[VOL. II.]

## ON THE DESPOTIC POWER GIVEN TO THE LANDOWNERS, IN THE POOR LAW AMENDMENT BILL, AS RESPECTS VOTING FOR NEW WORKHOUSES, EMIGRATION, &c.

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

Nov. 28.

SIR,—As an occupier of land in a pauperized village, I have hoped much from the projected reform of the Poor Laws. I need scarcely add that I have been much disappointed in some of the leading points of the new law; particularly in what may be termed its political features, or its apparent tone or spirit, where the rights and interests of the farmers, and the superfluous labourers are concerned. The bill was especially recommended to the House of Lords as a means of saving their lordships' estates from being engulfed in the all-devouring vortex of pauperism. This was perfectly right and just; but was it right or liberal to pass over the interests of the farmers, whose property every one knows is liable, as the laws stand, to be swallowed up by the landlords themselves, before their estates were touched. The Lord Chancellor—like many other learned in the law—evidently considered it doubtful, or more than doubtful, whether the farmers could be compelled to support the able-bodied poor at all, by the 43. Eliz. The direct inference from which is, that it is doubtful whether the farmers have not, in a long course of years, been plundered of many millions of money, by an illegal interpretation of that Act. Yet this burden which, *if legal*, was the result—as his lordship said, of "the worst law that ever was made," is still laid on the farmers, by what ought to be one of the best laws which ever was made, if the reformed parliament was intended to administer equal justice to all parties. Again, the Scottish poor law was eulogized, and very deservedly; but its great and peculiar merit, that which in fact has led to all the rest, the *equal division of all assessments between the landlord and tenant*, was altogether omitted, or neglected.

The right of the landlords to vote, in the Scottish Kirk session, was however, not forgotten to be transferred to the English vestries, and that in a very extraordinary manner, in clause 40 of the new poor law bill.

This led Mr. Hume pointedly to remark, in the House of Commons, in answer to some observation on the Scottish poor law, that "the Scotch landlords had to pay as well as vote." To this some member replied, that "English landlords also virtually paid the poor-rates." I had no opportunity of seeing much of the debates on this bill in the House of Commons; but Mr. Hume's is the most striking, and, indeed, almost the only remark that I recollect that showed any sympathy with the cause of the occupiers of land. The answer to Mr.

Hume appears, in my view, as one of the shallowest dogmas of the pretended science of political economy; a science which appears to me to contain a strange mixture of solid truth and baseless theory, and which is especially inimical to the poor and the poor laws, and to all the poorer class—an immense majority—of the occupiers of land.

The professors of this science seem to look at mankind only through a telescope; great part of what they see or think they see is 50 or 100 years distant; and thus over-looking almost completely all the affairs of the present generation, they are necessarily themselves little regarded by the existing race of man. In opposition to the observation which lead to this digression, I will venture to assert that the difference between the landlords *actually*, or only *virtually*, paying the poor-rates, and *that alone*, has led to nearly all the evils which have attended the poor-laws of England; evils which, never will, nor can be cured by continuing to burden the tenants with superfluous labourers, with the modern extras of new workhouses, education, chaplains, emigration, &c. which the despotic legislators of the age of Queen Elizabeth left to be enacted by a reformed parliament, in an age when liberality, equal rights, &c. are much talked of for all parties, *excepting only the cultivators of the earth!*

To illustrate the effect of clause 40, in connexion with clause 23, &c., suppose his Majesty's ministers were to deem it desirable that certain public buildings—of much probable or possible ultimate utility—should be ordered, *and paid for*, by the individuals composing the House of Commons. And suspecting (as well they might) the extent of their patriotic feelings, as to sacrificing their own money for the public good, the ministers should get half a dozen proxy votes from each of the peers to enforce their *vetos* in the lower house, they would of course gain their cause.

But what would the public think of such a measure? What would the radical reformers say, who speak disrespectfully of the upper house in their own sphere, and ridicule the proxy system as implying that a peer knows better how to vote without hearing a debate, than a commoner who listens to all the arguments?

Clause 40, however, in my opinion, out-goes the ultra Toryism of the above illustrative example. The landlord whose rates amount to 150*l.* is to have six votes in the Vestry, the tenant rated at 200*l.* is to have but one. The landlord's proxy is to vote away the tenant's property. The tenant may vote against it *if he dare*; but still he is under an uncontrollable despotism, and must purchase land and build a house of which neither brick nor a stone will then be his own, but which will belong, to all intents and purposes, to the landowners of the parishes.

It might perhaps be replied that, in this case,

despotism is necessary; because it would be in vain for the poor law commissioners to unite parishes and order a district workhouse to be built if the dissenting vote of the farmers in some of the parishes should be allowed to frustrate the whole scheme. I am willing to allow that absolute power in this point is indispensable; for the principle of calling on the tenantry to pay for what, when paid for, is to belong to the landowners, must, I should suppose, excite the determined opposition so far as votes go, of every tenant at will, and most of the leaseholders throughout the country.

The original clause was opposed by Lord Wyndford. He is reported (in the *Times*), to have said it was very unjust that the landlord might have as many as six votes, while the tenant could only have one, and proposed an amendment which was agreed to.

I consider the original clause to be very little worse than the amendment, for the power of the landlords cannot be more than absolute. The amendment which is needed, is, that they who vote should also pay, and that in proportion to their present and permanent interest; and the result will be, I conceive, instead of the farmers paying all, they will pay nothing towards the new workhouses. Of course nothing will be done in this matter till parliament meets again: and if the tenantry do not then petition and remonstrate against being called upon to build not only workhouses, but gaols, county halls, bridges, and churches; and against having the farm-buildings they have erected, and all other permanent improvements they may have made, confiscated for the use of the landowners, they will indeed deserve to continue under that sort of semi-feudal slavery from which no party in the state seems inclined to emancipate them. I beg here particularly to recommend to the consideration of the farmers—and their political friends, if they can find any—the opposition made by the Duke of Richmond to a clause for ordering the tenantry to contribute money towards the establishment, &c., of Provident Societies. That nobleman (according to the *Times* paper), “thought it most unjust that the occupiers of land should be taxed for the benefit of their successors. Let the tax be laid on the landowners, and he, as one of them, would cheerfully contribute his share toward the expense of management of those Provident Societies.” His Grace made nearly a similar observation both on the 4th and 7th of August; and the Bishop of London said, that “unfortunately this was the only clause in the bill which bore on the face of it the semblance of kindness to the poor—he felt anxious that it should be inserted.” Amongst all the severe reflections which have been excited by this famous bill, it would be difficult to find any thing more to the purpose than that of the Rev. Prelate, considering his connection with the Report on which it was founded. But where, I would ask, is there a single clause which bears on the face of it the semblance of kindness toward the tenants of farms? Yet some such clauses might very readily have occurred to any one, to say nothing of my own unaided exertions for this especial purpose during a long series of years.

How honourable it would have appeared had the land proprietors at once taken on themselves the charge of building new workhouses, aiding friendly societies, promoting emigration, and, indeed, finding public or private employment for the whole surplus population!

The rich, the great, the noble, and they alone have the power of obtaining the requisite aid from

the trading classes, the moneyed interest, or the general government, for such purposes; and have they not been told by Lord Brougham, and told truly, that the law, or rather the misinterpretation of it, by which the surplus poor were first sent to the farmers for support, was “the worst that ever was made?” Has not the impolicy, the injustice, the impracticability, the demoralising effect of sending surplus labourers to tenants-at-will for work, been telegraphed nightly over South Britain for four years, and written in letters of blood and fire? To counteract all this, what have we but (as in part observed by the Duke of Richmond) the district workhouse system as a ten thousand power, high pressure, Malthusian anti-population engine, *without a safety valve*. The Duke of Richmond proposed a safety valve, viz., a *labour-rate*, but, alas! instead of such a one as above alluded to—viz., a *labour-rate on the landlords and the public*—I fear his Grace meant to lay the burden, in the old style, on the tenantry; although it is easy to prove that such a measure is diametrically opposite to the principles he so liberally advanced in the debate (above quoted), respecting the establishment and encouragement of Provident Societies.

The plain fact is—which I challenge any one to disprove—that whoever employs the surplus labourers the benefits thence resulting cannot be immediate, but must fall perhaps, in some degree, to the tenantry of a few years hence, but almost entirely to the owners of land (and tithes) or their heirs and successors. If the farmers of England wish to use the Reform Bill as a means of breaking the iron yoke under which they have long groaned, let them strenuously impress on their present or future representatives, the necessity of amending the new poor law—and all other laws relative to landlord and tenant—on the principles alluded to (on provident societies), by the Duke of Richmond, and entrust petitions to parliament, to his Grace, with the same view. The first hint of giving to landlords a right to vote in vestries seems to have been taken from a communication of Mr. Courthope, a magistrate of Ticehurst, Sussex (vide first volume of “*Extracts*,” &c., in 1833, p. 52.) That gentleman is however generous enough to allow that landlords should pay half the expense of emigration. The commissioners, however, and the reformed parliament, leave the whole burden on the tenantry, and do not even hint that a sense of justice has induced some landlords to pay two-thirds, or even the *whole expense of clearing incumbrances from their estates*, in which their interest must be four or five times more than that of the tenants. Among the most remarkable *curses* with which the Jews were threatened, in case of disobedience, it is said (Deut. 28, 30), “Thou shalt build a house and shalt not dwell therein: thou shalt plant a vineyard, and shalt not gather the grapes thereof.” The old laws of England, relative to “*Waste*” and “*Reversions*,” have inflicted this “*curse*” on many an honest farmer, nurseryman, &c., and the writer of this paper is almost the only person who has earnestly protested against such manifest injustice. Had not the farmers, by their silence under oppression, tacitly allowed that they are fit only for slaves, I should have deemed it impossible that a legislature, chosen under the Reform bill—the essential principle of which is to diminish the power of landlords and house-lords over their tenants—should have ventured to tell the great body of the tenantry, “you shall build houses by our order and for our final benefit; but,

unless as paupers, you shall not dwell therein, nor claim them as your own." Even Zophar, a pagan, and one of Job's "miserable comforters" (Job, 20, 19), mentions among the short triumphs of the wicked, that "he hath oppressed and hath forsaken the poor, he hath violently taken away a house which he builded not." With particular reference to the objectionable clauses in the new poor-law bill, and the general laws relative to landlord and tenant, the preacher who may be called to address a new parliament might find some not inappropriate words in Isaiah, 65, 21, 22, 23,—*"They shall build houses and inhabit them—they shall plant vineyards and eat the fruit of them. They shall not build and another inhabit, they shall not plant and another eat. They shall not labour in vain, nor bring forth for trouble."* Would legislators act in the spirit of these texts, we should hear no more of tenants-at-will being called upon to build district workhouses, or any other public buildings whatever—nor to pay for emigration—nor to support surplus labourers in any shape, either on the highways, or in draining, marling, &c., because (as before quoted from the Duke of Richmond), it would be, in each case, *"to tax the present occupiers for the benefit of their successors, or, rather, the landowners."* On the same principle land-proprietors would never more be suffered to take possession of farm-buildings, cyder-mills, pumps, fruit-trees, &c., built or planted by the outgoing tenant, on the paltry pretence that *they are fixed to the freehold.*

Neither would it ever again be left to the honour of the landlord to give something or nothing by way of recompence to an outgoing tenant who had spent his property, and employed surplus hands in permanently improving another's land.

I remain, Sir, your's, &c.

THE AUTHOR OF THE RIGHTS OF THE FARMER.

## YORKSHIRE CENTRAL AGRICULTURAL ASSOCIATION.

The members of this Association dined together on Friday, Nov. 14, at Lockwood's White Swan Hotel, York. E. S. Cayley, Esq., M.P. took the chair; Thos. Laycock, Esq., and Mr. Hodgson, secretary to the Association, were vice-presidents. Among the company were the Hon. Sir E. Vavasour, Bart., W. C. Harland, Esq., M.P., F. Worsley, Esq., H. Vavasour, Esq., D. Saunders, Esq., W. Worsley, Esq., John Cayley, Esq., Colonel Croft, John Dunnington, Esq., C. Howard, Esq., R. Cattle, Esq., Edward Parker, Esq., Wm. Burton, Esq., John Flintoft, Esq., John Jolly, Esq., Henry Spence, Esq., Edward Brearey, Esq., S. Key, Esq., J. Micklethwaite, Esq., &c. &c., in all 88.

On the removal of the cloth the PRESIDENT commenced the toasts with "The King," which was followed by "The Queen," and "The Princess Victoria, and the rest of the Royal Family."

THOMAS LAYCOCK, Esq., the Vice-President, then rose and proposed the health of the Chairman, which was received with the warmest demonstrations of applause, and drank with three times three.

The CHAIRMAN, in acknowledging the toast, begged to assure the company that, at that moment, there was nothing more acceptable to his feelings than the hearty good wishes of such an assemblage, expressed as they had been. During the last three or four days, he had been so unwell, that had not the welfare of the agricultural interest

lain at his heart, he should not have ventured to have come to York. He sincerely rejoiced to see that the meeting was so numerous, even more numerous than the spacious room would contain; he trusted that it argued well for the cause of agriculture, when the agriculturists had come to a determination to give this public expression to their opinions. He conceived this expression of opinion must be beneficial here as elsewhere. It perhaps might have come to the knowledge of many, that at a meeting of the Market Club at Northampton, Lord Althorp, now Earl Spencer, had declared that he was exceedingly glad to find that the Market Club of Northampton was determined to steer clear of politics. With all due deference to the noble Lord, he thought worse advice could not be given to the farmers than that they were to steer clear of politics. For what were the objects—what the immediate wants of farmers, which led them to associate together in these societies? Were they not that they might obtain a remunerating price for their produce,—that they might be enabled to live? And those associations which had for their object only the production of fat stock, were but little calculated to produce those important ends. He was exceedingly glad that this association was not so much an association for the fattening of stock, as for the promotion of that more worthy motive, the enabling agriculturists and all other classes to live together in harmony; and he hoped that, ere long, societies of the nature he had alluded to, would blend themselves in associations of this kind. The fattening of stock was in itself an object very commendable; but it was much more desirable, in times like the present, that the agriculturists should unite for the purpose of expressing their decided opinions on the policy pursued by Government, and for endeavouring to rid themselves of the grievances under which they laboured, than that they should engage in competitions productive, at the present prices, of little profit to individuals. Though Lord Althorp, one of his Majesty's Ministers, had expressed the opinion he had stated, he was glad to learn that his Majesty had ventured so far to differ with his Ministers as to contribute 50*l* to the funds of the Buckingham Agricultural Association, at the head of which was Lord Chandos; and had thus set the example of patronizing a political association. The gentlemen he addressed were, in fact, and ought to be, a political association; at least so far a political association, as to have a unity of purpose in contending for the preservation of their property; a privilege enjoyed by every other interest. With respect to the distress of the agricultural classes, that was a subject on which all felt interested; it existed in all quarters, and was uniformly attributable to the low prices. It was quite impossible, considering the weight of taxation, that they could long go on with those low prices—with wheat at 4*s* 6*d* a bushel; it was necessary that something should be done; the question was, what should they do? He was aware it was a very prevalent opinion that low prices came naturally; Ricardo, in 1822, and others of that school, had promulgated that opinion, and that we had a superabundance of corn. But very shortly afterwards, it was maintained that we had an over-population, as well as over much corn. But had it been true that there was a superabundant population, it would have been exactly what was wanted to meet the evil of over-production; and yet it had been seriously maintained that, at the same time, we had too much corn and too great a population. It is well known that, since the peace, wheat had continu-

ally fallen, except in the intervals of 1817, 18, and 1823, 4, 5. At the latter period wheat rose from 38s (its price in Oct. 1822) to 64s per qr. For the express purpose of effecting this rise in price, Lord Londonderry introduced his one pound note act in 1822. The measure was entirely successful in producing a rise in prices; but was followed, as persons acquainted with currency predicted it would, by the panic of 1825. The ministers of that day had brought the country into the dilemma of low prices, by the sudden fall of prices which was the necessary consequence of Peel's bill of 1819; and in 1822 they found the country in such a dreadful state of ruin and adversity, that they were obliged to retrace their steps. They had showed their ignorance as to the results of the change in 1819; they equally showed their ignorance in the change of 1822. They expected one pound notes and a larger quantity of paper to circulate on the present gold standard, than it could possibly carry. If the gold standard had been altered, so as to be adapted to an increased issue of paper, and an increase of prices in 1822, no panic would have occurred in 1825. The increased quantity of paper would have circulated as safely and as steadily (indeed more steadily) on the altered standard,—as the present quantity of paper circulated on the present standard. No effect could be more distinctly traced to its cause than the panic of 1825. Gold, by law, was tied down to the fixed price of 3 17s 10½d the oz.: the increased issue of paper caused by the one pound note act of 1822, made every other article, except gold, rise in price. Speculators in London then went to the Bank of England and demanded, as they had a right to do, this cheap article gold, in exchange for Bank of England notes: so much currency was thus withdrawn. Well, when they got this gold out of the Bank, it did not take the place of the paper withdrawn from the circulation—for it would not sell in this country at more than the legal price of 3 17s 10½d the oz. So they took it abroad and bought silk, wool, or any other commodity; which, when it was brought to this country, was not tied down to any particular price, and thus a profit was made on this drain of gold from the bank. In consequence of all the paper being withdrawn, which was taken to the Bank for this gold, prices suddenly fell—there was a stagnation in trade—a panic, and nobody would trust his neighbour. No one denies the evils of the panic of 1825. But many persons imagine that a change of currency involves a panic—no such a thing. Every one who understood any thing of currency in 1822, knew that an over-issue and a sudden contraction, and probably a panic, must sooner or later be the consequence of Lord Londonderry's act. But if the price of gold had been altered by law to such a price as would have been equivalent to 64s per qr for wheat: or possibly, if there had been the old silver standard—if this alteration had taken place in the nominal price of gold before the alteration in the nominal price of corn and other goods—there would have been no more temptation to take gold away in 1825, than there is now, and we should have been as little in danger of panic as now—perhaps less: for lately we had, been very near one, notwithstanding the boasted security of the present system. This then was, in short, the history of the panic of 1825. It was his (Mr. C.'s) wish, that this history should be thoroughly understood, because the friends of low prices took advantage of the ignorance generally prevailing on the subject of this panic, to prevent any alteration of the present system of currency. Any one who

advocated one pound notes or an extended currency, was stigmatized as being friendly to an unlimited issue of paper. Nothing was more untrue, and those who brought the accusation, if they understood anything of the subject, knew it to be untrue. He for one, was as much against an unlimited issue of paper as any man in the kingdom: he would not accept one pound notes even, except on a standard different from the present; a standard on which they would securely rest. He was anxious for an altered currency, for no other reason than this, that British agriculture, with all its taxation and engagements, could not go on at a price of 5s a bushel for wheat; and he was perfectly assured that there was no other means of raising the prices, except by an altered currency, unless it was by scarcity, which was an advantage to neither grower nor consumer. So long as prices were kept up to a certain standard, and he conceived that 8s a bushel for wheat ought to be the regulating price, with wages in proportion, they might be enabled to meet certain engagements. After the 17 notes were done away with, there was a gradual fall in the price of corn until 1828, which was a scarce season, and was followed by three other scarce seasons. That, of course, produced a rise in the price, as the result of a natural cause. During those three or four years, the price of wheat in this country which generally prevailed was about 64s per qr. At that time he had said that this was not a fair criterion of the value of the article, the rise being entirely produced by the scarcity; therefore when that scarcity ceased, the price of wheat again fell to 44s. The beginning of this fall was in 1832; it had continued ever since, and we were now experiencing its effects. He was perfectly aware that some farmers were doing well, and it was natural that they should do so. The upland farmers, whose wheat crops were good even in the wet seasons, would do well; but the poor lowland farmer, who had no wheat crop during those seasons, and besides, lost all his sheep by the rot, was in a very different predicament. The wet seasons suited the other class, because they got a good price for their wheat, although, as they were well aware, from 1828 to 1831, an immense quantity of wheat came in from foreign countries. Persons might naturally ask why wool continued so high whilst corn had fallen, when both had been so scarce owing to the wet seasons. He would answer at once, the land was an old ewe, that if she died one year, she sprung up as fresh as ever the next. This was not the case with the old sheep ewe; if she died one year, she never rose again to produce another crop. Besides, we had much greater facilities in importing corn than wool; our long wool was peculiar to our own country. It had been calculated that at least one-fourth of the sheep stock died from the rot in those wet years. The number of sheep had been estimated in this country at 32,000,000; at least, therefore, 8,000,000 sheep had to be supplied. But when the capitals of the farmers were gone, how were they to replenish their stocks, especially at the present scarcity prices? And beef had risen in price as well as mutton, for the scarcity in one meat will produce scarcity in another. And if it had not been for Irish pork selling at Leeds last winter for 2d and 3d per pound, mutton would have been 7d or 8d per pound instead of 6d. Wool was the article that would remain the longest high, because, although the Scotch sheep would supply the carcass to us, they would not supply the wool. Nothing could prove the scarcity of wool more, than that we imported 10,000,000 lbs. more of

wool last year than the year before, and yet the price rose in the face of it; and that not owing to any increased demand for wool for manufactures, because at present, in particular, the Leeds trade was much depressed, and operatives thrown out of work, as he had heard from one of them that very morning, but because the manufacturers were obliged to purchase at any price for fear of losing their place in the foreign market, which, if they left off supplying for a year or two, the trade might never return to them. To talk, then, of prosperity from the rise in wool, although a certain class of farmers did benefit by it, was a delusion, and a mocking to those innumerable farmers who had been ruined by what produced a temporary benefit to the upland farmer; temporary it would only be, for as we gradually supply the scarcity in sheep, the price of wool and stock would fall on a level with wheat; as would barley and oats, which had only been deficient from this dry spring. The honourable gentleman dwelt at some length on the different results which those seasons of scarcity would bring to the Highland and Lowland farmers. He then referred to the causes which had been adduced, insufficiently as he contended, to account for the prevailing low prices. In Lancashire it had been imputed to the importation of Irish corn; but this at most he considered would only produce a fall of 4s. per qr. in the price; for wheat was 36s. in Lancashire, while it was about 40s. in the rest of England; and it was not a depression of 4s., but of 24s., which they complained of. In fact, however, there had been considerably less Irish wheat imported into Liverpool last year than the year before; so this plea fell to the ground. In explanation of the prevailing low prices, it had been seriously alleged that a great quantity of corn was smuggled into England from the Channel Islands. Nothing could be more absurd than this allegation; for the prices were at present so low that it was not worth the while of any person running the risk of smuggling it. Were corn 64s. or 84s. a bushel, there would have been some plausibility in this representation; but it was impossible that low prices, and the smuggling of corn from the Channel Islands, should exist together to any extent. So fully convinced was he that this was not the cause of the evil complained of, that it was his intention, at the earliest opportunity in the next session of Parliament, to ask for a committee to inquire into the truth of the alleged smuggling of corn from Jersey and Guernsey. It was also alleged that the present low price was owing to two good harvests. This was the last resource of the friends of low prices—they always wanted to attribute our distresses to a natural cause, well knowing that it was a violent artificial one that had caused it. Before Peel's Bill of 1819, good harvests were always esteemed a blessing to the farmer and to the whole community; it was only the philosophers who had discovered they were a curse. But, in fact, he did not believe that the present and the last harvest were more than what used to be considered average harvests. After the scarcity in the previous years, we naturally enough imagined any thing to be a good harvest. He was not complaining of the harvests; but let them refer, on this subject, to the report of the house of Scott and Co., corn-factors, of Liverpool, which he had lately seen in the *Mark Lane Express*. He had not seen, for a long time, a more comprehensive, and, in his opinion, a more faithful account of the harvests and the crops than this, and it tallied with the farmers' experience on the subject. Last year,

the wheat was in many places only thin upon the ground, although undoubtedly the yield was almost invariably excellent. Taking both yield and straw together, he did not think that more than an average crop was the consequence. Then again this year, if his memory served him, the harvest, as described by the above report, was bad in the western districts in Scotland, and notoriously very deficient in Ireland. On the east and north-east coasts, the harvest was good; but then the corn was much mildewed, and the yield was very indifferent. Oats and barley, too, were exceedingly light crops, and that accounted for their comparatively higher price than wheat. Plentiful crops, therefore, in his opinion, did not account for the present low prices. Under any other circumstances than those now operating, wheat would have kept up rather than down after four successive bad harvests. Some gentlemen were of opinion that the remedy was to be found in a fixed duty on all foreign grain. He might say, with a gentleman whom he lately heard converse on the subject, that if ever such a measure was proposed, he should consider it his fixed duty to oppose it. As regarded both the grower and the consumer, he did not believe that any man, even a philosopher, could devise a better mode of impost than a fluctuating duty.—The hon. gentleman then gave a rapid sketch of the operations of the corn laws, and traced the steps by which the agriculturists had been reduced to their present distressed condition. He said that the corn laws had never had the effect of raising the price of corn, except inasmuch as they prevented corn coming in from abroad. Did not the present corn laws, which operated to the extent, at this moment, of 44s. per qr. duty on the importation of wheat, give protection as far as corn laws could do it? It was not, therefore, the importation of foreign wheat which caused the low price. He had been down to the city last session, to the first house in the corn trade, Scott, Garnett, and Palmer, and he there learnt that no wheat had been let out on bond (beyond a chance quarter or two of damaged corn) for a year, and now the duty is higher than it was then. We did not begin our corn laws in 1815. We had had corn laws for three or four hundred years. But in 1815 we had a corn law passed on the basis of 80s. for the quarter of wheat. Did that raise the price? No. Wheat fell in 1816 to 60s., not in consequence of the importation of foreign corn, but in consequence of the withdrawal of the Bank of England notes. Another corn law passed in 1822, on the basis of 70s. for the quarter of wheat. This was 10s. lower than the former, and yet wheat rose immediately after; but that, as he had shown before, was in consequence of Lord Londonderry's one pound act. Another corn law passed in 1828, on the basis of 64s. per quarter for wheat,—still lower, yet wheat rose immediately after; but this, as before stated, was owing to the three or four successive deficient harvests. An enemy to the corn laws, who wandered wide for cause and effect, would say, on hearing all this, "See the injury which corn laws have been to you." But this would be erroneous reasoning; the corn laws had no effect whatever on those changes in the prices he had described. If corn be entirely prohibited, corn, in an average season, can only fetch a certain price, under our present currency standard of value; that price, as was predicted 15 years ago, cannot be more than 40s. What our corn laws do under our present currency is, to protect us between, say 45s. and 30s. or 35s.—whatever the price, on an ave-

rage, would be at which foreign corn could be introduced here duty free. The present low price was to be attributed to no other cause under heaven than the final consummation of Peel's Bill of 1819, which only came into full operation in 1829, and the effects of which were concealed for three years by the deficient harvests increasing the price of grain. He was sorry to have detained them so long on this point, but he considered it of the first importance to have this question fairly investigated; for if the farmers really wished to be relieved from this oppression of low prices, they had one, and only one way of effecting a relief of that kind; and that was by altering the currency,—not by an unlimited issue of paper, which he was against as much as any man, but by an alteration which would produce, in fact, a much safer currency than the present, and at the same time higher prices. In conclusion, he trusted that the day was not far distant when the farmers and the country, disappointed in every other plan and expectation of relief, would turn to this; the effect could only be removed by removing the cause. When he looked round on the company assembled, and called to mind other pleasing indications in various parts of the country, he was led to entertain stronger and firmer hopes that the result of another election (if it were not done in another session of this Parliament) would be to confer some measure of permanent relief on the suffering agricultural classes. Monetary changes produced an effect not only on agriculture, but on the other productive interests; and indeed, the idea that the manufacturers of the country should prosper by the depression of its agriculture, was contrary both to experience and to common sense. He concluded by proposing—"Prosperity to the York Central Agricultural Association." He was extremely glad to see so numerous and respectable a company round him; and he called to mind that this association was the cause of one of the best petitions on the subject of agricultural grievances being sent up to the last Parliament; he did not remember seeing any petition so ably conceived, and so temperately worded, as that which proceeded from the proprietors and occupiers of land in the city and vicinity of York. He was exceedingly glad to learn, from conversations with many tradesmen in this city, that they and other classes were becoming convinced of the error they had so long and generally entertained, that low prices were good for them. The labourers also, if not in this town, in many others, were beginning to see that unless their masters made a profit, it was impossible for them to pay remunerating wages. He was extremely glad at finding a disposition manifested on the part of the farmers, tradesmen, and labourers generally of this district, to unite together for their common welfare, and he trusted that an example so worthy of imitation would not be lost upon the neighbouring market towns. The country must unite for its own relief; and if it be firm, the remedy is in its own hands. Every farmer had not only a right, but it was his duty, to be a politician whenever his ruin was threatened. The hon. gentleman sat down, after proposing the toast, which was drunk with the customary honours. During his address, he was repeatedly interrupted by the loudest expressions of applause.

The toast was followed by a song from Mr. BULMER.

A question having been put to the Chairman, as to whether it was more advantageous to the farmer for the duty on foreign corn to be paid on its

importation, or when it was taken out of bond, he replied that he had no hesitation in saying it would be much better for the farmer that it should be paid on its importation. He then proposed the health of the Hon. Wm. Duncombe, which was received with loud applause.—A note had been received from Mr. Duncombe, expressing his regret at being unable to attend the meeting.

The Lord Lieutenants of the three Ridings was next given from the chair. A song by Mr. Seymour followed. "The Members for the East and West Ridings"—and "Agriculture, Manufactures, and Commerce," were also given from the Chair, and drunk with enthusiastic applause.

The health of the Hon. C. Langdale, M. P. for Beverley, was proposed by the Chairman, who, in the observations he made on it, said that from his own experience of Mr. L. in Parliament, he knew not a more upright or independent member, or one who was a truer friend to the agricultural interest.

Sir E. VAVASOUR, on behalf of his brother, acknowledged the toast. He was surprised at meeting so numerous an assembly on the present occasion, and said he was desirous of learning what were the intentions and feelings of what might be called a palpable meeting in this county. Although the association had been termed a political one, by the Hon. Chairman, he hoped it was not tainted with party feeling, or it would quickly sink into insignificance. When he observed the combinations which were forming against the agricultural interest, he thought it important that agriculturists should come forward to protect themselves; and it was that which induced him to become a member of this association. He concluded by proposing the health of W. C. Harland, Esq. M. P. for Durham. (*Loud applause*).

W. C. HARLAND, Esq., rose to return thanks. He observed, that the advantages resulting from an association like the present, were, the introduction of a more improved system of agriculture, and a kindlier feeling between landlord and tenant, whose interests were in common; for, in his opinion, they must stand or fall together. He knew that it was the opinion of many respectable persons, that their efforts ought to cease with these objects; and that they ought not to interfere with legislative proceedings. He decidedly differed from those individuals, and should continue to do so, until the present state of agriculture was wholly out of the way of legislators—until Acts of Parliament had nothing whatever to do with it.—What were the causes of the present low prices, but as his hon. friend had so clearly explained, the increase in the value of money?—and what led to that, but an act of Parliament? That act was passed in 1819, and is known by the name of Mr. Peel's act. In plain terms it reduced prices one-third, and in some instances one-half, and thus the agriculturist and the labourer had to pay all that extra to the fund-holder. He did not believe there were any gentlemen present who would talk lightly of the national faith; but were there not two parties to the national compact; and it was just as much a breach of faith, to lay on one-third or more to the claim of the creditor, as to wish to sponge off any part of the liability of the debtor. They were willing to pay what they had borrowed, but they had no right to be called upon to pay one stiver more. (*Applause.*) But, said the hon. gentleman, the opponents of agriculture told them, there was another rod in pickle for them. It was to come from the free-trade school of philosophers;—it was another Act of Parliament, and was to be

entitled "An Act for the free admission of corn under certain restrictions." This country was now groaning under an unnatural debt, and still these philosophers expected the farmer to compete with foreign countries. So long as his capital and labour were taxed, to pay the interest of this debt, which, be it remembered, was contracted not for agricultural but for national purposes—so long he was entitled to national protection, to prevent his sinking under the burden of his difficulties. (*Applause.*) He had already enough of difficulties to contend with; but if the protection was withdrawn, and he trusted the day would never come when that would be the case, then would the country gentleman be driven from the house of his fathers; the farms be tenantless, and the tenants and labourers sent to the workhouse. Would the agriculturists of England submit to this? If they did, then this country, which had been lauded above all others for her manufactures, her commerce, and her agriculture, would be left a mournful example of bastard philosophy. (*Loud applause.*) He feared he had trespassed too long on their time, and begged to return his thanks for the kindness with which his health had been drank. In his opinion, agriculture must eventually prosper,—she had justice on her part, and he trusted they would soon see her rise again from the difficulties and distresses under which she is now labouring. (*Great applause.*)

MR. SHEPPARD, of Fulford, said that although he was not an agriculturist in this neighbourhood, no one present felt more than himself in the welfare of the English farmer. He had been in the corn trade for 34 years, and during that time had lost as many thousand pounds. If he had not gained money by experience, he had gained a little knowledge. Free trade in corn had been mentioned. In his opinion it was impossible for the English farmer to compete with the foreigner, who paid little for his land, and almost nothing for labour. He held in his hand a sample of Barley grown in Denmark, which he sold yesterday for 18s. per quarter, and which was bought in Denmark at 13s. 6d. Better grain could not be. He would press on the farmer the necessity of his immediately thrashing out his barley to keep up the averages. Mr. S. then pointed out the fallacious system of taking the averages, and contended that the returns ought to be made by the farmer only.

Song, "Hebe," by MR. ANDERSON.

THE CHAIRMAN said that he always wished to steer clear of party, and he trusted that the association had not the slightest glimpse of it. It had for its object the promotion of the agricultural interest, and the public weal. He was about to propose the health of a noble Lord, who was not only the head of the agricultural interest in the House of Commons, but the leader of agricultural associations. He was fully convinced with the great Burke, that "when bad men combined, good men must unite." He had great pleasure in drinking "the health of Lord Chandos, and success to his exertions in promoting the interests of agriculture."

WILLIAM WORSLEY, Esq. said that he had received permission to give a toast. He was sure that it would be given with that demonstration of feeling which it deserved, for a more zealous friend to the cause which they had that day met to celebrate did not exist, than their worthy vice-president, Mr. Laycock. He begged leave to give his health. (*Cheers.*)

MR. LAYCOCK, in acknowledging the compli-

ment, said he was one of the first who originated the association. He was sorry to say that it had not effected much good hitherto, but yet he hoped it ultimately would do. He was sorry to see, by that morning's paper, that a gentleman who had been nominated as sheriff for one of the southern counties, had stated his inability to serve, on the score of the low price of agricultural produce. True, the Lord Chancellor had told him he could not admit his plea, because he (the Lord Chancellor) was of opinion that the agricultural interest would improve. He (Mr. L.) hoped it would, and that the Lord Chancellor would prove to be, what he never took him for,—a witch. (*Hear, hear.*) Mr. L. concluded by again returning his thanks for the honour conferred upon him.

THE VICE PRESIDENT then gave "The Patron of the York Agricultural Association—Lord Harewood"—which was drank with applause.

THE PRESIDENT, in giving "The Press," expressed the obligation to which the agricultural interest was indebted to the local part of it, for the independence it had shown in advocating the interests of agriculture. To it they were principally indebted for the prevailing opinions of the country, and he trusted, and believed that the press at York, would be of still greater benefit to the agricultural interest. (*Applause.*)

THE EDITORS of the *York Chronicle*, the *Yorkshireman*, and the *Yorkshire Gazette*, severally returned thanks, and expressed their determination to do all in their power to promote the welfare of the agricultural interest.

THE PRESIDENT then said that he had omitted before to state that Mr. Thompson, of Escrick, had sent a letter expressive of the regret which he felt at not being able to be present.

THE HON. SIR E. VAVASOUR next gave the health of Mr. Cayley, one of the members for the North-Riding, which was drank with three times three.

THE HON. MEMBER returned thanks, and said there was no interest so dear to his heart as the agricultural interest. He went into Parliament as an agricultural member, and as an agricultural member he trusted he should come out. He had done his best in Parliament to promote the interest of the agriculturist, and if the measures which he had, from an honest conviction of their truth, supported, were not acted upon, it was not his fault. He rejoiced to behold the present assemblage, viz. an union between the trading community and the farmers; and hoping to meet them in good health next year, he begged most sincerely to thank them for their kindness.

FREDERICK WORSLEY, Esq. impressed on the minds of the meeting the necessity of Poor Laws for Ireland.

THE PRESIDENT gave "Prosperity to the City of York," which was drank with applause.

THE VICE PRESIDENT next gave "The worthy Secretary of the Society," drank with great applause.

MR. HODGSON returned thanks, and said that nothing would give him greater pleasure than to be of benefit to the Society. The approbation of the Association amply repaid him; and he trusted that it would increase in numbers and in usefulness.

THE PRESIDENT having left the Chair, it was occupied by R. Cattle, Esq., who addressed the meeting on the importance of agricultural associations.

MR. SAUNDERS, of Askam; Mr. Wiley, of Bransby; H. Graham, Esq., and several other gentlemen, addressed the meeting, but our limits prevent further detail.

## SCENES IN HUMBLE LIFE,

BY MRS. R. J. HARTWELL.

## THE ARREST.

But come, ye generous minds, in whose wide thought  
Of all his works, creative bounty, burns  
With warmest beam, and on your open front  
And liberal eye, lifts, from his dark retreat,  
Inviting modest want \* \* \* \*

Surprising oft  
The lonely heart with unexpected good!

There was a mysterious stillness pervading the whole scene; twilight had commenced, but no ray of light appeared to illuminate the little dwelling. The once thickly-peopled shop was now deserted except by one singular-looking individual, who was faintly to be descried in its most distant recess. He was a tall, gaunt personage, of somewhat austere demeanour, and the air of perfect self-complacency with which he gazed around, bespoke him, at least in his *own* opinion, the superior of the occupants of that humble habitation.

The shadows of evening deepened rapidly, and the stranger, as though impatient of delay, stepped hastily towards a door leading to an inner apartment, and half opening it, exclaimed, "My good people, I can wait no longer. Woodbourn, you must prepare to depart." Again he was in his former position.

The group within consisted of five persons; at a small table, upon which a few piles of silver stood erected, sat a female, whose wan cheek and swollen eye betokened her the subject of some heavy affliction. Alternately she turned her restless gaze from the object before her to her husband, who was pacing the chamber with irregular footsteps, his lips compressed, his eye downcast, and sighs frequently issuing from his agitated breast. Near the fire, with her head resting against the chimney-piece, stood a young girl, who was striving vainly to repress her tears, whilst at his feet, encircled in each other's arms, crouched two younger children, looking all the astonishment and fears their little bosoms experienced. As the door opened, a simultaneous start was given, and as it closed, the mother, turning a look of deep despondency on her husband, exclaimed, "Woodbourn, what is to be done?"

"Done!" he repeated mournfully, "what can be done! I—"

"Father!" suddenly interrupted the young girl, as though a thought at that moment presented itself to her mind, "Could we not collect the money among some of our rich neighbours?"

"Of them, child!" returned the parent unhesitatingly.

"Yes," she continued, encouraged that a positive negative had not been put to her suggestion—"Yes, I should think if they knew the *urgency* of the case they *could not* refuse you."

"What, ask their *bounty*!" he resumed, "or borrow it of them!" rejoined the wife, perceiving that the idea was on the point of rejection.

"Nay," was the reply, "for I could never repay them."

There was a pause.

"Well, father, what do you say to my proposition?" the daughter at length timidly asked.

Woodbourn stopped, and prest his hand upon his brow in silence; every eye in the apartment was fixed with intensity upon him;—"No," he said, dropping it in utter hopelessness, "No—I can go with them to prison, but I cannot ask for *charity*." The Mother sunk her face upon her hands, and wept. The Father approached to comfort her, and the Daughter darted suddenly from the apartment.

"Oh! Sir," she exclaimed, addressing the stranger, into whose presence she had entered, "Will you extend your kindness by assuring me you will not take my Father from us till my return?"

"No, indeed, young woman, I can make no such unconditional promises," replied the man of law, drawing himself up commandingly—"How can I know but you may—*may never return*?"

"Oh! dear kind Sir," she cried with eagerness, "I shall be back within an hour, and I hope able to save you farther trouble, if you will but wait so long; do not refuse me."

"Well, child, we shall see," he returned in milder accents, "perhaps I may; at any rate, go you and procure the cash if possible."

"Oh! thank you, thank you a thousand times! I knew you were too kind to deny my request," cried the weeping girl, and she was out of sight in an instant.

"Margaret!" exclaimed Woodbourn, after a lengthened silence, "This delay is unavailing, we must *part*."

She threw herself upon his bosom in uncontrolled despair; he could add no more, but the burning tears which fell upon her forehead, told her most eloquently all hope was indeed over.

"Kate, child, come and make what preparations are necessary for my departure," he at length articulated in a low husky voice, and he turned towards the fire.

She was gone.

"Why, where is the girl?" he added quickly; "Jemmy, my boy, where is your sister?"

"I don't know, Father," said the child timidly, but she ran out of the room just now."

"Ah!" cried the Mother, starting from the sinewy arms which supported her, and a smile of joy lit up her countenance, "is she gone? Then you may *yet* be spared to us," and she clasped her hands in thankfulness.

"Gone! gone where, Margaret? what do you mean?" interrogated Woodbourn eagerly.

"To try to save her Father from a prison," was the reply.

"I trust she is not gone to ask for charity," he added hastily.

"Better ask for any thing than lose her parent, though it were barefoot or on her knees," returned the wife, whose joy at the idea of success could not be damped by any thought of humiliation.

"What, my child sue like a common *beggar*?"

"And would she not *become one* if deprived of him who is her only support?" asked his companion."

"Ah! Margaret," he answered, "she will *yet* be deprived of him, for they will spurn her from their threshold."

"Nay, nay, we will hope otherwise."

"I cannot hope; alas! I know them too well."

"Nay, husband," exclaimed Margaret, somewhat reproachfully, "you are unjust."

"We shall see," he replied, with a mournful smile, as he threw himself upon a chair. There was a pause.

"It is growing late," continued the anxious Mother, walking to the casement—"and the night is dark; I wish she were safe back again." She returned to the fire.

Again the silence was unbroken, until the younger children creeping stealthily towards their Father, clambered up the back of his chair, as one of them whispered, "Then you wont go away from us after all, will you?"

The parent answered not, but folded them both to his bosom.

At that moment a sudden gust of wind rushed fearfully down the neighbouring hill, and as it rapidly passed the cottage, every window it contained shook with violence, a heavy shower of hail-stones followed; on the instant Margaret uttered a faint exclamation, and hastened towards the outer door. Woodbourn arose, snatched up his hat, exclaiming, "I will go find her myself!" and was striding across the shop when his progress was arrested by the stranger, who, springing forward, laid his hand upon his shoulder, as he sternly said, "You forget, Sir, you are my prisoner."

"Prisoner!" he repeated, startled by the word, no less than the action;—"Ah! truly, I had indeed forgotten!" and he turned towards the inner apartment.

Minute after minute passed slowly on, an hour had elapsed, and still Kate returned not. The hail-storm had given place to a heavy fall of snow, and the unhappy Mother passed alternately from her husband to the open air, to give reports of the increasing inclemency of the night.

"A bad business this, and I cannot possibly put up with any more delays," was the observation of the stranger as she last passed him, and she hastened with sorrow to communicate it.

For some time Kate Woodbourn pursued her way with unabated rapidity, but as the night more entirely closed in, she slackened her pace, and began to gaze around her with apprehension.

A small wood now presented itself before her, through which her path lay. Should she turn from it to those leading to other dwellings, might not *their* inhabitants be as likely to give attention to her tale? Darkness and gloomy solitude was before her, but hope had pointed out the habitation to which they led, as the one most likely to become successful. She hesitated, listened, and endeavoured to pierce with her eye the dense obscurity. To her right stood a mansion whose proximity seemed inviting her to approach; to her left another, although a little farther removed, presenting no such formidable obstacle, but yet she was unable to persuade herself to give up her primitive intention. Could he but obtain the assistance of Lady Mulgrave, others, she rightly judged, would be more willing to listen to and assist her. "I must overcome this foolish fearfulness," she cried aloud, at the same time darting forward, "and the God of heaven will protect me!" She raised her eyes, but nothing save the closely-entwined

branches of gigantic trees met her view; a few moments and she was almost lost in darkness.

With a swift and noiseless step, the trembling girl issued from the dreaded spot, and it was with a thankful heart that she beheld lights passing and repassing in the mansion, towards which she was so rapidly hastening. Breathing a silent prayer for success to attend her undertaking, she gently opened the gates before her, and endeavoured to collect her thoughts, but the nearer she approached, the more her agitation increased, nor was it lessened by perceiving through the long windows which surrounded the right wing of the building, a numerous party assembled round the dinner table with their hostess at its head. She stopt, and her heart died within her; engaged as she now was, how could *she* hope to gain admittance to her presence, and delay would be fatal. After a few moments spent in unavailing regret, she ventured to advance a few paces towards the apartment, keeping carefully in the shade lest she should be observed. Her ladyship was talking earnestly with those around her, and the benevolence of her countenance, and the smile which seemed to dwell within her eyes, partially reassured the trembling girl by bringing back hope to her desponding bosom. "Surely," she mentally exclaimed, as she bent forward more closely to examine her features; "she cannot refuse to see me when she knows how important is my mission. They say she is good, as she is beautiful; and if so, oh, how amiable must she be! at all events I will make the attempt," she added, and with the swiftness of lightning darted round to a side entrance.

Her request to be favoured with a few moments' audience by her ladyship, was made in a timid though earnest tone to the livery servant, who admitted her, but upon being informed by him it was utterly impossible that evening, as she was particularly engaged, she could no longer command her feelings and burst into tears.

In extreme surprise the attendant inquired the cause of her sorrow.

"Ah sir," she answered, turning away, "if you knew but the consequence of this delay, you would pity and excuse me." She looked once more towards him.

"Stay my good girl!" he returned, softened by the genuine expression of grief depicted in her countenance, for Kate Woodbourn was not one to be contemplated with indifference, nor are woman's tears weapons to be easily withstood, "Come in and I will see what I can do in delivering your request."

Kate was in an extacy, and knew not how to sufficiently express her thankfulness.

"Our lady is a kind good creature as ever breathed on earth," he said, opening a door leading from the hall to a small retired apartment, "and if any one in the world would leave a gay assembly to attend you, it is she, so dry up your tears my good girl," and he quitted the room.

Some time elapsed, but her ladyship came not. Kate was all impatience and anxiety; perhaps though successful, she might be too late, besides she had other applications to make, for she could not expect so large a donation as that

required for her purpose at the hands of a perfect stranger; at length the sound of a light footstep met her ear, the door opened, and she was in the presence of Lady Mulgrave.

"Be seated my dear, be seated," her ladyship kindly said, taking a chair beside her, "and then tell me as briefly as possible the purport of your mission."

Kate was at a loss how to open the subject. "I hope your ladyship will excuse the liberty I am taking in applying to you," she at length began "but nothing but the urgency of the case could have made me presume to trouble you in such an affair." She hesitated.

"Speak freely my good girl" said her companion encouragingly.

"Your ladyship perhaps knows that my father keeps a little shop in the village."

"I do."

"Well," she resumed "he used to find it answer the wants of his family, and provide comfortably for us all, but lately, my lady, it has been otherwise, from some unaccountable cause his business has declined, and—and"—she stopt, "he has got into some little difficulty I suppose."

"Yes, madam—not I assure you from any extravagance or imprudence, but—but when his last payments became due—he found it impossible to procure the sum requisite, and to day, Oh lady, to day, he was arrested for the amount!"

"Poor fellow," feelingly ejaculated her ladyship, at the same time taking her purse from her reticule.

"Oh lady" continued the agitated girl with earnestness, "nothing but the thought of seeing them drag my beloved father to prison, of the anguish my mother has already suffered at the idea, the helpless condition of my little brothers, the disgrace into which we should all be plunged, could have emboldened me to apply for assistance, even to you, kind and good as I have heard you to be, but those who have never been in danger of losing a parent by such means, know little of the agony, the deep agony of the very thought!" Here she hid her face in her hands, and burst into a paroxysm of tears.

Lady Mulgrave would have interrupted her, but a sensation she could not conquer impeded her utterance. "Come," she at length said, "you have not told me the amount yet," and she laid a hand upon her arm.

Kate strove vainly to reply.

"I will ring for some refreshments," she added, rising and approaching the bell, "you stand in need of them to compose you."

"Oh lady," the weeping girl began; she could not proceed.

"Here, my dear, take this, it will revive you," continued her ladyship, herself presenting to her some wine, which an attendant had brought at her request.

Kate wept with renewed vehemence.

"Come, come, my young friend, I cannot allow you to weep thus, *indeed* I cannot," she exclaimed, taking both her hands; whilst tears stole rapidly down her own fair cheek, "we shall arrange everything to your satisfaction; then why this agitation?" Kate flung herself upon her knees be-

fore her, and covered the hands she held with kisses.

"Nay, nay, my good girl, you make me quite ashamed by this show of intense gratitude," her ladyship continued, attempting to raise her; "it looks as though a kind action was so scarce a thing in the world, that it is regarded with astonishment. Come, come, you must not throw such an imputation upon the wealthier portion of your fellow creatures, believe me they are less to blame than you may imagine; they are ignorant not only of your *worth*, but in many cases of your *wants* also, and although it is true that ignorance is culpable, yet it is more excusable than where neglect proceeds from *pride* and *hardness of heart*."

"Dear lady, if they were all like you," sobbed the excited girl.

"Well, well, we will talk this matter over to-morrow, when I intend calling upon you," added her ladyship; "in the mean time take some refreshment, and tell me the sum you require."

"The debt, lady, is twenty pounds," Kate replied, speaking with difficulty, "eleven of which my father had laid aside towards it, and the rest—"

"Then this note will be sufficient for the present," interrupted her auditor, placing one of ten pounds within her hands, "and to-morrow we shall have more leisure to see what can be done for you."

"Oh lady," exclaimed the delighted girl, half-hesitating to accept it, "I had no idea—"

"Never mind what were your ideas on the subject," she gaily replied.

"But my father," continued Kate, her eyes again filling with tears of gratitude.

"Oh, as to him, tell him he is my debtor, but the day of payment must be when I ask him for it, and not *before*, on pain of my eternal displeasure. There," she continued, perceiving a profusion of thanks were about to be poured forth from the lips of the grateful daughter, "There, you must now begone, I cannot possibly spare another moment; and your parents, think of their anxiety." She hurried her into the hall. "I wish I could send some of my people back with you, it is a gloomy night for a young female to venture out in alone."

"Oh, dear lady, *Heaven* will protect me. I care for nothing *now*," she interrupted.

"Well then, a good night to you; you will see me to-morrow; good night," her ladyship said, affectionately pressing her hand, and before another syllable could be uttered she had ascended towards the drawing room.

"Bless her," murmured Kate, as she quitted the mansion, and she kissed the memento of her kindness.

As she approached towards the gates she turned to take another look at the abode of her benefactress, when, to her surprise, she perceived her standing at a window, evidently gazing after her, although the darkness concealed her from her sight. "Bless her," she again articulated, and she moved onward. Once more she turned, she was still there. She raised her eyes towards Heaven, but her heart was too full for words. She reached the gates, and the impulse she felt was altogether irresistible. She sunk upon her knees on the green

herbage; but she could not pray, she could only weep forth her gratitude. Yet, were those tears not prayers? Ah, yes! and prayers which the Almighty will never listen to in vain.

A few moments and Kate Woodbourn arose; she turned to pursue her path. It was at *that* instant the hail-storm commenced in all its fury. She was but thinly habited, and the wind blew bitterly around her slender frame. The darkness of the wood was again before her, but its recesses offered her a partial shelter; she shuddered, and grasped the treasure she possessed with tenacity, as she entered its gloomy solitude. One half its length was passed in silence, when she thought she heard footsteps following her; alarmed for the safety of her treasure, rather than her own, she hurried forward, but the footfalls gained rapidly upon her; and finding it impossible to increase her celerity, she slackened her pace that the stranger might pass. Her heart beat violently. He approached—he was at her side; she could just discern that it was the figure of a man. He looked towards her—he passed on, but continued his glances backward; at length he stopped, as though awaiting her approach. She almost gasped for breath, and hid the note within her bosom. To walk quietly towards him, knowing that he was waiting to address her, she could not, she darted past him with velocity.

"Kate Woodbourn, is that you?" exclaimed the stranger in surprise; a faint exclamation of joy escaped her.

"Oh, Herbert, how you terrified me," she ejaculated, and stopped abruptly.

"Why, how could I for a moment suppose it was you, Kate?" he returned as he approached and took her hand, "at this time of night and in such a spot; what could have possibly brought you here?"

"Ah, I would tell you, if I *might*," was the reply, as she put her arm within his own.

"*Might!* who shall dare to forbid you telling any thing to *me*," he asked proudly.

"My father, Herbert."

"Your father! he could not require it, surely."

"He does, and I dare not tell you."

"How strange!" murmured the young man, and they walked on in silence.

"You know my father is a *strange* man sometimes, Herbert," she resumed, anxious to clear away all suspicion; "but have you heard no rumours in the village to-day?"

"Heard! no; what *should* I hear?"

"Oh, nothing; but I thought—Though it is no matter—my father, humble as we are, has his pride, you know; and he forbade me—." She stopped. "Oh, I do so wish I might tell you *all*," she concluded.

"There, there, Kate; don't distress yourself about it," he returned, touched by the simple earnestness of her manner.

"Oh!" she exclaimed, "I am so unspeakably happy, that I feel as though my heart could not contain the intensity of its joy."

Herbert pressed her hand in silence; they reached the extremity of the wood, and as they emerged from its shadows, he for the first time observed the slightness of the outer garments in which his companion was attired. The snow had

already begun to strew the earth with its unsullied purity, and the wind drove it obliquely in their faces as they proceeded. The youth knew not how to shelter his trembling charge from its bitterness, and could only support her with his nervous arm, but she careless and reckless of all danger, now he had become her protector, bounded joyously on, only eager to relieve her parents of that anxiety she knew they must be suffering.

"Herbert, you must leave me now," she said, as they came within sight of her own habitation. "You can come, as usual, in about an hour, but you need not say that we have met, good bye," and she sprang towards the cottage. "I have it, I have it, it is here," she exultingly exclaimed, exhibiting her treasure as she burst into the presence of her family, and she threw herself on the bosom of her father.

"Thank God!" fervently ejaculated the wife, raising her hand towards Heaven.

"Amen," added Woodburn, straining his daughter to his heart. "But my child," he continued, "you must tell me how you procured it, ere—he stopped."

The narration was eagerly began, and at its conclusion every eye was overflowing with grateful feeling.

"Come," the husband at length exclaimed, "let us put an end to this business. But where is Herbert I wonder? It is past his usual hour; he could have helped me to settle this affair; surely he has not heard of our misfortune, and deserted us."

"Deserted us," repeated Kate, indignantly; "no father, I have already seen him; but I thought as you forbade me to mention—"

"What girl, do you think I could be so ungrateful to this dear lady as to wish to *conceal* her benevolence," cried Woodbourn in his turn, with indignation; "no, go for him, Kate; for all the world shall know of her goodness. Bless her!" he added emphatically.

"May I then tell him *all*?" asked the delighted girl.

"All! aye child," added the mother, and tell him he shall be no son of *mine* if he does not pray for her the rest of his life for saving thy father's."

Kate bounded from the apartment, the very personification of rapture.

#### WEST KENT PLOUGHING MATCH.

On Monday, Nov. 24, a match took place in West Kent, near Gravesend. Thirty-two ploughs started, of which thirty-one were the Turnurest, with four horses and a driver, and the other one of Ransom's two-horse ploughs, without a driver. Half an acre of clover ley was allotted to each, which was ploughed very excellently by several of the ploughmen, but by none of them, in the opinion of many of the spectators, better than by the ploughmen of the Suffolk plough. The task was completed in several instances, amongst which was the two-horse plough, in two hours and thirty-five minutes. Some very fine teams were exhibited which, with the plough, cannot be estimated at less than 170*l* each, whilst the Suffolk plough and its slight pair of horses are not worth more than 50*l*. As ploughs of this description are

used by only one person in that neighbourhood, there was no competition, and therefore no prize; but the judges were so well pleased with the performance that they gave the ploughman a sovereign; indeed, the best testimony to the merits of the plough was the surprise expressed by many of the spectators at the successful competition of this apparently insignificant implement, contrasted with the imposing appearance of the Kentish plough. [See subjoined letter from a correspondent at Frindsbury]

### TO THE EDITOR OF THE "MARK LANE EXPRESS."

Frindsbury, Nov. 29, 1834.

SIR,—In consequence of the very kind and handsome treatment which my communication (made to you at the commencement of the last month) received at your hands, I take this opportunity of giving you an account of a very interesting Meeting, which took place on Monday last, in a field at the back of Chalk Church, near Gravesend, in order to try the skill of the different ploughmen in the neighbourhood. On account of the novelty of the scene in this part of the county, the company was large, and 31 ploughmen entered as competitors, with four-horse and three-horse ploughs, and after each plough had finished half an acre, the judges commenced their task, and a task indeed it proved to decide which was the best work, but their decisions gave general satisfaction. After the distribution of the prizes by the Earl of Darnley, who took great interest in this pleasing scene, the major part of the respectable spectators bent their steps to Gravesend, where they dined together in the Town Hall, the Earl of Darnley presiding, supported by the Magistrates of the Division. The day was here finished very pleasantly, and an arrangement entered into that the like may take place another year, and that good shepherds, faithful and industrious servants, of long standing, may publicly receive the rewards they so justly deserve. A subscription will be opened, which there is no doubt will receive the attention of very many. The conduct of Lord Darnley gave general satisfaction, and was worthy the imitation of all Peers in the Kingdom. I am sorry to inform you the spirit of incendiarism prevails among us, and that on Saturday night last we had another fire. A barn filled with corn, belonging to R. Knight, Esq., of Cliffe, was burnt, and had indeed must have been the man who committed this malicious act, as two labourers' cottages, containing ten children, were placed in imminent danger. It cannot be that the labourers are badly paid here, because those who are at piece-work earn 15s. per week, if able-bodied, and those who work by the day, which number is comparatively small, earn 12s per week. The labourers worked well at the fire on Saturday last, and their general conduct expressed good feeling. We have formed an Association in this neighbourhood to offer rewards, and we each agree to attend at fires with five efficient trustworthy men, with fire-buckets, who are paid from the Society's fund.

Your paper last Monday gave an account of an incendiary fire at Deal, which proved to be a stack of radish-stubble, set on fire by the stupid farmer himself in the dark of night, which has drawn on him the censure of the whole of his neighbours, who promptly flocked to his assistance, and which censure he richly deserves. At a meeting of this neighbourhood, about three weeks since, called in consequence of the fire which had

taken place in the parish of Hoo, the Earl of Darnley, who had been present at the examination of several men taken up on suspicion, declared it to be his opinion that their deplorable ignorance, and utter want of proper feeling, and a knowledge of spiritual matters, was in great measure to be attributed to the non-residence of the clergy. Of course we hailed his declaration. The Hundred of Hoo contains five parishes, some very large, and there are only two resident clergy, and they not a credit to their profession. The average payment per acre for tithes in the Hundred is 10s. and upwards. You will, I hope, excuse my thus occupying your attention, but I have several objects in view. The principal object is to extol the conduct of the Earl of Darnley, which conduct has very materially raised him in the estimation of his neighbours. We are unaccustomed to Peers of the Realm publicly expressing themselves as his Lordship did concerning the non-residence, or other misconduct of the clergy, and I sincerely hope it may act as an example to others.

I cannot finish without again requesting you to excuse my long epistle, and permit me to subscribe myself,

Yours respectfully,

JOHN OAKLEY.

### TO THE EDITOR OF THE "MARK LANE EXPRESS."

SIR,—In your valuable Journal of the 17th ult., I have read, with much interest, a letter signed, "A Country Banker," in which he suggests a "remedy for the existing agricultural distress," by means of an alteration in the circulating medium of the country, of a very novel kind, but, at the same time, it appears to me one by no means unworthy of the serious consideration of the Legislature, being (as the writer states, and very justly so,) "based on the wealth and property of the country, at half its valuation." Now, although I consider myself by no means so competent to enter upon a subject of such a nature as the currency as your correspondent (who is of course just in his element) yet perhaps a few remarks from a plain man, who has seen a little of the "world, and the things of the world," may not be unacceptable. I quite agree with your correspondent, that a paper circulation on a sound basis, is by far the most desirable, in fact, the only advantageous, kind of currency for this country, to enable us to carry on the vast concerns which necessarily require such immense amounts of money to be exchanged from one party to another daily. Mr. Mundell states the gross income of this country to be about six hundred millions per annum, and, as the highest amount of gold in circulation at any time has been only twenty-eight millions, here is a plain proof (if any were wanting,) that a metallic currency will not do. The circulation of Bank of England notes we may reckon now as about eighteen millions, (although, after the passing of the Restriction Act in 1797, the circulation rose from nine to nearly thirty millions!) the circulation of country bankers we will reckon at seven millions, which was the amount in 1822, (three years after the passing of Peel's Bill,) although for some years before it had ranged from eleven to sixteen and twenty millions; thus we have a circulation of only twenty-five millions of paper payable on demand, at this calculation, which, to any person at all conversant with business, must appear to be very inadequate for carrying on the enormous business of the nation; but the deficiency which appears at first sight to exist, is made

up by a very large amount of Bills of Exchange, which are constantly in circulation. As an instance, I may mention, that, at one period, the amount of Bills of Exchange paid into a private bank in Lancashire, as compared with all other kinds of currency, was as fifty to one. From 1803 to 1816, the quarterly average of Bills and Notes under discount by the Bank of England alone seldom fluctuated below ten millions, generally as high as thirteen, and, in 1810, exceeded twenty millions. Two more facts I will state, merely to shew how intimately the agricultural interests are connected with the currency of the country, and that, in the same ratio as the circulation of the country is reduced or increased, so are the prices of every kind of agricultural, as well as other, produce. In proof of the former assertion, the price of wheat, in 1822, when the country bank circulation was reduced to seven millions, averaged only 43s.; and, in proof of the latter, I may add, that, in 1799, (two years after the passing of the "Bank Restriction Act,") fine Jamaica coffee rose from 70s. to 196s.; West India and American cotton, from 1s. to 5s.; Cochineal, from 12s. to 54s.; Carolina rice, from 14s. to 40s.; and Jamaica sugar, from 38s. to 87s. I fear, Mr. Editor, I have trespassed too long on your valuable time; but I trust the facts I have adduced are sufficiently corroborative of the "Country Banker's" assertions, that a good sound paper currency (such as he has so ingeniously suggested,) is alone wanting to ensure to a great commercial country like this that healthy and prosperous condition it so justly merits.

I remain, Sir, YOUR CONSTANT READER.  
Liverpool, 20th Nov., 1834

### LINES,

SUGGESTED BY THE HOUSES OF LORDS AND COMMONS  
BEING DESTROYED BY FIRE.

A sudden and a fearful glare was seen

Across the evening sky,—a light arose,  
Subduing the pale moon's-ray, which had been  
Shedding on all around its calm repose.  
From the proud city's ancient halls it came,  
A wild, o'erpowering, and destructive flame.

Laying in ruins—mingling with the dust—

The structure that Time's dull and withering  
hand

Had spar'd—had hallow'd—would have spared  
we trust,

Long to have been a glory to the land.  
For there undauntedly the patriot stood,  
One motive ruling him—his country's good.

There, too, bath mind exerted its full sway,

And throngs have listened to the voice that  
woke

The hushed, hid feelings of the heart, which lay  
Chained to their home, till he the fetters broke.  
He, who perchance bath fled, but left a name  
Enrolled for ever in the leaves of fame.

All that makes England great, her children free,

Received a guiding strength—a guardian power  
Within that edifice, which now must be

With all the past, but seen by Memory's dower;  
For to the ground its dusty fragments fall,  
And nought remains of pillar, arch, and wall.

Kimbolton.

G. A. COTTRELL, 1st General Accountant.  
Excise-office, London, Nov. 27.

THE PITCHER PLANT.—There is not a more interesting spectacle of the kind, than the fine plant of *Nepenthes*, which exists in the stove of the Botanical Garden at Edinburgh. Planted in a tub, whose soil is kept moist by a covering of mosses, its stem, 18 to 20 feet long, rises from the midst of these; it is branched and climbs amongst the rafters of the roof, bearing towards the extremity very many leaves, which have quite an artificial appearance. The whole leaf, including the stalk, is two feet and more in length. The leaf, instead of being flat, is hollowed out, like an elongated pitcher; it is nine inches long, attenuated at the base, where it is curved or arched, and then it suddenly turns upward. It is ventricose, slightly expanding at the mouth, in a young state completely covered by a lid, which is flat; after a time, this lid opens, still continuing attached by a point at the back; the colour of the pitcher is pale green, spotted with red, and purple within. It has also the property of secreting a fluid, slightly acid, but transparent as the purest water,

## POOR LAWS—IRELAND.

*(From the Courier.)*

Mr. Inglis has just published a valuable and a well-timed work on Ireland. It does not, indeed, supply any new facts or profound observations, but it gives what is, we believe, on the whole, a faithful as well as a lively picture of the present condition of the people of Ireland. This, we regret to say, is *as bad as possible*. A notion has been gaining ground in this country, that the great increase in the trade and exports of Ireland, that has taken place of late years, furnished unequivocal evidence of a corresponding improvement in the circumstances of the people; but it is a radical mistake to suppose that an increase of trade necessarily brings along with it an increase of wages, or an improved mode of living. Certain other circumstances must conspire to make it have such consequences; and in Ireland these have been entirely wanting. The extraordinary increase in the exports of corn has been caused far less by the improvement than by the extension of tillage; and how paradoxical soever the assertion may at first appear, it is certainly true that any very material improvement in the mode of managing and occupying land, would be, in the first instance at least, productive of additional misery among the mass of the people.—There are in many extensive districts four or five times as many people huddled on the land as are required for its proper cultivation; and supposing they were displaced, and an improved system of agriculture introduced, there would be a decided increase in the disposable produce of the land, but there would be, at the same time, a considerable increase in the number of unemployed, houseless, starving paupers. The fact is, that owing to the vicious system that has prevailed, and continues to prevail, with respect to the occupancy of land, there is not, at this moment, *employment for half the people*. Wages are, in consequence, reduced to a miserable pittance. Mr. Inglis says, he is quite confident that if the entire amount of wages paid in Ireland, were divided amongst the whole number of labourers, they would not afford *fourpence* a-day to each!

Nothing, therefore, can be a greater mistake than to imagine that an increase of exports implies, or is any evidence whatever of an increase in the comforts and conveniences of the poor. Speaking generally, it may be unhesitatingly affirmed that there has been no visible improvement during the last two centuries in the condition of the mass of the Irish people. They are, at this day, in almost all respects, as ill-fed, ill-clothed, ill-lodged, destitute, and degraded, as in the days of Sir William Petty. The export trade of Limerick has increased with unusual rapidity; and yet the authentic details given by Mr. Inglis in the work referred to, show that the lower classes of that city suffer privations of which no Englishman can form any just idea, and which far exceed in universality and intensity the worst of those endured by the American Indians, or the savages of New Holland.

Various circumstances have doubtless contributed to bring about this deplorable state of things; but the endless division and sub-division

of the land has had ten times more to do with it than all the rest put together. But had a compulsory provision for the support of the poor existed in Ireland, this subdivision would not have taken place, and land would have been held in it as it is held in Great Britain. An English or Scotch landlord will not allow his estate to be parcelled out into minute portions, or unnecessary cottages to be built upon it, because he knows the Poor Laws will make him responsible for their occupiers should they become unable to maintain themselves. But in Ireland there has been no check of this sort to hinder the subdivision of the land. Its proprietors have looked only to the amount of rent derivable from their estates; and Ireland being a country without manufactures, or any means of employment except those connected with the culture of the soil, the competition for small patches has been very great, and higher rents have been frequently paid for estates occupied by cottiers than would have been obtained had they been let to extensive farmers. Hence the subdivision of the land, the excess of population, and the poverty and misery of the people. Such a system, if allowed to run its full course, must obviously end in the destruction of all wealth and civilization, and the division of the country into mere potatoe gardens occupied by beggars. A good number of landlords have, at last, become sensible of this, and have endeavoured to arrest the progress of subdivision, and even to consolidate the small occupancies. Still, however, they are, as compared with the great body of landlords, but few in number; and subdivision continues in most districts to be the common practice.

The introduction of a compulsory provision for the poor would at once arrest the spread of this enormous evil; and it is the only thing effectual to this end. But it would do much more than this. It would render the progress in an opposite direction safe and certain; while, by raising a bulwark between the poor and absolute want, it would put an end to the recklessness, the outrages, and the crimes inseparable from destitution and despair.

In Ireland, when an estate is cleared of its superfluous occupants, there is not one case in five in which the landlord troubles himself in the least about the fate of the wretches that are ejected. Whether they join Captain Rock, or die by the way-side, seems to be deemed immaterial. But whatever the ex-Chancellor may say to the contrary, we contend that no landlord, be he ever so good, ought to be entrusted with a power of this sort—a power far more liable to be abused, and which, in fact, has been productive of incomparably more misery than any ever enjoyed by the proprietors of slaves in the West Indies. If a landlord resolve upon consolidating the small occupancies upon his estate, and if their possessors be unable to find employment in the neighbourhood, every principle of justice and expediency requires that he should be compelled to proceed with caution, and to provide, in the meantime, for the subsistence of the persons ejected. Now, a Poor Law would have the double advantage of making landlords anxious to get rid of the idle and unprofitable occupiers of their estates, at the same time that it would hinder them from dealing,

as they too often do at present, with these persons, as if they were not men but noxious vermin; it would lay them under the necessity of providing those they meant to eject, with the means of emigrating to the Colonies, or of settling somewhere else. The former, we have no doubt, would be the mode most generally adopted; and it would be in all respects most advantageous for the parties and for the country. But it is, at all events, essential that an end be put to the present practice. The landlords are far more responsible than any other class for the present disastrous state of things; and it is not to be endured that they should be allowed to attempt to extricate themselves from the difficulties in which they are entangled, by the adoption of measures that are uniformly fatal to the public tranquillity, and never fail to occasion the sacrifice of a greater or smaller number of the poor.

But, apart altogether from these considerations, there is abundant evidence in Mr. Inglis's book to prove that nothing but the institution of a compulsory provision will ever make the landlords and people of fortune in Ireland take a sufficient interest in the well-being of the poor. It is said that a Poor Law is destructive of spontaneous charity; but if experience may be relied on in a matter of this sort, the fact would seem to be distinctly and completely the reverse. Besides what they are obliged to contribute, the landlords and opulent classes of England expend ten times more in proportion to their means, in voluntarily relieving the wants of the poor, than is expended by the same classes in Ireland. The so much talked of Irish generosity exists only among the lower orders: it is a consequence of the sympathy of one beggar for the distress of another, and not of the sympathy of the rich for the miseries of the poor. There are many exceptions, no doubt, but taking them in a mass, it may be truly affirmed that the landlords of Ireland act towards their tenants and the poor on their estates and in their vicinity, in a way of which the landlords of England, and we believe we may say of most other civilized countries, would be utterly ashamed; and which is as prejudicial to their real interests, as it is discreditable to their humanity. Mr. Inglis gives some very striking examples of what has now been stated; and we may, perhaps, lay one or two of them before our readers.

Poor Laws are, therefore, indispensable to Ireland. It is not easy to exaggerate the advantages of which they would be productive. They would shut up by far the most copious source of poverty by preventing the further subdivision of the land; they would stimulate landlords to consolidate small patches, and would make such consolidation be effected without injury to the occupants; they would give the poor a "stake in the hedge," and an interest in the stability of the existing order of things; and would go far to repress disturbance, outrage, and bloodshed, by obviating that extreme distress whence they principally proceed.

We have no confidence whatever in the Commissioners appointed to inquire into the condition of the Irish poor, and the expediency of introducing Poor Laws into Ireland. It is next to impossible that they should be able to communicate any new facts; and as for their theories, we can

tell pretty well before hand what they will be. We never, indeed, looked upon the thing otherwise than as a juggle—as a clumsy device got up to delay for a while the discussion of a most important question—and to give the Reverend and Honourable Members of the Central Board an opportunity of playing second fiddle to the ex-Chancellor, by enforcing the "sound Christian principle" of leaving it to beggars to provide for beggars. We shall be glad should it turn out that we have taken an erroneous view of the matter; but we apprehend that those who except little that is good from the Report of the Commissioners will be least disappointed.

Mr. Inglis obtained copies of the queries and instructions addressed to the peripatetic Commissioners. Some of the queries are foreign to the purpose, and others do not admit of any distinct or general answer. But Mr. Inglis, though not a Commissioner, has briefly and ably replied to those that are most important; and as his answers embrace the pith and substance of his remarks and observations on the condition of the people, we shall take leave to lay them, on the first opportunity, before the reader.

#### ANCIENT BRITISH HUSBANDRY.

The acute historian of the middle ages has justly observed, that "even in the least civilised periods, there were not wanting partial encouragements to cultivation, and the ameliorating principle of human industry struggled against destructive revolutions and barbarous disorder. The devastation of war, from the fifth to the eleventh century, rendered land the least costly of all gifts, though it must ever be the most valuable and permanent. Many of the grants to monasteries, which strike us as enormous, were districts absolutely wasted, which would probably have been reclaimed by no other means. Although the monks were vulgarly considered as an idle and worthless class, yet Mr. Bakewell shows that the agricultural riches of great part of Europe are due to them, and the earliest improvements in English husbandry are ascribed to their intelligence and industry. They were, in that early age, the only persons acquainted with the learned languages, in which alone were found the records of the agriculture of the Romans, which those who are conversant with Georgical literature know to have been carried to a considerable degree of perfection; their correspondence with Italy, as well as occasional missions to that country, and other parts of Europe, made them acquainted with foreign modes of culture; and their education, their habits, and their wealth, enabled them to apply the knowledge thus acquired with more skill and effect than could have been exerted by a warlike nobility more devoted to arms than to the arts of domestic life. They were indulgent landlords; their large revenues secured their tenants from the exactions which they suffered under less opulent proprietors, nor were they so much exposed to the hazardous services required of the retainers of the military landholders. They paid more attention to the moral conduct and the welfare of their dependants, and the courts under their jurisdiction were less arbitrary than those of the great feudal lords. The protection thus afforded, attracted many free settlers to the neighbourhood of the religious houses; the lands belonging to them were more thickly inha-

bited, and better cultivated than other estates; and the remains of agricultural buildings, the vestiges of orchards, and other improvements, then but little understood, together with the records of abbeys, both in this country and on the continent, incontestably prove that even at the remote era of the Norman conquest, much care and attention were bestowed upon rural economy by the monastic orders.

Although agriculture gradually advanced from this period, yet the paucity of the population, and the insecurity of the country, still confined cultivation to the land adjacent to the mansions of the nobility, in which the Norman Baron, as well as the Saxon Thane, lived in solitary independence, surrounded by his vassals, and owning no superior but his sovereign. Such a state of simplicity and freedom from those "trammels of the law," by which the interests of more civilised society are guarded, may have charms for the admirer of uncultivated nature, but the enjoyments which it afforded belonged only to the owner of the soil. The condition of the lower classes was wretched. Their huts contained neither beds nor moveables of any kind, except the few common utensils requisite to the preparation of their food: the peasant reposed on straw, spread upon the floor, with a log of wood for his pillow, or stretched himself in the stable with his cattle; and even the upper sort of husbandmen fared very little better. Of these, at a much later period, we are told by an accurate observer of the manners of his day, that, "if within seven years after their marriage they had purchased a flocke bed, and thereto a sacke of chaffe to rest their heads upon, they thought themselves as well lodged as the lorde of the towne, that peradventure laie seldome in a bed of downe or whole feathers." Their houses were constructed of wattles plastered over with clay, and without either glass windows or chimnies: the fire was either made upon the earthen floor in the centre of the room, or against a "reredosse," or hob of clay placed before the wall; and the oxen were stalled under the same roof. Their furniture was correspondently mean, and we learn from that strange medley of satire, morality, and manners, "*The Vision of Piers Ploughman*," which is supposed to have been written by a Shropshire priest, about the middle of the fourteenth century, that the bread then in common use was composed of peas and beans.

The accommodations of the higher orders were not much superior. Even the baronial hall was only lighted through wooden lattices, or, where unusual grandeur and delicacy were effected, through windows closed with horn or parchment; the naked walls of the apartments were occasionally hung with loose tapestry, to conceal the rudeness of the masonry; the floors were strewn with rushes instead of carpets; the beds were partly, if not wholly, composed of straw; and the lord of an extensive domain indulged in fewer luxuries than a modern farmer. More than a century later, the most distinguished families ate off wooden trenchers, or pewter plates; forks were unknown; and even in 1572, the princely residence of Skipton Castle held only eight mattresses and bolsters in the lodging of thirty-five household servants. Even the homely fare of which they were possessed was dealt out to their domestics with a parsimonious regard to economy, and nothing is further from truth than the idea, so commonly entertained, of the abundance and profusion of ancient times. But, in fact, they were not rich, even according to the estimation of money at that period.

An income of ten or twenty pounds a year was reckoned a competent estate for a gentleman; and a knight passed for extremely wealthy with one hundred and fifty pounds per annum: yet this, according to the calculation of Mr. Hallam, (who supposes twenty-four to be a sufficient multiple when we would raise a sum mentioned by a writer under Edward I.,—ann. 1300,—to the same value in our money,) was only equal in command over commodities, to 3,600*l*. The cause of this comparative poverty can only be ascribed to the imperfect state of cultivation, for many of the estates in the hands of individuals were larger than at present, and the price of corn was comparatively higher: but the same quantity was not gained from a similar space of ground. The stimulus of trade was also still wanting; and without that there is no incentive to labour for a surplus beyond the wants of mere sustenance. Living in the midst of his retainers, the feudal chieftain was supplied either from the produce of the land surrounding his dwelling, or by the contributions of his more remote tenants; his expenses consisted principally in the exercise of a rude hospitality; and the few foreign luxuries which the habits of life then rendered necessary to enjoyment, were obtained in exchange for the wool and hides of his flocks and herds, in which, from the great extent of its pasture, the kingdom abounded, and which, for the opposite reason, were scarce in Flanders, to which country and France, commercial intercourse was nearly confined. But the industry of the Flemings having extended to agriculture as well as to manufactures, afforded no market for grain. France was fed by its own fertile territory: and Italy, through which were procured a few articles of Eastern luxury, for which a taste had been acquired during the Crusades, was equally independent of the products of the English soil.

The annals of agriculture at that remote epoch are scanty and uninteresting: there is no work extant on the subject, and so little has it been noticed by historians, that it is involved in much obscurity. But from an ancient Latin tract, supposed to have been written about the latter end of the thirteenth century, and which, although chiefly a treatise on law, yet contains many passages relating to rural economy, we learn, that husbandry was conducted with more regard to precision than might be thought consistent with the rude habits of the times. It points out the several duties of the steward, the bailiff, and the labourers; from which it appears, that even in that age, when education was so rare, the farm accounts, on large properties, were kept with scrupulous accuracy; and it gives many directions respecting the tillage of land, and the management of cattle, that are not inapplicable to the practice of the present day. Yet the learned author estimates the possible returns from the soil so low, as to inform us—that unless an acre of wheat yielded *three times the seed sown*, the farmer would be a loser, if corn were not unusually dear. His calculation is as follows:—

|                               | s. | d. |
|-------------------------------|----|----|
| Three ploughings . . . . .    | 1  | 6  |
| Harrowing . . . . .           | 0  | 1  |
| Two bushels of seed . . . . . | 1  | 0  |
| Weeding . . . . .             | 0  | 0½ |
| Reaping . . . . .             | 0  | 5  |
| Carrying . . . . .            | 0  | 1  |
|                               | 3  | 1½ |

which is about the value of six bushels of wheat

at the time he wrote, and exclusive of rent, of which nothing is said. But Sir John Cullum and Sir F. M. Eden, who have devoted much attention to the subject, assume the average crop to have been about twelve bushels; and the former remarks, that "Supposing 4s 6d to be about the mean price of a quarter of wheat, and 4d a year's rent of an acre of land, the disproportion between the produce of the land and its rent is almost incredible: for if an acre produced in general only a quarter and a half, it would, if the ground was cropped only two years together, give the husbandman thirteen times the rent of his land, one year with another; a profit which the best farmers in the present state of improved agriculture can rarely reach." This, however, supposes the ground to have borne two crops of corn in every three years, which, under the system then pursued, was barely possible on the best soils; for, independently of the disadvantage of indifferent tillage, manure was so scarce, in consequence of the cattle being almost entirely pastured on the wastes, that it was not uncouth to the lord of the manor to reserve to himself the privilege of having his tenant's sheep folded upon his own farm; and lime, since so extensively applied to the melioration of some soils, was so dear, that an account in 1437 shows the price, near the kiln, to have been one-third more than that of oats. There can be little doubt, therefore, that the land, after having been exhausted by repeated cropping, was necessarily allowed to recover its fertility, during a series of years, in a state of fallow, or unproductive natural grass, for an artificial mode of laying it down to meadow seems to have been unknown; and we have, besides, records of the frequent and almost entire failure of the crops, of murrian among the cattle, and consequent extraordinary fluctuations of price, accompanied with frightful details of famine, unknown to modern times in any even tolerably cultivated country. Wheat often varied from four to sixteen shillings, and Stow mentions its being sold, in 1315, at forty shillings the quarter. He says, in his account of that dearth, that dogs and horses were used as delicious food; and he adds, that—"Theeves that were in prisons did plucke in peeces those that were newly brought amongst them, and greedilie devoured them half alive: some (it was said) compelled hunger, in hidden places, did eate the fleshe of their owne children; and some stole others, which they devoured."

This surmise respecting the state of arable land is in a great measure corroborated by the comparatively high value of meadow, which usually let at six and even eight times its rent; a disproportion which can only be accounted for, by the greater certainty of its produce, as it exceeded the difference between the expences of tillage and grass, and may be justly regarded as one of the strongest proofs of imperfect culture. There is also reason to believe, that twelve bushels of wheat per acre, is too high an estimate of the average product; for in the history of the parish of Hawstead, in Suffolk, the returns in 1387, of the manor farm, which may be presumed to have been at least as well cultivated as others of similar medium soil, are stated thus:—

|                                                    |  |
|----------------------------------------------------|--|
| 66 acres of Wheat produced 69 qrs. 2lbs. of Grain. |  |
| 26 — Barley — 52 — 2lbs. —                         |  |
| 62 — Oats — 40 — 4lbs. —                           |  |
| 25 — Peas — 25 — 3lbs. —                           |  |
| 25 — Haras — 28 — 0lbs. —                          |  |

and in that of the manor of Dorking, in Surrey, about the same period—

|                                                      |  |
|------------------------------------------------------|--|
| 30½ acres of Barley produced 41 qrs. 4lbs. of Grain. |  |
| 28 — Oats — 38 qrs. 4lbs. —                          |  |
| 5½ — Tares — 1 qr. 6lbs. —                           |  |

Hawstead farm contained 572 acres; of which 321 were in tillage, 30 meadow, and the remainder wood and pasture. The stock, consisting of 26 cows and a bull, with 6 heifers and 6 calves: 10 working oxen; 4 cart horses, and 6 colts; and 92 muttons, with 10 score of hoggerills, or two-year old sheep. The cows were fed, during the winter, with rack meat in the yard; and, as the whole of the hay was devoted to their support, the rest of the cattle must have been maintained throughout the year, either along with the sheep upon the pasture, or with the straw and halm. Such a system naturally produced an inferior stock; and, accordingly, the produce of a cow, during the summer half-year, which is the only time mentioned, was rated at 128 pounds of cheese, with half a gallon of butter, weekly. The price of a cow with her calf varied from six to ten shillings, and the produce of the milk of an ordinary one was valued at twopence three farthings per week: Ewes were also milked, and twenty, if well kept, were thought equal to three cows.

The number of working cattle at Hawstead is at variance with other accounts, and in one kept by the bailiff of the manor of Flaunchford, near Ryegate, from 1382 to 1386, twelve plough oxen are stated as the number used upon fifty-six acres of arable, of which sixteen were fallow. But it is not improbable, that part of the work at the former was performed by the customary service of the tenants of the manor, for more than five hundred persons were employed to get in the harvest, which was thus completed in two days, while in other places its average duration was five weeks. It was then, as now, a season of festivity; and harvest-home appears to have been a scene of much rustic jollity, accompanied with some customs that have since fallen into disuse.

About that era, the reign of Edward III., may be dated the dawn of general improvement in this country.—*Hereford Times.*

### THE MILLERS' MONOPOLY.

TO THE EDITOR OF THE SUFFOLK CHRONICLE.

Sir,—Having in a former letter endeavoured to draw the attention of the public to the extravagant high price of flour compared with the low price of wheat, I should have been content to remain silent, and left the further consideration of the subject to correspondents more able than myself, to expose and combat this most odious monopoly; but, as silence may be misconstrued, and having been challenged and assailed in no very courteous language, by Mr. Albion, in your paper of Nov. 1st, I crave your indulgence to give publicity to the following remarks:—

It cannot be denied, without the most gross falsehood, that the present high price of flour bears any proportion to the very low price of wheat, and it shows both ignorance and knavery for any man to assert it, and to submit such logic through the medium of the press, proves consummate impudence and insulting to the meanest capacity. Sir, I contend, as in my first statement of the 25th ult., that the millers, at the present time, are exacting from the public a profit of more than 50 per cent.; to prove which, the calculation is easily construed, and this enormous impost the farmers, knowingly and willingly, accede to, for unfortunately it is too true—such is the extent of this powerful monopoly—that the majority of the

farmers are compelled to submit to the dictation of the great millers; and, however willing and anxious some of the smaller millers may be to follow the example of other tradesmen, in the field of competition, they dare not attempt it—they must, like the stream which turns their mills, go with it, or be crushed in like manner as their grain is, or, in other words, be sent to Coventry, for attempting to undersell their powerful superiors. Sir, custom is a dangerous law, and by the custom of this trade, unknown to any other, if there are twenty millers on one stream, they regulate each other by one uniform price, and generally the most wealthy, or the one who does the largest business is censor, and sets the price, and woe be to him who differs from that censorship. Call you not this, ye starving labourers and artisans, monopoly, and one of the most base and cruel? nor is it confined to flour alone, but applicable to every description of meal.

The sapient Mr. Albion tells you, the poor do not purchase flour of the millers, but of the bakers; to whom they allow from 2s. 6d. to 4s. per sack for selling, and he discovers a mare's nest, by stating, that the public may purchase their wheat, and send it to the mill to be ground; that upon an average of years, milling will not be found a profitable speculation; that at the present time flour is not proportionably dear. But he does not tell you they are not in the enjoyment of a baneful monopoly, which allows them to take advantage of the bounty of Providence to make milling a profitable speculation.

Most wonderful and Jesuitical Counsellor—can the poor man, can the tradesman, can the public generally, with the least propriety, go into the market to purchase wheat to send to his mill to be ground, and subject themselves to the craft and heavy tollage thereon—why, I admit it is not impossible, and also admit that his own suggestion strikes at the root of the monopoly, and if acted upon, with the aid and assistance of steam apparatus, both wind and water-mills would, at no very distant period, be totally annihilated.

This monopoly has not that baneful effect in London, as in the country—for when flour arrives there, it must be sold, and the large bakers frequently purchase it at their own price, and it is sold to the public, by the bakers, under great competition.

In conclusion, I am constrained to make these remarks, prompted by no other motive than a desire to expose and eradicate an abuse injurious to the public, and more particularly that large portion which now unhappily pines in poverty and want; for, from the extremely low price of corn, the farmers have been obliged to lower the price of labour, in the full and warranted expectation that their scanty pay would be compensated by a proportionate reduction in the price of flour and meal, whereby their extreme poverty would have received some alleviation.

Hoping and trusting that every parish throughout the kingdom will adopt the system and suggestion of your Palgrave and Blything Hundred correspondents, inserted in your paper of Nov. 1st, and to whom I proffer my thanks, and that the community at large will use their most strenuous exertions to obtain for the poor, cheap bread, by encouraging, as in every other necessary of life, a fair and honourable competition, divested of an injurious and interested monopoly, is the sincere wish of

Your respectful and obliged correspondent,  
Sudbury, Nov. 25, 1834. AN OLD FARMER.

## THE CORN TRADE.

Sir,—It has been given in evidence before the Agricultural Committee (May, 1833), "That the produce of our harvests on the average is deficient each season, one month's quantity of the annual consumption of the nation; that for the last 10 years the stock reserved at the end of any season has scarcely equalled a month's consumption, and the alarming fact was stated in evidence, that if we were now to have had so bad a harvest as that of 1816, the deficiency could not be supplied from all the world." Besides this unquestionable deficiency of produce and want of stock to meet, we have the intolerable pressure of the middle men, by whose doings the grower is deprived of from 30 to 40 per cent. on the value of wheat, and the public charged from 30 to 40 per cent. over the value of bread. As the matter stands at present either the farmer should be getting 52s per quarter for wheat, or the price of the four-pound loaf should not exceed *sixpence*. Allowing the miller 9s per quarter for profit and expenses of manufacturing into flour, and the baker 12s per sack for manufacturing into bread; but instead of this the grower is getting but an average of about 37s or 38s per quarter for wheat, and the public is charged *eight-pence* for the four-pound loaf, which difference of 2d per loaf on the consumption of London alone for one week amounts to 19,193l.

It may be asked who are the middle men, and point out their doings? The merchant who buys of the grower either upon his own account, or on commission for another, and lays five or six per cent. on the first cost for outlay, &c. The speculating merchant who purchases of the latter, also lays on at least six per cent., and the charges attending delivery, &c., amount to about three per cent. The Speculator consigns to a factor on the Corn Exchange, who demands a price to cover freight, carriage, *del credere*, commission, charges, interest, &c., amounting to about 10 per cent. The miller purchases through a party who advances payment for him at 2½ per cent. The miller consigns the flour to a factor, whose *del credere*, commission charges, &c., amount to about 10 per cent.; from whom the baker receives it thus encumbered with 30 to 40 per cent., and consequently the price of bread enhanced upon the consumer; and even if the impositions extended to 90 per cent., as might be the case in like manner, the existing corn law is incompetent to prevent it.

So far for one part of the system arising from inadequate corn laws; but it is in the power middlemen possess of causing prices to decline, duties to advance, and to check importation, or prices to advance, duties to reduce, and increase importation, as it may suit their purpose either for making purchases or selling out, that the great and serious injuries arise to the grower as well as the consumer, and the miller and baker, in their turn, not only by glutting the market at one time or withholding supplies at another, but by means which the present corn-law system of returns and averages actually afford them for working this dangerous influence, prejudicial as it is to the interests of the nation.

In September last certain corn returns were detected in London, in which *foreign* qualities were included as *British* growth, and were found to make a difference of 8s per quarter on the week's averages. The detection having been by mere chance, there is no knowing to what extent that artifice has been practised. It is also known that certain extensive speculative contracts have been recently made, the returns of course sent in and included in the averages, yet the delivery is ex-

tended to July, 1835, and even to 1836. It is further known that frequently A sells a considerable quantity of corn to B at a certain price, of which a return is made and included in the regulating averages. A re-sale of the same lot of corn takes place back again from B to A at another particular price, of which a return is, of course, made, and goes into the averages; but no delivery or transfer of corn at all takes place between the parties; probably the article only existed in name and not in grain. But these are only a few of the various modes practised by middlemen in order to reduce or enhance the averages, and the consequences of such operations, and the before-mentioned impositions, are, the farmers complain of unremunerating prices and agricultural distress, at the same time the working classes cry out "Dear bread!" and thus the agricultural and manufacturing interests of the country are, to the prejudice of the national welfare, disunited.

The present system of returns and averages answer no other purpose than the middleman's; it is the machinery of their artifice, and fraught with mischief in its prejudicial tendency and effect upon value and prices, incompetent to adjust the relative value of corn and bread between grower and consumer, and therefore an improper means by which to regulate the duty on foreign corn for home consumption. I would suggest the abolition of the return and average system altogether, and propose that foreign corn and flour be allowed into consumption in certain quantities, and at several periods of the year by the Privy Council, at a duty according to the present scale, to be fixed by the Board, and according to the produce of the harvest, the extent of stocks, the state of prices, or other existing circumstances.

As the corn law is also defective in providing against the event of a failure of the wheat crop, and in insuring a certain stock being held over from year to year to meet the usual deficiency between the produce of the harvests and the consumption of the nation, and with a view to prevent the imposition of enormous commissions and charges of middlemen, which reduce the value of wheat to the grower, and at the same time enhance the price of bread on the consumer, and to remove the operations of such middlemen from the corn market altogether, except one particular class, I would propose,—

That merchants in the united kingdom purchasing, holding stocks of, and selling *home-cultivated corn*, and *home-made flour*, should register and enter into bond to hold the following stocks:—Any quantity of *home-cultivated wheat* and *home-made flour*, not less than 2,000 quarters, or more than 4,000 quarters, or any quantity of *foreign wheat* and *flour in bond*, not less than 3,000 quarters, from whom only, and out of their said stocks, whatever quantities of foreign wheat and flour the Privy Council may deem expedient to allow into consumption shall be purchased and taken, and foreign wheat and flour not to be sold for, or permitted into consumption through any other channel. No other merchants than those so registered and privileged to purchase, hold, or sell any quantity of wheat of home growth or home-made flour, exceeding 50 qrs.

The stocks of registered or privileged merchants to be exchanged or renewed as frequently as they may wish; but at all times the quantities stated to be kept up, or in default thereof the privilege of the defaulter to cease for the remainder of the year or season.

Direct trade between the growers of corn in the united kingdom and millers, maltsters, distillers, other

manufacturers and retail corn-dealers, and between millers, bakers, and retail mealmen, to be free, and their respective stocks unlimited.

Persons acting between parties in the sale and purchase of home-cultivated corn and home-made flour, shall be sworn brokers, whose charge for agency, factorage, brokerage, commission or delcredere, shall not exceed *one per cent.* on the price.

The import, bonding, and export of foreign corn and flour to be free and open to all indiscriminately, and to be extended to all the bonding ports in Great Britain and Ireland.

The proposed plan would secure to the nation the reservation of a certain stock of wheat and flour, from year to year, by the privileged merchants, and as their stocks could not exceed a certain quantity of home growth, the produce of the country could not be stored up in any greater extent in order to withhold it from the consumption. Direct trade between growers and millers, and millers and bakers, would become more fixed and extensive; the difference between the relative price of wheat to the grower, and of bread to the consumer would be but a reasonable remuneration to the miller and a fair allowance to the baker; and this direct trade would serve to regulate the stockholding merchants' prices. Foreign corn and flour would go regularly through one channel into consumption, and the duties thereon levied as at present. It would place in the pockets of the growers of corn and consumers of bread, some millions annually, now exacted from them by means of the middlemen. J. F. S.

[We give insertion to the above letter, as it evidently proceeds from one who thoroughly understands his subject. In doing so, however, we do not pledge ourselves to an approbation of his plan, further than to say that it is worthy of consideration.—Ed.]

## SOME ACCOUNT OF THE FAIRS IN SCOTLAND.

(From the *Quarterly Journal of Agriculture*.)

BERWICKSHIRE.

**I. DUNSE FAIRS AND MARKETS.**—Dunse is a small town, situate on the northern margin of the richly cultivated Merse, at the southern base of the Lammermuir Hills. It contains 3469 inhabitants. It lies in a N. W. direction from Berwick-upon-Tweed 14 miles; 10½ miles N. from Coldstream; and 44 from Edinburgh. Ten fairs and markets are annually held at Dunse. Of these three are old established fairs for cattle, sheep, and horses, and the hiring of servants; the others have been recently instituted for the sale of sheep. We shall first describe the old established fairs.

**1. DUNSE JUNE FAIR** is always held on the first Thursday in June. About 2000 cattle are brought to this fair, the greater part of which are fat short-horns; a few half-fat and fat black coloured cattle from the northern and midland counties; and the remainder a good show of milch cows. One-half of the cattle are fit for the butcher, and are mostly purchased by English dealers, who drive them to Morpeth, Darlington, Skipton, Wakefield, &c. A small portion only is purchased by the Edinburgh dealers and butchers, though Mr. Gray, flesher in Edinburgh, has been known to purchase 100 of them; but this seldom happens, as fat beef at this season is generally worth more in the English market than in Edinburgh, the latter market being well supplied at this season from East Lothian, Fife, and other counties north of the Forth. This fair is considered to contain the best

show of fat cattle in the south of Scotland. About one-fourth of the number is composed of half-fat and lean short-horn steers and heifers, chiefly two years old, which are mostly purchased by dealers from Yorkshire, Lincolnshire, and other English counties. Of these, most of the steers go into Lincolnshire, where they are sold to farmers, who keep them twelve or eighteen months, and then send them to Smithfield market, where they are called Lincolns, although bred in Scotland. The heifers generally go no farther than Yorkshire, where they are also sold to farmers, who keep them as cows till they are five and six years old. Should they be in calf when sold in Dunse, the dealers like them the better. When aged, the Yorkshire farmers sell them to dealers, who either send them direct to London, or dispose of them at convenient markets, where they are picked up by the London cow-dealers, who, in selling them to the cow-feeders in Smithfield, call them Yorkshire cows, although they were bred in Berwickshire. The quality of the short-horns in this county is now so much improved, that the breeders may challenge any county in England for steers; and breeding being extensively cultivated, the show of fat is very superior at this fair; but since the establishment of so many winter and spring cattle markets in the county, it has rather fallen off in numbers, but improved in quality. It is not uncommon to see two-year olds from 60 to 70 stone of 14lb. The great bulk of the cattle are now fed off at two years old in that county. We have seen the late Mr. Robertson of Ladykirk receive twenty-five guineas a piece for his two-year-olds. The milch-cows make a conspicuous figure at this fair. All the aged cows are purchased by dealers for the Edinburgh market. Young cows are purchased by farmers and farm-servants for country use. Young heifers in calf meet a ready sale from the Yorkshire dealers, a vast number of whom attend this market.

The show of sheep at this fair is but middling, generally not exceeding 700 or 800, of all sorts,—Leicester, half-bred, and Cheviot hogs,—Cheviot and black-faced wethers,—Cheviot and black-faced ewes and lambs. Some of the lots are fat. They are bought by farmers and graziers in the neighbourhood and East Lothian; and a few are purchased by gentlemen for the use of their own tables. There is also a horse market, but very few good ones are shown, being mostly of the inferior sorts. This is a fair of great importance in Berwickshire. It generally clears the hands of the farmers of all their disposable fat stock at this season.

2. DUNSE AUGUST FAIR is held on the 26th of August, or the Tuesday after, in case that date falls on a Saturday, Sunday, or Monday. Some years ago this was a large fair, the number of cattle being fully as great as at the June fair; but lately it has fallen off very much, the numbers seldom exceeding 700 or 800, mostly short-horns, and a few black-coloured cattle. One-fourth of them may be termed fat, but not many of them prime fat, which are mostly purchased by dealers and butchers from Edinburgh, Morpeth, and Newcastle. Very few dealers from the midland counties of England attend this market to buy fat cattle. About one-half of the cattle are lean, and half-fat, short-horn steers and heifers, two years old. When a scarcity arises from any cause in England, these are purchased for grazing by the Lincolnshire and Yorkshire dealers; the steers for Lincolnshire, and the heifers for Yorkshire. A few of them are bought by farmers and

graziers in the country around, and particularly in East Lothian. The remainder are milch-cows, fat and half-fat black coloured cattle. The former are purchased by Edinburgh cow-dealers, and the latter for home feeding. Sometimes, however, they are driven south. Mr. John Thomson, of Mungoswalls, purchased last year from 80 to 100 half-fat for Woolpit in Suffolk. The show of sheep at this market is very middling, consisting generally of about 300 or 400, with a few lambs and fat sheep, the latter being purchased by Morpeth dealers and Berwick butchers, and the former by graziers in Berwickshire, and the adjoining counties. The show of horses, like that of the June fair, is very middling, and the same remarks will apply to both. This is also a hiring market for shearers, whose wages are regulated by St. James's fair at Kelso on 5th August.

3. DUNSE NOVEMBER FAIR is held on the 17th of November, or the Tuesday after in case that date should fall on Saturday, Sunday, or Monday. This fair, like the August one, has fallen off very much. About the same number of cattle are shewn, and generally of the same description both in quantity and quality. The fat are generally purchased by the same customers as at the August fair. The half-fat and lean cattle, whether short-horns or the black-coloured kind, are purchased by farmers and graziers in Berwickshire, and particularly East Lothian, where many go to be fed on turnips, and distillery offals, and wintered on half turnip and straw. Very few milch cows are shown at this season, and these few are purchased by the Edinburgh cow dealers. A few lots of small lean black-coloured cattle from All-Hallow Fair are generally exposed for sale, and which are purchased by farmers for wintering on straw and rough winter pastures. The show of horses is scarcely so good as at the two preceding fairs.

4. DUNSE SHEEP-MARKETS. These constitute the recently established markets which have been alluded to. There are four of them held at Dunse, and were established about eleven or twelve years ago through the exertions of Mr. James Dickson of that place. The first takes place on the fourth Wednesday of March, principally for the sale of ewes in lamb, although several lots of hogs and wethers are brought forward. The numbers may be about 1000 to 1200. The ewes are mostly of the Cheviot and black-faced breeds from the Lammermuir hills, with a few Leicester and half-bred ewes. They are principally purchased by farmers and graziers in Berwickshire and the adjoining counties, particularly East Lothian. Most of the proprietors and farmers who kill their own mutton and lamb supply themselves at this market with small lots of ewes for what are termed "pot flocks." The hogs and wethers are purchased by the same customers. Sometimes a few lots of fat sheep are presented, which are purchased by the Morpeth dealers.

The second sheep-market is held on the third Wednesday of May, principally for hogs and wethers. The number shewn may be about 1500, one-half of which are Leicester and half-bred hogs, the other half, Cheviot hogs, Cheviot and black-faced wethers, Cheviot and black-faced ewes and lambs, and a few fat sheep. The largest proportion of the whole is purchased by farmers and country dealers in the neighbourhood and adjoining counties, particularly East Lothian. Some of the Leicester hogs are nearly fat, and only require a few weeks' feeding after being clipt. The prices of this market, like all other rough hog

markets, are a good deal regulated by the price of wool.

The third sheep-market is held on the second Wednesday of July, principally for the sale of lambs, although a few others of different sorts are brought forward. Of 2000 lambs and sheep shewn, two thirds of the lambs are Leicester and half-bred, between the Leicester ram and the Cheviot and black-faced ewe, and the remainder Cheviot and black-faced. The Leicester and half-bred lambs are purchased by farmers who keep no breeding stock. They buy lambs at this season, turnip them well during the winter, clip them and feed them the following season. A few of the Cheviot and black-faced lambs are purchased for the same purpose, but most of them, if fat, are bought by butchers and dealers; or they are purchased by farmers, who graze them on high land, and keep them in only growing condition, as this kind of stock does not come so early to maturity as the finer sorts. The fat sheep are purchased by the Morpeth dealers and country butchers, the half-fat and lean by farmers and graziers from the neighbourhood and adjoining counties.

This is also a great wool market, and is attended by almost all the wool-staplers from Yorkshire. By the time of this market they have seen the stock of wool in the farmers' hands; and as the Yetholm fair is over, and the price to a certain degree fixed, sales are more quickly effected here than at Yetholm. Much business is done at this market, perhaps more than at any other wool market in the south of Scotland. Berwickshire being a great sheep-breeding county, an immense quantity of wool is raised in it, and it forms one of the principal commodities which the farmer has to dispose of. The Berwickshire farmer is therefore much interested in the wool-market, and looks forward to it with great anxiety. We have reason to believe that some of them have 1000*l.* worth of wool to dispose of this season.

The fourth sheep-market is held on the fourth Wednesday of September. Fully 2000 are shewn, principally draft ewes, about two-thirds of which are Leicester and half-bred, the remainder Cheviot and black-faced draft ewes, and a few wethers and fat sheep. The ewes are purchased by those farmers in the county, and from East Lothian, who keep no breeding stock, but what is called a "flying stock." From these ewes a lamb is taken, which is sold fat off the ewes the following May, June, or July. The ewe is immediately thereafter fattened and sold. It is considered fair payment to get the lamb and the wool of the ewe for ten or twelve months keep of the ewe on good feeding farms. The average profits may be 25*s.* for Leicesters and half-breds, and 20*s.* for Cheviots, greater profits than which are often realized, particularly by East Lothian farmers, who can force lambs early into the Edinburgh market; but the pursuit of this system is attended with a considerable expense. When draft ewes can be bought cheap, they leave a profit considerably above cost price under this management; but taking one year with another, and deaths into account, farmers seldom receive a greater profit than the cost price. The high as well as the low lands of Berwickshire being now completely drained, the ewes are generally very sound, and thrive well with those who purchase them, and they generally change their ground for the better.

When these markets were first established at Dunse, the numbers of sheep shewn were small and the buyers limited; but they are every year becoming more important, and bid fair to benefit

both the buyer and seller. Before their establishment the lambs in Berwickshire were often driven to Yetholm and St. Boswell's, the hogs to Whit-sunbank, and the ewes to St. Ninian's; and they were frequently purchased at these markets by Berwickshire and East Lothian farmers, who had to bring them back over the same ground they had travelled. This playing at "cross purposes," as it might be termed, imposed a heavy expense on both buyer and seller, besides being very detrimental to the stock. It is no wonder, therefore, that these Dunse markets are improving, and found useful and convenient to that part of the country.

II. BERWICK FAIRS.—Berwick is a considerable town, containing 8920 inhabitants. It stands on a corner of land, on the north bank of the River Tweed, at its confluence with the German Ocean. Its corporation lands form a neutral territory between England and Scotland. It is the principal shipping port for the exportation of agricultural produce from the counties of Berwick, Roxburgh, and North Durham. It was the first port north of the Tweed which fitted out snacks for the London trade. Two hundred thousand qrs. of grain are said to be annually exported from it to London; and during the war 30,000*l.* worth of eggs were annually exported; but since the egg market in London has been inundated with importations from France, that trade has been completely destroyed. Three fairs are annually held in Berwick. The first is held on the second Friday after Whit-sun Tuesday. The number of cattle generally shown at this fair amounts to 800 or 1000, one-half of which are fat, the other half-fat and lean. The fat are of superior order, not inferior in kind and condition to those shewn at the Alnwick and Dunse fairs. The same buyers attend this fair as at Dunse, for it often happens the day after Dunse June fair. It is unnecessary to repeat our observations on Dunse June fair, as they strictly belong to this Berwick fair. No sheep are shewn at this fair. A few north country black-coloured cattle attend it. The second fair is held on the Wednesday before the 26th of August, but it is more useful for the hiring of shearers for the ensuing harvest than the sale of stock, though a few scores of milch cows, half-fat and lean cattle, are brought forward, but they are unworthy of notice to strangers. The third fair, held on the first Wednesday of November, is also unworthy of notice.

III. COLDSTREAM MONTHLY MARKETS.—Coldstream is a small town on the north bank of the Tweed, containing 2897 inhabitants. It is situated up the Tweed above Berwick 14½ miles; from Dunse 10½ miles in a south-west direction; east of Kelso 9½ miles. A fine bridge which spans the Tweed at Coldstream, connects England and Scotland, and forms the extension of the mail road from Edinburgh to Wooler, through Cornhill, from which last place it is 1 mile, Wooler 15½ miles, and Newcastle-upon-Tyne, 61 miles.

These monthly markets were established about twelve or thirteen years ago, and for some years were held on the last Thursday of the month from December to May, both inclusive; but they are now held on the last Thursday of every month throughout the year. But the former period from December to May still embraces the most important time of these markets. During those months, about 600 or 700 cattle are shewn. The greatest proportion, at least three-fourths, of which are fat short-horn steers and heifers, two and three years old, with a few half-fat and lean steers and heifers and milch-cows. The fat are principally bought by the Morpeth dealers, although it occasionally

happens that the Edinburgh and Glasgow dealers can afford better prices and drive them to these markets. If fat is scarce in the south, Yorkshire dealers attend, and sometimes in considerable numbers. The Newcastle, Shields, and Sunderland butchers also buy at this market. As the fat cattle at this market in the spring months, is inferior to none in the kingdom, dealers can supply themselves with cattle of all descriptions for the cutting and shipping butcher, their weight being 40 to 80 stones, and sometimes as high as 90 to 100 stones. Occasionally some superior lots of north country black-coloured cattle are shewn. The half-fat and lean short-horn steers and heifers shewn here are excellent, and seldom will any one regret buying bred cattle at these markets, as they invariably thrive well, the neighbourhood of Coldstream having long been famed for breeding good short-horns; the true blood being in almost every man's stock, and it will always tell on good keep. In the other months of the year, a good show of cattle may sometimes be seen, but there is no calculating on a fine show but in those which we have mentioned. The milch-cows are bought by the Edinburgh cow-dealers. A few of the young cows are bought for country use. The sheep shown throughout the year constitute a more regular market than the cattle, being from 500 to 600 monthly, principally Leicester and half-breds. The sheep are all intended for the butcher. In the spring months are to be found Leicester and half-bred dinmonts and gimmers, and Cheviot wethers, the former weighing from 16 to 24 lb. per quarter. The Morpeth dealers pick them up, but since the introduction of steam navigation from Leith to London, a few have been bought for the Edinburgh market, and thence sent to London alive, or in carcass. From May to September, clipt hogs of young dinmonts and gimmers, and yeld ewes, with a few fat lambs, are presented; and from September to January, dinmonts, gimmers, and fat or cast ewes that have had lambs, and Cheviot wethers, are to be found. Very superior lots of fat sheep are shewn at these markets. Mr. Thomson, of Scrammerston, has shewn dinmonts in spring from 26 lb. to 28 lb. per quarter, and his ewes 24 lb., but his sheep have a dash of the Tees-water blood in them, and that gives the weight. The sheep shewn at Coldstream are of a superior cast, but how can it be otherwise on Tweedside, which has long been famed for Leicesters and the quality of its land? These markets appear to improve every year.

*(To be continued.)*

### A COMIC RURAL SONG, UPON THE POTATO CROP.

AND SUPPOSED TO HAVE BEEN WRITTEN BY THE POTATO.

*(Sung at the Meeting at Market-Hill.)*

When first we came to this Green Isle,  
By fam'd Columbus brought,  
The natives boiled our tops like kale,  
For roots they never sought;  
Until the spring of the next year,  
When turning up the ground,  
More rich than a Peruvian mine  
Our roots the natives found.  
For centuries then, it is well known,  
A friend we ne'er deceived,  
And with 'cead mille falta still,  
We always were received.

A few years back we must confess,  
And do confess with pain,  
Of partial failures in the crops  
The farmers do complain.  
Why this is so, all wish to know,  
Is it nature, charm, or spell?  
Bright sovereigns twenty he will get.\*  
Who can the reasons tell?  
Some say, the failure was because  
The seed were cut, if so,  
Why did not that affect the crops  
An hundred years ago?

Some say that we were hous'd too soon,  
Shut up from air and light,  
And there got leave to heat and sweat,  
And that's what caused the blight.  
Some say the seasons were too dry,  
Too much heat in the ground;  
Our moisture thus extracted was,  
And we became unsound.  
Some say the sun's hot scorching rays  
On us got leave to shine,  
Which caused the failure—and some say,  
These causes all combine.

*But we do know the very cause,  
To us it is no puzzle,  
You all remember Thirty-one,  
You would sow mangel wurzel.  
And turnips too nought else would do,  
To them your dung must go,  
Whilst we were set on lime and soil,  
And as we could might grow.  
The dwarfish seed of this bad breed,  
Next season you did set,  
And now you see the bad effects,  
Old friends for to forget.*

When farmers thus deserted us,  
A charm then we found,  
That all their watching could not keep  
Their turnips in the ground.  
This charm quite puzzled Mr. Bruce,†  
No cause he knew at all;  
But just to please the farmers, said,  
The *linnets* done it all.  
But as we're not inclined to spite,  
And wish the country well,  
How you may have good crops again,  
Now listen and we'll tell:

Still keep your seed mixed up with mould,  
Or where we'll get the air,  
And when the ground's a little damp,  
Then plant us out with care.  
These two plain rules, if you observe,  
And give us your manure,  
For generations yet to come  
Good crops we will ensure.  
Of mangel wurzel, turnips, now,  
We only this will say,  
The day you took these plants for us,  
You threw your wits away.

\* In allusion to the premium offered by the Royal Dublin society.

† Mr. Bruce is the Agriculturist on Lord Gosford's estate, and had ascertained that the small birds picked up the turnip seed just as it appeared above ground.

JOHN SLATER, Beadle, Brewers' Hall.

## TYLNEY HALL.

A NOVEL.

BY T. HOOD.

The grotesque and fantastic figures with which this work abounds, are all drawn in Mr. Hood's pleasantest manner. We recommend it to the perusal of all our readers, and in order to give them a specimen of its general style, we extract the following description of a Coroner's Inquest held in the county on the untimely death of one of Sir Mark Tyrell's sons—

"Such was the coroner for—shire, and attorney withal, for he was placed on the Rolls before the present high duty on indentures, which makes it a matter of more difficulty for an errand boy to succeed his employer, and stand in the shoes he formerly blacked. His promotion, however obtained, had been far from slow, and the rapidity of his rise seemed to have influenced his character. He bounced into the room, bobbed a hurried bow at the justice, threw himself into the appointed chair, and began dabbling the bill of a pen in the inkstand, with the eagerness of a duck's in a gutter. Whatever portion of time may be a jiffy, in half its usual space he had rubbed his bald head, blown his nose, and put on his spectacles, and then, at his best pace, began on a dozen topics at once, as if talking, not walking, a match against the celebrated Mr. Gurney. As far as the shortest of short-hand could collect, it ran thus:—

"'Strange weather, gentlemen,—devilish dirty though! Dick count the jury. Famous year for birds, they say,—shot seventeen brace myself. Foreman—eh,—Master Tablet? Sharp work, your worship, for one day: two visitations, a found drowned, and an accidental;—posting's unconscionably high.—Mr. Justice, you'll be at the Blue dinner?'

"'I rather think not,' said the Justice, in a dry tone.

"'Sorry for it,' resumed the inquisitor. 'Capital dinners at the Eagle—very good house—wines excellent,—gentlemen, I needn't lay down—we've met before. Mr. Bundy, have patience—slow and sure. A very well proportioned room indeed,—very. Poor Sir Mark!—witnesses all in attendance, Dick? (the clerk nodded.) It's a melancholy event,—hadn't we better open a window? Such a promising young man!—If you please we'll view—where's the body?'—Gregory, show the way—' and jumping up from his chair, as if to pick up a child, or save the post, or catch a wasp, the coroner scuttled along the room, and trundled down stairs with his twelve satellites in his train. The domestics and the tenantry, with the common wish of seeing and hearing all they could, joined the procession, and the Justice and the Creole were left to themselves.

"Guided by the obsequious Gregory, the coroner and jury soon found themselves in the drawing-room, where the dead body, supported on tressels, awaited their inspection. \* \* \* The coroner, to whom such sights were familiar, after a momentary glance, turned away to a window, and found his view in a prospect of the park. \* \* \*

"'Hic jacet,' said the foreman solemnly, 'what a melancholy memento of mortality; he must measure six feet.'

"'Aye, more nor that,' said Mr. Benson, scanning the length with the critical eye of a carpenter, and in a moment his pocket-rule was travelling along the body, and the product was an inch and a half above the two yards.

"'What matters feet and inches of flesh,' exclaimed the loud, harsh voice of the Ranter, all clay—potter's clay—pipe clay.' \* \* \*

"Here he was stopped by the coroner, with his usual hurry.

"'Amen—amen,—better another time. Well gentlemen—what a beautiful room this is! A very fine corpse, eh!—poor young man—who carries snuff? Dr. Bellamy, you've examined the body?'

"'I have had that pleasure,' replied old Formality, with an instinctive bow to the corpse, which during its life, had once done him the honour to become his patient.

"'Then, gentlemen,' said the coroner, 'all we have to do—'

"'Not till I have lifted up my voice,' said the Ranter, 'twenty coroners shan't prevent a word in season! no, nor twenty fiery dragons,—what's the use of death, if it ain't to be improved on?' \* \* \*

"'I say I've to sit on more bodies, and I can't trifle,' said the coroner, raising his voice.

"'And I says eternity first,' said the pertinacious Ranter, 'what's sitting on bodies, to sitting on souls? what can you say to that?'

"'That souls will keep, and the bodies won't,' answered the coroner. 'Gentlemen, you've all viewed?—seen all you can see—follow me? and like an old Young Rapid he trotted off, followed by his company. \* \* \*

"Well, gentlemen, you've seen the body,—warm weather, Mr. Justice, won't keep long,—Mr. Bundy, don't talk,—what's the time, Dick?—I forgot last night to wind-up,—very simple case, gentleman; lies in small compass,—where's the witness?—Dick, swear in Mr. Walter Tyrrell.'

"The Creole took the book from the clerk with some emotion, and repeated an assenting 'So help me God.' He then proceeded to relate the occurrences of the evening up to the fatal discharge into the moving fern, suppressing only the verbal directions which he had himself given for the aim of the weapon.

"'That will do, Sir,' said the coroner; and he was adjusting himself to address the jury, when, after a suppressed remonstrance from the foreman, Mr. Jenkins, more untractable than Tablet had anticipated, persisted in putting a few questions to the witness.

"'By your favour, Mr. Walter Tyrrel,' was his first interrogation, 'and I should wish you particularly to call to mind the circumstance, and take time to consider before answering,—Did he jump up a yard high, as they say people do when they are shot?'

"'I saw nothing of the kind,' answered the Creole.

"'That is very odd,' remarked the pompous Mr. Jenkins. 'Perhaps you will be as good as inform, Sir, where he put his hand first,—his side or his head, or his back? Some say feeling is in the spinal marrow, and some say in the heart, and others say in the brain.'

"'My observation was not so particular, Sir,' said the Creole, with a look of annoyance.

"'One more question, Sir,' said the persevering Mr. Jenkins, 'and I have done. Perhaps you could name the maker of the gun?'

"'Pshaw—any body you like, Sir, interrupted the impatient coroner. 'Gentlemen, you've heard the witness—evidence very clearly given,—Dr. Bellamy will favour us with his post mortems.'

"The personage thus appealed to proceeded with great gravity, and a technical minuteness equally tiresome and revolting, to describe scientifically the complicated injuries the body had received, concluding with his decided mature professional opinion on oath, that the receipt of the united charges of a

double-barrelled gun into the human chest would be sufficient to cause the death of the individual.

" 'Thank ye, doctor,—very clear,' said the coroner. 'Well, gentlemen, you have heard all—right lobe—left lobe—sternum—laceration—hemorrhage, and so forth—capital evidence—needn't read it over—Gregory, go and order my chaise—gentlemen, I am going to sum up. Here's a young gentleman—heir to a fine estate—an elder brother shot by a younger brother—shot by mistake for a rabbit. You must dismiss all prejudice, and so forth. Very ugly case—can't be two opinions. Gentlemen, you'll consult together—and if there's a doubt, you'll give the murderer a benefit,—Dick, take down the verdict.'

"A pause succeeded for some minutes: the twelve jurors turned round and buzzed together in a corner, like so many blue-bottles on a window-pane; and the voice of Mr. Trot at length arose above the rest.

" 'Fratericide, be d—d. I have heard of homicide and suicide, and I'll take which of them sides you like.'

"Then there followed a fresh buzzing, during which Tablet convinced Messrs. Jenkins and Trot that there was but one way of being unanimous; that men of different opinions would never agree between this and doomsday; and that in such a case dinner must be postponed 'sine die.'

" 'Gentlemen,' said the coroner, 'are you all agreeable?'

" 'Very,' responded the foreman. 'We are all in favour of Wilful Murder.' \* \* \*

" 'Sound judgment—a right decision—very correct indeed. Poor Sir Mark Tyrrel—it's a shocking thing for a father—Dick, make out a warrant—a strange thing, your worship, if the Blues should get their man in—Yellow used to walk over the course. I haven't had much shooting this season—I shall come some day, Mat, and look at your birds. By the bye, if you know of a good cocking spaniel—I like 'em oldish and slow, for I'm getting into that way myself—ready, eh, Dick?—there, give it to Gregory, and catch who can,—it's forty pound. Your worship, I've the honour to say good day—good bye, gentlemen, you've done your duty,—Dr. Bellamy, your most obedient,—Mr. Walter, I'm your's. Look sharp, Dick, for I'm late for the Eagle,—and, spurred by the anticipation of the election dinner, the coroner departed with an activity and speed that seemed purposely intended to distinguish him from his subjects—the quick from the dead. In fact, before the bowing head of Old Formality rose again to its perpendicular, the personage he intended to honour was out of sight. The stonemason, emulating the example of the doctor, kept obsequiously ducking at the Justice, and the jurors copied every bend of their foreman as regularly as the crew of a cutter take the stroke from the steersman; after which ceremony they hustled out of the room as from a theatre when the performance is over."

A Royal ordinance of July 8th reduced the import duty on wool by one-third, and declared that the premiums on the export of woollen yarns and cloths should be reduced in the same proportion from the 1st of January next. It having, however, been represented that the sale of all the cloths made of the wool which had paid the higher duty cannot be completed till the end of February, a Royal ordinance of Friday prescribes that the full premium of 13½ per cent. shall be allowed till the last day of February inclusive.—*Galignani's Messenger*.

## TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir,—Your correspondent "*A Country Banker*," proposes a singular remedy for the existing agricultural distress. He suggests that the Bank of England, the country bankers, and joint-stock banks, should be *annihilated at the end of three years*; that a gold currency *should be abandoned*, and give place to an universal paper circulation,—and that the whole property of the country (funded and landed) should be pledged to the government, to enable them to establish a "National Bank," upon the principle of advancing a moiety of its value to the owners of such property, above 2,000*l.*, who might be disposed to mortgage it for so hopeful a purpose. He does not, however, entirely lose sight of gold. The trustees of this National Bank would be empowered to purchase a stock of from 10 to 15 millions, from which stock "any person should have the power of purchasing any quantity he might require at the market price of the day, the loss, if any, on such transactions, to be borne by the government." And when this project is once on foot, he thinks matters will then move on smoothly, prices *will be elevated* (which he conceives is just what the farmers want), and with such an arrangement they might "*safely permit the importation of foreign grain at a low fixed rate of duty, WITHOUT ENDANGERING THEIR OWN INTERESTS.*"

There is something so manifestly absurd in this Utopian project, that one can scarcely find patience to expose its fallacy. But the object of the writer is good, however much he may be mistaken, as he conceives that a scheme like this will render prosperity more permanent, and put an end to distrust,—let us see how a "consummation so devoutly to be wished" can be attained by the plan he suggests. It reminds one of the fable of the goose and the golden eggs, and were it possible to be adopted, would bid fair to be an apt illustration.

It is unnecessary to dwell upon the impolicy of a National Bank, to be established upon the plan of *Government* issuing its notes. We are certainly, by the blessing of reform, better protected than formerly, against the abuses of bad government, but enough, God knows, of the heaven remains, to make it a bitter expedient. The fingering of the public purse is too dangerous an experiment to entrust to any, even *the most virtuous* administration; and we have a lasting example before us in the national debt, accumulated solely through the ease by which the Government obtained supplies from the Bank of England, to promote their schemes of war and bloodshed. The end and object of all banking is the promotion of trade and the exchange of commodities. It is a system of credit arising out of the industry of the country, and created by the wants of the people themselves; it is best it should remain in *their*

hands,—the less the Government have to do with it the better.

But the avowed object of the "Country Banker" is to *elevate prices*. What would be the result? He cannot, even by his own project, confine the elevation of prices to the *Agriculturists* for whose interest he is led to propose it. If the prices of our manufactured productions were elevated (which they would undoubtedly be, by our uncontrolled paper circulation), we should cease to be "the workshop of the world," as other nations would naturally seek commodities where a more restricted circulation would enable them to obtain them cheaper. The consequences of such a scheme would only lead to overproduction in our own country. It is true that overproduction would correct itself, but it would be attended with ruin to many of our manufacturers. How would an unnatural elevation of prices, such as his plan would produce, benefit the farmers?—particularly (as he thinks might be done safely) if foreign grain were allowed to come in at a low fixed rate of duty? No plan could be better devised for their destruction. If his scheme for elevating prices were simultaneously adopted in all the markets of Europe *then* our farmers would be improved by it, but as his plan has little likelihood of being adopted over so wide a field, the consequences to our farmers would be just this, (supposing that by the universal elevation of prices in England they were to receive half as much again as they do at present for the quarter of Wheat,) that our markets would be inundated with foreign grain (raised at little expence and admitted freely at a low duty) and the stocks of our farmers, raised amid all the disadvantages of high taxation, high prices, and high wages, would remain unsold! Let the Country Banker extricate himself from the horns of this dilemma.

But the proposition is altogether absurd, and to talk of the stock of gold which is to be kept in the coffers of this Government Bank to regulate the exchanges! why, the very fact of an increased importation, which would assuredly follow the elevation of prices at home, would blow the whole of his theory to the four winds of heaven, and the fancied stock of gold, melting before the paper circulation, would fly away with it. Then would the fable of the goose and the golden eggs be realized with a vengeance. But it is true—the capital of the Bank would remain secure, the *fixed* capital, the land that would not fly away, except from the owners, and an improvement might even be suggested by which the evanescent stock of gold could be replenished; the *fixed* capital might then become truly available, because they might *dig* for gold; and there is no doubt they would get it too, *if they only went deep enough!*

Another Correspondent "your Constant Reader" performs the part of Philo Junius to the *soi disant* Country Banker, and elaborately shows "how intimately the agricul-

tural interests are connected with the currency of the country." The fact is, that *all* the interests of the country, productive and non-productive, are deeply interested in the question; and it is of vital importance to the country at large that a sound system of Banking should be encouraged. But in looking around us for that system which is best adapted for the necessities of a great commercial nation, we cannot overlook the gratifying spectacle which Scotland presents to the eye of a very impartial observer who has turned his attention to the subject, a country, which until the establishment of that safe and satisfactory system of Banking adopted there presented only a barren heath, where corn-fields are now luxuriantly blooming, where a frugal population has arisen, competing in the peaceful arts of industry in the very spots where their forefathers struggled and fought in feudal enmity against each other; we cannot contemplate this scene without reflecting that the elevation to which that once proverbially *poor* country has now raised itself, in manufacture, in commerce, and in agriculture, has been solely owing to the excellent system of banking established there. England can scarcely do better than follow its example. We can witness the effects which that system has produced in a country labouring under every disadvantage. But with all our superior wealth, and with the springs of our industry more widely and gigantically distributed; it is at least doubtful whether in the establishment of this new system of banking advocated by "the Country Banker," we should have much occasion to congratulate ourselves upon the adoption of so questionable a theory. S.

#### TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir,—I was not a little amused by the letter of your correspondent from Frinsbury, in your last Monday's "Express," professing to give an account of the ploughing match at Chalk, near Gravesend, but omitting all mention of one of the most interesting circumstances of that day, and one which has been much the subject of conversation in the neighbourhood, the exhibition of Rancome's plough with a pair of slight horses, successfully competing with the enormous Kentish ploughs, and the powerful four horses by which each of them was drawn. I say successfully competing, because, in the opinion of very many of the spectators, the ploughing was as well performed, and certainly as expeditiously, by it, as by any plough in the field. If I was not well acquainted with the liberality of your correspondent, I should suppose that the omission was intentional, from an unwillingness to admit that any plough can rival the turn-wrest, of the merits of which, it is well known, the Kentish farmers are very tenacious; nor should I notice the omission, but that I consider it to be the duty of the agriculturist to give publicity to those implements by which the land is best and most cheaply cultivated; and, in

my opinion, there is no implement which has so much benefited agriculture as this very simple and efficient plough. As a proof of its merits, I may mention that after dinner, the Earl of Darnley, the patron of the Association, spoke in terms of great approbation of its performance, and toasted the health of the owner for having introduced it that day.

I remain, Sir,  
Your obedient servant,  
THOS. BENTLEY.

Hermitage, near Rochester,  
4th Dec., 1834.

## COURT OF KING'S BENCH.

MARTIN v. COLEMAN.

LORD DENMAN said that this was an action of assumpsit brought by an outgoing tenant against his landlord, to recover the value of dressings of the fields and of manure left on the farm. The declaration contained a special count on the custom of the country, and there were, besides, the common money counts. The case was tried before Mr. Justice Taunton at the Spring Assizes for York, when the plaintiff recovered a verdict, but as there was scarcely any proof of the custom of the country on which the plaintiff could found his right to recover, and as it was contended that he could not recover on the common money counts, leave was reserved for the defendant to move to enter a nonsuit. The Court were now of opinion that a nonsuit could not be entered, for that where an outgoing tenant left manure, &c., upon the farm, and the landlord took possession and applied the manure to the improvement of the farm, the law raised an implied assumpsit without the necessity of any special custom being proved, and this in favour of agriculture. The rule for the nonsuit must, therefore, be discharged.

## COURT OF EXCHEQUER.

MASH v. DENSHAM.

This was an action to recover damages for a false representation upon the sale of a horse.

MR. RICHARDS stated that the plaintiff, who was a milkman, went on the 12th of July, 1833, to Smithfield to buy a horse, and seeing one which he thought would suit him, inquired if it was sound. A person named Maddox, who was the owner, said it was, and was also a good worker, and referred the plaintiff to the defendant, who immediately said it was a good horse. The plaintiff expressed his doubt as to its wind, on which the defendant said its wind was sound, and it was a good worker; he would vouch for it. Upon this the plaintiff bought the horse for 18*l*, and took it home, but the horse was so desperately broken-winded that at the end of three days he died. The plaintiff sold the carcass for 1*l* 10*s*, and the action was brought for the difference, 16*l* 10*s*, against the defendant, who must have known the condition of the horse at the time he made such a false representation.

WILLIAM WARD.—Went with the plaintiff to Smithfield. They saw a horse tied up. Defendant and Maddox were close by. The horse, at plaintiff's request, was put into a cart and driven about; it seemed to go very well. Maddox asked 18*l*. The plaintiff was doubtful about its wind, and asked defendant if he would vouch for him,

on which defendant said he would warrant his wind sound, and that he was a good worker. The plaintiff paid the money, and took the horse home. Witness drove him next day to Holloway, about three miles distance, his wind very bad. The next day he was driven to Barking, about seven miles, in a light chaise; his breath was very short. Plaintiff drove him once more towards Holloway, but in his way he fell down dead.

WILLIAM THOMAS WALTER, clerk to the plaintiff's attorney, served defendant with the writ. Defendant asked a man of the name of Coleman if he recollected a black horse which they had some time ago in the stable, a little touched in the wind? Coleman said he did. Defendant said "I have been served with a writ about it; it does not belong to me, but to Maddox; but I vouched it for him."

DAVID RICKETTS, a horse-slaughterer.—Saw defendant, who was a horse-dealer, show the horse to plaintiff. By medicinal preparations short-winded horses may be made to appear for some little time as if they were sound; shot was sometimes given for that purpose. The horse was what was called a Bullman, his windpipe was diseased; he opened it.

WILLIAM MADDOX.—Witness was a blacksmith, no relation of the seller of the horse. Saw the horse when it was sold. He had known it for a twelvemonth before. He knew it was unsound, and that it belonged to the defendant, for Maddox was only his servant—what they called a guinea-catcher. Told the buyer he had got a nice thing.

MR. ERLE, for the defendant, said it was the custom in Smithfield-market that a man in dealing with a stranger should bring some person forward who will vouch for him, and for this reason, if the horse is stolen and the true owner comes forward, the buyer will be compelled to give up the horse, and will also lose his money, unless he can come upon the voucher. It was only in this sense and in pursuance of this custom that the defendant vouched for Maddox, for he neither gave nor intended to give any warranty or representation that should make him liable for the soundness of the horse, although he was well content to be responsible for the forthcoming of Maddox. If the representation, however, had been made, the defendant would be answerable only if it were untrue to his knowledge. Now it was not untrue at all, and Maddox himself had before refused to take 17*l* for the horse.

JOSEPH TEASDALE proved that Maddox purchased the horse at Raleigh fair, Essex, for 16*l*. Witness offered 1*l* for his bargain, but he refused it.

FRANCIS MADDOX bought the horse at Raleigh fair. Refused several offers for it. It never belonged to the defendant.

THOMAS FOX.—Offered 16*l* for the horse. Maddox refused, and wanted 20*l*.

MR. RICHARDS, in reply, contended that the representation that the horse was sound in wind was made; that it was an untrue representation, and that the defendant knew at the time that it was untrue.

MR. BARON ALDERSON said the defendant could not be responsible if the representation had been honestly made, however mistaken the defendant

might have been; but if the jury thought that the representation was made, and that it was not a true representation, and that the defendant at the time of making it knew that it was untrue, then the plaintiff would be entitled to recover.

Verdict for the plaintiff—Damages, 16*l* 10*s*.

## TO THE EDITOR OF THE 'FARMER'S MAGAZINE.'

Sir,—I some time since endeavoured to show in what manner and on what principle the present Corn Laws had operated beneficially to the landed interest, and it is my intention in this letter, after having stated the causes that I believe principally to have occasioned the present low price of wheat, to enquire what would be the effect, to the farming world, of the repeal of the Corn Laws.

From the passing of the Corn Bill, in 1828, up to the middle of the summer of 1832, the average price of wheat for that period had been somewhat above seven shillings per bushel. The crops during this interval had varied much, and in many situations and counties, had produced below an average growth—consequently the several reports at harvest-time, of the three harvests preceding 1832, differed so much in account, that each crop, at the time of harvesting it, was calculated to be somewhat deficient, and the sequel proved these impressions to be quite correct; but immediately on the universal prospect of the abundant harvest of 1832, and about the time of housing the corn, the price of wheat fell back to 6*s*. per bushel, and so it remained to the spring of 1833, when there was an apparent advance in the price of about 6*d*. per bushel, with an increased demand. This state of things was, however, but of short continuance; for, as the summer advanced, the promise for another abundant wheat crop increased, and the consequence was, that the price again fell back to six shillings per bushel, and with the price the demand also declined.

At the commencement of the harvest of 1833, a great surplus of the old crop remained in the hands of the farmers and dealers—probably to an extent much beyond that which the crop had exceeded as an average produce—and this fact may be accounted for by the immense importations from Ireland during the year; for the Irish, like the English, crop of 1832, had been abundant. The crop of 1833, although excellent, was very far inferior to the produce of the former year: nevertheless, it was beyond an average growth at home, and still more so in Ireland, and this, added to the great supply in hand from the old crop, reduced the price of wheat during the autumn of 1833 rather below 6*s*. per bushel, and so it remained up to Christmas of that year. The oat crop of 1833 had been deficient at home, but in Ireland the crop of this grain had again far exceeded an average produce. Now, the low price of oats during 1833, in the face of a very deficient crop at home, fully illustrates the ruinous effect of Irish importations on our home market; and it was not until the last dry summer had placed beyond doubt the possibility of having a great crop of oats, that the price of this grain revived. But the late summer not having affected the wheat crop in the manner it had the oat crop, but, on the contrary, it being about harvest time pretty generally admitted that on the whole the wheat was quite equal to, and probably a little beyond, an average

crop, the price began gradually to go down to 9*l*. and 10*l*. per load.

This was natural enough—an unusually forward harvest—a vast supply of old wheat in the stores of the millers and dealers—the condition of the new wheat inferior—a complete destitution of wind and water to the mills—the farmers' necessities of a nature not to be denied, and consequently no alternative but to dispose of his commodity at any price it would realize. I may be asked, if I attribute the low price of wheat to arise partly from want of speculation, occasioned on the part of the merchant by the inferior condition of the corn, and on the part of the miller by the late lack of wind and water—why, these causes being removed, the price does not forthwith rise in a degree at least equal to the effect of those causes on the price? To this I reply, that although of course the effect of the mills standing still is entirely removed, yet the condition of the wheat, independent of the late unusually dry and beautiful weather, is of that description as to render it unfit to shoot together in large quantities, for the purpose of keeping, without incurring considerable risk in so doing. Thus I have endeavoured to show, that the low price of wheat, from the harvest of 1832 to the harvest of 1834, is mainly to be attributed to two successive bountiful harvests both at home and in Ireland, and that the further decline of price, immediately subsequent to the late harvest, arose more from other causes rather than from any impression of that harvest being so abundant as the two that preceded it; and, added to the above *natural causes* that have concurred to depress the price of wheat, the *unnatural effect of Peel's Bill* may, I believe, be placed prominently forward in the list, as tending gradually to depreciate prices—together with various causes arising from the *unnatural effect of having a provision for the poor in one part of the kingdom only*: and these two political anomalies will, I fear, continue to neutralise, in a great degree, the original intention of the Corn Laws. If, then, the above views be nearly correct as to the real cause of the present low price of wheat, is it not absurd on the part of those who are opposed in opinion to a graduated scale of duties, to assert that the present low price of wheat proves the Corn Laws to be utterly defective? A certain fixed duty, it is said, would at all events have kept prices as high as they have been since 1832, and I believe that a moderate fixed duty since that year would have had such an effect; but how, I ask, would such a fixed duty have operated from 1828 up to the harvest of 1832, those years of deficient produce, and when an average price of more than 7*s*. per bushel barely compensated the grower? It is not in seasons of abundance that the farmer derives protection from a graduated scale of duties imposed on imported corn. The very fact of that abundance acts precisely the same protecting part towards him in such a year that a high import duty does when he experiences a deficient crop.

Let us now proceed to inquire how the repeal of the Corn Laws and a free trade in corn would operate on the landed interest of this country, and in order to do so I will divide that interest into five classes of persons, thus:—First—the rich aristocracy with large unencumbered estates; Secondly—the smaller landed proprietors, or, country gentlemen; Thirdly—the yeomen, or, owners and occupiers; Fourthly—the tenants; and last—the agricultural labourers. It is admitted on all hands that capital employed in agriculture ought to realize a profit of not less than ten per cent,—I

mean, of course, capital employed in the cultivation, and not in the purchase, of land. Now, the object of the repeal of the present Corn Laws, and a free trade in corn, is, to lower the price of our home produce: and the only question is, to what extent such a course of proceeding would lower the price. Any opinion on this head must, I am aware, be entirely speculative, and the only reasonable guide to be regulated by, is the present price of grain in the other leading markets of the world; and, on the whole, I am inclined to believe that it would occasion such a depression of price that would, on the aggregate, lower the proceeds of the land to an extent about equal to ten per cent. on the capital employed in the cultivation,—or, in other words, destroy the tenant's profit. Well, let us now inquire what would be the effect of this state of things, first, on the rich and uncumbered aristocrat, and I am not aware that he would be seriously injured by the change, because such slight inconvenience that might occur to him from receiving a less revenue from his land, would not, at all events, be difficulties of an insurmountable nature—in fact, he would “ride the storm;” next comes the smaller landed proprietor, or, country gentleman; how will he fare? A few, indeed, of this class may be able also to suffer a reduction of their landed revenue to such an extent, and still maintain their situations; but in this class it would be the exception only that could stand, and the great body of persons now forming the independent and useful characters of country gentlemen and magistrates would, in respect of such situations, be annihilated. The rental of the land being destroyed, their incomes would be gone, and the only alternative that would remain for them would be to take their estates into their own occupation, and become such a class of persons that their occupying tenants had been; and if they could use their land with the like skill and economy that their tenants had done, they would at least partially save themselves—of their tenants we will inquire bye and bye. The yeoman, or owner and occupier, is the next on our list. This class, if I may use the term, was created during the late war, by the benefit from long leases, which existed before the high prices commenced, and which did not expire until several years after the continuance of those high prices, and when that time did arrive, the tenant found himself in possession of considerable capital—perhaps sufficient to pay for half the value of the farm he then occupied; and in instances innumerable, the tenants did actually purchase their farms of their landlords; but it was in few cases only that the tenant had all the money for the purchase—probably, on the aggregate of the immense tract of land that thus changed hands, half the money was borrowed to accomplish this anomalous state of things, and which occurred principally between the years of 1800 and 1812, the average price of wheat for that period being about 10s. per bushel. Now, these farms were sold commensurate to this price of wheat, and it amounts just to this—that if the purchaser had half enough money to purchase the estate at 10s. per bushel, he had just enough to pay for the whole estate had the price of wheat, instead of being 10s. per bushel, been only 5s. per bushel; but now he was obliged to mortgage the property to the extent of 5s. per bushel, leaving its real interest in the estate to be only in the proportion of five shillings in ten: if, then, the value of the bushel of wheat be reduced permanently to 5s., the yeoman's interest in his estate is at once de-

stroyed, and the mortgagee takes the land to secure himself. Now for a view of the tenant's fate from the repeal of the Corn Laws, and indeed he would be entirely dependant on the circumstances of his landlord. I say on the circumstances, because I am satisfied that as far as inclination or will to do so, most landlords would be inclined liberally and justly to meet their tenants in such an exigency; but many, and indeed the great body of landed proprietors, would not have the power to do so without ruining themselves, but would be obliged to resort to the alternative I have before described, of taking their estates to save themselves, into their own occupation. Perhaps in a few instances the ruined occupier would be offered the situation of bailiff under his former landlord, but with the great body of tenantry it would unavoidably be, “turn out!”

The agricultural labourer now only remains to be disposed of, and I feel assured such of your readers that admit the difficulties I have advanced would, by the *megrim* of the repeal of the Corn Laws, be entailed on landlord, tenant, and yeoman, will not have much hesitation in coming to the conclusion that those difficulties, and that ruin, would revert with increased force on the labourer.

I am, Sir, your obedient and very humble servant,  
AGRICULTOR.

Sussex, Dec. 5, 1834.

## A VISIT TO “THE POULTRY.”

BY HENRY W. CHALLIS, ESQ.

A wily fox, much feared for his misdeeds,  
Had long time feasted from a near farm-yard.

To take his prey,

Through corn fields he would stray—

Well knowing CORN-HILL to the POULTRY leads.

In vain his victims strove to give him battle,

He sent them hobbling,

And nightly glided in to FRIGHT them with his GOBLIN.

“All flesh is grass,” so choosing out “CHICK-WEEDS,”

On them he'd pop—

Taking each crop—

Their FEATHERS making DOWN-BEDS, for the cattle!

‘Twas sad to see YOUNG GEESE, with throats so lank!

All BROKEN, with his RUN on “GOSLING'S BANK!”

While the scared ducklings, sprawling on their backs,

Did nought but die—

No aid was nigh—

No regular DIPLOMA—nothing but QUACKS!

Oh! what a sight of mangled wings and legs.

Here was he “tossing heads or tails,” there LAID

THE EGGS—

Here SADLY showed “a MERRY thought,” and there stretched out a neck,

With beak that never more again would “peck o’barley,” PECK

He gorged and stuffed, the ruthless beast, and ruin round him strewed;

First grunched the OLD, then vowed he wished

To “TASTE THE NICE HOME BROOD!”

A REAL WONDER.—A lamb, the property of Mr. Sarson, of Quorndon, was slaughtered last week, which weighed 100 lbs. It was about nine months old, got by a sheep of Mr. Parr's, of Wanlip, and the dam by a sheep of Mr. Smith's, of Dishley.

**AN ACT TO AMEND AN ACT PASSED IN THE THIRD YEAR OF HIS PRESENT MAJESTY, INTITULED AN ACT FOR SHORTENING THE TIME REQUIRED IN CLAIMS OF MODUS DECIMANDI, OR EXEMPTION FROM OR DISCHARGE OF TITHES.**

(15th AUGUST, 1834.)

WHEREAS by an Act passed in the third year of the reign of his present Majesty, intituled *An Act for 2 & 3 W. 4. c. 100. shortening the time required in claims of modus decimandi, or exemption from or discharge of tithes*, certain provisions were made limiting the period within which in cases of claims of a modus decimandi the payment or render of such modus, and in cases of claim of or to any exemption from or discharge of tithes by composition real or otherwise, the enjoyment of the land without payment or render of tithes or money, or other matter in lieu thereof, should be shown to have taken place: And whereas it was by the said Act further enacted, that nothing therein contained should be prejudicial or available to or for any plaintiff or defendant in any suit or action relative to any of the matters therein mentioned, then commenced, or which might be thereafter commenced during the then session of parliament, or within one year from the end thereof: And whereas since the passing of the said Act a great number of suits have been instituted for the recovery of tithes, under the apprehension on the part of the plaintiffs that they would be precluded by the said Act from recovering the tithes to which they claim to be entitled unless they prosecuted their claims within the periods limited by the said Act: And whereas it is deemed advisable to enable the defendants in such suits to cause all further proceedings therein to be suspended until the end of the next session of parliament, upon the terms hereinafter expressed. Be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled,

and by the authority of the same, that from and after the passing of this Act it shall and may be lawful for the defendant or defendants in any action or suit which may have been commenced or instituted since the passing of the said recited Act for the recovery of tithes, or for invalidating claims of a modus decimandi, or an exemption from or discharge of tithes, for lands in respect whereof no tithes, nor any composition in lieu thereof, shall have been actually rendered or paid within the space of sixty years previous to the passing of this Act, with the consent of the plaintiff or plaintiffs in such action or suit, to pay the amount of the costs and expences (to be taxed as between party and party) which may have been incurred by or on the part of the plaintiff or plaintiffs in such action or suit into the Bank of England, in the name and with the privity of the accountant general of the Court of Chancery or of the Court of Exchequer, or of the proper officer of the court in which such action or suit shall have been brought, to the credit or on account of such action or suit; and in every case where such costs and expences shall be so paid into court, all further proceedings in such action or suit (except as herein-after provided) shall be stayed and suspended until the end of the next session of parliament.

Plaintiff may give notice to defendant of his intention to proceed; in which case the defendant may have his costs out of court.

II. And be it further enacted, that from and after the end of the next session of parliament it shall and may be lawful for the plaintiff or plaintiffs in any action or suit, in which the defendant or defendants shall have caused the proceedings to be stayed or suspended under the provision herein-before contained to give notice to the defendant or defendants of his, her, or their intention to proceed in such action or suit and to proceed therewith accordingly; and then and in every such case the defendant or defendants shall, immediately after such notice shall have been so given, be entitled to receive out of court the sum or sums which such defendant or defendants shall have previously paid into court on account of the costs of the plaintiff or plaintiffs.

If plaintiff accepts the costs, all proceedings to be abandoned.

III. Provided always, and be it further enacted, that it shall and may be lawful for the plaintiff or plaintiffs in any action or suit in which the defendant or defendants shall have paid into court the costs of such plaintiff or plaintiffs under the provision herein-before contained, to take the sum or sums which may have been so paid for such costs out of court, for his, her, or their own use, and then and in every such case all further proceedings in such action or suit shall be for ever abandoned and relinquished.

Executors, heirs, &c. may act in case of death.

IV. And be it further enacted, that it shall and may be lawful for the successors, heirs, executors, administrators, or assigns of any plaintiff or plaintiffs, whose action or suit may be so stayed or suspended as aforesaid, to revive and proceed with such action or suit after the end of the next session of parliament, or to take such costs as aforesaid out of court, and cause all further proceedings to be abandoned and relinquished, in the same manner in every respect as the original plaintiff or plaintiffs might or could have done.

Judges may, upon sufficient cause shown, permit actions to be proceeded with.

V. Provided always, and be it enacted, that notwithstanding the provision herein-before contained it shall and may be lawful for any party to any action or suit so suspended, upon adducing sufficient proof to the satisfaction of a judge of the court in which such action or suit shall have been commenced that there is danger of some material evidence in support of the right or claim of such party being lost in consequence of such suspension, to proceed in such action or suit to the extent of proving such fact or facts the evidence respecting which shall be so shown as aforesaid to be in danger of being lost through such suspense.

As to previous claims.

VI. Provided always, and be it enacted, that nothing in this Act contained shall prevent the prosecution of any suit in law or equity for the recovery of any tithes claimed or demanded previous to passing of the said recited Act, or for the recovery of the value thereof.

# AN ACT TO AMEND AN ACT OF THE ELEVENTH YEAR OF KING GEORGE THE SECOND, RESPECTING THE APPORTIONMENT OF RENTS, ANNUITIES, AND OTHER PERIODICAL PAYMENTS.

[16th JUNE, 1834].

Whereas by an Act passed in the eleventh year of the reign of his Majesty King George the Second, 11 G. 2. c. 19, intituled *An Act for the more effectual securing the payment of rents, and preventing frauds by tenants*, it was enacted, that where any tenant for life should happen to die before or on the day on which any rent was reserved or made payable upon any demise or lease of any lands, tenements, or hereditaments which determined on the death of such tenant for life, the executors or administrators of such tenant for life should and might, in an action on the case, recover of and from such undertenant or undertenants of such lands, tenements, or hereditaments, if such tenant for life die on the day on which the same was made payable the whole, or if before such day then a proportion of such rent according to the time such tenant for life lived of the last year or quarter of a year or other time in which the said rent was growing due as aforesaid, making all just allowances, or a proportionable part thereof respectively: And whereas doubts have been entertained whether the provisions of the said Act apply to every case in which the interests of tenants determine on the death of the person by whom such interests have been created, and on the death of any life or lives for which such person was entitled to the lands demised, although every such case is within the mischief intended to have been remedied and prevented by the said Act; and it is therefore desirable that such doubts should be removed by a declaratory law: And whereas, by law, rents, annuities, and other payments due at fixed or stated periods are not apportionable (unless express provision be made for the purpose), from which it often happens that persons (and their representatives) whose income is wholly or principally derived from these sources by the determination thereof before the period of payment arrives are deprived of means to satisfy just demands, and other evils arise from such rents, annuities, and other payments not being apportionable, which evils require remedy: Be it therefore enacted and declared by the King's most excellent Majesty, by and

Rents reserved on leases determining on the death of the person making them (though not strictly tenant for life), or on the death of the tenant *pur autre vie*, to be considered as within the provision of recited Act.

with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, that rents reserved and made payable on any demise or lease of lands, tenements, or hereditaments which have been and shall be made, and which leases or demises determined or shall determine on the death of the person making the same (although such person was not strictly tenant for life thereof), or on the death of the life or lives for which such person was entitled to such hereditaments, shall, so far as respects the rents reserved by such leases, and the recovery of a proportion thereof by the person granting the same, his or her executors or administrators (as the case may be), be considered as within the provisions of the said recited Act.

II. And be it further enacted, That from and after the passing of this Act, all rents service reserved be apportioned; on any lease by a tenant in fee or for any life interest, or by any lease granted under any power, (and which leases shall have been granted after the passing of this act), and all rents charge and other rents, annuities, pensions, dividends, moduses, compositions, and all other payments of every description, in the United Kingdom of Great Britain and Ireland, made payable or coming due at fixed periods under any instrument that shall be executed after the passing of this Act, or (being a will or testamentary instrument) that shall come into operation after the passing of this Act, shall be apportioned so and in such manner that on the death of any person interested in any such rents, annuities, pensions, dividends, moduses, compositions, or other payments as aforesaid, or in the estate, fund, office, or benefice from or in respect of which the same shall be issuing or derived, or on the determination by any other means whatsoever of the interest of any such person, he or she, and his or her executors, administrators, or assigns, shall be entitled to a proportion of such rents, annuities, pensions, dividends, moduses, compositions, and other payments according to the time which shall have elapsed from the commencement or last period of payment thereof respectively (as the case may be), including the day of the death of such person, or of the determination of his or her interest, all just allowances and deductions in respect of charges on such rents, annuities, pensions, dividends, moduses, compositions, and other payments being made; and that every such person, his or her executors, administrators, and assigns, shall have such and the same remedies at law and in equity for recovering such apportioned parts of the said rents, annuities, pensions, dividends, moduses, compositions, and other payments, when the entire portion of which such apportioned parts shall form part shall become due and payable, and not before, as he, she, or they would have had for recovering and obtaining such entire rents, annuities, pensions, dividends, moduses, compositions, and other payments if entitled thereto, but so that persons liable to pay rents reserved by any lease or demise, and the lands, tenements, and hereditaments comprised therein, shall not be resorted to for such apportioned parts specifically as aforesaid, but the entire rents of which such portions shall form a part shall be received and recovered by the person or persons who if this Act had not passed would have been entitled to such entire rents; and such portions shall be recoverable from such person or persons by the parties entitled to the same under this Act in any action or suit at law or in equity.

Act not to apply to certain cases. III. Provided always, and be it enacted, That the provisions herein contained shall not apply to any case in which it shall be expressly stipulated that no apportionment shall take place, or to annual sums made payable in policies of assurance of any description.

A Devon bullock was slaughtered last week at Wymondham, by Mr. W. Bravator, the carcass weighing 83 stone, producing the immense quantity of 16 stone 3lb of fat. It was grazed by Mr. W. Howse, of Fundenhall, Norfolk.

# ANNUAL MEETING OF THE RUTLANDSHIRE AGRICULTURAL SOCIETY.

The annual show of cattle, &c. in connexion with this society, took place on Tuesday, Dec. 2, and far exceeded all former meetings, both in the number and respectability of attendance, and the quantity and quality of stock exhibited. The judges having awarded the premiums, and affixed a ticket over each animal shown as they were ranged round the Riding-house, at twelve o'clock the admission of the public on payment of one shilling each commenced, and we think we under-rate our computation when we say that between that time and three o'clock, two thousand persons were admitted; amongst whom we observe nearly all the resident gentry, as well as many eminent breeders and cattle-dealers from distant parts of the country. The following are the officers of the society, and with one or two exceptions, they honoured the meeting with their presence:—

## President.

Sir Gerard Noel Noel, Bart., M. P.

## Vice-Presidents.

|                              |                        |
|------------------------------|------------------------|
| Hon. Col. Lowther, M. P.     | Stafford O'Brien, Esq. |
| Sir John Trollope, Bart.     | Thomas Hotchkin, Esq.  |
| Sir John Palmer, Bart.       | Henry Wilson, Esq.     |
| Sir Fred. Fowke, Bart.       | Henry Dawson, Esq.     |
| G. J. Heathcote, Esq., M. P. | Major-Gen. Johnson.    |
| George Finch, Esq., M. P.    |                        |

## Stewards.

Mr. T. E. Pawlett, Tinwell.—Mr. Sam. Cheetham, Hambleton.—Mr. Christopher Smith, Burley.

## Secretaries and Treasurers.

Mr. Henry Stimson, Oakham.—Mr. Robert Smith, Burley.—Mr. Richard Healy, Ashwell.

## Judges.

Mr. William Robinson, of Brandon, near Newark.  
Mr. John Buckley, of Normanton-Hill, near Loughborough.  
Mr. Clarke Hillyard, of Thorpeland, near Northampton.

The following are correct copies of the labels affixed over each lot and the premiums awarded by the judges:

## CLASS I.

Oxen or Steers of any breed, age, or weight, without restrictions as to feeding.

To the feeder of the best fat Ox or Steer, a premium of 15 sovs.

To the feeder of the second best ditto, the second premium of 7 sovs.

Mr. Robert Smith, of Burley-on-the-Hill, near Oakham, a four years and eleven months old short-horn ox; bred by Mr. Richard Hough, of Threckingham, from a bull of Mr. E. E. Dawson, of Birthorpe, near Falkingham, and fed by him on oil-cake, beanmeal, carrots, and a few turnips.

Stafford O'Brien, Esq., of Blatherwycke Park, near Wansford, a three years and six months old Hereford ox; bred by himself, and fed by him on oil-cake, flour, and turnips.

Mr. Christopher Smith, of Burley-on-the-Hill, near Oakham, a four years and ten months old Hereford ox; bred by Mr. Thomas Cranston, of Wide Marsh, near Hereford, and fed by him on oil-cake, beanmeal, turnips, and a few carrots.

R. W. Baker, Esq., of Cottesmore, near Oakham, a four years and seven months old short horn ox; bred by Lord Exeter, of Burghley, near Stamford, and fed by him on cake, bean flour, turnips, and carrots.

First prize awarded to Mr. Robert Smith.

Second ditto to R. W. Baker, Esq.

## CLASS II.

Oxen or Steers of any breed, age, or weight, that shall not have had oil, oil-cake, corn, pulse, seeds, or meal of these, previous to the 1st of August, 1834. To the feeder of the best fat Ox or Steer, a premium of 10 sovs.

To the feeder of the second best ditto, the second premium of 5 sovs.

Mr. Christopher Smith, of Burley-on-the-Hill, near Oakham, a three years and six months old Hereford ox; fed by him on cake and turnips, since the 1st of August.

Mr. Thomas Lester, of Manton, near Oakham, a three years and two months old short horn steer, bred by himself, from a bull of Mr. V. Baines, of Brooke Priory, and fed by him on cake and turnips since the 1st of August.

Mr. Samuel Cheetham, of Hambleton, near Oakham, a four years and six months old Scotch ox, fed by him on cake and carrots since the 1st of October.

First prize awarded to Mr. C. Smith.

Second ditto to Mr. T. Lester.

## CLASS III.

Oxen or Steers of any breed or age, weight under 90 stone, of 14lbs, that shall not have had oil, oil-cake, seeds, corn, pulse, or meal of these, previous to the 1st of October, 1834.

To the feeder of the best fat Ox or Steer, a premium of 7 sovs.

To the feeder of the second best ditto, the second premium of 3 sovs.

Sir John Palmer, Bart., of Carlton Hall, Northamptonshire, a three years and six months old short horn steer, bred by himself, and fed by him on grass, hay, turnips, and mangel-wurzel.

Mr. Christopher Smith, of Burley-on-the-Hill, near Oakham, a three years and nine months old Hereford steer, fed by him on cake and turnips since the 1st of October.

Mr. Samuel Henton, of Saxby, Leicestershire, a Scotch ox, fed by himself on hay, grass, and turnips.

First prize awarded to Sir John Palmer, Bart.

Second ditto not awarded.

## CLASS IV.

Oxen or Steers of any breed or age, weight under 70 stones of 14lbs that have not at any time eaten oil, oil-cake, seeds, corn, pulse, or meal of these.

To the feeder of the best fat Ox or Steer, a premium of 5 sovs.

To the feeder of the second best ditto, the second premium of 3 sovs.

Mr. Valentine Baines, of Brooke Priory, near Oakham, a three years and one month old short-horn steer, bred by W. Mills, Esq., Manor House, Braunston, near Oakham, from a bull of Mr. V. Baines, and fed by him on grass, hay, and turnips.

Mr. Richard Healey, of Laughton, near Falkingham, a four years old Scotch Highlander fed by him (on his Ashwell farm) on grass, hay, and Swedish turnips.

Mr. Christopher Smith, of Burley-on-the-Hill, near Oakham, a three years and eight months old Hereford steer, fed by him on grass, hay, and turnips.

Mr. Samuel Cheetham, of Hambleton, near Oakham, a four years and six months old Scotch ox, fed by him on grass, hay, and vegetables.

First prize awarded to Mr. S. Cheetham.

Second ditto to Mr. C. Smith.

## CLASS V.

Cows or Heifers of any breed or weight, under five years of age, without restrictions as to feeding.

To the feeder of the best fat Cow or Heifer, a premium of 7 sovs.

To the feeder of the second best ditto, the second premium of 3 sovs.

Mr. John Coverley, of Castle Bytham, near Stamford, a four years and six months old short horn heifer, bred by Lord Exeter, of Burghley, near Stamford, from Emperor, and fed by him on cake and turnips.

Mr. James Clarke, of Burley-on-the-Hill, near Oakham, a three years and three months old Hereford heifer, fed by him on cake and turnips since the 1st of October.

Mr. Richard Healy, of Hambleton, near Oakham, a short horn heifer, bred by himself, and fed by him on grass and hay only.

The first prize awarded to Mr. John Coverley.

Second ditto to Mr. James Clarke.

## CLASS VI.

Cows or Heifers of any breed or weight, above five years of age, that shall not have had oil, oil-cake, seeds, corn, or pulse, or meal of these, previous to the 1st of August, 1834.

To the feeder of the best fat Cow or Heifer, a premium of 5 sovs.

To the feeder of the second best ditto, the second premium of 3 sovs.

Mr. Henry Hodgkin, of Edenham, near Bourn, a six years old short horn cow, bred by himself, from Mr. Hand's old Turnill bull, and fed by him on 4 cwt. of oil-cake, turnips and carrots, since the 1st of August.

Mr. John Coverley, of Castle Bytham, near Stamford, an eight years old short horn cow, bred by himself from Lord Exeter's Emperor; has bred five calves, and fed by him on cake and turnips since 1st August.

R. W. Baker, Esq., of Cottesmore, near Oakham, a nine years old short horn cow, bred by himself, from the bull Eclipse (1598), dam Burleigh (page 245), has bred five living calves, and fed by him on cake, cabbage, and turnips since 1st August.

First prize awarded to Mr. John Coverley.

Second ditto to Mr. Henry Hodgkin.

## CLASS VII.

Long woolled fat Wether Sheep, one year old, bred within the limits of this Society, without restrictions as to feeding.

To the feeder of the best Pen of three under 22 months old, a premium of 7 sovs.

To the feeder of the second best ditto, the second premium of 3 sovs.

E. W. Wilmot, Esq., of Pickwell, near Melton, three 21 months old Leicester wethers, bred by himself, and fed by him on cake and carrots.

Mr. Henry Stimson, of Oakham, three 21 months old Leicester wethers, bred by himself, and fed by him on turnips, carrots, cabbage, seeds and cake, since the 20th July.

Mr. Wm. Pawlett, of Barnack, near Stamford, three 21 months old Leicester wethers, bred by himself, from rams of Mr. T. E. Pawlett, of Tinwell, near Stamford, and fed by him on clover, turnips, cabbage and carrots only.

First prize awarded to Mr. Wm. Pawlett.

Second ditto to E. W. Wilmot, Esq.

## CLASS VIII.

Long Woolled fat Wether Sheep, one year old, bred

within the limits of this Society, that have not at any time eaten oil, oil-cake, seeds, corn, pulse, or meal of these.

To the feeder of the best pen of three, under 22 months old, a premium of 5 sovereigns.

To the feeder of the second best ditto, the second premium of 3 sovs.

Mr. Wm. Pawlett, of Barnack, near Stamford, three 21 months old Leicester wethers, bred by himself, from rams of Mr. T. E. Pawlett, of Tinwell, near Stamford, and fed by him on clover, turnips, cabbage, and carrots.

First prize awarded to Mr. Wm. Pawlett.

## CLASS IX.

Long-woolled fat Wether Sheep, two years old, bred within the limits of this Society, without restrictions as to feeding.

To the feeder of the best Pen of three, above 22 and under 34 months old, a premium of 7 sovereigns.

To the feeder of the second best ditto, the second premium of 3 sovereigns.

Mr. James Burgess, of Ridlington Park, near Up-pingham, three 32 months old Leicester wethers, bred by himself, and fed by him on turnips, carrots, beans, and peas.

Mr. Henry Stimson, of Oakham, three 32 months old Leicester wethers, bred by himself, and fed on turnips, carrots, cake, and beans.

First prize awarded to Mr. James Burgess.

Second ditto to Mr. Henry Stimson.

## CLASS X.

Long-woolled fat Wether Sheep, two years old, bred within the limits of this Society, that have not at any time eaten oil, oil-cake, seeds, corn, pulse, or meal of these.

To the feeder of the best Pen of three, above 22 and under 34 months old, a premium of 5 sovereigns.

To the feeder of the second best ditto, the second premium of 3 sovereigns.

Mr. John Painter, of Burley-on-the-Hill, near Oakham, three Leicester wethers, under 34 months old, bred by himself, and fed by him on grass and vegetables.

Mr. James Burgess, of Ridlington Park, near Up-pingham, three Leicester wethers, under 34 months old, bred by himself, and fed by him on grass and vegetables.

Mr. Peter Healey, Jun., of Hambleton, near Oakham, three Leicester wethers, under 34 months old, bred within the district, and fed by him on grass only.

First prize awarded to Mr. Painter.

Second ditto to Mr. James Burgess.

## CLASS XI.

Breeding Ewes that have suckled Lambs up to the 1st July, 1834, and that have been fed on grass and seed only for six months previous to the time of showing.

To the exhibitor of the best Pen of five, a premium of 4 sovs.

To the exhibitor of the second best ditto, the second premium of 2 ditto.

Persons who have let six or more Tups in the year 1834, not to show for this premium.

E. W. Wilmot, Esq., of Pickwell, near Melton, five Leicester Ewes, bred by himself, and fed by him on grass.

Mr. Robert Smith, of Burley-on-the-Hill, near Oakham, five Leicester Ewes, fed by himself on grass and seeds.

Mr. William Baines, of Braunston, near Oakham, five Leicester Ewes, bred by himself, from rams of R. W. Baker, Esq., and fed by him on grass and seeds.

Mr. Wm. Pawlett, of Barnack, near Stamford, five Leicester ewes, bred by himself, from rams of Mr. T. E. Pawlett, of Tinwell, near Stamford, and fed by him on grass and seeds.—Commended.

Mr. John Hayes, of Whissendine, near Melton, five Leicester ewes, bred by himself, and fed on grass.

First prize awarded to Mr. Robert Smith.

Second ditto to Mr. Wilmot.

#### CLASS XII.

Pigs of any breed or age, weight above twenty stones of 14lbs, bred within the limits of this Society. To the feeder of the best fat Pig, a premium of 3 sovereigns.

To the feeder of the second best ditto, the second premium of 1 sovereign.

Thomas Hotchkin, Esq., of Tixover, near Stamford, a forty-nine weeks old pig, bred by himself, and fed by him on barley meal.

Mr. Thos. Healey, of Ashwell, near Oakham, a thirteen months old pig, bred by himself, and fed by him on meal.

Mr. Everard King, of North Luffenham, near Uppingham, an eighteen months old pig, bred by himself, and fed by him on barley flower and potatoes.

First prize awarded to Mr. Thomas Healy.

Second ditto to Mr. Hotchkin.

#### CLASS XIII.

Pigs of any breed or age, weight under 20 stones of 14lbs, bred within the limits of this Society.

To the feeder of the best fat Pig, a premium of 2 sovs.

To the feeder of the second best ditto, the second premium of 1 sovereign.

Mr. Richard Stevens, of Colleyweston, near Stamford, a forty-five weeks old pig, bred by Mr. Gaskell, of Thornaugh, near Wansford, and fed by him on barley meal.—Disqualified as over weight.—Commended.

Mr. Henry Stimson, of Oakham, a twenty-five weeks old pig, bred by himself, and fed by him on barley meal.

Stafford O'Brien, Esq., Blatherwycke Park, near Wansford, a sixteen months old pig, bred by himself, and fed by him on flour and potatoes.

First prize awarded to Mr. Stimson.

Second ditto to M. O'Brien.

The following premiums were offered by R. W. Baker, Esq. of Cottesmore, near Oakham:—

#### CLASS XIV.

To the occupier of Land in the district who shows the best five open Heifers of any breed, under two years of age, 10*l*.

R. W. Baker, Esq., of Cottesmore, near Oakham, five open Heifers, under two years of age, bred by himself, from his bull Gainsborough, and fed by him on grass only.

Mr. Wright, of Exton, near Oakham, five open Heifers, under two years old, fed by himself, on grass only.

Prize awarded to Mr. Baker.

#### CLASS XV.

To the occupier of Land in the district who shows the best bull (in use) of any breed, under eighteen months of age, 5*l*.

R. W. Baker, Esq., of Cottesmore, a short-horn bull, under eighteen months old, bred by himself,

from his bull Gainsborough, dam Graceful, by Emperor, (1014.)

Mr. J. Needham, of Ridlington, near Uppingham, a bull, under eighteen months old.

Prize awarded to Mr. Baker.

#### CLASS XVI.

To the occupier of Land in the district who shows the best Cow Calf of any breed, under twelve months old, 5*l*.

R. W. Baker, Esq., of Cottesmore, a heifer calf, under twelve months old, bred by himself, from his bull Gainsborough, dam Graceful, by Emperor, (1014) —Commended.

Mr. Henry Stimson, of Oakham, a thirty-two weeks old heifer calf, bred by himself, from R. W. Baker's, Esq., bull Gainsborough, and raised by himself.—Commended.

Mr. Thomas Dorma, of Langham, a twenty weeks old heifer calf, raised by himself.

Mr. John Berridge, of Barrow, a twenty-two weeks old calf, bred by himself, from R. W. Baker's, Esq., bull Gainsborough.

Prize awarded to Mr. John Berridge.

#### CLASS XVII.

To the occupier of Land in the district who shows the best pair of Mares of any breed, suitable to the Agriculture of the district, 2*l*.

R. W. Baker, Esq., of Cottesmore, a pair of Suffolk mares, used and kept for his Cottesmore Farm.

Mr. Robert Smith, of Burley-on-the-Hill, near Oakham, a pair of eight years old black mares, kept for agricultural purposes on his Burley farm, both in foal by Oxford, the property of Messrs. Hales and Housin.—Highly commended.

Mr. Charles Rowell, of Ridlington, a pair of mares, kept by him for ploughing, &c.

Mr. Wm. Grant, of Empingham, a pair of mares, bred by himself, and kept for agricultural purposes.

Prize awarded to Mr. Baker.

#### CLASS XVIII.

To the occupier of Land in the district who shows the best Colt Foal of any breed, suitable to the agriculture of the district, 2*l*.

R. W. Baker, Esq., of Cottesmore, a colt foal, foaled in May last, and bred in Suffolk.—No competition.

The following were offered by E. W. WILMOT, Esq.—

To the Labourer in Husbandry who has brought up the greatest number of Children without Parochial Relief, and can produce the best character from his Employer, a premium of three sovereigns.

To the second ditto, a premium of one sovereign.

First prize to John Baxter, of Collyweston, who has been in the employ of Mr. J. Bunning, of Keltorpe, 40 years; has brought up nine children without parochial relief, and still bears an unexceptionable character.

Second prize to Wm. Chamberlain, of Burley, labourer, who has lived and worked upon the Burley Park Farm, near Oakham, (now in the occupation of Mr. Robert Smith,) for 38 years, is 50 years old, has brought up eight children, and has never at any time received parochial relief, and bears an excellent character at the present time.

A gratuity of 5*s*. was given to Wm. Chamberlain, of Hambleton, labourer, 32 years of age, who has lived nearly 21 years in the same family, and brought up five children respectably without parochial relief.

Zachariah Wright, of Cottesmore, labourer and shepherd, has brought up eight children and buried three without parochial relief, and has been in the employ of R. W. Baker, Esq., of Cottesmore, more than 16 years.—Was recommended.

The following extra Stock was also exhibited:—

#### SHEEP.

Mr. Wm. Pawlett, of Barnack, near Stamford, some Leicester wethers, under twenty-two months old, bred by himself, from rams hired of Mr. T. E. Pawlett, of Tinwell, near Stamford, and fed by him on vegetables only.

Mr. John Hayes, of Whissendine, near Melton, four Leicester wethers, under thirty-four months old, bred by the late Mr. Glover, of Whissendine, and fed by him on grass only.

Mr. Richard Healey, of Laughton, near Falkingham, three long-woolled wethers, under thirty-four months old, bred in Lincolnshire, and fed on his Ashwell Farm, upon grass only.—Commended.

E. W. Wilmot, Esq., of Pickwell, near Melton, five theaves, bred and fed by himself.

Mr. Shipman, of Sedgbrooke, near Grantham, three long-woolled sheep, under thirty-four months old, bred and fed by himself on grass only.

#### BEAST.

Mr. Richard Healey, of Laughton, a Scotch Highlander, fed on his Ashwell Farm, upon grass, hay, and Swedish turnips.

Mr. James Clarke, of Burley-on-the-Hill, a four years old Hereford heifer, fed by him on cake and turnips since 1st October.

E. W. Wilmot, Esq., of Pickwell, near Melton, five open heifers, under three years old, fed by himself, on grass only.—One of Mr. Wilmot's heifers commended.

E. W. Wilmot, Esq., of Pickwell, a bull, twenty-three months old, kept by himself.

#### PIGS.

Mr. Everard King, of North Luffenham, a pig, bred and fed by himself.

#### SWEEPSTAKES.

A Sweepstakes of half-a-sovereign each, for the best Pig of any breed, age, or weight, open to all England, until the 1st day of December.

Mr. Thomas Healey, Ashwell.—No competition.

An extraordinary Ewe, the property of E. W. Wilmot, Esq., was slaughtered and hung up in the Riding-House, which weighed 39lbs. per quarter, and was very fine meat.

We understand that the next meeting of the subscribers, for fixing the day of showing, settling the bill of premiums, and transacting other business connected with the show of 1835, will be holden at the Crown Inn, Oakham, on the first Monday in January next.

#### THE DINNER.

At three o'clock, 260 gentlemen sat down to dinner at the George Inn: Sir Gernard Noel Noel, Bart., M.P., in the Chair, and Major-General Johnson, Vice-President. Amongst the company we noticed G. J. Heathcote, Esq., M.P.; Henry Handley, Esq., M.P.; John Humfries, Esq., Lodington Hall; John Eagleton, Esq., Ketton; W. Healey, Esq., Laughton; R. W. Baker, Esq., Cottesmore; Rev. S. Shield, Preston; T. Brown, Esq., Uppingham; E. W. Wilmot, Esq.;—Sherard, Esq., Krossington; J. Morris, Esq., Uppingham; J. Weatherall, Esq., Brampton;—Simpkin, Esq., Whetstone, &c., &c.

As soon as the cloth was drawn, the Hon. Chairman proposed "The King," with three times three.

The CHAIRMAN said as there was much business to get through in connection with the Society, he would be brief as possible, and give, "The Queen, and the rest of the Royal Family,"—three times three.

The "Army and Navy," and "The Rutland Agricultural Society." Three times three then followed, and the Chairman requested Mr. Stimson, one of the Secretaries, to read over the competitors for the prizes, and the awards of the Judges, as given above. This being done,

G. J. HEATHCOTE, Esq., M.P., said he would propose a toast, which he was sure they would all drink with great pleasure. They had all seen the fostering care of the Hon. President for a number of years over the Society; and were indebted to him not only for his liberality but for the use of the Riding-house; but he was sure that in that place and that county, he need not remind them of these obligations to cause them to drink the toast with enthusiasm, and he hoped the good practice they had commenced would be followed up by giving it with three times three. "Sir Gerard Noel, the President," was then warmly received, and three times three hearty cheers succeeded.

The CHAIRMAN said, that the compliment paid him by the speaker and the company was a peculiar and high gratification at this late hour of his existence. He had spent a great number of years amongst them in the county of Rutland, and was pleased to receive such a compliment at the hands of those whom he had known so long. He was now more anxious than ever for the amelioration of the condition of both farmers and labourers, and he was happy that he was surrounded by so many gentlemen who were equally anxious for the accomplishment of the same object, convinced that the prosperity of those classes tended most materially to the national welfare and stability. He also referred in very affectionate and respectful terms to the endeavours of the hon. gentleman's father who had proposed his health, (Sir Gilbert Heathcote, Bart.,) for the accomplishment of the same end, and expressed his thanks for the accommodation he had provided for them that day. He would not enter into a detail of the proceedings of the day, but concluded by giving "The Successful Candidates."

Mr. SMITH, of Burley, returned thanks. He expressed his determination to take the animal which had that day won the first prize, and enter him in the first class at the Smithfield show, let it cost what it would; for they had won the first prize in London two years together with the first prize animal from Oakham, and he believed they could do it again. As a young farmer he was a great advocate for breeding, and had last year proposed a class for ewes, which premium had been awarded to him that day; but as he had proposed the class he should not take the prize, but give it to the funds of the society.

The CHAIRMAN gave "The unsuccessful Candidates."

The CHAIRMAN proposed "The Vice-President."

General JOHNSON, in returning thanks, congratulated the county of Rutland on having that day the largest and most respectable assemblage of agriculturists he had ever witnessed, and also on the superiority of the stock exhibited. Had he known the particulars of their arrangements, he

would have sent an ox, which, although he might be inferior to some there, in some points, he would back for 5*l.* to be heavier. In referring to the condition of the farmers, the General said there was, he believed, only one way to put a stop to those diabolical acts of incendiarism, and that was to institute an immediate and strict investigation into the conduct and proceedings of all about the place where the fire occurred.—He had known two instances where this had led to the conviction of the miscreant, and for three years since no more fires had occurred in those places, because this system was one which deterred them from the commission of the crime. And he knew no way better calculated to put such notions out of the heads of the infatuated than by filling the belly of the hungry; but if an overseer drove away the labourer from his door when he ought to find work for him or relieve him, then he drove him to desperation. He concluded by hoping that all would be done which could be to alleviate the condition of the labouring classes.

The next toast was "The Vice-Presidents of the Society."

H. WILSON, Esq., of Allextion, returned thanks. He approved of these meetings above all things, because they strengthened the bonds of union between the landlord and tenant.

The CHAIRMAN proposed "The Judges," and said that the unsuccessful, as well as the successful, had expressed their approbation of their awards. It was extremely gratifying to him, at the three or four anniversaries at which he had presided, to have witnessed the utmost satisfaction and harmony.

C. HILLYARD, Esq., (one of the Judges), said he hoped they had done their duty conscientiously; if they had committed an error, it was an error of judgment, for they did not know to whom any of the stock belonged, and therefore could not be partial. The show Mr. H. highly commended, as creditable to the county, considering the infancy of the society. The sheep especially would do credit to any show in England. It was needless now to say anything of the general utility of societies like this, and he would therefore only remark that it was in meetings like these that they found out what faults their animals had. While they had their stock at home they fancied they were better than any body else had, but there they found that it was not the case. He was sure they had yet much to do in the way of improvement, for there was yet a great quantity of stock in the country, consuming a vast quantity of meat, which ought to be exterminated.

Mr. T. HEALEY said that, in consequence of the observations of one of the judges, that their great object should be to produce the greatest quantity of meat from the least consumption of food, and in the shortest time, he begged to inform them that the pig he had shown that day was only twelve months and three weeks old, although he had put him down for thirteen months, and his weight was 48 stone. He was got by Mr. Standwell's boar; and he thought it would take a clever fellow to produce a better.

"The Secretaries and Treasurers of the Society."

Mr. CHEETHAM returned thanks for the Treasurers.

Mr. R. HEALEY, Ashwell, for the Secretaries. The opinion that these societies were beneficial to the country was not yet unanimous, but he thought the number of their friends was daily increasing. In the last ten years he was sure that

their breed of cattle and sheep had greatly improved; and when he looked round him that day in the Riding House, and saw the great number of men of experience, and many from distant parts, he thought, "what a valuable Agricultural School is this for the young farmer." He next considered it as a means of strengthening the bonds of union, and was a benefit to the community, from the highest peer of the realm to the humblest labourer who rented his rood of potatoe land. He was sure that this meeting produced the happiest effects, in drawing together the landlord and the tenant, and they (the tenants) valued these condescensions more than they valued their money.—The venerable President had long stood by them, and honoured them with his presence, and he was now happy to see that his example had been followed by the honourable gentlemen who sat against him for the first time.—Rutland was possessed of landlords who need not be afraid to meet their tenants face to face; and he believed no county could boast of more good ones, and no county had to lament fewer bad ones."

"W. E. WILMOT, Esq." was next drank.—In returning thanks, Mr. W. said what he had given was with a willing heart, and the prizes he had obtained he gave back to the society, as he never took any thing from so valuable an Institution. In reference to Mr. Healey's observations on the condescensions of their landlords, he considered it was only their duty thus to co-operate with their tenants; and he heartily wished that all the landlords in the kingdom would thus come forward to perform their duty instead of spending their time and money in the foibles of fashion. There were many present whom he was most happy to meet, and one he observed who was always at his post of duty when any thing was to be done for the Agriculturist, and he would therefore beg to propose the health of—"Mr. Handley."

H. HANDLEY, Esq., M. P., expressed the gratification it gave him to be connected, in any way, with the cause of the agriculturist; and ever since he had been a member he had been the humble advocate of their interests. He had been introduced as a stranger to this meeting, but he hoped it was the last time he should be considered one. In the morning he had been gratified to see such specimens of stock as were a credit to the county, and now he was surrounded by as respectable a class of yeomanry as it was possible to meet. He would not introduce any subject to create a division of opinion, but would briefly allude to a subject which had been his *hobby-horse* during the last session, viz., that of Islington market.—Mr. H. expressed his preference for the new market before Smithfield; he had heard all the arguments, on both sides of the question, in Committee, and lamented that so much secret influence had defeated his aim. The Corporation of London had determined to add to Smithfield three roods of land, but this would not remove the evils complained of, and their only intention was to saddle them with an additional toll. Another bill would be brought forward next session of Parliament, and he hoped they would all unite and instruct their members how to act. Mr. H. concluded by proposing "The Yeomanry of the County of Rutland."

The CHAIRMAN said he had the pleasure of coinciding entirely with Mr. Handley; and he was of a decided opinion, having viewed the Islington market, that it was a desirable project: it was a short distance from London, but it was so much nearer to them.

Mr. HILLYARD also spoke in favour of the Is-

lington market; he had attended meetings on both sides of the question, and had had a good deal of experience at Smithfield; and in consequence of its crowded state, he was sure that their cattle was sometimes given away, instead of being sold. If the Islington market were established they need not submit to this, but could bring their cattle away, and stall them with the salesmen there, and the butchers might come there to purchase.

Mr. HANDLEY said he had sat on the committee, and listened to the evidence and arguments for thirty-five days, and he thought the London butchers a set of most incomprehensible men. Sixteen years ago between 15 and 1600 of them had signed a petition to Parliament for the removal of Smithfield market, and now the number had dwindled down to 15 or 20; the fact was, a few opulent men in the trade had got their hands upon their poorer brethren, and raised a powerful opposition to the bill. He hoped that in the next Session of Parliament the bill would be entrusted in abler hands.

R. W. BAKER, Esq., in returning thanks for the last toast, said that he was proud to be ranked among the yeomanry of Rutland. As a steward, a tenant, and an occupier of land, he was convinced that if the tenants and their landlords co-operated throughout the country, to promote such objects as this society had in view, England would continue to be a great and a flourishing country. He had been the first to introduce the short-horned breed into the county of Rutland, many years ago; and he said at that time that he should be glad to see a hundred where he then saw one. He also alluded to the breed of horses which he had introduced for agricultural use, for one of which (a mare which he had shown that day) he had given 100*l*. Alluding to his annual ploughing matches at Cottesmore, he said that at the first meeting he had only seven competitors in the field, and the last time he had 47 ploughs, and above 3,000 persons present.

Mr. BAKER next proposed the health of "Mr. Healey, of Lougham."

Mr. HEALEY, after some facetious observations, said that contrasting the present with the past state of the county of Rutland, when he was a resident of that part, he could not help observing that day, when he viewed the enclosures and the cultivation and general appearance and condition of the country, that it had been converted from a desert to a paradise, and especially in that part where Mr. Baker resided; and he considered the ploughing matches and this society to have been the grand impetus of agricultural improvement and cultivation. The transformation of the condition of the county in so short a time, appeared to him more like magic than the efforts of human power. In one sentiment uttered by his son he heartily concurred, viz.: that no county was blessed with better landlords, and that they had reason to rejoice in their condescension in thus meeting them; but he regretted that they did not favour other societies of a similar nature at other places with their presence. Mr. H. concluded an eloquent speech by hoping that the spirit of these societies would go on and increase, until they should see throughout the country equal shows of stock, and equally respectable and numerous assemblages, with what they had that day witnessed. He would propose the health of "Major Brown," of Welbourne, as a man who had done all in his power to promote the agricultural interests.

Major BROWN returned thanks, and said he felt that the interests of landlords and tenants were in-

separable, and hoped they would always feel mutual pleasure in meeting each other.

The CHAIRMAN proposed "Success to the Northamptonshire Farming and Grazing society."

Mr. HILLYARD returned thanks. He said they were going on flourishingly under the patronage of Lord Spencer.—Theirs was the oldest society, and this year he believed they should get the first prize at Smithfield with an ox belonging to Lord Spencer, whose weight was 240 stones, 8*lb* to the stone. (Pointing to an engraving of the celebrated Durham Ox, hung in the room), he said he believed he was nearly, if not quite equal, to that gentleman, whom he recollected seeing very well. Mr. H. also stated that he had brought with him in his gig a farmer's son, who had suggested that it would be well to make a match for a farmer's son out of Northamptonshire to plough against one out of Rutland, and he had replied that he had no doubt he should find a friend at their meeting who would be very ready to do so (alluding to Mr. Baker), and he would propose for them to plough first in Rutland, then in Northampton, and if they proved equal, then to plough between the two to decide.—(Many voices were here called for the challenge to be accepted, and in the after part of the evening we believe the match was made up, the particulars of which we shall give when we can obtain them.)

G. J. HEATHCOTE, Esq., said Mr. Hillyard had made some very good humoured allusions to their society, but had designated them as infants compared with the Northampton; and he would therefore beg to say, that infants as they were, they were not afraid (after the result of the exhibitions in London and the prizes they had won,) to compete with them, and he would therefore propose "Success to the Stock which had been shown there that day, and might they be equally successful at the next show in Smithfield."

Mr. HILLYARD said that he did not wish to under-value them on account of their *infancy*; and would add that he no more admired their own society because it was *old*, than he did a lady because she was *old*.—(A laugh.)

The next toast was "Prosperity to the Grantham Agricultural Society."—Mr. BEASLEY returned thanks.

H. HANDLEY, Esq., M. P., would propose the health of a class of men in whom they reposed great trust and confidence—"the Smithfield salesmen,"—and one of whom he was happy to meet on the present occasion, Mr. Leihair.—Mr. L. returned thanks.

At nine o'clock the Chairman, accompanied by Mr. Heathcote and Mr. Handley, left the room, when General Johnson was called to the chair. The General proposed "the health of G. J. Heathcote, Esq., M. P." which was drank with enthusiasm, and several other toasts, interspersed with some excellent songs, prolonged the harmony and conviviality of the meeting till midnight, when the General vacated the chair, and the company separated.

Since our return from Oakham we have received a letter from an eminent farmer there, who says that the gentlemen attending Oakham were so pleased with Mr. Healey's pig that they have prevailed upon him to allow him to be taken to Leicester, for exhibition, that the agriculturists in that neighbourhood may be indulged with the sight of so extraordinary an animal; allowed by all who saw him to be the largest as well as the finest ever bred in this part of the country, and the judges declared him to be without a fault.

## LITERATURE.

THE HORSE IN ALL ITS VARIETIES  
AND USES. By JOHN LAWRENCE. H.  
Washbourne, Salisbury-square.

This book contains much information which will be useful to all those who have not devoted more than ordinary attention to the care and management of horses; we subjoin an extract on the exportation of horses.

"A year or two since, the following calculation was generally supposed to be accurate, or rather below than an exaggeration of the truth. It has doubtless since proceeded *pari passu*. 'Taking the mean price of each horse to have been 500 francs, or 20*l.*, odd shillings (a rate probably too low), the sum expended by France alone has amounted to 1,374,916*l.* in five years.' It was at the same time averred, no doubt with too much truth, and with equal shame to the police of this country, that, a very great, if not the most considerable part, of this export consisted of stolen horses! On this trade, some sage of the most ancient school of political economy in the *Sporting Magazine*, made the following heart-breaking lament. 'Though, during the last month, very few thorough-bred horses have been sent abroad, we regret to learn that many others have. At Horncastle fair, no less than *three hundred* horses were bought by three foreign dealers, most of which were mares. This must very much hurt the breed of riding horses in England, more especially those used for the cavalry. Our farmers being tempted to sell their three-year-old fillies to those dealers (who never buy the worst, or one with splent, spavin, or curb) they must either breed from the blemished ones (*pourquoi?*) or, tempted from the low price they fetch, buy the mares which are imported from Germany, the Netherlands, &c., and breed from them, which are really too bad for our hackney coaches. Mares should not be allowed to be exported, except on paying a heavy duty, or in a few years our breed will be very much injured. If the government do not put a stop, or in some way check the exportation of mares, should a war break out in a few years, the cavalry cannot be mounted, except at a great advance in the government allowance.' Government has already anticipated this writer—mares have at length enjoyed the military honour of becoming cavalry. An official French account of the importation of horses into that country, states the annual number of English horses imported to be from 15 to 25,000.

Certainly, our export of horses to the Continent, to the East and West Indies, and to New South Wales, has greatly increased of late years, and as a natural consequence, the home stock has increased in proportion. A ready and profitable sale for an article, which can be produced, will ever tend to the multiplication, not subtraction of the article. Time has been when our sages, reverently quoted above, were in the horrors at our national luxurious extravagance in devouring lambs and sucking pigs, to the obvious risk of ultimately rooting out those breeds, which, nevertheless, has not yet happened. As to fundamentals generally, I profess myself of the modern school of political economy—with a bar, however, in regard to the scientific verbiage and slang of the scaffolding, which is veritably and actually ludicrous, in the true style of the burlesque. I have a very humble reverence for the prolific and exuberant brains of those economical writers, who decide that, from five to five and twenty pages each are necessary to explain to their unlearned readers, what rent is—

and what capital is. The tenantry are already sufficiently enlightened on the difficulty of obtaining the latter, and the paramount difficulty of discharging the former."

THE MANAGEMENT OF BEES, WITH  
A DESCRIPTION OF THE LADIES'  
SAFETY HIVE; by S. BAGSTER, JUN.—*Bagster, Paternoster-row.*

We have no hesitation in pronouncing this to be the most complete work on the subject which has ever come under our notice.

THE LADIES' SAFETY HIVE EXAMINED  
AND EXPLAINED.

Ladies generally consider keeping bees a task of imminent risk, and that those who are successful in the pursuit are either naturally impervious to the sting, or possess such deep science in the matter that nothing less than the business of a life can insure excellence; or, although unconfessed, that necromancy or legerdemain has *something* to do with it. Now the real secret is a successful application of common sense to common principles, and a general acquaintance with the habits, instincts, and peculiarities of the bee.

Courage is not half so necessary as judgment: an old proverb has it,—

"He that fights and runs away  
Shall live to fight another day."

So it is with your bees: if you find, on approaching your hive on a windy day, that the bees have as much as they can well do, safely to reach home, get out of their way; or the first young fellow who is driven against you by the wind, will make haste into the hive, and quickly give the pass touch of war, when you may expect a regular attack. Common sense says, Do not go near the hive on windy days. Again, bees dislike shaking; for you will find on the least vibration of a hive, a number come to the door in a great hurry to see what is the matter. If the vibration be caused by opening the windows—or cutting off a glass of honey—or removing filth—or feeding, all of which are indispensably necessary, and thus cause a commotion, cease for a short time;—you may be apparently a coward, but really a conqueror. Again, remember that *entire* separation from the queen is one of the most certain means of attaining an ascendancy over the bees, and easy recognition of their queen, the most powerful excitement to keep them in constant activity; this instinct will be found very valuable in your future management of the hives.

An extraordinary instance of attachment to the queen occurred to me in stocking one of my hives. In the very height of the season, just before a hive swarmed, I purchased a stock at a distance from my residence; it was in one of the imperfect, flat-shaped cottage hives, such as is used for working the top glass, seen at p. 61. By means of the bottom box and cloth, recommended at pages 53 and 54, I removed it to my own house without the least personal inconvenience; and late in the evening gave the bees full liberty of air through the night, and a clear egress and ingress at day-light, by untying the cloth and throwing it loosely around; they were in the most deplorable heat in consequence of the removal and their near approach to swarming. On the following night I intended to have removed the hive off the box to place it on a flat board, preparatory to fumigation; but on attempting the removal, to my almost inex-

pressible pain and anxiety, although the combs had been kept in their places by the under box while travelling many miles; yet, when lifted from that support, nearly the whole of the combs, bees, and queen, fell out together in one mass. I confess I was horror-struck at the sight. The moon was just rising full, which, while it gave me light, exposed my person to the attacks of ten thousand infuriated bees. The principle of running away was then useless; the best use of my wits alone got me out of the difficulty. With the teeming thousands before me I employed two hives; the one in which the top part of the combs and multitudes of bees remained after the mass had fallen out, the other a new empty hive; the doorways of which I brought very close together. As I could not get the whole of the comb under the original hive, I placed as much as I could there, and the residue under the new hive, by breaking the combs in half, and placing them on their edge, side by side, within the diameter of the hive, and then covering them with the hives, I expected the bees would have used the two indiscriminately, until I could venture to separate them for my experiment. Then came the fear, "What if the queen should be hurt?" The next day I watched most narrowly, and found that the queen was safe, because the bees were repairing the damages of the removal—but as evidently hard at work carrying the honey from the new hive to their own. The queen being safe, and the bees having left the brood comb where I had hoped to have established a second colony under a new made queen (see page 16), I at once determined to fumigate them, and place the neglected brood comb in my new ladies' hive, in order to save all the valuable brood, which another day would have destroyed, and establish the queen on a new throne.

The fumigator was put to work on the afternoon of the following day; and very soon I had command over all the inhabitants. The puff balls were not very good, which caused me to be longer than usual; so that many of the bees began to get lively again. But before this occurred I had lifted the second hive, under which there was not one bee; and, having adjusted the combs in the ladies' hive, I proceeded to store away the bees, by placing them in the *side apartments*; but, to my mortification, after having almost individually examined the whole for the purpose of restoring the queen to her subjects, I could not discover her. I thought I might perhaps have put her into possession amongst some of the comb; but, to be certain, I gathered up every bee I could find, and put the emptied hives on their side against mine, so that the queen might have every opportunity to get in, if not already there. The profusion of spilt honey, the hot weather, and the bees from my other hives, caused a great commotion, so that the real cause, the absence of the queen, was undiscovered. The next day the same hurly-burly continued: when, having feared my queen was unseated, I took an apiarian friend to form a judgment. He gave the opinion that there surely was a queen in my new hive, or if destroyed, one soon would have been made out of the brood comb. I pointed to groups of bees on the grass and around the stand, still fearing that my queen was in one of them; but he so positively said such was not the fact, that I did not examine any of the masses then. Naturally inquisitive under such circumstances, I visited my perturbed hive late in the evening, and found, while the others were quiet, this was in an uncomfortable state. All the masses or companies of bees, which had been licking up the dropping sweets

through the day, had now all retired, save only one lot about as large and as round as a small cricket-ball. My heart beat high with a sensation which an enthusiast in a pursuit alone can comprehend. I hoped all would yet be right, and left them. At dark I again visited them—hope revived, for the mass remained unmoved: by the earliest peep of day I rose from bed, after a sleepless night, to look for my beauty, and, if successful, witness genuine loyalty.

I confess myself an enthusiast: I laid myself at full length on the grass, and with my hand gently opened the benumbed but still clustering mass: there was the queen, surrounded by her faithful and watchful subjects, paralyzed, and to all appearance quite dead. I picked her up, placed her in my hands, breathed upon and cherished her for a considerable time, until, I think with joy of a new kind, I saw her move one joint of one leg; my tender care was renewed until the sun had mounted high in the heavens, and by his beams renewed the perturbation of the defenceless hive. The demonstrations of misery were renewed ten-fold when anyone approached the hive; and then, indeed, courage was necessary, for the bees had just missed their queen. To those alone who have witnessed such commotion can an idea be conveyed.

Now came the delightful scene—my queen was restored by the genial warmth of my hand, and walked comfortably about it; the bees, her subjects, were whirling in incensed crowds around the hive: the buz of discontent was incessant and clearly marked. At this moment I called all who were in the house to witness the scene. I placed the queen on the alighting board at the door of the hive; she was recognised in a moment; the pass-touch, or pass-word, or pass-hum, was communicated. The great commotion was instantly changed to peace. She was caressed—licked over and fondled—the bees pressing round, who, with an affection worthy of the best subjects of a beloved monarch, showed their attachment in terms that even human tongues could not exceed.

From that instant all was peace, and harmony, and joyful labour. Very few of the brood were destroyed by the accident which gave rise to the development of this peculiar instinct; and, I hope, I treasure up the remembrance of the circumstance as one more proof of the truth of that passage of Scripture, "God doeth great things and unsearchable; marvellous things without number."

Gentlemen must be pleased to remember, that, while I consider my practice so easy, as to be safely placed in the hands of the fair sex, it is equally adapted to their use, being based on the sound principles of cool store-room, easy ventilation, easy deprivation of honey, and similarity to the simplest modes of bee-management.

SPIRITUAL HONEY FROM NATURAL HIVES. BY SAMUEL PURCHAS. A.M. S. Bagster, Paternoster-row.

This work, which was first published in 1657, has been supervised and much improved by Mr. BAGSTER, who seems to delight in every thing which in any way treats upon or is connected with the history of the Bee. The quaintness of the style and the soundness of the observations will recommend the work to many persons.

## HIGH PRICE OF BREAD.

MR. EDITOR,—A great deal has been said lately in the public papers respecting the high price of bread compared with the low price of wheat, and there can be no doubt that those persons who have been paying 8d per 4 lbs. of bread have paid from 20 to 25 per cent. more than they ought to have been charged.

What I would advise to remedy this imposition is to put on an assize again, but not regulated by the price of flour, as returned by the bakers (and which return was false in 49 cases out of 50), but by the average price of wheat sold for the purpose of making flour; you would then find a very different price charged for the best bread, as they call it. The truth is that the full-priced bakers make the living pay for the dead, as the saying is,—that is, you and others who are paying the full price are making up the losses they sustain from bad debts; so that, because they are foolish enough to trust a parcel of people who are entirely unworthy of credit, you and others must make up the loss. Besides, the market price of flour, as they call it, is all humbug, they do not pay that price; they know it well: ask the millers if this is not true. Therefore, I say, there is no remedy but making the price of bread from the price of wheat sold for making flour. Until this is done the public will be imposed upon.—I am, Sir, your obedient servant,  
CERES.

## THE PRICE OF BREAD.

TO THE EDITOR OF THE TIMES.

Sir,—I am sorry that I have not had an earlier opportunity of noticing the two letters contained in your journal in reply to mine on this important subject. The public must feel obliged by the information given by your correspondent "E. J.," from which it appears that the proportion of potatoes used by the metropolitan bakers is about half a bushel to every sack of flour, and that the baker gains from four to five loaves per sack by the mixture of potatoes. What, then, are we to think of the statement made by the other correspondent styling himself "a Practical Baker," who asserts the proportion of potatoes used to be only from 1-88 to 1-100? But leaving the baker to extricate himself as he can out of this striking discrepancy, I quite agree with "E. J." in his conclusion, that without doubt the present price of bread is out of all proportion to the price of wheat; and it is a grievous thing, that notwithstanding the abundant harvests with which we have been favoured year after year, and the unprecedented low price of grain in consequence, the bread of the metropolis is still an adulterated article, not made from pure wheaten flour, but mixed up with ingredients, which private families, who make their own bread, are neither in the habit nor under the necessity of using. The public, and especially the poor, have cause to complain that under the present system they are deprived of their just share in the blessings of a gracious Providence, whilst the millers and the bakers are reaping all the advantages. The unhappy farmer, too, is crushed to the earth beneath the combined oppression of those trades and monopolies which interpose themselves betwixt the grower and consumer. I am not at all surprised at the soreness felt and the rudeness evinced in his letter by the "Practical Baker." It is ever the case with those who dread the light, and therefore would resist investigation. The bakers may

imagine that they have got the inhabitants of the metropolis completely into their power, and dependent on them for the principal necessary of life, in whatever way they may choose to supply it, either with regard to quality or weight. But let them not conclude, that because a tyranny has been long established, it is therefore never to have an end. The idea has been entertained of enabling private individuals in general to brew their own beer. But is it not at least equally important, as it is far more practicable, that they should make their own bread? In order to promote such a plan the beginning should be made by throwing open the Corn-Exchange really and practically to purchasers of every description. And this I consider to be a question well worthy the serious attention of the Municipal Commissioners. It would also be desirable that markets should be instituted in various parts of the metropolis, where grain might be exposed for sale in the sack in any quantity that might be required, instead of being sold, as it is in Mark-lane, only by the sample, and principally, I think, I may say, in wholesale quantities. Only once give the facility of purchasing, and the means of grinding will be readily obtained. Besides, when persons have the liberty to choose their own grain, they will be the better able to avoid the use of "that rubbish (I am using the very language of the "Practical Baker" himself) scarcely fit for anything else than pigs' meat," of which I doubt not that an ample proportion is every day worked up in the manufacture of the bread of the metropolis. Here I must acknowledge that my opponent has furnished an additional argument, if any had been wanting, in favour of home-made bread. The "Practical Baker" may talk as insolently as he pleases from behind his fancied intrenchment of an old monopoly, and tell us about the use of the best wheat in the bread of the metropolis; but who for a moment can believe anything of the kind in the face of all the adulteration that is going forward, or what security can the public possibly have that such is the case? The bakers, therefore, can have no right to assume 54s or 56s per quarter for the price of wheat as the basis of the calculation of the price of bread, when the imperial average is only 42s or 44s, unless, indeed, they call to their aid the monopoly of their friends, the millers, to help them out by swelling the statement? I quite agree with your correspondent "E. J." that the millers are at this moment driving a thriving trade, and making enormous profits, to the great injury and oppression of the public at large, and especially of the farmers; and it clearly appears from the letter of my opponent, that the bakers cannot in any degree clear their own trade in this matter except by making out a case against the millers. According to his statement, the intervention of the millers occasions a considerable advance in the London market. For surely he is not justified in describing, as he does, the present prices of grain to be high, if the true prices are considered, which can only be taken from the average of the different counties named in the Corn Law Act, which, I believe, have been as low as 41s or 42s, and it is well known do not afford anything like a sufficient remuneration to the producer. But really it is lost labour to attempt to reason with a person who is inclined to pay so little attention to facts. I will therefore conclude with expressing a hope that a subject of such extensive importance may be transferred to abler hands than mine. I would only take leave to remind monopolists of every class that the spirit of reform is abroad. Hitherto it has busied itself

chiefly with matters of government. But the day may not be far distant when it will search into the iniquities of trade, and the oppressions of private life.

A CONSUMER.

### MALT TAX.

The following Statement is published for the purpose of enabling the Public to form a correct estimate of the operation of the Malt Duty.

An Account of the total quantity of Malt made in England and Wales in each year, from 1787 to 1828, both inclusive, the Rates of Duty, and the Total Amount of the Duty;—extracted from the Official Returns printed by order of the House of Commons.

| Years ending July 5. | MALT.     |       | Rate of Duty. |       | Total amount of Duty. |       |
|----------------------|-----------|-------|---------------|-------|-----------------------|-------|
|                      | Qrs.      | Bush. | s.            | d.    | £                     | s. d. |
| 1787                 | 3,409,104 | 7     | 10            | 6     | 1,789,780             | 1 2   |
| 1788                 | 3,358,580 | 1     | ..            | ..    | 1,764,264             | 11 3  |
| 1789                 | 3,031,314 | 2     | ..            | ..    | 1,591,439             | 19 7  |

An account of the quantities of Malt used for home consumption during the 50 years ending with 1753. (From Smith's Tracts on the Corn Laws.)

| Years.            | Yearly Averages. |       |
|-------------------|------------------|-------|
|                   | Qrs.             | Bush. |
| From 1703 to 1713 | 2,959,063        | 7     |
| 1713 to 1723      | 3,542,157        | 2     |
| 1723 to 1733      | 3,358,071        | 2     |
| 1733 to 1743      | 3,215,094        | 2     |
| 1743 to 1753      | 3,404,026        | 1     |

From the above tables, it appears that the consumption of malt has been substantially stationary for about 120 years, but it must be remarked, that it was customary, during the latter part of the period which this last table embraces, to allow private families to compound for the malt duty; and many availed themselves of the alternative, a circumstance which shews sufficiently that the quantity of malt then actually made use of must have been greater than the quantity as estimated by the duty from the amount of which the above quantities have been calculated.

During the first ten years of the last century the population of England and Wales is estimated to have amounted to about 5,350,000; and it is supposed that during the remaining forty years of the first half of the century, the population had increased to 6,467,000. According to the Parliamentary returns, the population in 1801 amounted to about 9,100,000, and in 1821 to 12,100,000, and if this rate of increase continued, it would amount in 1828 to about 13,500,000. The supply of malt, therefore, to each person at these respective periods would stand thus:—

In 1713, the population being 5,350,000, and the annual consumption of malt, 2,959,064 quarters, gave to each person a supply of 4 bushels and 27 pints.

In 1750, the population having amounted to 6,467,000, and the annual consumption of malt being 3,404,026 quarters, the average supply to each person was 4 bushels and 2 pints nearly.

In 1801, the population amounted to 9,100,000, but the quantity of malt manufactured in 1800 and 1801, was, owing to the scarcity of those years, considerably below an average. The consumption, however, in 1802 and 1803 amounted at a medium to nearly 3,800,000 quarters, being an average supply of 3 bushels and 21 pints to each person.

In 1828, the population being 13,500,000, and the consumption of malt 3,137,042 quarters, the average supply to each individual was considerably less than 2 bushels;—or more than 1 bushel and 21 pints less than the quantity which fell to the share of each person in 1802;—more than 2 bushels less than each individual, on an average, consumed in 1750;—and more than 2 bushels and 27 pints less than the average consumption of each person in 1713!

Thus it appears, that, when the population, in 1713 amounted to less than five millions and a half, the consumption of malt was nearly as great as in 1828, when the population had increased to thirteen millions and a half!

Malting is, in itself, a very simple process: it consists in wetting the barley till it begins to sprout, and then checking the vegetative process suddenly by heat. This produces a saccharine substance in the grain, which constitutes the essence of malt.

The several Acts of Parliament, under the authority of which the duties upon malt were levied previously to the year 1827, amounted in number to about forty, but their enactments were so vexatious and contradictory, that the manufacturer of malt could scarcely advance a step in his business without subjecting himself to a penalty. To relieve him, therefore, the whole were, in that year, consolidated into one Act, known as the 7th and 8th George 4th, Cap. 52. This Act was no sooner passed, than the maltster found he was no better off than before, for, instead of simplifying the law, the number of oppressive restrictions, prohibitions, and penalties, which it contained, rendered it a matter of very great difficulty for him to carry on his business at all. The repeated complaints of the maltsters at length attracted the attention of government,

and another Act (11th George 4th, Cap. 17.) was passed in the beginning of the present year, to alter and amend the former; and under the authority and subject to the provisions of these two Acts, the duty assessed upon malt is now levied throughout the United Kingdom.

The restrictions, however, which these Acts impose on the making of malt, are, notwithstanding, so numerous and complicated, as to make it very hazardous for any person to attempt to make his own malt; the consumer is therefore compelled to purchase his malt of a maltster, whereby the price is very considerably enhanced.

The process of making barley into malt causes the grain to swell or increase in bulk. This increase varies according to the quality of the barley, and the nature of the season in which it has been harvested; it has, however, generally been estimated, as amounting on an average to *one-tenth*. Now, it has frequently been stated by persons competent to form a correct opinion in the matter, that when barley sells for 4s. the bushel, the price of malt, if the tax were abolished, would be 4s. 3d. per bushel. With the tax, however, although it is no more than 2s. 7d. the maltster charges 8s. 6d. which raises the tax upon the consumer to *One Hundred per Cent.*—For, it must be constantly borne in mind, that, in estimating the amount of a tax upon any given article, it is not the nominal sum assessed by government that constitutes the tax, but the sum paid on that article by the consumer in consequence of the tax, over and above the sum which that article could be purchased for if it were wholly free from any such tax. Thus, for instance, it is seen that a bushel of malt which could otherwise be procured for 4s. 3d. cannot, in consequence of a tax of 2s. 7d. be purchased under 8s. 6d.

If this additional charge of 4s. 3d. be analysed, it will be seen immediately who shares the money,—pre-mising, that from the nominal tax of 2s. 7d. ten per cent. at the least must be deducted to defray the expense of collecting it.

|                                                                                                                                  | s. | d. |
|----------------------------------------------------------------------------------------------------------------------------------|----|----|
| Net proceeds of the tax of 2s. 7d. levied upon a bushel of barley made into malt                                                 | 2  | 4  |
| Received by the Exciseman for collecting 2s. 7d.                                                                                 | 0  | 8  |
| The Maltster's charge for indemnifying him for the extra expenses incurred in making a bushel of malt, in consequence of the tax | 1  | 8  |
|                                                                                                                                  | 4  | 3  |

Thus it appears, that in order that the government may receive a net sum of 2s. 4d. the consumer is made to pay an additional sum of 1s. 11d., or, in other words, the *first* tax actually creates a *second* tax of 80 per cent. on the amount of the *first*.

But the tax operates more severely on the labourer who would make his own malt for he can always obtain a bushel of malt for the same price which he pays for a bushel of barley, as the increase in the quantity amply compensates him for the expense attending the making of it. He is therefore, in consequence of the tax, compelled to pay 8s. 6d. for that which he could otherwise obtain for 4s., being an *ad valorem* tax of 112½ per cent.

The natural consequence of the pressure of this tax, has been, to deprive the labourer and his family of one of the prime necessities of life. Fifty years ago, nearly every industrious labourer inhabiting a cottage, brewed his own beer, but from that period to the present, the number enabled to enjoy that advantage has been progressively decreasing, till scarcely one in a

thousand can now be found who drinks his own homebrewed ale. The malt tax, therefore, as it respects the labourer, has ceased to be a tax and become a prohibition. And it cannot be doubted that this prohibition has, for many years past, been one of the primary operating causes of the demoralization of the rural population. The labourer, deprived of his beer, has had recourse, when opportunity offered, to ardent spirits and all sorts of villainous compounds, to obtain which he has come in contact with scenes of vice and profligacy, which have, at last, sunk his morals to the lowest point of degradation.

If any proof be required that ardent spirits have been substituted for malt liquors there is abundance ready at hand. By the official accounts, printed by order of the House of Commons, 20th of March, 1828, it appears, that, during the seventeen years ending with 1827, while the population had increased nearly three millions the *ale* licenses in England and Wales, had hardly been augmented,—their number in 1810 being 49,061, and in 1827, only 49,327, while the *spirit* licenses, the number of which in 1810, was 37,011, had increased in 1827 to 42,599, being an addition of 266 *ale* licenses and 5588 *spirit* licenses.

But much stronger proof than even this, can be offered. The following extract from the report of the Committee of 1828 on Criminal Commitments, will show, that the consumption of spirits is increasing in a still greater ratio than the licenses.

“Your Committee think it right not to let this opportunity pass without remarking the very great increase in the quantity of spirits consumed, and considering the tendency of spirits to brutalize the habits, to inflame the passions, and to prevent all prudent savings, this question is very important.

“From papers laid before Parliament, it appears that the quantity of Foreign and British spirits, entered for home consumption, has, within the last five years, prodigiously increased. The average of the three years, 1820, 21, 22, is, in round numbers, 11,974,000 gallons, while the average of 1825, 6, and 7, is 23,540,000 gallons; the last year gives 24,346,460 gallons. Now, allowing that 6,000,000 of this quantity is derived from the suppression of illicit distillation in Ireland, and the decrease of smuggling in Great Britain, still, the increase is equal to one half the whole quantity consumed in 1821. It may be worth considering, whether the taxes on malt and beer do not increase the consumption of spirits as well as prevent brewing at home.”

These facts and statements require no comment.

It may now be necessary to state briefly, the price at which the labourer could brew his own beer, if the malt tax were repealed. It must be remembered that in brewing, the grains and the yeast will always repay him for the expense of fuel. Assuming then, the average cost to the labourer, of a bushel of malt to be 4s. and that of a pound of hops to be 1s. 4d. making together 5s. 4d. it may be stated, that for this sum, sixteen gallons of beer can be brewed, nearly as strong, and far more nutritious and wholesome, than that which is usually sold at the licensed beer houses for sixteen pence a gallon; or in other words, the labourer will obtain (exclusive of the wear and tear of the brewing utensils) a better beverage for *one penny* a quart, than can be now procured from the licensed houses for *four-pence*! And, what is a most important consideration, he will be enabled to enjoy it in the way he ought to enjoy it, and that is with his wife and family at home.

With respect to the relief which the repeal of the

**Malt Tax** would give to Agriculture, it cannot for a moment be doubted, that it would be very great. The supplies of barley, of which malt is made, are chiefly derived from light lands, which, though naturally the least productive, have, through the application of capital and industry, been made to yield excellent crops. But every one conversant with Agriculture must be aware, that the light soils are at present cultivated, in some instances, with a positive loss, and in none with great advantage to the farmer.

It appears from the Records of the House of Commons, that in the interval between 1801 and 1827, both inclusive, that no fewer than 1826 Enclosure Acts have been passed; and deducting a fourth from this number for Scotland and Ireland, 1370 remain for England and Wales. Now, it is stated, in the Report of the Committee of 1796, on the waste lands, that each Enclosure Act included at an average 1600 acres; and supposing this proportion still to be maintained, it will follow that 2,192,000 acres have been brought into tillage since 1800.

But a vast deal of land lying in smaller portions, has been enclosed without any Act of Parliament; and during the period in question, very great improvements were made on land previously enclosed, so that, taking these circumstances into account, we may on the most moderate estimate, compute the increase in the produce of English agriculture since 1800, as equivalent to the produce derived from three millions of acres of land of medium fertility. And yet there has been no increase in one of the principal crops suitable for such lands! No augmentation of the demand for barley, nor, consequently, of the supply of that valuable species of grain. But even under the late ruinous system of taxation as it affected Malt and Beer, the quantity of Barley made into malt may be stated on an average as amounting annually to about 3,200,000 quarters, which, supposing barley to sell at 32s, is equivalent to 5,120,000*l*, and as there is every reason to believe that if the duty upon malt were abolished, the demand for barley for malt would be doubled or even trebled, it is immediately seen that the repeal of the Malt Tax would give greater relief to agriculture, than the adoption of any other measure that can possibly be devised for that purpose.

**DESTRUCTION IN CATTLE.**—The neighbourhood of Montgomery has lately been put into a high state of excitement, in consequence of a dreadful disease breaking out at Gwernybearth Farm, near Llandyssil, in the occupation of Mr. Evan Brumwell, and causing the death of 18 fine young cattle in the short space of six days: another was seriously injured, but is now in a convalescent state. A labouring man about 300 yards distant from the above farm, lost his only cow, by which his family was mainly supported. Some neighbouring gentlemen, aware of the probability of the disease extending itself, sent a veterinary surgeon, (Mr. Cooper, of Montgomery,) to investigate its cause and nature, and he at once recognized it as being the *Malignant Epidemic Murrain*, (a disease of the most contagious nature). Means were immediately resorted to, and happily its progress was arrested. Had not the unfortunate owner been persuaded by ignorant persons that the disease was not of a contagious nature, preventive remedies might have been adopted, before it ran on to such an alarming extent, and the majority of his animals probably saved.—*Shrewsbury Chronicle*.

## BATH AND WEST OF ENGLAND SOCIETY

FOR THE ENCOURAGEMENT OF AGRICULTURE, THE ARTS, MANUFACTURES, AND COMMERCE.

### THE ANNUAL MEETING

took place at the society's rooms, on Tuesday, Dec. 9, and it was very numerously attended. On the motion of Dr. Parry, seconded by Mr. G. W. Hall, J. Adam Gordon, Esq. took the chair until the Marquis of Lansdowne should arrive.

The meeting then proceeded to the re-election of officers. The only alterations consisted in the substitution of the names of Lord Kerry and Sir J. C. Hobbhouse instead of Lord Arundel and W. Hanning, Esq., deceased. Captain Scobell moved Lord Kerry's appointment, which was seconded by Dr. Parry. On the nomination of Sir J. C. Hobbhouse, (seconded by J. Stone, Esq.) Dr. Parry said it could not but give him considerable gratification to nominate the son of a highly respected baronet who had formerly done so much honour to this society as its president, and who had also added materially to its funds. The nomination which he had now made ought to have been attended to before, from respect to the distinguished individual whom he had now named, and from gratitude to his honoured father.

Dr. PARRY begged to move the re-appointment of Mr. B. L. Lye as sub-treasurer and secretary to the society. He would not say a word on what was a mere matter of course.

Captain SCOBELL said he had in common with the other members of the society, admired the great zeal and unwearied activity of mind displayed by their respected secretary in promoting the welfare of the society. He begged most cordially to second the resolution.

The name of J. Bleak, Esq., was added to the committee of manufactures, &c. Various alterations in the rules and premiums were then submitted.

On the motion of Mr. G. W. Hall, seconded by Captain Scobell, it was agreed that, instead of the premium in class 2 for wool, there be substituted 5*l* for the best fleece of combing wool, and 5*l* for the best ditto carding wool. It was also agreed that thirty minutes be added to the time for ploughing, in the society's matches, half an acre of ground, with two horses, and a proportionate additional time in the other cases. It was proposed by B. Gray, Esq., that the next ploughing match should take place in August or September next, at Stourhead, Wilts. Sir R. C. Hoare, bart., Capt. Scobell, T. S. Bailward, T. Davies, R. Gray, John Bailward, Webbe Hall, Esqrs., and J. Bennett, of Pyt House, M.P., for South Wilts, were chosen judges of the ploughing match.

The Secretary then read the minutes of the general meeting which had been held throughout the year.

The report of the judges of live stock (Messrs. E. Davies, Mathew Paull, and Henry Kaines) was then read and approved.

The Secretary then read the following report of the committee of superintendence:—

“Hetling-house, Nov. 29, 1834.

“Your committee report that the ploughing match for the premiums offered by the society in the year 1833, not having taken place, in consequence of circumstances communicated to the last annual meeting, the same was held according to arrangements directed at that time, on a piece of land belonging to George Wyndham, Esq., one mile from Wincanton, on the

11th day of March last. Seventeen ploughs were in the field, 15 of which were drawn by 2 horses, and 2 by 2 oxen abreast. The society's premiums having never before been offered in this neighbourhood, the competition excited great interest, and a large concourse of spectators assembled to witness the operation. T. S. Bailward, Esq., V.P., presided upon this occasion, and the proceedings were conducted with great spirit.

The Ploughing Match for the premiums offered in 1834, having been left by the annual meeting to the discretion of your Committee of Superintendence, it was arranged to take Place on the 14th day of August, on a piece of old ley in the occupation of Mr. R. Wigmore, two miles from Tetbury. Twenty-three ploughs appeared in the field, 15 of which were drawn by two horses with a driver; the remainder by three or four oxen, with a driver. T. G. Bucknall Estcourt, Wm. Blathwayt, and H. Shute, Esqs., acted as the committee. The proceedings of this meeting were marked by a very spirited competition, and by the cordial approbation of a numerous body of spectators. The able conduct of T. G. B. Estcourt, Esq., who acted as chairman, greatly added to the pleasures and efficiency of the meeting, both in the field, and at the festive board.

An essay having been received from an author who signs himself "An Observer" in claim of premium 4, class 10, on the subject of Mr. Lyon's experiments on barking as a remedy for barrenness in fruit trees, the same has been referred to a special committee to report thereon.

Your committee have pleasure in stating that the notices received in claim for exhibitions of breeding and fat stock, are this year more numerous than usual, including four competitions for the Hobhouse premium, five for breeding heifers, several for extra stock, four for stallions, besides others for breeding ewes, fat wethers and pigs.

It is also satisfactory to them to be able to state, that notwithstanding the secession of some members, in consequence of the establishment of two neighbouring Agricultural Societies since the last annual meeting, the finances of the society, by the payment of many arrears, are in a somewhat more prosperous state than they were in the last year.

The secretary read the report of the committee, to whom had been referred an essay on Barrenness in Fruit Trees. The committee stated that the essay was a very valuable one and contained many important suggestions, but that it did not enter sufficiently into the principal object required—that, namely, having reference to the experiments of Mr. Lyon. The report of the committee was confirmed; premium not granted.

The secretary then read the following correspondence between himself and his Grace the Duke of Bedford:

"London, Nov. 30, 1834.

"The Duke of Bedford begs to acquaint Mr. Leigh Lye that not having had it in his power to attend any meeting of the Bath and West of England Society for the last thirty years, he requests he will withdraw his name from that society. If any subscription is due, Mr. Lye will be so good as to inform the Duke of Bedford."

"To Mr. Leigh Lye."

"Hetling-house, Dec. 2, 1834.

"My LORD DUKE.—I have the honour to acknowledge the receipt this morning, of your Grace's note of the 30th of November, and I beg most respectfully to state that I am sure the society will learn with the utmost regret that your Grace has withdrawn

your support. The name of the Duke of Bedford is so associated with the best days of the institution; the bust in marble of his Grace adorns the great room of the society; his 'Bedford Gold Medal' is annually offered in the list of the society's premiums; and the very name is held in such high honour and respect by the oldest members of the society, that to have your Grace withdraw your support in this our hour of need (two neighbouring societies having been established within the last year) will, I am sure, be considered one of the most unfortunate events that could befall us. The committee does not meet till Saturday next, and I have ventured, with feelings of the most profound respect, to offer these observations to your Grace, in the humble, but fervent hope, that I may be spared the grief and mortification of announcing the intention conveyed in your Grace's note of the 30th ultimo.

"Trusting that your Grace will pardon my having presumed thus to evince my anxiety to serve a society which has for so many years enjoyed the honour of your Grace's support,

"I have the honour to be, my Lord Duke, &c.,

"B. LEIGH LYE."

"Woburn Abbey, Dec. 4, 1834.

"SIR,—I have received by this morning's post your letter of the 2nd instant. The infirm state of my health and the impossibility of my ever attending the meetings of the Bath and West of England Society, was my sole motive of desiring to withdraw my name as a member, and I had not the remotest idea that such a step could be considered as of any importance. I readily, however, yield to your suggestions, and am willing to continue a member of that Society, as long as it shall please God to prolong my existence.

"I am, Sir, your most humble servant,

"B. Leigh Lye, Esq."

"BEDFORD.

Capt. SCOBELL said that his Grace's letter reflected on him and on the Society considerable honour. The Society was placed in a novel position. New societies of a similar nature had sprung up around it, and though they had not tried to injure their parent, they had certainly tended to circumscribe her means. He alluded to this point for the purpose of remarking that it was the duty of the friends of the Society to crowd more numerous and more energetically around her. He begged to move the thanks of the meeting to his Grace the Duke of Bedford for his determination to continue his support. He could not sit down without adding that the members were under great obligations to Mr. Lye for having adopted the wise and well-managed course to which reference had just been made. (*Cheers.*)

The Secretary read a petition from the Rev. Canon Bowles in favour of Wm. Collins, aged 89 years, who, as a garden labourer, had lived with the father of Mr. Bowles 20 years, and for 35 succeeding years with Col. Rogers, at Uphill, in this county. The petition stated that this old man had led a most industrious and laborious life, and now lived on an allowance made up by the parish and the contributions of the family with whom he had last lived, and of the rev. petitioner. The object of the application was that the Society would bestow upon the old man some mark of its favour in the shape of a bounty.

Dr. PARRY said that no premium being directly applicable to this case, the committee had thought it better to refer it to the consideration of the Annual Meeting. He would propose that a bounty of three guineas be awarded to the individual in

question. This proposition was seconded, and, after some discussion, was unanimously agreed to.

The Secretary then read the following report of a Committee appointed to examine an improved bit which had been submitted to the Society by Mr. W. H. Higman, saddler, &c., of Cheap-street, in this city :

"December 9th, 1834.

"It appears to your Committee, that the curb bit is an ingenious improvement on those in ordinary use. When its power is but partially required, it is a plaything in the horse's mouth, and likely to induce him voluntarily to carry a better head, but having the usual power of a common curb bit, when it is required. Its construction is also simple, and not liable to be out of order. The certificates from persons who have tried this curb bit, represent it as humane to the horse, and pleasant to the rider or driver. As a useful improvement to this important part of a horse's equipment, we recommend the silver medal to the inventor.

"G. T. SCOBELL,  
"GEO. WEBB HALL,  
"J. R. SMYTHIES."

Capt. SCOBELL said, that this improvement was one of very great merit. It had called forth many strong certificates in its favour from persons well qualified to judge of its value. He (Capt. Scobell) had himself used the bit, and though his horses went pleasantly before, they went much more pleasantly on his making use of this ingenious invention. The bit was quite as powerful as any other; and it presented the additional advantage of acting only when it was absolutely wanted.

A conversation then took place on the subject of presenting Mr. Higman with the society's silver medal; but it appeared this could not be done in accordance with the society's rules, which required that the invention should have been submitted previous to the first of November, which had not, through mistake, been done. It was therefore resolved, that the thanks of the society be presented to Mr. Higman, for his ingenious and deserving invention; and the noble chairman observed, that it could be submitted for a premium at the society's next meeting.

Dr. PARRY produced the model of a window frame, which had been sent to him by the Rev. W. Meyrick, of Bath, and the object of which was to enable domestic servants to clean window sashes with safety to themselves.

J. STONE, Esq., attested the usefulness of the plan, which he had for some years tried in his own house.

Capt. SCOBELL then rose to submit a motion to the notice of the meeting. He felt that he was about to open a most important subject—namely—how far the introduction of Poor Laws into Ireland would affect the property of the English Agriculturist. The subject, he thought, was a legitimate one for the society to entertain, as he thought that the agriculturists of England suffered very much from the abundant importation into this country of Irish produce and of Irish labourers. (*Cheers.*) If he dwelt not upon the wants and distresses of the Irish population, it was not by any means because he was indifferent to them; in the discussions of this society it was necessary to adhere to questions affecting English agriculturists. He would also guard against entering into politics. His resolution was that the Bedford Gold Medal be given to the writer of the best essay on the effect which the introduction of Poor Laws into

Ireland would have upon the agricultural interests of this country. If the depression of England had the effect of exalting Ireland, we might, perhaps, say, "Let Ireland reap the benefit of the present system;" but this was not the case. Ireland was not the better on account of our suffering. There was an old saying, that "Patience is a quiet nag, but will sometimes bolt." Now the English agriculturist had long been quiet. He knew no society better qualified to take up the subject than the Bath and West of England Society. It was universally admitted that English agriculture was at present in an unprecedentedly depressed state; that wheat and other produce were as low in price as they ever had been within the memory of man. The object of his resolution could not, therefore, be considered other than a most important one. England and Ireland might be compared to two men struggling in the water. England was the better man of the two; but Ireland clung so close, that both must swim or sink together. He would rather lift Ireland than put down England. The introduction of Poor Laws into Ireland would, in all probability, do good to both countries, but certainly to England. If Ireland were joined to England by a neck of land, it would be thought absurd if she had not, in some sort, the same laws as England. Yet she was joined to this country much more effectually than by a neck of land; floating bridges were coming over almost every hour laden with Irish produce and labourers, brought here at an extremely low cost. The longest side, or hypothense of England, was opposite to the longest side of Ireland, and there was consequently an immense intercourse between the ports of the two islands embraced in those two lines. The cattle imported into Liverpool alone had amounted to 12,000 per week; and into Bristol there had been imported, in one year, about 624,000, including pigs, &c. Mr. Sadler had stated the yearly importation of Irish grain into England at 2,000,000 quarters. According to Mr. Porter's tables, the total value of Irish imports into Liverpool was—

|               |            |
|---------------|------------|
| In 1831 ..... | £4,497,000 |
| 1832 .....    | 4,451,000  |
| 1833 .....    | 7,456,000  |

If this were the natural surplus of the country, there was no reason why it should not be imported into England, but it was not a natural surplus. If Poor Laws were introduced into Ireland, there would be more comfort, and consequently more home consumption of the produce now sent so abundantly out of the country. He would now refer to a darker shade of the question—the immigration of Irish labourers, who beat down the labourers of England. There were, perhaps, 300,000 Irish labourers in England, and the support of these persons was so much taken out of our own labour market. It had been said, that the assistance of Irish labourers was convenient at the time of housing the crops; but it was not sufficiently considered, that the wages paid to these individuals was so much taken from the English poor; and that, in fact, the farmers had, in consequence, to pay so much the more poor rates. He would repeat, that the introduction of Poor Laws into Ireland would prevent this immigration of poor, by promoting employment, and of course comfort, and greater consumption of produce. If produce be allowed to circulate freely through all parts of the country, equal laws ought also to circulate. The laws which affect nine-tenths of the Irish people, ought not to be dissimilar to the laws which affect England. If Poor Laws were impar-

tially distributed over the land, their local pressure would be most considerably diminished. The new Poor Law he trusted would work well; it would, in his opinion, work much better if it were extended to Ireland; but it would not produce the benefits hoped for if we were still to have an unchecked influx of Irish labour. He would refrain from entering further into the subject, and would conclude by moving the adoption of the resolution to which he had drawn the attention of the meeting. (*Cheers.*)

J. A. GORDON, Esq., seconded the motion.

Dr. PARRY did not see how the resolution could be objected to as interfering with politics. The resolution of Capt. Scobell referred to a question bearing on English agriculture. This question could not be properly considered without entering into an examination of the state of Ireland. The writers of the proposed essay must inquire into the causes leading to the influx into England of Irish commodities and labour. This must be done before it could be effectually shown how that influx could be prevented. The causes were, the lowness of wages and price of produce in Ireland, as compared with the different state of things which prevailed in England. The main object to be accomplished was to find labour in their own country for the Irish poor. On this point both the advocates and the opponents of poor laws agreed, and also that a fund should be provided in Ireland for the sick and infirm, and that employment should be provided for the able-bodied poor. How could the agricultural depression of England be remedied if a remedy were not applied to the present state of the Irish poor. The evils of this class were to be found, first, in want of employment and low wages—secondly, in the competition for farms, and, consequently, high rents; and, thirdly, in starvation and emigrations. Dr. Parry offered some very judicious observations on the many mistakes which had occurred in the consideration and discussion of the Irish question, and described the results of some successful endeavours which had been made to improve the condition of that country. The proposed essay, he observed, would be one of very considerable importance, and he hoped it would be undertaken by those who were well qualified to write on the subject. (*Cheers.*)

The Rev. J. R. SMYTHIES said that, so that the essay did not take up party politics, it should not be circumscribed in its matter.

The most noble PRESIDENT did not hesitate to say that the proposed essay was strictly within the scope of the society. It would be absurd if this were not the case. The society was established to consider what was best for the community in an agricultural point of view. He begged to suggest that the writers of the essay should not be limited with regard to time. Upon the judicious discussion of the information collected by the commission, now employed in Ireland relative to the poor laws (which he believed would make its report in the spring), the merit of the essays would mainly depend.

After some further discussion, the motion for the premium was put to the meeting and unanimously carried.

Mr. G. W. HALL then rose to submit a motion which, simple and, to some, even ridiculous as it might appear, was one which effected to a most extensive degree the agriculturist interest of this kingdom. The motion which he had to propose referred to the devastations committed on agricultural stock by dogs. The protection of the species of prop-

erty in question, and the safety of human life from that most terrible of diseases, hydrophobia, called for the prompt interposition of the legislature. At present the owner of a dog was not liable for any damage which the animal might commit, excepting in extreme cases. He (Mr. Hall) had been obliged by a Gloucestershire Jury to pay 20*l* damages, involving, with the cost of the action, an expense of 200*l* for shooting a mad dog which had made its appearance on his own estate. Was not this most monstrous? He then read some extracts from a publication, showing that the evil of which he now complained had been rife for the last forty years, and that meetings of agriculturists had been long since held with a view to the suppression of the mischief. He concluded by moving the following resolutions;—

Resolved—That, in the opinion of the Bath and West of England Society, the agricultural property of this county, as far as its live stock is concerned, amounting in value to fifty millions sterling, is almost entirely without the protection of the law, against any devastation committed upon it by dogs, which is a constantly occurring fact; and

That the welfare of society at large, involving in addition to security of property the safety of still more valuable human life, especially from the deadly and appalling disease of hydrophobia, most loudly calls for the speedy and efficacious interposition of the legislature, as far as the same may be practicable.

Mr. BAILWARD narrated several cases of hydrophobia, and considered with Mr. Hall that some legislative steps were necessary on this head.

Dr. PARRY thought that the meeting would agree with Mr. Hall with regard to the importance of endeavouring to secure for agricultural property adequate protection against the devastations under consideration. The owners of dogs ought to be made responsible for injuries inflicted by animals in their possession. Dr. Parry then gave some highly interesting details respecting the symptoms and general character of hydrophobia, and concluded by seconding Mr. Hall's resolutions.

After some discussion, in which Capt. Scobell, Mr. Webb Hall, Dr. Parry, &c. joined, the resolutions were unanimously carried. Mr. Hall said that Mr. Miles intended to bring the subject before the notice of Parliament. The Secretary then read communications from T. S. Bailward, Esq., on apple trees and cider, for which the thanks of the society were voted to him.

It was announced that J. A. Gordon, Esq. had offered a premium of 10*l* for the best plan of constructing suspension bridges, in which, as in Switzerland, wire should be used instead of chains.

Thanks were voted to the judges of the last year's ploughing match.

Mr. JILLARD, of Oakhill, laid before the meeting some fine specimens of potatoes, in the raising of which kiln-dust had been used instead of the usual manure.

Thanks were then cordially voted to the most noble chairman, and the meeting separated.

#### THE DINNER

took place, as usual, at the White Hart, and was very numerously attended. The Marquis of Lansdowne presided, and B. L. Lye, Esq., officiated as Vice-President.

On the removal of the cloth, the following toasts were proposed:—"The King"—"The

Queen, and the rest of the Royal Family"—"Mr. Bennett, Member for Wilts"—"The Army and Navy." The last-mentioned toast was acknowledged by Col. Daubeney.

Captain SCOBELL returned thanks on behalf of the navy. Half his life had been spent in the navy, the other half on the land. One of the most satisfactory circumstances of the latter portion of his career had been his connection with this society. (*Cheers*).

Col. LANGTON said, that it needed no eloquence to recommend the toast which he had risen to propose. He was confident that it would be received with the most rapturous applause by the members of this society. He begged to propose the health of the noble president, (*cheers*) of whose high character it was not possible for him to say too much. The zeal and utility which he displayed in the cause of this society, reflected on him the highest honour. It was most delightful to see a nobleman of his high standing, affording his most strenuous aid to an institution which had for its object the benefitting of all classes of the people. Col. Langton concluded by alluding to the great meliorations which the noble Marquis had effected in the condition of the poor by means of his extensive adoption of the allotment system. (*Three times three*).

The noble PRESIDENT returned thanks for the honour conferred upon him, which he said was enhanced in value by being proposed by a respected gentleman who was one of the oldest members in the House of Commons. He (the noble Marquis) could not apprehend any diminution of zeal on behalf of a society which produced so many valuable public benefits, after having heard it that day announced, that, notwithstanding the depressed condition of the agricultural interests, the funds of the society were in a better state than they were at the time of the last annual meeting. He attributed this to the high spirit which impelled the British agriculturists to promote, in defiance of all opposing difficulties, the great objects of the furtherance of which this society was established. He had heard without pain the allusion which had that day been made to the infant societies which had sprung up around the Bath and West of England society. He did not grudge them their existence. It was the common lot of old established societies, as well as of old countries, to give rise to off-shoots and colonies. But while we do not grudge them the vigour of their youth, we must take care that we do not exhibit the decrepitude of old age. He hoped that this, the old society, would go prosperously on, and make the young societies proud of the character which this institution had first bestowed on them. The noble Marquis concluded by proposing the health of the members for the county of Somerset. (*Cheers*).

Col. LANGTON returned thanks.

The NOBLE PRESIDENT then proposed, "The Mayor and Corporation of Bath," and said that the public not only of this city, but of the country in general were under the deepest obligations to them for their great liberality as evinced in the admirable improvements of the Abbey Church and its neighbourhood. (*Cheers*).

The MAYOR of BATH returned thanks on behalf of himself and the corporation. He observed that they could not but feel highly gratified at receiving the approbation of so important and respectable a society. The corporation and inhabitants of Bath were fully aware of the advantages resulting from the annual assembling in their city

of so many gentlemen of rank, talent, and influence; this however was but a narrow view of the question when he looked at the important services which this society rendered to the agricultural interests at large. He begged to repeat his thanks to the company for the compliment conferred on the corporation and himself. (*Cheers*).

The noble PRESIDENT said that he had the pleasure of seeing present the Minister Plenipotentiary of the King of Belgium—M. Vanderweert. He (the noble Marquis) would beg to propose a toast—"The health of the King of Belgium, and success to agriculture in that country." The toast was connected with the name of M. Vanderweert.

M. VANDERWEERT returned thanks in pleasing and appropriate terms.

The distribution of the prizes to the successful candidates then took place, and in the course of which Mr. John Nicholls enlivened the company with his usual amusing observations.

The following toasts were afterwards proposed and duly acknowledged—"Lord Kerry—the Judges of Live Stock—the Vice-Presidents—Sir Wm. Cockburn, bart.—the Members for Chippenham—the members for Calne—Col. Horner and the North Somerset Yeomanry Cavalry—the Exhibitors of Live Stock, &c."

The company separated at an early hour much gratified with the occurrences of the evening.

The following is a list of the premiums and bounties awarded:—

| LIVE STOCK.                                                                                                                            |    | £ | s. |
|----------------------------------------------------------------------------------------------------------------------------------------|----|---|----|
| To Mr. Wm. Winkle, Stourton, Wilts, for the best bull, cow, and offspring, Hereford breed, Sir B. Hobhouse's premium.                  |    |   |    |
| To Mr. John Nicholls, Harnhill, near Cirencester, the best fat ox, Hereford, a bounty of .....                                         | 10 | 0 |    |
| To Mr. Jasper Hewer, jun., Aston, Gloucestershire, for the best fat steer, Hereford, a premium of .....                                | 15 | 0 |    |
| To Mr. John Nicholls, Harnhill, for a steer, Hereford, a bounty of .....                                                               | 5  | 0 |    |
| To Sir Hungerford Hoskyns, bart., Harewood, Herefordshire, for the best fat cow, Hereford, breeder and feeder, a premium of .....      | 10 | 0 |    |
| To Mr. John Nicholls, Harnhill, for a fat cow, Hereford breed, a bounty of .....                                                       | 5  | 0 |    |
| To Mr. John Haine, Glastonbury, for a fat heifer, Devon, feeder only, a premium of .....                                               | 5  | 0 |    |
| To Mr. Chas. Stevens, Port Farm, Cirencester, for the best fat wethers, improved Leicester breed, a premium of .....                   | 6  | 0 |    |
| To Mr. Geo. Limbrick, Horton, Gloucestershire, for the second best wethers, improved Cotswold, a premium of .....                      | 3  | 0 |    |
| To Sir Hungerford Hoskyns, bart., Harewood, Herefordshire, for the three best heifers for breeding, Hereford breed, a premium of ..... | 10 | 0 |    |
| To Mr. John Stephens, Hurcott, Somerset, for the six best breeding ewes, Devon and Cotswold, a premium of .....                        | 10 | 0 |    |
| To Mr. Josh. Hall, Coates, Gloucestershire, for six breeding ewes, improved Leicester, a bounty of .....                               | 5  | 0 |    |
| To Mr. Wm. Pearce, Kington Langley, near Chippenham, for the best stallion, 4 years old, premium of .....                              | 10 | 0 |    |

## EXTRA STOCK.

|                                                                                                                       |      |
|-----------------------------------------------------------------------------------------------------------------------|------|
| To Mr. C. Lewis, Woolley, near Bradford, Wilts, for a long horned cow, to a bounty of .....                           | £ s. |
| To Mr. Robt. Joliff, Long Ashton, near Bristol, for a fat ox, Hereford, a bounty of .....                             | 2 0  |
| To Mr. Robt. Joliff, for a fat steer, short-horned and Hereford, a bounty of .....                                    | 2 0  |
| To Mr. Jas. Fussell, Laycock, Wilts, for a cow, long and short horned breed, a bounty of .....                        | 3 0  |
| To Mr. Charles Usher, Weston, near Bath, for a fat pig, 11 months old, Berkshire and Chinese breed, a bounty of ..... | 5 0  |
| To Mr. Josh. Hall, Coates, Gloucestershire, for a fat wether sheep of great merit, a bounty of .....                  | 1 0  |
|                                                                                                                       | 1 0  |

## THE VILLAGE ALEHOUSE.

A PICTURE IN DETAIL.

Dear Ramblers all—an Alehouse sign  
 You'll own as good a sight as greets ye;  
 When summer's long, long morning's shine,  
 Where leisure reigns, and "All hail" meets ye.

There rests the waggon in its track,—  
 A corn-bag round each horse's nose is;  
 There comes the miller and his sack;  
 And there at ease the beggar dozes.

There limps the hostler with his pails,  
 And there the landlord stalks inspector;  
 Two farmers there discuss their sales,  
 And drain by turns one goblet's nectar.

Hay-ricks are near, and orchard fruit;  
 The cock's shrill crow and flapping wing;  
 The low contented neigh of brute;  
 The pipe's perfume, and tankard's ding,

The fiddle's scrape,—the milking cows,—  
 The snapping cork,—the roaring joke;  
 The birds by thousands in the boughs;  
 The creaking wheel and whip's loud stroke.

Sunshine strews all the kitchen floor,  
 Reposes on the home-field crop—  
 Blisters the Doctor's fine new door,  
 And kisses copse and chimney top.

Clouds fleecy dot the blue immense—  
 Farm-houses, cities, vales, and streams,  
 And seats, and parks, and forests dense,  
 Sleep, stretched afar, in floods of beams.

Z. Z.

**PARMAZAN CHEESE.**—Parmazan cheese is a valuable Italian production, and is formed in the following manner:—Two evening meals of milk, after standing for sixteen hours, and a morning's meal after it has stood six hours, are mixed together, consisting of about seventy English gallons. These are placed in a large copper vessel, suspended over a slow fire made of wood. The milk is frequently stirred, and in the course of an hour allowed to reach the temperature of eighty-two degrees. A ball of rennet, the size of a walnut, is then placed in a cloth, and squeezed through it into the milk, while it is constantly stirred. It is removed from the fire, and coagulation ensues in about an hour. The curd is then well stirred up, and permitted to stand till the

they has separated. In about an hour after, the curd is wrought by means of a stick armed with cross wires, in which process it is reduced into small pieces, and left till the whey has completely subsided. Part of the whey is then taken off, and the copper again placed on the fire. It is now brought to a heat nearly approaching the boiling point, and a quarter of an ounce of saffron is mixed with it, while the curd is constantly stirred with a wooden spatula, to prevent it from singeing. The superintendant examines it, by rubbing it betwixt its fingers from time to time, to ascertain when it has assumed sufficient tenacity. During this process the heat is raised to one hundred and twenty-four degrees of Fahrenheit's thermometer, and sometimes even so high as one hundred and thirty degrees. During this time it is permitted to remain about half an hour on the fire, when it is taken off, and the curd allowed to subside. About three-fourths of the remaining whey is then separated from it, and three or four gallons of cold water poured round the bottom of the vessel, to cool the curd so that it can be handled. It is raised from the bottom of the vessel, a cloth slipped under it, and then removed into a tub to clear. When properly drained, it is put into a hoop, and pressure equal to about half a hundred weight is placed upon the top of it, and allowed to remain an hour in this state. The cloth is now removed, and the cheese again placed in the hoop, and afterwards laid on a shelf, where it must be turned every day for three days, and at the end of this period it is salted all over. This operation is repeated every day for the space of thirty days if in summer, and forty days if in winter, which completes the process, and finishes the making of the cheese. During the time of salting, two cheeses are placed above each other, which is supposed to facilitate the process. They are then scraped clean, rubbed every day with a cloth, and anointed with linseed oil to protect them against insects. They are not considered marketable till about six months old.—Would it not be worth while for Scotch and English dairy-keepers to try their hand at making this delicious kind of cheese?

**EXTRAORDINARY WEN.**—On Wednesday, the 27th of Nov., a Wen was taken off a horse by Mr. Smith, Farrier, Great Scotland Yard, Westminster, of an extraordinary size, being thirty-four inches in circumference, and weighing nineteen pounds and a-half. This astonishing excrescence was on the upper part of the fore leg of a valuable Cart-horse belonging to Messrs. Edward Wood and Co., of Northumberland Wharf, Strand, and the horse is doing well. Any of our readers may see the Wen at the Farriers.

**DUCHESS OF TYRCONNEL.**—It is a curious fact that the Duchess of Tyrconnel, the Lady of Richard Talbot, Lord Deputy of Ireland in the reign of James II., after that monarch's abdication, was driven by distress to keep one of the stands in Exeter Change in the Strand (the original English Bazaar) at that time a fashionable place of resort, at which she sold millinery, the labour of her hours by night, in an obscure apartment in which she slept. It was then the custom for women, in public, to wear masks, and the Duchess, in her little shop, uniformly appeared in a white mask and dress, and was called by the loungers of that day, "The White Widow." Her rank was accidentally discovered, and she had afterwards a pension granted her from the Crown during her life.

## THE OPERATION OF THE POOR LAW AMENDMENT ACT.

We have made inquiries as to the operation of the new Poor Law Amendment Act, of a number of parish officers in the metropolis, who, it may be supposed, are by no means inclined to overrate its advantages, and they admit, that whilst the change has been attended with some present trouble to them, the operation of the new act has been extremely beneficial to the extent to which it has been carried into execution.

One object of the act, it will be remembered, was to discontinue out-door relief in money and substitute relief in kind, as a step to the entire discontinuance of out-door relief, and the substitution of relief in a well-regulated workhouse, where the aged and infirm will receive proper care, and the indolent and sturdy "buckled to work." In some parishes the officers have revised their pension lists, and effected savings by the detection of imposture; but the reductions have been mainly effected by the adoption of the chief preliminary measure, recommended by the late Commissioners of Inquiry: the substitution of relief in food, bread, meat, cheese, fuel, and clothing, to those who declared they were hungry and destitute, and medicine to the sick.

The following is the amount of saving which we are assured has already been effected in the parishes hereunder named.

We have been informed of similar reductions having been effected in other parishes, but we have not yet information sufficiently accurate to induce us to insert it. In one or two instances, items, having been stated to us more than a week ago, may not correspond with the actual reduction during the last or the current week; but we believe that on the whole it will be found that the amount of saving is understated:—

|                                                  | Weekly<br>Reduction. |       | Being at the rate<br>per Annum, |

| Islington .....                                  | 70 0                 | ..... | 3,640                           |
| St. Andrew and St.<br>George .....               | 30 0                 | ..... | 1,560                           |
| St. Martin .....                                 | 50 0                 | ..... | 2,600                           |
| St. Andrew, Saffron<br>Hill .....                | 6 0                  | ..... | 312                             |
| Clapham .....                                    | 13 0                 | ..... | 676                             |
|                                                  | £616 10              |       | £32,058                         |

The partial saving, then, in these sixteen parishes alone is probably double the expense of the new machinery to the whole nation. The saving has been effected, as we have stated, chiefly by offering to the applicants bread and other food, such as an Irishman or Highlander never tastes, sometimes with the alternative of workhouses, which a large proportion of the hard-working population of the two kingdoms would find to be palaces as compared with their own huts, in which they never see such profusion. This change has, we are assured, been effected without producing any cases on which the most sensitive could found any just claim for sympathy. Nearly

all cases presented as such at the police-offices have been cases in violation of the act, or of the express recommendations of the Commissioners. Most of these cases, it may be observed, are cases of the absolute refusal of relief, which refusal wherever the party is ready to make oath that he is absolutely destitute, and ready to accept the relief which a destitute person and proper object can never refuse, is as illegal now as it was before the passing of the act.

Many parish officers have endeavoured by their illegal proceedings to throw odium upon the new act, and have for a time partially succeeded; but the repetition of this conduct will, no doubt, be prevented.

We see by provincial papers, that in the case of the neglect of a pauper by the parish doctor, proceedings were taken by an Assistant Commissioner which gave great satisfaction to the paupers and the rate-payers. The neglect being obvious, the parish officers anticipated the decision of the Commissioners by dismissing the offending officer themselves. In Berks, one Assistant Overseer has been dismissed, and rendered incapable of holding office again, in consequence of his oppressive conduct, and an illegal administration of the rates. But we trust that the Commissioners will have little occasion to exercise their authority to this extent.

It is a most important fact, that whilst the out-door relief has been diminished to the extent we have stated, that the number of in-door paupers has not increased, although it is admitted that the workhouse allowances are in many instances still extravagantly profuse, and above the style of living of a large portion of the rate-payers, which the greatest enemies of the act will admit ought not to be.—*Morning Advertiser.*

## TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir,—In your paper of last week I read a letter signed "Ceres," on the high price of bread, in which your intelligent correspondent recommends (I suppose he means the Government), to revert to the imposition of an assize. Allow me to inform Ceres that all Englishmen are not so blind as himself, who wishes more firmly to rivet on the shackles of trade, whilst the general outcry is for the repeal of all laws tending to restrict it. With as much reason might you fix a standard price for meat and vegetables—aye, and for beer and grocery too. To talk of forcing a man to sell his goods at any price which our rulers may be pleased to dictate, is enough to chill one's blood. An assize, instead of lowering the price of bread, would certainly raise it, to all honest and prudent people who wish to pay for everything they have. Does Ceres believe that in the city of London there is not sufficient competition in every trade to prevent undue profits long to remain? If he does, I recommend him to turn mealman, baker, or butcher, and he will soon be undeceived. He says, if the bakers are foolish enough to trust a parcel of people who are entirely unworthy of credit, you and others must make up the loss; I say this is not the case, but if people are fools enough to give 8*d.* for a 4*lbs.* loaf, when they can have one equally good for 6*d.*, that is their fault, and not the fault of the baker, whose bounden duty it is (agreeably to the laws of trade), to get all the profit he can, provided he deals impartially with his customers; but a good tradesman, who deals in articles of universal consumption, of which every customer is a judge of the quality, knows that it is contrary to his interest to be guilty of extortion on the public

—he knows well that he would soon lose his trade—but does Ceres believe that a tradesman can give six or twelve months' credit to a customer, however trustworthy, and yet sell his goods on the same terms as he does to one who pays ready money? Finally—I recommend Ceres, and all persons at the West End of the Metropolis in particular, to go with money in their hands for all eatables, and they will soon find their account in it, and will be able to see clearly that in this country no extravagant profits can be obtained in the necessities of life.

FREEDOM.

17th December, 1834.

## TO THE EDITOR OF THE SUFFOLK CHRONICLE.

SIR—Your Correspondent "Shoy Hoy" presumes, that "the farmers suppose, that if the Malt Tax was repealed, the amount of it would go into their pockets." Now, "Shoy Hoy" has no right to suppose that the farmers are such fools as to believe any such thing. The farmers are quite as well aware as other classes, that the repeal of the Malt Tax would not raise the price of Barley but a trifle; but the farmers are great consumers of malt, and cannot charge the consumers of their produce the extra cost of production occasioned by the Malt Duty, and the cost of what they consume themselves is doubled by the Duty.

Again, he says, "The farmers must not ask for the reduction or repeal of one particular tax, because they fancy it will benefit them alone. No, they must be more patriotic, and come forward boldly and join the people, in demanding a great and general reduction of taxation." Now, Sir, I must think this is one of the most provoking sentences that ever was penned. The farmers never interfere with other classes, never oppose any measure they bring forward, one only excepted; and that they supported in the end. I allude to the taking off the Beer Tax in lieu of the Malt Tax. How the mad policy of the towns' population squares with the liberal and patriotic policy advocated by "Shoy Hoy," I cannot ascertain. The case was this, the tax on Malt and Beer combined, created a revenue of some nine millions. I think; the towns' population clamoured for the repeal of the Beer Duty alone, as they said the poor, and indeed all consumers of taxed Beer, paid by so much more than the rich and the farmers who brewed their own Beer. This is the farmers admitted; but as they were told, and in fact were quite aware, that so great a sacrifice of revenue as nine millions could not be made till the demands on the Exchequer were reduced, and that to petition for the repeal of both the Malt and Beer Duties would be the means of obtaining neither, they advocated the repeal of the Malt Duty in preference to the Beer Duty. Their argument in support of this measure was this—that if the Duty on Beer were repealed, that the towns' population, and others consuming the common brewers' beer, only would be benefited; that, on the contrary, if the Duty were taken off Malt, the whole community would be relieved—that the farmers and labourers would partake of the benefit, which they would not by the repeal of the beer duty—that although they quite admitted the repeal of the malt duty would not place the towns' population, on an equal footing with themselves, yet they would not have less relief; but for reasons of State, that they would be more relieved by the repeal of the malt duty than by the repeal of the beer duty: thus the farmers and labourers not only deny that "liberal and patriotic feelings" were shown towards them,

but that a narrow-minded policy existed, by no means creditable to the party.

We do not presume that the Government were biased in favour of the towns' population; it was the presumed difference in the effect on the revenue which decided them to select the Beer duty for repeal. It was calculated that little deficiency in the revenue would occur from the repeal of the Beer Duty, as more would be consumed, but that a repeal of the Malt duty would cause a decrease to nearly the full amount; and the farmers were told that they would partake of the benefit, from the greater demand, and consequent rise in the price of Barley. Whether Barley has fetched a higher price it is impossible to say, but it could scarcely have been lower than a feeding price, which it has been at till of late, and would not be more now, but from the great deficiency in the crop. We consider, however, that, taking off the Duty on Malt would so far increase the consumption as to increase the price of Barley 4d per bushel, on an average of years and qualities. We know very well it could increase it no more, because, as "Shoy Hoy" truly observes, foreign Barley would be abundantly imported, and fix the maximum of price. We do not advocate the repeal of the Malt Tax on such selfish motives as are insinuated: we believe that the repeal of the Malt Tax would be of all others the most beneficial. It would increase the demand for labour, and its growth, manufacture, and consumption of beer. The labourers would be enabled to keep beer for the use of themselves and families, and would require less food. Thus, if the consumption of Barley required an increased extent of land to grow it, by so much the less would be required to grow Wheat; or in part, at least. But, Sir, until the Landed Interest unite and clear up the questions in dispute, they can never obtain justice.

## REPEAL OF THE MALT TAX.

A meeting of gentlemen took place on Tuesday, Dec. 16, at Brown's Hotel, Bridge-street, Westminster, "to take into consideration the best means of obtaining relief from the destructive consequences of that most cruel and unjust tax, the duty on malt." The meeting was but thinly attended, which was attributed by the gentlemen at whose instance the meeting was convened, to the circumstance of many gentlemen interested in the object of the meeting being engaged in canvassing.

Mr. ELLIS, an extensive farmer of Kent, was called to the chair.

The CHAIRMAN saw that it required but little argument from him to show that to advocate a repeal of the malt tax was to uphold the cause of the poor—and that cause was in his opinion the duty of the rich, and he regretted that there were not more of those who came under the latter designation at the meeting. However, they would do the best they could in the absence of more influential persons to advocate the cause of the poor agricultural labourer—(hear, hear.) It appeared to him to be quite clear, that every man, woman, and child who assisted in the cultivation of the land were entitled to partake of its produce—(hear). It was equally clear that the cultivator of the soil was prevented from this positive right, owing to the operation of the malt tax—(hear). He could not himself state all the evil consequences of this most iniquitous tax; but having been from circumstances all his life amongst the labouring classes of the country, he knew that to them at least that tax worked great injustice—(hear). Fre-

quently had he seen the agricultural labourer in the oppressive heat of the day obliged to drink water to quench his thirst, not being able to get good beer, as, owing to the present state of agriculture, the farmers were not able to provide their labourers with this necessary and wholesome beverage—(hear, hear). It cost him (Mr. E.) 2,000l for beer in three years. He could not now afford to give his men as much beer as he was in the habit of allowing them; but not only himself, but his brother farmers, would be happy to have an opportunity of contributing to the comforts of the poor in this respect if the malt duty were repealed—(hear). He should be happy, if such a result took place, to sow 15, or 20, or 30 acres of barley for the manufacture of malt for the advantage of his labourers; but to cultivate barley now was only to give pain to the labourer, who perceived that, instead of reaping advantages from this circumstance himself, he was only contributing to the comforts of hogs, and other animals in the farmer's yard—(hear, hear). He remembered well when the labourers used to brew for themselves. One of his labourers used to brew from as small a quantity as a peck, which proved that, if the malt duty were removed, an opportunity would be afforded to the agricultural labourer to brew his own beer—(hear). This very man informed him, that in brewing this peck of barley he saved two gallons of flour—(hear, hear)—such was the nutritious character of the barley when made into malt—(hear). This one fact in itself showed the impolicy and injustice of the malt tax. Notwithstanding the pressure upon the land, the farmers would most willingly give up a portion of their land for the cultivation of barley; but if they did so under existing circumstances, they would have to pay a tax to four or five times the amount of the price of the barley grown—(hear, hear). The worthy Chairman then went into a calculation, to show that since 1723, when the population was less than one-half of what it was at present, there was, comparatively speaking, a greater quantity of beer drunk. He then observed, that where spade husbandry was introduced, it was quite necessary, in order that the agricultural labourer should be able to contend in any way with teams of horses, that he should be enabled to obtain good wholesome beer—(hear). There were so many facts in connection with this case, that it was impossible to advert to them all. What he wished to impress upon the minds of the gentlemen present was, that pigs and hogs got that which, but for the malt tax, would be made into good wholesome beverage for the poor labourer—(hear). For the last 14 or 15 years he, and several gentlemen who had acted with him, had made frequent endeavours to rid the country of an impost so oppressive as the malt tax. They had frequent meetings on the subject at Maidstone—they began by asking for the repeal of part of the duty—they now asked for relief from the whole. Since then the duty had been taken off beer, and the consumption of barley was not now more than five millions of quarters, although in 1723, when the population was only five millions and a half, the consumption of barley was 3,800,000 quarters—(hear). Many say that the labourers got too much beer. This he denied—(hear). They might get too much of a Friday or Saturday night, when they got their week's earnings—(hear); but if they had a fair quantity during the week they would not be so anxious to partake of so large a portion at the end of the week, when, instead of doing them good, it did injury—(hear). The Chairman, in adverting to the taxes which

had already been reduced since the peace, said that the reduction of the property tax produced no benefit to the labourer; nor did the reduction of the assessed taxes, the duty upon wine, &c., produce any benefit to the labourer. The tax upon spirits which had been taken off was rather an injury than a benefit to the labourers. Upon the whole, then, it was clear that something was yet due by the Legislature to the agricultural labourer, and that the best course that could be adopted would be the taking off the duty upon malt. In the course of the last year 120 petitions had been presented to the Legislature on this subject from the county of Kent, which had been signed by 26,000 persons; and this year he had no doubt but that they would be greater. What he was anxious for was that they should be prepared to meet the coming Session, to be in such time with their claims that advantage could be taken of them by the Minister, should he be disposed to make any alterations in the financial affairs of the country—(hear);—and here he must say that, for one, he would accept a reduction of one-half of the malt duty, if he could not get the whole—(hear). He had the satisfaction to inform the meeting that the Marquis of Chandos had kindly consented to bring this question before the House of Commons this year; and he (the Chairman) hoped that every friend of his country, and every friend to the poor, would do everything in their power to get rid of a tax which was a disgrace to the country—(hear, hear.)

Mr. RUSSELL, another respectable farmer, addressed the meeting in support of the view taken of the subject by the worthy Chairman, and observed that, according to an account kept by an ancestor of his, it appeared that in 1699 barley was 30s the quarter, while in the spring of this year it was only 25s; but at the period when his ancestor lived the same quantity of malt could be got back from the maltster, and at the same price, as the barley that had been sent to him—a bushel of barley and a bushel of malt at that time being 3s 9d. At the early part of this year, however, although barley was only 3s 1½d a bushel, the same quantity of malt could not be got from the maltster under 8s. This clearly proved the injurious tendency of the malt duty, and explained why it was that the farmers could not afford to give beer to their labourers. (Hear, hear.)

Mr. WELLS quite agreed in the view taken of the subject by the gentlemen who had preceded him, whose practical knowledge afforded them such excellent opportunities of ascertaining how far the tax in question was injurious to the agricultural labourers. (Hear.) He, however, could never agree to the tax being reduced one half, for that would still leave in existence all the complex and expensive machinery of collection, &c.; and when gentlemen recollected that it cost this country upwards of 8,000,000l for collecting the revenue, he was quite sure that they would be anxious to adopt every means by which that expense was to be lessened. (Hear, hear.) He thought that the best course which the meeting could adopt would be to put itself, through the medium of its Chairman, in communication with Sir E. Knatchbull, one of the present Ministers, who was known to be favourable to their views, and that he should be requested to lay before his colleagues the views that were entertained by the meeting in reference to the malt duty. (Hear, hear.)

Resolutions to the following effect were then put from the Chair, and unanimously agreed to:—

"That a supply of wholesome beer is essentially necessary to the poor generally, particularly to the working labourer, and that it is the imperative duty of all to use their best exertions to enable them to obtain that sustenance of which they are now deprived by the excessive duty on malt. That the average individual consumption of malt, having decreased to less than half the amount of what it was before the prohibitory duties were laid on, would rapidly increase, and thereby would greatly relieve the poor-rates by the stimulus given to tillage: and tend to improve trade. That the prohibitory duty is contrary to equity, humanity, and sound policy, and has increased crime and demoralization. That, whilst the meeting feel grateful for the reduction of taxation that has taken place, they respectfully submit that the poorer classes have not had their equal share of reduction, the duty on malt being unaltered. That the meeting earnestly invites the co-operation of all classes in the promotion of measures for the repeal of the malt tax. That, although the meeting studiously avoids stating political feelings in the recent change in the Ministry, yet they cannot help expressing their anxious hopes that the present Ministry will not be hostile to the repeal of the malt tax, the necessity of which this meeting knows has been admitted by several members of the present Cabinet. That copies of the resolutions be presented to Sir Edward Knatchbull, Bart., with a request that he will submit the same to his colleagues in office.

"That the thanks of the meeting and of the country are due to those Members of Parliament who supported Sir Wm. Ingilby's motion last session, as well as to the public press for advocating the repeal of the malt tax.

"That, upon a general election taking place, it is strongly recommended by this meeting that all friends to the cause do have a most decisive answer from each candidate, that they will support a repeal of the malt tax. That this meeting recommend that petitions to Parliament be forthwith proposed and signed as numerous as possible throughout the kingdom. That this meeting be adjourned to the second Tuesday after the meeting of Parliament, to be held at this place."

After a few general observations, it was agreed that the meeting should stand adjourned until the second Tuesday after the meeting of Parliament, it having been previously agreed that Mr. Wells should act as honorary Secretary.

Thanks having been given to the Chairman, the meeting separated.

## THE FRENCH BAKERS.

FROM THE 'MARK LANE EXPRESS.'

We last week alluded to the system adopted at Paris respecting the bakers being preferable to that in London, and promised a short account of the regulations, which we will now briefly detail. Often the tranquillity of Paris would have been endangered by the high price of bread if the Government had not assumed a control over the bakers of the metropolis, as bread is the chief article of food to the Frenchman. The company of Parisian bakers consists of a limited number. Every baker is obliged to record his daily sale, and compelled by a statute enforced by the prefect of police, assisted by the advice of the Syndicat, a body of men selected from among the bakers, with a chief appointed by the prefect, to lay up in the store houses of the city a certain number of sacks of Flour of first quality, which

are taken back, or renewed, according as the season is less or more favourable to keep them in a state of preservation; this stock, the produce of the united bakers, is in order to provide for the subsistence of the inhabitants, in case of dearth. The price of bread is regulated by the prefect of police, and is kept lower than the current price in the country, when too dear; but if cheap in the country, they keep up the price in Paris long enough to make up for the deficiency experienced by the bakers, when obliged to undersell the country retailers. If a baker has not the means to carry him on the length of time, which he is required to supply the "staff of life" at a cheaper rate, he is supplied with money out of the funds possessed by the Syndicat, who are appointed specifically to watch over the interests of the bakers in general and the subsistence and provision of the inhabitants. The bakers are in consequence for the most part wealthy, and, in fact, could not carry on business without being possessed of a large capital.

TO MAKE WOOD-FLOUR IN PERFECTION.—According to Professor Autenrieth, the wood, after being thoroughly stripped of its bark, is to be sawed transversely into disks about an inch in diameter. The sawdust is to be preserved, and the disks are to be beaten to fibres in a pounding mill. The fibres and sawdust, mixed together, are next to be deprived of every thing harsh and bitter which is soluble in water, by boiling them, where fuel is abundant, or by subjecting them for a longer time to the action of cold water, which is easily done by enclosing them in a strong sack, which they only half fill, and beating the sack with a stick, or treading it with the feet in a rivulet. The whole is then to be completely dried, either in the sun or by fire, and repeatedly ground in a flour mill. The ground wood is next baked into small flat cakes, with water rendered slightly mucilaginous by the addition of some decoction of linseed, mallow stalks, and leaves, lime-tree bark, or any other such substance. Professor Autenrieth prefers marshmallow roots, of which one ounce renders 18 quarts of water sufficiently mucilaginous, and these serve to form four pounds and a half of wood-flour into cakes. These cakes are baked until they are brown on the surface. After this they are broken to pieces, and again ground, until the flour pass through a fine bolting-cloth; and upon the fineness of the flour does its fitness to make bread depend. The flour of a *hard wood*, such as beech, requires the process of baking and grinding to be repeated. Wood flour does not ferment so readily as wheat flour, but the Professor found 15 pounds of birch-wood flour, with three pounds of our wheaten leaven, and two pounds of wheat flour, mixed up with eight measures of new milk, yielding 36 pounds of *very good bread*. The Learned Professor tried the nutritious properties of wood flour, in the first instance, upon a young dog; afterwards he fed two pigs upon it; and then, taking courage from the success of the experiment, he attacked it himself. His family party, he says, ate it in the form of gruels or soup, dumplings, and pancakes, all made with as little of any other ingredient as possible, and found them palatable and quite wholesome.—*Quarterly Review*.

A REAL WONDER.—A lamb, the property of Mr. Sarson, of Quorndon, was slaughtered last week, which weighed 100 lbs. It was about nine months old, got by a sheep of Mr. Parr's, of Wanlip, and the dam by a sheep of Mr. Smith's, of Dishley,

## THE MALT TAX.

THE CURSE OF BRITISH AGRICULTURE, AND ITS TOTAL  
REPEAL THE ONLY EFFICIENT RELIEF.

Brother Farmers,—This most noxious impost is consuming your very vitals. It does not merely infringe upon the comforts of your families, but, like the unseen wire-worm in your fields, it is withering your every prospect. It has been the chief cause of driving your younger labourers from the farm-house, where they were under your own watchful eye; in too many instances, to the deadly moral influence of the beer shops. It not only robs you of the just reward of your industry, by severely depressing one of your staple articles in the market, but by fostering monopoly it injures the public to an incalculable degree. At the same time, it is the most unequal tax, for, while it falls with undue severity upon the unkind barley lands of the kingdom, it is almost exclusively a tax upon the poor man's beverage. But the evil does not end there. You not only suffer in the depression of your marketable barley, but these vexatious excise laws prevent your turning that which is not marketable to the best account. It has been stated by high authority, that two quarters of malt will fatten a bullock equal to four quarters of barley-meal, while it is well known that malt is as indispensable for the profitable feeding of horses; whereas this irksome impost leaves you the only alternative of giving it to hogs, which, from the immense importation of Irish pork, makes it now nearly tantamount to throwing it away. So that it will appear, while the Exchequer gains about four millions annually from this tax, it costs the consumers of beer nearly double that sum, and, in one form or other, imposes a tax of from seven to ten shillings per acre upon the greater proportion of the arable land of the kingdom. The limits of a letter will not allow us to go into particulars to prove these statements, but we hold ourselves responsible for what is said, and feel convinced that we underrate the cost which this odious tax is to the country.

Will you then (brother farmers) allow one of your own fraternity to entreat you to shake yourselves from your slumber, and make one more effort to rid the country from this grossly unequal, oppressive, and now insupportable burden?

I know your habits are anything than political, and I am too well aware that the manner in which you have been treated by the legislature is calculated to induce you to settle down into a state of indignant apathy. Still, however, your best friends have hitherto had just cause to say that you have not half supported them. You have wanted unanimity. Hitherto you have not half spoken out. You have suffered yourselves to be beguiled and overawed by a few overgrown maltsters, common brewers, and capitalists, who are fattening upon the spoils of the country, and dread only lest the repeal of this tax, accompanied by the repeal of some others affecting the lower classes, should at length occasion them to have to bear their just share in the support of the state, corresponding with the interest they have in the preservation of order and good government. Let nothing of this kind, however, intimidate you; and if the next parliament, like the present, suffer themselves to be thus frightened from the path of duty, by any threat of the finance minister, and turn and eat up their own words, then they will justly deserve to have their whole properties exposed to the threatened scramble of the Radicals. Say to your opponents, "that we have nothing to do with substitutes." Be united, ask at present for nothing more, and be content with nothing less, than the total repeal of this intolerable burden. And I much mistake if the times are not somewhat favourable to your success. Indeed, I am con-

vinced, in your present distressed circumstances, the legislature could not resist a general simultaneous effort throughout the kingdom.

To accomplish this most desirable object, then, where no agricultural associations exist, it is only necessary that some half-score business-men, in their respective market towns, first form a preparatory committee, to mark out the line of operation, fix upon their proper agents, draw up a short petition, and arrange for the incidental expenses, and then, by hand-bills, call a public meeting, fixing, if possible, upon some influential person to preside. All the precaution necessary is to avoid (that curse of agriculture) party politics. You are likely also to have very shortly another opportunity of strengthening your cause,—you will be solicited for your suffrages. At all hazards, make no promise to men whom you have reason to fear will do nothing to relieve you; give the lie to that statement of your enemies, that while the 10*l.* voters are independent, you are the mere creatures of your landlords.

If any of you should find it your duty to take an opposite course from those you are under, let it only be manifest that you do it from principle, and not for the sake of opposition, and then we can hardly bring ourselves to believe that there is a man to be found who can lay the least claim to the appellation of a nobleman or gentleman, who can be vile enough to resent such conduct.

The repeal of this tax will be popular among all parties except the few individuals noticed above. It will be seen in this measure you are not seeking to benefit yourselves at the expense of others. Above all, be not deluded by procrastination; already remember you are twenty years behind hand. Ministry or no ministry, this is the time for exertion, and be sure to let your motto be, **TOTAL REPEAL.**

And, believe me, brother farmers, I am, &c.

A BEDFORDSHIRE FARMER.

Luton, Dec. 5, 1834.

**ADVANTAGES OF DEEP PLOUGHING.**—A farm and other lands on the estate of Broomhall, having fallen into the landlord's possession, in a state of much dirt and exhaustion, it was found, on examination, that this deterioration was greatly to be attributed to the practice of confining the labour to six or eight inches of the surface, which a two-horse plough could not more than effect in ordinary cases; and to the subsoil being rendered peculiarly retentive by the constant pressure of the plough upon it. At this time, attention had been much excited to experiments, in progress in East Lothian, of deep ploughing and deep delving, in imitation of the practice in Flanders; and also by the introduction of Wedge drains, and the valuable suggestions of Mr. Smith, of Deanston, near Doune, for combining that mode of draining and deep ploughing. Accordingly the landlord proceeded to act upon these two unquestionable principles in good husbandry—that of draining the lands, and deep ploughing, and the consequences have been—1st, That, solely by the admixture of subsoil, and free use of the grubber, the dirt and exhaustion of the original surface have been got the better of, so that the seed has been at once sown without summer fallow. 2d, Any improvement which the quality of the subsoil is calculated to effect is obtained. 3d, The land is rendered pervious to rain to the full depth of the deep ploughing. And, accordingly, from the commencement of the operation, the crops have invariably been beyond comparison far better than ever were before produced on the same ground, and, in most instances, light land is improved, and a cold wet clay is now converted into essentially good turnip soil.

The following lines, by JAMES BIRD, ESQ. of Yoxford, Suffolk, author of "The Vale of Slaughden, &c." were spoken by him after Dinner (forming part of his Speech) at the late Meeting of "The East Suffolk Agricultural Association."

The Earth!—her riches were to all men given,  
The first best boon of an indulgent Heaven;  
And he who tills her bosom, ought to share  
Her bounties freely, equal to his care;  
Yet, oft we hear, in this enlightened age,  
When every penny reader is a sage,  
When the Schoolmaster is abroad—I doubt  
He'll keep *aborad*, since he has late gone out!—  
When steam impels us, and when oft, alas!  
The only light we have abroad is gas!  
We hear men state that COMMERCE is alone  
The staff that props the Peasant, and the Throne,  
That *Farmers* are a sorry, useless race,  
And only born to give the Merchant place:  
One sapient Politician tells us clear,  
Corn never should be *grown* but *purchased here*;  
Purchased from *Foreign* lands—I wish he'd try it,  
And tell us where to find the cash to buy it!  
Another cries—the *Land* is all a joke,  
That nought is good but *Birmingham*, and smoke;  
A third asserts that all is lost in sloth  
That does not smack of *Manchester*, and cloth!  
We grant that COMMERCE is a useful dame,  
And, only where she plays the sauce-box blame!  
Why should she give herself obnoxious airs,  
And kick poor AGRICULTURE down the stairs?  
Her elder Sister too!—a sinful shame,  
And she, poor thing, has been for some years lame!  
But *now*, I trust, a higher prospect cheers  
The Farmer's heart, and shows him brighter years!  
Pleased I behold the meeting here to-day,  
All petty cares and party feuds away;  
Our men of *business*, and our men of *station*,  
Conjoined in one approved ASSOCIATION!  
Its object thus to foster in the mind  
Of Landlord and of Tenant feelings kind,  
To raise an emulation in the Swains  
Who till the soil, and labour for its gains,  
To show the Peasant that his own best aim  
Is *honest industry*, to give his claim  
To self respect a title, and a gift,  
To prove ye are his brothers, and to lift  
His mind above the indolent and vile,  
And give the due reward to honest toil!—  
Shame to the rambling rhymester, thus to keep  
You all so long! (he wonders ye don't sleep!)  
He thus concludes, and will you pledge him now  
In this his Toast!—*God speed the Suffolk Plough!*

#### TIPTREE RACES, A COMIC PUNNING POEM, à la HOOD'S CELEBRATED "EPPING HUNT" BY C. C.—Longman, and Co.

"In it if you should find a *skit* or two,  
Ye people British,  
I trust you'll pardon it, for my Pegasus  
Is very *skittish*!"

C. C.'s Pegasus is not only *skittish*, but sometimes downright *restive*.

His most serious offence is the perpetration of a constant succession of *puns*, for all of which we have no doubt his reader will discover a pun-ishment—(*pun-is-meant*.)

#### THOMAS'S TOWN AND COUNTRY AL- MANACK.

The first step towards taking off the taxes on knowledge was made by Lord Althorp the late Chancellor of the Exchequer, in repealing the stamp duty on Almanacks. But for this, we should not have been in possession of a large, full, and comprehensive sheet Almanack, embracing every thing useful that can be comprised within so small a compass as is now offered to the public by Mr. Thomas, at the low price of three-pence.

#### TUSSIN'S HUNDRED GOOD POINTS OF HUSBANDRY, reprinted verbatim from the original Edition of 1557, printed by CHARLES CLARKE (AN AMATEUR) at his PRINTING PRESS, GREAT TOTHAM, ESSEX.—Longman, and Co.

Mr. Clark himself, as he tells us, an agriculturist, appears to be one of those individuals who delight in devoting such few leisure hours as he can spare from his customary occupation, to the cultivation of some useful science or art. Printing seems to have been *his* hobby, and he has used him most characteristically in reprinting "Tussin's hundred points of Good Husbandry," a work published by an agriculturist nearly 300 years ago. It is printed *verbatim et literatim* as it at first appeared. The language is quaint, and many of the words are so obsolete, that they would have been unintelligible, had not Mr. Clark remedied the inconvenience by adding a glossary. "His pleasure and pride" in having been the means of giving the curious and the public in general an opportunity of justly appreciating the genius and worth of such a man as our old 'right trusty' friend Thomas Tussins, evinces feelings highly creditable to him.

#### SHOOTING.

FROM THE 'SPORTSMAN.'

On first taking the field I would endeavour to impress upon the minds of all noviciates the necessity of being perfectly cool, both before and after the rising of the covey. He may be assured that he will have plenty of time to bring down his bird, to ensure which I earnestly recommend him to select one from the covey, and to cover his bird with due deliberation. It is natural enough for a youngster to fire bang into a covey, en masse, on their first rising, but the real sportsman will select his birds, taking the one that is farthest from him for his right-hand barrel, and one of the loiterers for his left. Some men possess more nerve or coolness than others; indeed so lamentably deficient are many with whom I have had the misfortune to be out on a field-day, that nothing but the intervention of an artificial or an acquired degree of coolness, enabled them to shoot with anything like certainty. An old friend of mine who for ever sinned in this manner, bethought himself of taking a pinch of snuff after the birds rose, and before he fired; to expedite the process he had his dexter pocket lined with leather to contain the pulverized tobacco, and ever and anon as occasion required, the thumb and dexter digit were applied to the store in his pocket, and by the time the powder was applied to the expectant nostril, the nerves had obtained the requisite degree of composure, and I must in justice add that nine times out of ten a bird fell as soon as the gun was raised to the shoulder.

## THE TORY ADMINISTRATION.

## CABINET MINISTERS.

|                                                 |                       |

| (ditto).....                               |                                      |
| Surveyor-General of the Ordnance.....      | Lord EDW. SOMERSET.                  |
| Store-keeper of the Ordnance.....          | Mr. BONHAM.                          |
| Lord Advocate of Scotland.....             | Sir WILLIAM RAE.                     |

Board of Admiralty—Earl De Grey, Sir George Cockburn, Sir John Beresford, Sir Charles Rowley, Lord Ashley, and Mr. Maurice Fitzgerald (Knight of Kerry). Secretary, Mr. G. R. Dawson.

Colonel Perceval—Treasurer of the Ordnance.

Board of Control—Lord Ellenborough, Sir Alexander Grant, Messrs. Planta and Sullivan. Secretary, Mr. Praed.

Sir George Clerk, as Secretary to the Treasury Board, took his seat on Saturday.

**PIG BARGAINS.**—The second day I spent at Gashel was market day: and among other sights I was greatly amused by the country people driving bargains for pigs. A man, a pig dealer, would come to a countryman who held a pig by a string. "How much do you ask?" "Twenty-eight shillings," the answer might be. "Hold out your hand," says the buyer; and the proprietor of the pig holds out his hand accordingly; the buyer places a penny in it, and then strikes it with a force that might break the back of an ox: "Will you take 20s.?" The other shakes his head. "Ask 24s., and see if I'll give it ye," says the pig-merchant. The owner again shakes his head. It is probable by this time some one among the bystanders—for there is always a circle formed round a bargain-making, endeavours to accommodate matters; for it is another instance of the kindly feeling towards each other, that all around are anxious that the bargain should be concluded. Again the merchant says, "Hold out your hand," and again a tremendous blow is struck, and a new offer made, till at last they come within a shilling of each other's terms: when the bargain is struck, and the shilling about which they differed, and probably two or three others, are spent in whiskey punch, screeching hot."—*Ingli's Ireland.*

## SMITHFIELD CLUB CATTLE SHOW.

[FROM A CORRESPONDENT.]

The thirty-sixth annual adjudication of prizes, and of gold and silver medals, to fat cattle, sheep, and pigs, took place on Friday last, in the Repository-yard, in Goswell-street.

The general opinion of those agriculturalists who have as yet been favoured by a view of this grand exhibition, state that a finer display of superior stock, and better competition, has seldom, if ever, been witnessed in this metropolis.

The stewards, viz., Mr. R. Griffin, Mr. T. Chapman, and Mr. Thomas C. Beasley, have found it an arduous task to class and arrange them this year; they have placed numbers over each animal, by which the gentlemen judges have decided the prizes.

The judges, viz., Mr. Samuel Druce, of Ensham; Mr. Samuel Bennett, of Bickering's-park; and Mr. Charles Stokes, of Kingston Kegworth; having decided the prizes while in ignorance to whom the several animals belonged, at a very late hour finally signed their award, and during the night the following copy from the labels over each animal was made as follows:—

## CLASS I.—CATTLE SHOWN.

For the best ox of any breed, under five years old; no restrictions as to feeding.

A premium of 20 sovs. to Mr. Robert Smith, of Burley, near Oakham, for his four years and eleven months old short-horned ox; bred by Mr. Hough, of Threackingham, near Falkingham; fed on oil-cake, bean-meal, carrots, and turnips.

A silver medal to Mr. Hough, as the breeder of the above ox.

The other competitors in class I. were—

Sir Felix Booth, Bart., of Brentford, a three years and nine months old Hereford ox; bred by Mr. Turner, of Noke; fed on wash and distillers' grains. The judges commended this ox.

Mr. Christr. Smith, of Burley, a four years and 10½ months old Hereford ox; bred by Mr. Cranston, of Widemarth; fed on oil-cake, bean-meal, carrots, and turnips.

Lord Huntingfield, of Heavingham, a three years and nine months old Durham ox; bred by his lordship; fed on oil-cake and bean-meal.

Mr. W. Yardley, of Grove, Ivinghoe, a four years and ten months old Hereford ox; bred by P. Morris; Esq., of Hurst, near Clunn; fed on cake, turnips, and hay.

Mrs. Elizabeth Earl, a three years and eleven months old mixed East Indian and English ox; bred on her farm at Bellingden; fed on oats and hay.

## CLASS II.

For the best ox of any breed, under six years of age, weight 160 stone and upwards, not to have had cake, corn, or distillers' wash, previous to the 1st of August.

The first premium of 20 sovs. to Earl Spencer, for his four years and six months old Durham ox; bred at his Wiseton farm, and fed on his lordship's farm at Althorp, on mangel wurzel, turnips, and 1127 lbs oil-cake.

A silver medal also to his lordship as the breeder of the above ox.

The second prize of 10 sovs. to Mr. Richard Spraggett, of Chadshunt, Warwickshire, for his five years and eight months old Durham ox; bred by Mr. William Bellamy, of Hasely House; fed on grass, turnips, and 800 lbs oil-cake.

The other competitors in class II. were commended by the judges generally.

The Duke of Richmond, a four years and eight months old Hereford ox; bred by Mr. Thomas Ardlen, of Lacy; fed on mangel wurzel, turnips, 114 lbs of bean meal, and 545 lbs of oil-cake.

The Earl of Oxford, a five years and nine months old Hereford ox; bred by his Lordship at Egwood; fed on mangel wurzel, 750 lbs barley-meal, and 280 lbs of flax-seed, ground together. The judges particularly commend this ox.

W. J. Bailey, Esq., Shenly House, Bucks, a four years and two months old Hereford ox; bred by Mr. Loe, of Pilchfield, near Ludlow, Salop; fed on grass, hay, and 1,500 lbs of oil-cake.

J. T. Senior, Esq., of Broughton House, near Aylesbury, a four years and five months old Hereford ox; bred by Mr. George Proctor, of King's Pides, Hereford; fed on grass, hay, and 700 lbs of oil-cake. Travelled by boat forty miles.

#### CLASS III.

For the best ox of any breed, under five years of age, weight under 160 st., and above 120 st., not to have had cake, corn, or distiller's wash previous to the 1st of August:—

The first prize of 15 sovs. in this class, to Mr. Ralph Oldacres, of Cestersover, near Lutterworth, a three years and eight months old Hereford ox; bred by Sir Francis Lawley, Bart., of Middleton-hall; fed on grass, 560lb of oil-cake, and three bushels of barley-meal.

A silver medal, as the breeder of the above ox, to Sir Francis Lawley, Bart.

Mr. Ralph Oldacres, of Clipstone, a four years and five months old Durham ox; bred by Mr. R. Richard Bagshaw, of Newton; fed on grass, hay, and 406lbs oil-cake.—Was disqualified from this class from being over weight, but possessing considerable merit.

Mr. Richard Spraggett, of Chadshunt, Warwick, a four years and eight months old Durham ox; bred by Mr. William Bellamy, of Haseley; fed on grass, turnips, and 750lbs of oil-cake.

William B. May, Esq., Hadlow castle, near Tunbridge, a four year and 8½ months old Sussex ox; bred by Messrs. John and William Cuckney, of White Ditch, Sussex; fed on grass, hay, turnips, cabbage, and 300lbs oil-cake.

J. T. Senior, Esq., of Broughton House, a four years and five months old Hereford ox; bred by Mr. William Rayer, of Longdon; fed on grass, and 750 lbs of oil-cake.

William James Bailey, Esq., of Shenley House, near Stoney Stratford, a three years and nine months old Hereford steer; bred by Mr. T. Oakley, of the Moat, Stapleton, Salop; fed on grass, hay, and 400 lbs of oil-cake.

#### CLASS IV.

For the best ox of any breed, not exceeding four years and three months old, under 120 st. weight, not to have had cake, corn, or distiller's wash previous to 1st of August.

The first prize of 10 sovs. in this class to Mr. Ralph Oldacres, of Cestersover, a three years and nine months old Hereford ox; bred by Sir Francis Lawley, Bart., of Middleton Hall; fed on grass, 560lbs of oil-cake, and three bushels of barley meal. A silver medal, as the breeder of the above ox, to Sir F. Lawley, Bart.

The second prize of 5 sovs to Wm. Jas. Bailey, Esq., of Shenly House, a three years and nine months old Hereford ox; bred by Mr. Thomas Oakley, of the Moat, Salop; fed on grass, hay, and 800 lbs of oil-cake. Travelled sixty miles in boat.

Mr. George Peach, of Northampton, a three years and eight months old Hereford ox; bred by Earl

Talbot, at Ingestrie; fed on grass, hay, and 423lbs of oil-cake.

Mr. Wm. Wright, of Shoby, near Melton Mowbray, a Scotch ox; bred by himself; fed on grass, hay, and 1,000lbs of oil-cake.

Mr. John Clode, of Sherington, a three years and five months old Hereford steer; bred by Mr. John Walker, of Stormer, near Leintwardine, Salop; fed on grass, hay, turnips, and 500lbs of oil-cake.

#### CLASS V.

For the best fat cow or heifer under five years of age. Freemartins and spayed heifers are not qualified.

The prize of 15 sovs. to the Marquess of Exeter, for his four years and eleven months old Durham heifer; bred by his Lordship at Burghley, near Stamford; fed on turnips, carrots, and 1,460 lbs. of oil-cake, and 800 lbs. of barley flour.

A silver medal also, as the breeder of the above, to his lordship.

The judges commend the other two competitors in this class; viz.

T. F. Johnson, Esq., of Spalding, a four years and six months old Durham heifer; bred by himself, and fed on oil-cake, linseed-flour, oat-meal, and turnips.

William Hayward, Esq., of Aylesbury, a four years and nine months old Durham cow; bred by T. T. Drake, Esq., of Shardelows; fed on oil-cake and oats.

#### CLASS VI.

For the best fat cow, of five years old and upwards, freemartins and spayed heifers are not qualified.

The prize of 15 sovs. to Earl Brownlow, for his five years old Durham cow; bred by his Lordship at Belton; fed on Swede turnips, and 1,200 lbs. oil-cake.

A silver medal also to his Lordship as the breeder.

The other competitors in this class were—

C. Hillyard, Esq., of Thorplands, a six years and two months old Durham cow; bred by the Rev. Henry Berry of Liverpool; fed on turnips, bean-meal, and oil-cake. The judges commend this cow.

William Hayward, Esq., of Aylesbury, an eight years and nine months old Hereford cow; bred by Mr. William Holmes, of Pooland; fed on oil-cake and oats.

Mr. Edward M. Lucas, of Rowsham, a six years and ten months old Yorkshire cow; bred by Mr. Wm. Duncombe, of Dunton; fed on turnips and oil-cake.

A gold medal, value five sovs., to the breeder of the best beast in any of the above classes—to Earl Spencer for his ox, which gained the first prize in class 2.

James Rhodes, Esq., of Islington, a fine Durham cow, but which was excluded for want of the breeder's certificate.

#### CLASS VII.

For fat long-woolled wethers, one year old any-how fed.

The first prize of 16 sovs. to Mr. Wm. Pawlett, of Barnack, for his three twenty-one months old Leicester wethers; bred by himself; fed on vegetable food only. A silver medal also as the breeder of the above.

A gold medal value 5 sovs., as the breeder of the best pen of long-woolled sheep, exhibited in classes seven or eight, to Mr. Wm. Pawlett.

The second prize of 5 sovs to the Marquess of Exeter, for his three twenty-months old Leicester

wethers; bred and fed by his Lordship, at his Burghley farm.

The other competitors were—

Mr. Richard Redgrave, of Bunker's-hill, three twenty-months old Leicester wethers; bred by himself.

Mr. Thomas Inskip, of Upper Caldecote, three twenty-one months old Leicester wethers; bred by himself.

Mr. Thomas Carpenter, of Over Norton, three twenty-one months old Leicesters and Cotswold wethers; bred by himself.

Mr. Wm. Faulkner, of Bury Barnes, three twenty-two months old Leicester wethers; bred by himself.

Mr. Jos. Bull, of Nethercote, three twenty-one months old Leicester wethers; bred by Mr. Carpenter.

#### CLASS VIII.

For fat, long-woolled wethers, two years old any-how fed.

The prize of 10 sovs. to Mr. John Painter, of Burghley, near Oakham, for his three under thirty-four months old Leicester wethers; bred by himself. A silver medal also as the breeder.

The other competitors were—

Mr. Richard Garratt, of Great Harrowden, three thirty-two months old Leicester wethers; bred by Mr. Joseph Faulkner, of Boughton.

Mr. Richard Rowland, of Cresslow, three thirty-two months old Cotswold wethers; bred on the farm of Mrs. Cook, at Aylworth.

#### CLASS IX.

For fat, short-woolled wethers, one year old, any-how fed.

The first prize of ten sovs. to Thomas Ellman, Esq., of Beddingham, near Lewes, for his three twenty-months old Southdown wethers; bred by himself.

A silver medal also as the breeder of the same.

A gold medal, value five sovereigns, as the breeder of the best pen of short-woolled wethers, in classes 9 or 10 also to Mr. Ellman.

The second prize of five sovs. to Stephen Grantham, Esq., of Stoneham, for his three twenty months old Southdowns; bred by himself.

The other competitors were—

His Grace the Duke of Richmond, three twenty-months old Southdowns; bred by his Lordship at Goodwood, near Chichester.

Lord Huntingfield, three twenty-one months old Southdowns; bred by his Lordship, at Heavingham, near Yoxford.

The Honourable P. J. L. King, of Woburn, near Chertsey, three twenty-one months old Southdowns; bred by the late Lord King.

Sir Watkin Waller, Bart., of Twickenham, Middlesex, three twenty-two months old Southdown wethers; bred by himself.

#### CLASS X.

For fat short-woolled wethers, two years old, any-how fed.

The prize of 10 sovs. to Stephen Grantham, Esq., of Stoneham, for his three thirty-two months old Southdowns; bred by himself. A silver medal also as the breeder.

The other competitors were—

His Grace the Duke of Richmond, three thirty-two months old Southdowns; bred by his Grace at Goodwood.

Lord Viscount Gage, three thirty-two months old Southdowns; bred by his Lordship at West Fife.

Henry Boys, Esq., of Waldershare, three thirty-two months old Southdowns; bred by himself.

Sir Watkin Waller, Bart., of Twickenham, Middlesex, three thirty-two months old Southdowns; bred by himself.

#### CLASS XI.—PIGS.

Any breed of the same litter, above four and under nine months old.

The first prize of 10 sovs. to the Earl of Harborough for his three twenty-six weeks old Neapolitan and Chinese pigs; bred by his Lordship at Stapleford; fed on barley and wheat flour, and skim milk. A silver medal also to his Lordship as the breeder.

The second prize of 5 sovs to Mr. George Chandler, of Kingston, for his three sixteen weeks old Surrey pigs; bred by himself; fed on meal and milk.

The other competitors were—

The Hon. P. J. L. King, of Woburn, near Chertsey, three thirty-two weeks old Rudgwick pigs; bred by himself; fed on whey, skim milk, potatoes, gains, and a few peas.

Mr. Luke Guerrier, of Stepney, three twenty-six weeks old Norfolk and Chinese pigs; bred by himself; fed on barley and peas, flour and milk.

#### EXTRA STOCK.—CATTLE.

To the exhibitor of the best beast in extra stock.

A silver medal to R. W. Baker, Esq., of Cottesmore, for his four years and seven months old Durham ox; bred by the Earl of Exeter.

The other competitors were—

Sir Felix Booth, Bart., of Brentford, a three years and ten months old Hereford ox. The judges commended.

Sir Felix also showed a five years old Scotch ox.

Wm. J. Baily, Esq., two Hereford oxen.

Mr. R. Oldacre, a four years and four months old steer.

W. B. May, Esq., of Hadlow Castle, a Sussex ox.

Mr. J. Warmington, of Tottenham, a Scotch ox.

Mr. W. Dearle, of Staines, a Sussex ox.

S. Adams, Esq., of Ware, a Scotch ox.

Mr. W. H. Wills, of Tillingham, a Scotch ox.

#### EXTRA STOCK.—SHEEP.

A silver medal to Mr. John Beasley, of Chapel Brompton, as the exhibitor of the best long-woolled sheep in extra stock.

The other competitors commended by the judges were—

The Marquis of Exeter's two Leicester wethers.

Mr. W. Pawlett's three Leicester wethers.

Mr. Redgrave's Leicester sheep.

A silver medal to Thomas Ellman, Esq., as the exhibitor of the best short-woolled sheep in extra stock.

#### EXTRA STOCK.—PIGS.

A silver medal to the Marquis of Tavistock, as the exhibitor of the best pig in the extra stock.

The other competitors commended by the judges were—

Mr. George Chandler, three Surrey pigs.

Wm. Orchard, Esq., a Hereford and Essex pig.

Mr. B. E. Bennett, a Leicester pig.

#### SWEEPSTAKES.

Lord Huntingfield and the Duke of Richmond five sovs. each, for the best five Southdown wethers—award to the Duke of Richmond.

A great variety of agricultural implements, seeds, &c. were in the yard.

On Monday December 15, the club held its annual meeting in the parlour of the yard, to settle their financial matters, and determine the amount and conditions of their bill of premiums for next year. We are informed that a prize of ten sove-

reigns is added for one-year-old long-woolled sheep that have never eaten cake, seeds, corn, pulse, or meal. Further, the prizes for one-year-old short-woolled sheep is altered from ten to fifteen sovereigns: and a second prize of five sovereigns is offered for two-year-old short woolled sheep.

#### THE DINNER.

In the afternoon between two and three hundred members of this club dined together at the Freemasons' Tavern, in great Queen-street, Lincoln's-inn-fields, to celebrate the thirty-sixth anniversary of the formation of their society. Earl Spencer presided, supported on the right by Lord Huntingfield, and on the left by Lord Oxford. There were also present Francis Pym, Esq., Clark Hilyard Esq., Henry Handley, Esq., M. P., W. May, Esq., &c.

The cloth having been removed, "the health of the King" was given. It was drunk with no very marked applause. Neither did the toast of "the Queen and the rest of the Royal Family" produce such an ebullition as could be referred to political feeling. Some half-dozen appeared to be disposed to prolong the plaudits, and thus give them the effect of an expression of Tory sentiment; but their efforts met with no encouragement, and their attempt, therefore, was a complete failure.

Earl SPENCER said, it was not necessary for him to preface the next toast he had to propose, with any observations; he would at once give them, "Success to the Smithfield Club" (*cheers*), and that it would be successful he thought there could be no doubt; the best evidence of the fact was to be found in the character of the shows of cattle, year after year; and to this he might add the very numerous attendance that he saw before him this evening. He was most anxious, as indeed he always had been, for the success of this Club, because he was sure, that on examination, it would be found exceedingly beneficial to the farming interest of the country; and for that interest, whatever might be his situation, it would be his earnest endeavour to do what he could. (*Great cheering.*) The toast was drunk with great applause.

His Lordship then read the list of prizes awarded by the judges, and distributed them to such gentlemen as were present to receive them. The health of each successful candidate was given, and drunk by the company with great applause. There was much cheering when his Lordship announced himself as the receiver of the premium of twenty sovereigns for a four years and six months old Durham ox, and of the gold medal for the best ox shown. His Lordship's health having been proposed, the toast was honoured with several rounds of applause.

Earl SPENCER said, it always gave him the greatest satisfaction to be received in the manner in which he had been by the present meeting. His own taste inclined him to follow agricultural pursuits as much as possible. He was interested in every way in which a man could be in the success of agriculture; but independent of his personal interest in it, he felt that to the country its success was of the very highest importance. (*Cheers.*) When he proposed to them as a toast, "The success of the Club," he told them that his endeavours should never be wanting to promote that object; surely he need not repeat that this was his determination. He should now have more time, he hoped a great deal more time, to apply to agricultural pursuits. (*Hear, and a laugh.*) He told them last year, when he gave the gold medal to the gentlemen to whom it was adjudged, that, in his opinion, that ought to be the object they should all have in view. He would use his best exertions to

obtain the prize next year, as he had done this. When he was unsuccessful, he should not feel discontented; but he hoped to succeed in the future years that he promised himself he should have the honour of sitting at this table. (*Great applause.*)

The healths of the unsuccessful but commended candidates having been drunk,

Lord HUNTINGFIELD, in returning thanks, said, though he had not been fortunate enough to succeed this time, he assured them he would try, and try again, and if he failed at last, it would not be owing to a want of exertion. He congratulated them on the numbers he saw present. He had been afraid the interest the public were taking in such business was going down, like the price of corn (*a laugh*); but he was happy to find it was not so. His Lordship having expressed his sorrow at seeing the short-horns beaten by the Herefords (*laughter*), proceeded to say that he thought it desirable there should be a premium for animals not fed on artificial food. The long-woolled sheep, as well as the South Downs, might be produced in as fine a condition as any person could desire, having been raised by natural, and not by artificial means. If they made them fat beyond a certain degree, they became unsaleable. (*Hear.*)

Mr. P. HILLYARD said the gentlemen whose healths had been drunk were the "commended" unsuccessful candidates, and for them he presumed to rise to return thanks. He was rather surprised to see the Noble Lord who last addressed them, get up for that purpose, because his Lordship did not belong to that class—his Lordship belonged to the class that were simply unsuccessful. (*Laughter.*) Now he (Mr. Hillyard) was as nearly a successful candidate as he could be, being one of the unsuccessful who were "commended." He always considered that the judges had a rather difficult task to perform, but their difficulties on this occasion must have been greater than usual. He believed that since the club had been instituted the judges had not been so puzzled as they were to decide between the claims of Lord Brownlow and himself. He rejoiced at having so nearly obtained the prize, and he regretted that he had lost it. At all events, he was perfectly satisfied with the conduct of the judges, and, in conclusion, begged to propose their healths.

Mr. BENNET returned thanks.

Earl SPENCER said, the club being of opinion that a treasurer was unnecessary, Henry H. Hoare, Esq., their banker, had consented to perform the duties of that office. This gentleman was one of the oldest members on their books. His Lordship proposed "Mr. Hoare's health." Drunk with applause.

The following toasts were also given:—"The Marquis of Tavistock;" "The Duke of Richmond;" "The Stewards of the Club;" "The Duke of Bedford;" "T. W. Coke, Esq.;" "The Earl of Talbot;" "Success to the Manufactures and Commerce of the Country;" "Prosperity to the Labourers of the Country;" "The Butchers of the Metropolis;" "Live and let live;" "F. Pym, Esq.;" "The Manchester Agricultural Society;" "H. Handley, Esq., M. P.;" "Sir C. Morgan, Bart.;" "Mr. W. Farey, the Club's indefatigable Secretary;" and "Success to the Agricultural Societies throughout the Kingdom."

Earl Spencer and his friends withdrew at about nine o'clock, when Mr. Hillyard was voted into the chair, and conviviality was kept up till a late hour.

EFFECTS OF TAXATION.—Mr. Coke's estate consists of 40,000 acres of land, rented upon an average at 16s. per acre; and as the four course system of husbandry is pursued in that county, one-fourth

part of this estate, or 10,000 acres, are annually sowed with barley, and which produces on an average, five quarters per acre, or 50,000 quarters of barley annually. Now the duty paid (before the last repeal) to government, on making five quarters of barley into malt and beer, of both sorts, was 14*l.* 3*s.* 4*d.*, so that each acre pays, in direct taxes, more than 17 times the annual rent, these 10,000 acres yielding to government 141,660*l.*, while they yield to Mr. Coke only 8,000*l.* Now, the fundholders receive about three-fifths of all the taxes raised, whence it follows that they derive from these 10,000 acres 84,996*l.* 8*s.*, or above ten times as much as the landlord. This sum, too, be it remembered, is exempt from all direct taxation, contributes nothing to the poor, nothing to the state, the church, army, navy, &c., while the landlord's share is burdened with heavy expenses towards them all, and by far the greater part of it ultimately finds its way into the pockets of the same fundholders.—*Correspondent of the Birmingham Journal.*

A Royal ordinance of July 8th reduced the import duty on wool by one-third, and declared that the premiums on the export of woollen yarns and cloths should be reduced in the same proportion from the 1st of January next. It having, however, been represented that the sale of all the cloths made of the wool which had paid the higher duty cannot be completed till the end of February, a Royal ordinance of Friday prescribes that the full premium of 13½ per cent. shall be allowed till the last day of February inclusive.—*Galignani's Messenger.*

## STATE AND PROSPECTS OF THE WOOLLEN TRADE.

During the last month the trade of this district has remained in that state of depression which naturally ensues when the public mind has been suddenly awakened to a sense of insecurity. The explosion of a rotten system, involving one house after another in ruin, and spreading along a connected train so extended and ramified, leaves people at a loss to judge where its effects may stop, or whom it may be prudent to trust. This state of feeling has been aggravated by the stoppage of a few speculating wool houses on the continent, which has induced an apprehension that prices will suffer a further reduction, and the concurrent operation of two separate causes so potent, at a period which, under ordinary circumstances, is usually the dulllest of the whole year, has produced a series of markets here, without precedent for inactivity.

The total reduction in foreign wools, since this time last year, may now be stated at full a shilling per lb. The fall up to the last clip was about 9*d.*, and it brought them down again to about the prices of 1833, before the advance began. But such is the consequence of over excitement and speculation; after a twelve month's contest to establish an advance of 50 per cent. upon a fair and moderate price, we come to a reduction of 10 per cent. below that price, and yet confidence is so far impaired that business is at a stand.

At the same time there appears little real ground for apprehension as to the ultimate stability of prices. The importations up to this time last year, taking round numbers, amounted to 31,000,000 lbs., and this year they are at 29,000,000 lbs.

The prospects in our cloth markets are con-

sidered to be already improving. There was perhaps no very striking difference to be seen in the quantity of goods actually sold last Tuesday, but it was evident that a better tone prevailed amongst the buyers, and that more disposition was manifested to purchase. Another month, and the turn of the year, may do great things towards re-establishing us.—*Leed's Intelligencer.*

## THE BUCKINGHAMSHIRE AGRICULTURAL DINNER.

A meeting of the Buckinghamshire Agricultural Association took place on Wednesday, Dec. 17th, at the County Hall, Aylesbury; his Grace the Duke of Buckingham presided. The meeting was looked upon throughout the county as one of very great importance, and considering the respectability and the numbers of the persons that attended it, it must be generally allowed that it was. Upwards of 800 persons sat down to dinner, the great majority of whom consisted of the farmers of the county. Besides the noble President we observed present the Marquis of Chandos, Lord Boston, Sir Thomas Fremantle, Bart.; Sir W. L. Young, Bart.; Sir Harry Verney, Bart.; Sir John Dashwood King, Bart.; Sir Alexander Croker, Bart.; Sir John Chetwode, Bart.; Sir Robert Gunning, Bart.; Colonel Harmer, M. P.; W. Richford, Esq., M. P.; T. P. Williams, Esq., M. P.; G. S. Harcourt, Esq., High Sheriff; Colonel Chester, Colonel Pigott, Major Bent, Captain Harcourt, Captain Arnol, Captain Swabey, Captain Chase, W. Medley, Esq.; G. Lyall, Esq., M. P.; Mr. D'Iraeli, and a number of other highly respectable and influential gentlemen.

The hall was profusely decorated with flags of various descriptions, and with festoons of evergreens intermixed with flowers. On an elevated platform, at the eastern end of the hall, under a canopy of evergreens and flowers, sat the noble Chairman. Over his head (the only inscription in the hall) was written in large illuminated characters—"Success to Agriculture."

The Duke of Buckingham's band was in attendance, as well as several London vocal performers.

The cloth having been removed, and grace said by the Rev. Mr. Cox, the county Chaplain,

The Noble PRESIDENT said—Gentlemen, I will give you the health of the munificent patron, the gracious friend of the Buckinghamshire farmer—"The King"—(loud cheering). Gentlemen, let us have a Buckinghamshire volley, three times three, God bless the King. (This toast was drunk in the most enthusiastic manner.)

The national anthem was sung by Messrs. Charles Taylor, Fitzwilliam, Robinson, and Hobbs, the company standing, and joining in the chorus.

The Noble PRESIDENT then said—Gentlemen, I call upon the chivalrous feeling of the county in support of the toast I intended to give—"The Queen." (This toast was received with greater applause than the former, although a slight hiss or two were heard at the lower part of the room.)

Song—"Here's a health to the King and the Queen." When the singers came to the word "Queen" they were more than once interrupted by bursts of applause.

The Noble PRESIDENT then gave "The Royal Family," which was drunk with three times three.

Glee—"Glorious Apollo."

The Noble PRESIDENT—Gentlemen, I am now going to give you a toast which of itself you will, I am sure, drink with the greatest enthusiasm, the health of the army of England, but with it I shall combine the name of the hero of a hundred fights—(cheers)—the conqueror of France—(loud cheers)—the deliverer of Europe—(great cheering)—"the Duke of Wellington and the Army of England."—(Loud cheering.) As the cheers were about to cease, the noble chairman again rose, and exclaimed—"Up boys and be at them."

The next toast was "The King and the Navy of England"—(cheers).

Song—"Rule Britannia."

The Noble PRESIDENT then said—I am going now to give a toast which will require but little preface. It is a toast in support of the cause upon which the prosperity of England depends, and concerns every class of the community, from the highest to the lowest; "The health of the English farmer, and prosperity to agriculture!"—(*loud cheers.*)

Mr. Charles Taylor sung "The English Farmer," which was warmly applauded, particularly the following passage:—

"New fangled nonsense an't the thing  
To gull the British farmer."

Mr. HORWOOD, in expressing the gratification of the landed interest at the toast which had been drunk, said he hoped that every man who duly estimated the condition of the landlords and tenant, would join heart and hand to obtain from the Legislature that attention which had been so long withheld—(*hear, hear*). Believing that to be the wish of the country, he should speak in plainer terms, and would at once ask for the unrestricted use of barley, and a repeal of the tax on malt, which was treated so lightly that it became a question whether barley or malt were used in the brewing of beer?—(*a laugh*). He knew that if the tax was taken off malt it would leave him a greater credit for his barley, and make room in the market for his wheat and beans—(*hear, hear*). If the duty were taken off malt it would allow the wife of the labourer to spend sixpence in beer and bread and butter, or a shilling in beef or mutton—(*loud cheers*). The metropolis and the country had been at variance upon the subject of the house tax and the duty on malt, both contending for its repeal. The metropolis, however, had been successful. They had obtained the repeal of the house duty, and he hoped, therefore, that the 50*l* householders who obtained a vote through the influence of the Marquis of Chandos, would come forward and counteract the effect of the votes of the metropolis—(*hear, hear*).

The Noble PRESIDENT then proposed the health of the High Sheriff of the county, which was drunk amidst loud and general applause.

The HIGH SHERIFF, in returning thanks, declared his attachment to the old institutions of this once happy land, and said that he clung more closely to them when he saw many deride them as old-fashioned institutions, in contra-distinction to their own absurd notions—(*cheers*). The hon. Gentleman then proposed the health of the noble President, observing, that his cry was "Liberty!" and his desire to stand hand in hand with one another, as well in liberty as in adversity—(*cheers*).

The noble President's health was then drunk in the most enthusiastic manner, the company standing and responding to the toast with three times three cheers.

The Duke of BUCKINGHAM rose to return thanks:—"Gentlemen and Brother Farmers, it must be most gratifying to any Lord Lieutenant of a county to find himself remembered by British farmers; but what must my situation be when I perceive my health received as it has been done? It is now 38 years since in this hall I first offered myself to your kind acceptance. You then chose me as your Representative, and at every successive opportunity which the King gave you, by dissolving Parliament, you re-elected me. You had an opportunity of telling me if I had forfeited your confidence; but at each successive opportunity you told me that I still enjoyed your confidence; and now, in the sunset of life, I find, by the manner you have so kindly received my health, that I still enjoy your unabated affection and undiminished kindness. Can any man feel prouder than I do, surrounded as I am by such a numerous and respectable assembly? I received your confidence at an early age; and confidence was transmitted to me by those who loved me and went before me, and I have transmitted your confidence *there*—(pointing to Lord Chandos;—*immense cheering*). I am surrounded by British farmers and by friends, and I feel most warmly the kindness with which you have noticed my allusion to my son. This meeting is no party meeting; but still it is a political one, and God

forbid that it should be otherwise. The time never has been, and we hope never would be, in England, when the agriculturists of that country would cease to be, in their assemblies, a political body. It shall never happen whilst I have a voice to prevent it—I say it shall never happen as long as I live, that the agricultural interest shall cease to be a political object. I hold that no Minister, no matter to what party he may belong, or be he who he may, will be supported in this country who does not take into deep consideration the agricultural interests of the country—(*cheers*). I tell you, gentlemen, if there be any to support him, I, for one, will not—(*cheers*). The object of the present meeting is known to all of you, for all your feelings are interested in it—I mean the distress of the agricultural part of the community. Indeed, that distress has flashed on the minds and feelings of every body of men, of each successive Ministry, and even on the mind of the King himself, who recommended that distress to the consideration of Parliament. But how did that Parliament answer the King's appeal on the occasion? What the answer was I will not say, and I leave it to your feelings to judge of that answer. I ask what has been the result of the last Session of Parliament, and what good has it done to agriculture?—Oh, yes, it has taken off the tax from short-tailed dogs—(*laughter*). We asked of that Parliament bread, and they gave us a stone—(*cheers*). But now another era has arisen, another light has dawned upon us, one, I hope, which will speedily illumine the prospects of British farmers—(*cheers*). For myself, I owe it to myself, I owe it to my family, I owe it to my country, to look to the interests of the British farmers. You have one object to pursue, and, as farmers, you are bound to pursue it—namely, the interests of agriculture. You must pursue that by every means in your power, provided they be legal and constitutional. You must follow up that object by petitions to the King, and by addresses to both Houses of Parliament—(*cheers, and cries of 'We will'*). I have seen to-day an address or petition, I know not by whom it has been drawn up, but I have read it, I approve of it, and am willing to sign it, and I hope that the mass of the farmers of the county will follow my example and sign it also. If they do their duty, they may rely upon it I will do mine, for to the last moment of my life all my exertions shall be put forward in their behalf. This I consider a duty to myself, to my family, to the farmer, to those under the farmer, to the labourer, and to the poor. I repeat again, that the last exertions of my life shall be in favour of those classes—that I shall employ those exertions in the most useful way at all times, bearing in mind to use them constitutionally. The noble Duke concluded by again thanking the meeting for the way in which they had drunk his health, and begged to propose to the meeting the following toast—"God speed the plough."—The toast was drunk most cordially.

Lord BOSTON then rose and said that he was about to propose a toast which, he was sure, would be received with the greatest enthusiasm by the meeting; and in doing so he would observe that persons who exerted themselves for their neighbours were entitled to their highest respect. He entered most fully and heartily into the feelings of the gentlemen who had that day assembled, and he should endeavour to uphold and support their interests. He begged, therefore, to propose the health of the Members of the county of Buckingham.

The Marquis of CHANDOS rose to return thanks, and spoke nearly as follows:—"My Lord Duke and Gentlemen, I rise to acknowledge, on the part of my colleagues and my own, the honour that you have done to the members of this county in the way in which you have drunk their healths; and, at the same time, I beg to express my deep regret that I am the only member of the county now present to thank you for this distinguished honour you have conferred upon us. The manner in which the toast has been drunk must be most interesting to us all, and gratifying to every man that values the institutions of his country. There now appears before me in this Court the largest, the most

respectable, the most influential, the most wealthy assembly that has ever within the memory of man graced this large hall to take into consideration the state and condition of the British farmer, and to support him in the best way they can. (*Cheers.*) I have for many years advocated the cause of the British farmers, and I am sorry to say to no effectual avail. However, the distress of the farmers during the last few years has so much increased that it now requires in their favour the exertions of every man who wishes to see the farmers prosperous and happy, and, by consequence, the whole nation equally so. (*Cheers.*) For sixteen years I have represented you in Parliament, and during that time I flatter myself that I have never forfeited your confidence, nor relaxed an iota from the path I promised to pursue with respect to you. (*Loud cheers, and cries of "No, never!"*) I have always done the best to promote the good fortunes of my country, and I hope that I have never been found unwilling to step forward in support of the British farmer. (*Cheers.*) A great crisis, gentlemen, is now at hand—it is a crisis that affects, in particular, the British farmer, for their general state of prosperity was falling off—their prospects were destroyed, their markets were declining. Farmers were quitting farms, and labourers were compelled to abandon their families—therefore I appeal to you if it be not time for all Englishmen to come forward and do their duty. (*Hear, hear.*) I am not vain enough to think that my humble efforts can save the farmers, but knowing them well, and living among them, and not being deemed unworthy of their confidence, I appeal to them if I have ever lost, and I am determined never to lose an opportunity of doing good in their service. As the Noble Duke in the chair has said, we have lately lived under an Administration whose measures, we must all confess, were excessively benign towards agriculture. (*Groans and laughter.*) But we are now arrived at another, and, I hope, a more fortunate period. We have another Administration in England. I am more or less acquainted with the members that are to form the present Administration. *They are men more or less dependent on the soil, and I look to them with confidence, and I hope that being men who, when out of office, did support the British farmer, they will not now, when in office, desert him.* (*Hear, hear.*) I know that many difficulties have arisen and many differences of opinion prevail as to the mode in which relief is to be granted to the farmer. Many have very justly thought that the only relief that could be afforded them was the taking off of those taxes that pressed most heavily upon them, and some thought they might be relieved by taking off the taxes that fell heavily upon their fellow-countrymen in the large towns. For my own part, I have always aided, by my vote, the inhabitants of towns, and I have constantly called upon them and their Representatives to give me their assistance. I have not been supported as I have supported others; for that reason I call upon all in this room—I call upon the whole county—upon all who possess landed property—upon landlords and tenants,—I call upon them all to support one another. I call upon all the holders of property to do the same, because, if but one link in the chain be broken, we may bid adieu to the prosperity of the country. (*Cheers.*) I am of opinion that of all the classes in the community, the farmers mostly require the relief of every man present, and of every individual who wishes to see his country happy. I can say that I have always stood forward in my place in Parliament, and stated the objects, the wishes, and the mode of relief required by the British farmer. I can place my hand upon my heart and say that I have never forgotten the cause that I first advocated. (*Cries of "True, true."*) Since my friends have so much confidence in me, I consider it my bounden, my unflinching duty to pursue every means that may sway England's prosperity—that may make the farmers prosper, and yield to them assistance; and one of the best means I consider is the repeal of the malt tax, for by its repeal we may have the unrestricted use of corn, which would lead the farmers to brew, enable them to drink good beer, and all by their own fire-sides, and save the labourer from the contamination of the beer-

shops. (*Cheers.*) I hope, therefore, that the attention of his Majesty's present Government will, without delay, be directed towards this tax—that they will repeal the whole, or, at least, a part of the malt tax. (*Cries of "They must repeal the whole."*) If we approach the throne in a dutiful and respectful manner, I trust that the Ministers who are at present in power will recollect the support the farmers gave them in times of trouble and uncertainty, and that they will prove that recollection by now, in their turn, supporting the farmers. (*Hear, hear.*) *I, for one, will not answer for any man. I will place no confidence in any bosom but my own, and I think you may place some confidence in me, since, I believe, I have never swerved from the principles I first advocated, nor deceived the confidence they reposed in me at the outset of my political life.* (*Cheers.*) I tell you that you must adhere to your principles, and I can assure you that I will adhere to mine; and if you are not saved you must attribute the blame to men who in politics have not adhered to their principles; and I tell the farmers not to support at the present crisis such men. (*Cheers, and cries of "No Rickford."*) I should regret if any one ever doubted that I should fail you in the hour of adversity, since you know that I have been your friend in the time of prosperity. No, gentlemen, I shall steadily stand by you; I shall for ever support you, and I shall profess to the latest hour—down to that which bears me to my grave—the same principles and the same feelings that have actuated me throughout public life—principles and feelings known and understood by the country at large, and from which I have never deviated, nor in the slightest manner altered. (*Loud cheering.*) We must rely on the justice of the Legislature. We must lay before Parliament our distresses, and I think I may say we must confide in the loyal and honourable men that now form the Administration. In them I believe we shall not want advocates in our cause; we shall find in them the steadfast and sincere advocates of the British farmers. Gentlemen, no language can express the gratitude I feel at seeing that you have not forsaken me; and I sit down promising you with the most heartfelt sincerity that you shall never be forsaken by me.—The Noble Marquis then sat down amidst the loudest applause.

Sir JOHN DASHWOOD, in returning thanks for his son, said that his absence was not to be attributed to any want of respect to the meeting, but to circumstances which he could not avoid. He was sure his son would unite in promoting the cause for which they had assembled, and that if he were present he would have expressed himself in language similar to that which had been addressed to them by the noble lord—(*applause, mingled with some hissing.*) *The company then rose, and again proposing Lord Chandos's health, gave three cheers.*

The HIGH SHERIFF again rose, and said that he had lately experienced the pleasure of meeting 300 farmers in Suffolk, when a toast was proposed with a feeling which he hoped to see evinced on this occasion. It was the Marquis of Chandos, whose health he begged now to propose.

The toast was then drunk, and responded to with nine times nine cheers.

The Marquis of CHANDOS returned thanks for the honour that had been done him. It was truly gratifying to him to perceive that not only in his private capacity but in his public career, it would seem that he was entitled to the approbation of the respectable assemblage by whom he was now surrounded. (*Applause.*)

Song—"The Old English Gentleman."

The Noble PRESIDENT then said he intended to give a toast connected with the religion of the country—that religion which had been handed down to them long before the reign of Queen Elizabeth, in defence of which our ancestors bled, by which they flourished, and which had been handed down to them as the best legacy that could be bequeathed to them. These feelings go home to every mind. If the Church should fall, the nation also must fall. The noble duke con-

cluded, by proposing "the health of the Lord Bishop and the Clergy of the diocese." (*Loud cheers.*)

The Rev. Mr. QUARTLEY said, the infinite importance of the subject on which he was called upon to address them was the principal cause of his offering himself to their notice on this occasion. He felt his utter inability to do justice to the subject which the Chairman had introduced, especially when he observed many men around him possessing superior abilities and talents. But he should do little justice to the profession of which he was a member, and the principles of the Established Church in which he was educated, if he did not bear testimony to the unrelenting zeal of the clergymen of the county. It was owing to their exertions, and to the zeal and attention of the parochial clergy, that the loyalty and attachment which had been manifested throughout the labouring districts was to be attributed. (*Hear, hear.*) Gentlemen, we live in an era when the ties of the Church and State, by disloyal and unprincipled persons, were attempted to be severed. (*Hear, hear.*) All knew that such an attachment was inseparable, and he was sure the company would join with him in giving gratitude to the Clergy for the conscientious discharge of their duties, and to the noble-minded men in the House of Peers for having protected the interests of the Church. (*Hear, hear.*) Not only did he call their attention to the protection afforded to the Church by the House of Lords, but to the determination of the King—the Supreme head of the Church, who had promised to support the interest of the Established Church as long as he lived. (*Cheers.*) Under such patronage and support might we look for the strict maintenance of the Church Establishment. (*Hear, hear.*) As to the separation of the Church from the State, every thinking man must be shocked at the contemplation of such an event; and my fervent wish is that the religious establishments of the country may never be separated; but that as we received them from our forefathers, so may they remain to those who may succeed us. (*Loud and general cheers.*) He entreated the meeting therefore to accept his most earnest wishes that the separation desired between Church and State might never be made. (*Loud, general, and most enthusiastic cheering.*)

Lord CHANDOS could not help calling the attention of the country to the great meeting of the inhabitants of the county of Buckingham, which had taken place that day. That meeting was in honour of the county, and he hoped that it was not only the determination of that county, but of every other in the kingdom, to obtain relief from the Legislature, of their agricultural distress. (*Hear, hear.*) It was not necessary for him to dwell longer on the subject of their distress, and, knowing the feelings of the farmers of the county of Buckingham and the other counties, he thought he could not propose a more acceptable toast than the following:—"Speedy relief to the farmers, and the repeal of the malt tax."

The toast was given from the Chair, and drunk with loud cheering.

Mr. ROLFE then said he was sorry to see that, unless agricultural distress interfered, the generality of landlords were guilty of apparent apathy. Nothing but absolute necessity—nothing but seeing that the farms lay a dead weight upon their hands, made them come forward and open their eyes. (*Hear.*) The Marquis of Chandos, more than once, had thrown out broad hints to them respecting this apathy. He agreed with Mr. Horwood and the Marquis of Chandos that nothing could do so much good to the farmer and to the agricultural labourer as the removal of the malt tax. The removal of that tax would enable the farmer and the labourer to brew their own beer—to remain comfortably by their own fire-sides, and regale themselves with that wholesome and invigorating beverage. The manufacturers might cry out for cheap bread, but they could not do so in justice when the price of agricultural labour was so much diminished. He begged to conclude by proposing as a toast, "The health and prosperity of the Nobility and Gentry of the county of Buckingham."

The toast was received with loud applause.

The Noble PRESIDENT then observed that Mr. Rolfe, who had addressed them on proposing a toast, was an English landlord cultivating his own land. He (the Duke of Buckingham) was in the same situation. The hon. gentleman had said that the landlords did not come forward to complain till their eyes had been opened to the distresses of the people, but he would ask was there a single landlord in the county blind to the distresses of their tenantry or of their fellow men? (*Hear, hear, and cheering.*) The interest of the landlord and the tenant were inseparable—(*hear, hear*), because if the tenant failed the landlord became a beggar. (*Hear, hear.*) It was the landlord's interest, therefore, that the tenant should prosper, and it was the duty of the tenant, likewise, to entertain a favourable feeling for the landlord, and to give the peasantry the best wages that the price of the commodity will afford. (*Hear, hear, and loud cheering.*)

Sir ALEXANDER CROKE, by permission of the noble chairman, would suggest a toast he was sure would be received with heartfelt satisfaction, "the health of the Duchess of Buckingham." The toast was drunk with great enthusiasm.

The Noble PRESIDENT, in returning thanks, said if the company had seen the Duchess relieving poverty, assisting the distressed, and encouraging exertion, they would drink her health as the poor man's comforter and protector. (*Cheering.*)

The Noble PRESIDENT proposed "Sir R. Gunning and the Northamptonshire farmers."

The toast was very warmly received.

Sir R. GUNNING said that he had been lately engaged in canvassing his county, and he could not have believed it possible that such a re-action could have taken place as had happened. That circumstance led him to believe that the people of his county were up and stirring, and most determined to return no one to Parliament except those who would support the farmers in their present crisis. (*Hear, hear, and cheers.*)

Mr. HUTTON observed that three years ago he had recommended the formation of the Agricultural Association, feeling, as he had done at that time, and as he still felt, the severe depression of their circumstances, and the severity under which their property suffered. His apprehensions in this respect had been realized more and more every day, and he lamented that circumstances did not improve, neither did times grow better. (*Hear, hear.*) He congratulated the agricultural interest on the change in the Ministry—(*Tremendous cheers*); but he could not forget that the person at the head of that Ministry, who by altering the nature of the currency, had depressed in the most grievous way the agricultural interests. (*Hear, hear.*) He heartily concurred in the repeal of the malt tax. It was a tax that pressed heavily on the industry of the people, and he hoped the Ministry would be induced to concede a boon which was so strongly recommended by the large meeting that he had then the honour of addressing.

Mr. ROLFE and Mr. HORWOOD rose together; the latter, however, gave way, and Mr. Rolfe proposed "the health of Mr. D'Israeli, which was drunk with loud cheers."

Mr. D. ISRAELI (the younger), rose to return thanks, and said that they had heard more than once that evening that they had arrived at a great crisis in the fortunes of the country, and he was not one of those who would quarrel with the word. For when a new Administration, was formed, and when they were threatened with a dissolution of Parliament, there was no doubt that every one should ponder and be anxious to exercise the suffrage he possessed, in the best way possible. A few days ago he had hoped for extensive relief from the present administration, but his hopes were greatly abated when he saw that a distinguished individual there present—an individual remarkable for his honour, talent, and devotion to the country—he meant their noble representative, was not taking the place every one expected he would take in the Councils of his Sovereign. On

that account alone, he for one faltered in his confidence in the present Administration. The noble marquis in his speech that evening had delicately avoided the subject, but he thought that the noble marquis should have alluded to it, especially when a gentleman, respected by the agriculturists in the same manner as the noble marquis, was called to the King's Council, he meant of course Sir Edward Knatchbull. Ought it to be said that there was any split in their ranks, as surely would be said when the country saw that Sir Edward Knatchbull was called to the Councils of the Sovereign, and the Marquis of Chandos was excluded from them? He would be more explicit and say that he was glad to see that the Cabinet was not as yet formed, and he hoped that the delay was in expectation of the results of this great Aylesbury meeting. (*Loud cheers.*) He looked upon that meeting with feelings of delight, he might even say of admiration, and they all might remember that the only time he ever raised his voice within these walls was to tell them that the way to be defeated was not to be organised. He told them then that when a Government was weak it behaved society, in its own defence, to be strong—(*cheers*); he felt that in an age when trades unions existed, it was necessary to have the protection of Agricultural Associations. (*Cheers.*) Petitions for the repeal of the malt tax should not only be presented by every county, but by every town in the country. They had on their side the gentry of England, and the once unrivalled yeomanry of the country—and dearer than all, and more prized than all, they had (if they deserved it) on their sides the devoted hearts of a brave and numerous peasantry.

The Noble CHAIRMAN then proposed, after passing a high eulogium upon them, "the yeomanry of the country."

The Marquis of CHANDOS returned thanks.

The Noble CHAIRMAN then said—Gentlemen and brother farmers, it is now my duty to bid you farewell. The recollection of this meeting will long dwell in my mind; but that is saying nothing, for I trust that it will long dwell in the minds of the inhabitants of the whole country, and that the echo of it will rattle throughout the whole of England, and produce, what all such meetings ought to accomplish—good to you. I hope the tone of this meeting will go down the Thames and make itself heard in the centre of Westminster. (*Cheers.*)

The Noble Duke then retired amidst loud cheering.

The HIGH SHERIFF was then called to the Chair, and, after a few toasts of local importance, the company separated.

In the course of the evening the following petition was signed by the Duke of Buckingham and by all the company present:—

"TO THE HONOURABLE THE HOUSE OF COMMONS,  
IN PARLIAMENT ASSEMBLED.

"The Petition of the Nobility, Gentry, Clergy, Landowners, and Occupiers, in the County of Bucks,

"Sheweth,—That the Select Committee of your Honourable House, on the state of agriculture, while it acknowledged the extreme distress under which your petitioners (in common with all those dependent on the cultivation of the soil) laboured, and the heavy burdens by which they were oppressed, expressed a hope that these sufferings might yet prove to be only of a temporary nature.

"That nearly two years have elapsed since the expression of this hope on the part of your Honourable House, and the situation of your petitioners, and of all those dependent on the cultivation of the soil, far from being improved, has been considerably deteriorated, so that their present distress exceeds any degree of suffering experienced in their memory; and while in its progress it ruinously reduces the rent of the landlord, the capital of the farmer, and the wages of the peasant, threatens, unless its progress be immediately and effectually arrested, to shake to its foundation the very framework of the empire.

"That your petitioners recognised with the highest

satisfaction, the allusion which his Majesty made, in his most gracious Speech from the Throne, to the distressed state of agriculture, and the sympathy expressed, by your Hon. House, in following up the report of the Select Committee, by a resolution that not only recognised the existence of their sufferings, but even indicated the method by which they might be alleviated—feelings of satisfaction, however, which were only equalled by the regret and the mortification experienced by your petitioners on learning that this cheering resolution was immediately rescinded.

"That, under these circumstances, your petitioners are again under the necessity of humbly soliciting the immediate attention of your Hon. House to their perilous situation, and of earnestly entreating some prompt and specific measure of relief. And you petitioners, &c."

## THE NEW MINISTRY.

(From the Mark Lane Express.)

"Drowning men catch at straws," it is therefore not wonderful that the agriculturists of England, who are sunk into almost the lowest state of distress, should, seeing that little had been done to relieve them by the late administration, cherish a hope that a change of ministers might lead to an amelioration of their condition. Impressed with a deep sense of their lamentable situation, and feeling confident that however much he might apostatise in other respects, Sir Robert Peel, who owes every thing to *manufactures*, would *not* repeal the duty on malt in favour of *agriculture*, we a short time since put the farmers on their guard against any attempt to trepan them into voting in favour of Tory Candidates under the pretext of so great a boon being in store for them at the hands of a Tory Government. The caution which we gave brought down upon us the animadversion of several of our cotemporaries, who, "measuring other men's corn by their own bushel," thought Sir Robert would be as ready to change his opinion upon the policy of taking off the duty on malt, recorded on the 27th Feb. last, as they are to change their opinions of public men when it may suit their own personal interests. High-sounding and loud as has been the declamation of these generous advocates of the agricultural interest against the late ministers for not taking off that oppressive and demoralising tax the duty on malt, no sooner is it discovered that the new Premier is for once *consistent*, and refuses that relief, and that, too, upon the very same grounds that it was refused by the late Chancellor of the Exchequer, than the subject is passed over in silence, or if it be alluded to at all, *ruined men* as the farmers are known to be, they are told to place confidence in their new friends, and wait a year or two, when, *perhaps*, the relief required may be conceded. This is indeed heaping insult upon injury, and if the yeomanry of England do not show their resentment at such treatment when the proper time arrives, we shall indeed say they have degenerated. A comparison has been challenged between the individuals composing the present and the late administration. Is it

common sense to suppose that military men or *landless* state pensioners are so likely to sympathise with the British agriculturists, as the Duke of Richmond, Earl Spencer, and the Marquis of Lansdowne, all of whom are not only eminent patrons of agriculture, but whose incomes are wholly derived from the soil. The treatment of the Marquis of Chandos is a specimen of what the farmers have to expect from the new Administration, and though in politics we differ *toto cælo* from the noble Marquis, we are proud to bear testimony to his high principled consistency of conduct upon the late occasion. Having been named as one of the new Cabinet, in which he would have been more fittingly placed than very many of those who have since received appointments, as the zealous friend, and we might almost say the organ of the agricultural interest, he fairly and openly made the repeal of the malt tax a positive condition of his taking office. This condition was as positively refused by Sir Robert Peel, and with a magnanimity which will ever gain him respect, he declined lending his aid to an administration composed of individuals, who whilst out of office, railed at their predecessors for not evincing that consideration for the landed interest, which they themselves, when in power, refuse to grant. The scheme of the noble Marquis was conceived with much judgment. The dinner at Aylesbury having been previously fixed, the communication of a repeal of the malt tax, made by a member of the government to 800 individuals, either themselves farmers or immediately connected with and dependent upon the landed interest, would have produced an astounding effect, and would have re-echoed to the credit of the government throughout every village and hamlet in the United Kingdom. The guests were invited, the dinner was prepared, and the noble Marquis set out to join his *brother farmers*, as the Duke of Buckingham emphatically styled them, but not bringing with him "the glad tidings." Possessing, however, good command of temper, he screens his disappointment, and refrains from any observations calculated to injure his *party*, but being compelled to notice the subject, it becomes impossible for him altogether to smother his feelings, and he gives way to the following remarkable expressions, not over much calculated to increase confidence in the consistency of our new governors. "*I for one will not answer for any man—I will place no confidence in any bosom but my own—and I think you may place some confidence in me, since I believe I have never swerved from the principles I first advocated, nor deceived the confidence they reposed in me at the outset of my political life (cheers), I tell you that you must adhere to your principles, and I can assure you that I will adhere to mine, and if you are not saved you must attribute the blame to men, who in politics have not adhered to their principles, and I tell the farmers not to support at the present crisis such men.*" If such

were the feelings of the noble Marquis at the moment he uttered these expressions, how much must they have since been aggravated upon the perusal of the sophisticated address of the new Premier, not intended simply as an address to the electors of Tamworth, but sent forth to the inhabitants of the United Kingdom, as his *new* political creed, wherein the neglected and suffering agriculturists are not once mentioned. It has been objected to the late ministry, that although allusion was made to the depressed state of agriculture in the last speech from the throne, yet no relief was attempted save and except by passing the Poor Law Amendment Act, which we presume cannot fail to be good, having received the full approbation and support of the Duke of Wellington and Sir Robert Peel.

The following members of the present administration voted against the motion for a committee to enquire into the propriety of a total or partial repeal of the malt tax in February last:—

SIR R. PEEL.  
MR. GOULBURN.  
SIR H. HARDINGE.  
SIR E. KNATCHBULL.  
MR. HERRIES.  
MR. POLLOCK.

How many of these gentlemen will venture to offer themselves as the representatives of counties at the forthcoming election?

NEW SOWING MACHINE.—We had an opportunity of witnessing last week, on Mr. M'Kenzie's farm of Barnhill, the operations of a sowing machine, which is at all events a novelty in this district, if not in Scotland, and promises to be one from which much good may result, and this in more ways than one. The machine was then depositing seed-wheat in a fine level six-acre field, and so admirable does its construction appear to be, that every thing progressed easily, and with the regularity of clock-work; the works are mounted on two elevated wheels, and operate on a breadth of seven feet, which space contains fourteen small coulters and droppers, each six inches apart, and by these the grain is deposited in regular rows, and not promiscuously as when sown by the hand. The extremity of the droppers is attached to, and immediately preceded by the coulters, and thus no sooner is the rut made in the soil than it is supplied with the seed, and on the conclusion of the day's work, which, on an average, will extend to seven or eight acres, the process of light-harrowing completes the business. The droppers are supplied by tiny iron spoons, moving in the midst of the grain-box, which are kept in continued motion from the action of a revolving roller, and throw their contents in the dropper at each revolution. The velocity of their motion may be increased or lessened at pleasure, and in proportion to their speed may the quantity of grain sown per acre be regulated. When we witnessed it, the machine was drawn by three horses in the tandem style, and followed immediately by its English superintendent, whose duty was that of regulating the machinery, keeping an even course, and anon clearing the coulters and droppers from any obstruction in the shape of weeds, &c. By and bye, however, should the drill be generally adopted amongst us, we may expect it to perform its work with less of power than is contained in the energies of three steeds—if not rendered available by the application of steam itself.

## CHRISTMAS.

Christmas is the happiest time in the year, says an old-fashioned writer. It is the season of mirth and cold weather. It is the time when Christmas-boxes and jokes are given; when misletoe, and red-berried laurel, and soups and sliding, and school-boys prevail; when the country is illuminated with fires and bright faces; and the town is radiant with laughing children.

Christmas Eve formerly was a serious and holy vigil. Our forefathers observed it strictly till a certain hour, and then required their forbearance with cups of ale and christmas candles, with placing the *yule clog* on the fire, and roaring themselves thirsty till morning. Time has altered this. We are neither so good as our forefathers were, nor so bad. We go to bed sober; but we have forgotten their old devotions. Our conduct looks like a sort of compromise; so that we are not worse than our ancestors, we are satisfied not to be better; but let that pass. What we now call Christmas Eve (there is something very delightful in old terms; they had always their birth in reason or sentiment) was formerly *Madrenack*; or, *The Night of Mothers!* How beautifully does this recal to one's heart that holy tale, that wonderful nativity, which the eastern shepherds went by night to gaze at and adore.

The old "Wassail Bowl" was indeed a great composition. It is made of wine, with *some* water, with spices of various sorts, and roasted apples, which float triumphantly upon its top. The proportions of each are not important; in fact, they should be adapted to the taste of the drinkers. The only caution that seems necessary is to "spare the water."

One mark and sign of Christmas is the *music*; rude enough, indeed, but generally gay, and speaking eloquently of the season. Music, at festival times, is common to most countries. In Spain, the serenader twangs his guitar; in Italy, the musician allures rich notes from his cremona; in Scotland, the bagpipe drones out its miserable noise; in Germany, there is the horn; and the pipe in Arcady. We, too, in our turn, have our Christmas "*Waits*," who witch us at early morning, before cockcrow, with strains and welcoming which belong to night. They wake us so gently, that the music seems to have commenced in our dreams, and we listen to it till we sleep again. Besides this we have our songs, from the young and the old, jocose and fit for the time.

Leaving now the *eve* of Christmas, its jokes, and songs, and warm hearths, we will indulge ourselves in a few words upon Christmas Day. It is like a day of victory. Every house and church are green as spring. The laurel, that never dies, the holly, with its armed leaves and scarlet berries, the misletoe (under which one happy ceremonial is still performed) are seen. Every brave shrub that has life and verdure seems to come forward to shame the reproaches of men, and to show them that the earth is never dead, never parsimonious.

Our population looks more alive than at other times. Quick walking and heaps of invitations keep the blood warm. Every one seems hurrying to a dinner. The breath curls upwards like smoke

through the frosty air; the eyes glisten; the teeth are shown; the muscles of the face are rigid; and the colour of the cheek has a fixed look, like a stain. Hunger is no longer an enemy. We feed him, like the ravenous tiger, till he pants and sleeps, or is quiet. Every one eats at Christmas. The rich feast as usual, but the tradesman leaves his moderate fare for dainties. The apprentice abjures his chop, and plunges at once into the luxuries of joints and puddings. The school-boy is no longer at school. He dreams no more of the coming lesson, or the lifted rod; but mountains of jelly rise beside him, and blanc-mange, with its treacherous foundations, threatens to overwhelm his fancy; roods of mince pies spread out their chequered riches before him, and figures, (only real on the 6th of January) pass by him, one by one, like ghosts before the vision of the king of Scotland. Even the servant has his "once a year" bottle of port; and the beggar his "alderman in chains."

Oh! merry, piping time of Christmas! Never let us permit thee to degenerate into distant courtesies and formal salutations. But let us shake our friends and familiars by the hand, as our fathers and their fathers did. Let them all come around us, and let us count how many the year has added to our circle. Let us enjoy the present, and laugh at the past. Let us tell old stories and invent new ones—innocent always, and ingenious if we can. Let us not meet to abuse the world, but to make it better by our individual example. Let us look of *the time*—cheerful and generous, and endeavour to make others as generous and cheerful as ourselves.

## CHRISTMAS CUSTOMS,

COMPILED FROM VARIOUS AUTHENTIC SOURCES.

The customs formerly observed at this season of the year were numerous, and were several of them kept up with a considerable degree of romantic parade and splendour. Some of these are retained at the present day, and some are disused. We shall give an account of the principal, which may be comprised under the heads—Christmas Carols; Celebration of Christmas Eve; Decking of Houses, &c., with Evergreens; Christmas Sports; the Yule Dough; Plum Puddings and other cheer, and Christmas Boxes.

**CHRISTMAS CAROLS.**—Bishop Taylor observes, that the "*Gloria in Excelsio*," the well-known hymn sung by the angels to the shepherds at our Lord's nativity, was the ancient Christmas Carol. The word is said to be derived from *cantare*, to sing, and *rola*, an interjection of joy. Several specimens are preserved of the early Christmas Carols, but they are chiefly interesting from their age.

**CHRISTMAS EVE.**—Next to the preparatory announcement of the joyous season, by the sort of song just described, followed the celebration of Christmas Eve, thus pleasingly described by a poet:—

"Thy welcome eve, lov'd Christmas, now arriv'd,  
The parish bells their tuneful peal resound,  
And mirth and gladness every breast pervade;  
The ponderous ashen faggot, from the yard,

The jolly farmer to his crowded hall  
Conveys with speed ; where on the rising flames  
(Already fed with store of massy brands)  
It blazes soon"—

CHRISTMAS DAY, in the primitive church, was always observed as the Sabbath Day, and was, like that, preceded by an eve, or vigil. Hence our present custom of keeping Christmas Eve. On the night of this eve, our ancestors were wont to light up candles of an uncommon size, called Christmas candles, and lay a large log of wood upon the fire, called a yule clog, or Christmas block, to illuminate the house, and as it were, turn night into day.

The ancient method of spending the Christmas Day is thus curiously described in the scarce tract, entitled, "Round about our Coal Fire at Christmas":—

"An English gentleman, at the opening of Christmas Day, on the morning had all his tenants and neighbours enter his hall by day-break. The strong beer was broached, and the black jacks went plentifully about, with toast, sugar, nutmeg, and good Cheshire cheese. The Hackin (a great sausage) must be boiled by day-break, or else two young men must take the maiden (*i. e.* the cook) by the arms, and run her round the market-place, till she is ashamed of her laziness. At dinner, and during the holidays, the tables were all spread from the first to the last ; the sirloin of beef, the minced pies, the plum porridge, were severally brought upon the board, every one ate heartily and was welcome, which gave rise to the proverb, " 'Tis merry in hall when beards wag all."

The YULE DOUGH, or Dow, a part of these festivities, was a kind of infant or little image of paste, which our bakers used formerly to bake at this season, and present to their customers, in the same manner as the chandlers give Christmas candles. This figure, it appears, was intended to represent the child JESUS, and a something like it is said to be still customary in Yorkshire, where what is called "the vessel-cup singers," (generally poor old women) about three weeks before Christmas, go from house to house with a waxen or woollen doll, fantastically dressed, and sometimes adorned with an orange or a fine rosy-tinged apple, with which in their hands they sing or chaunt an old local carol. This vessel-cup is most probably the remains of the "wassail bowl," which anciently formed another part of the festivities of this season of the year. The

PLUM PUDDING, that great article of modern feasting,

"A mixture strange of currants, suet, meat,  
Where various tastes combine, the greasy  
and the sweet,"

is not mentioned amongst the other cheer enumerated in the preceding quotation, though it certainly was as old as 1676.

EVERGREENS.—The decking of houses, churches, &c. with evergreens, was a very ancient custom, and to the delight of those who do not like entirely to forget old times, is still in a great measure retained. This appears, like several other Christmas observances, to have been copied by the Christians from their Pagan ancestors. Formerly this prac-

tice, at this time, was universal. Stowe, in his Survey, tells us "that against the feast of Christmas, every man's house, as also their parish churches, were decked with holme, ivy, bays, and whatsoever the season of the year afforded green. And the conduits and standards in the streets were likewise garnished. The laurel, a conspicuous object in modern collections of these plants, was used by the Romans, as the emblem of peace, joy, and victory. In the Christian sense, it may be applied to the victory gained over the powers of darkness by the coming of CHRIST. The mistletoe was a plant held sacred by the Druids, and suspended from the ceiling of the apartment where the pleasures of the evening are to take place, still gives rise to a number of frolicsome gambols in the country.

SPORTS AND GAMES.—Our ancestors, among other amusements at this period, had what they called "disguisings," consisting of *mummings*, the *Lord of Misrule*, the *Fool Plough*, and *Sword Dance*, &c. Of these, the mumming was sometimes very splendid. This custom consisted in the changing of clothes between men and women, who, when dressed in each other's habits, went from one neighbour's house to another, partaking of Christmas cheer, and making merry with them in their disguise ; but, on particular occasions, varied, and was formed into a sort of characteristic procession or drama. Stowe has preserved an account of a remarkable mummary made in 1377 by the citizens of London, "for the disport of the young Prince Richard, son to Edward the Black Prince," who then resided at the Palace at Kensington. The dresses, &c. in this, were particularly grand. And the like, he informs us, took place in compliment to King Henry the Fourth, in the second year of his reign, whilst residing at Eltham Palace ; "when twelve Aldermen of London and their sonnes, rode a mumming, and had great thanks." Before this, in the year 1348 there was also a splendid ceremonial of this kind, when, according to Andrews, in his *History of Great Britain*, "eight tunics of buckram, forty-two visors, and a great variety of other whimsical articles of dress, were provided for the disguisings at court, at the feast of Christmas.

The revel-master, called the Lord of Misrule, was a sort of officer appointed on occasion of some of these great Christmas festivities, to keep order during the celebration of the different sports and pastimes which took place. The Universities, and in London the principal Inns of Court, were the most expensive in the preparations and pageantry attending this kind of mock solemnity, which the reader, if he has patience to read about such sort of foolery, will find prolixly detailed in Dugdale's "*Origines Juridicales*." The custom, however, was not confined to these places ; for Stowe tells us there was, at the feast of Christmas in the King's house, wheresoever he lodged, a *Lord of Misrule*, or master of merry disports, "and the like had ye in the house of every nobleman of honour and good worship, were he spiritual or temporal." The Lord Mayor and the Sheriffs had their several Lords of Misrule, ever contending, without quarrel or offence, who should make the rarest pastime to delight the beholders. These

Lords, beginning their rule at Allhallowtide Eve, and continuing the same till the morrow after the Purification, commonly called Candlemas-day, in which space there were generally fine and subtil disguisings, masks, and mummeries; with playing at cards for counters, nayles, and pointes, in every house. "More," he adds, "to the shame of modern times, 'for pastime than game.'" The name only of the Lord of Misrule is now remembered. The Lords of Misrule were first preached against at Cambridge, by the Puritans, in the reign of James I., as an appointment unbecoming the gravity of the University, and in Scotland these personages, there called in derision, the "Abbot of Unreason," were thought worthy to be suppressed by the Legislature as early as 1555.

The foot and plough dance was a custom used about this time in the North of England, and still in part kept up. It consisted of a sort of pageant in which were a number of sword-dancers dragging a plough; and one, sometimes two, in strange attire. What was called "the Bessig," in the grotesque habit of an old woman, and the "fool," almost covered with skin, a hairy cap on, and the tail of some animal hanging from his back, acted as a sort of clown; and one of them went about rattling a box amongst the spectators of the dance, in which he received their little donations.

Christmas boxes, which were formerly a matter of bounty, have in late times been almost demanded as a matter of right. This tax on tradesmen, in particular, says the author of the *Commoisseur*, gave him a pretence to lengthen out his bill, and the master and mistress to lower their wages on account of the vails. Gay, in his *Tristia*, mentions the Christmas box—

"Some boys are rich by birth beyond all wants,  
Beloved by uncles and kind good old aunts;  
When time comes round a Christmas-box they  
bear,  
And one day makes them rich for all the year."

Parliament, in 1652, by order, enjoined "That no observation shall be had of the five-and-twentieth day of December, commonly called Christmas Day, nor any solemnity used or exercised in churches in respect thereof. We live now in more liberal times.

REMARKABLE OAK.—Most persons who have wandered on a summer's day among the green glades and leafy avenues of Greenwich-park have probably observed a massive and aged oak in the garden attached to the keeper's house; few, however, are aware of its real magnitude. The trunk is hollow, and there is sufficient room within it for a table, round which 12 persons may sit. At three feet from the ground it measures 31 feet in girth. The circumference of the interior is 22 feet. The door-way was originally a cleft, which is now five feet five inches high, and upwards of two broad. The present height of the trunk is about 40 feet, and its age is unknown. The old tree has been more than once honoured with the presence of royalty, and is now used as a place of temporary confinement for juvenile depredators in the chestnut season.

## AGRICULTURAL INTELLIGENCE, FAIRS, &c.

At NEWTOWN (Montgomeryshire,) FAIR, the number of sheep was but small: fat ones sold from 5d to 5½d per lb., stores were little in demand. A number of pigs were for sale, and fat ones obtained 3d per lb., small stores valued from 14s. to 25s. were in demand, but those at higher prices sold very low. The number of animals in the cattle market on Tuesday was but small at this season; fat beasts brought 5d per lb., good bullocks sold from 20s. to 30s. lower than at the former fair, and of lean stock the prices vary. Cows and calves were much enquired for, and but few were in market. The horse fair was but small, and only very few good horses present.

YORK CHRISTMAS HORSE SHOW.—According to usual custom, our horse show commenced on Monday last. There was a good supply of horses of all descriptions; but the south country buyers being but few, coach-horses did not meet with a ready sale. Hunters and Swimmers, or Mares for exportation, were readily bought up at good prices, whilst other descriptions were not so promptly disposed of.

ASHBOURN FAIR AND STATUTES.—The supply of cattle at this fair was more abundant than at any time since its being established. Good fresh barren beasts and calves were tolerably well sold; the supply of beef was great, selling at about 5½ per lb., but customers were not equal to the quantity on the stones.

ARUNDEL MARKET AND CATTLE SHOW, December 8.—Beef from 2s 10d to 4s 4d; Mutton, 3s 6d to 4s 6d; Veal, 3s 8d to 4s 6d; Pork, 3s to 3s 6d per stone. Supply of Beasts rather great, and, for the most part, good; of each kind of small stock limited, but of fair average quality. Trade, for that of a Christmas Cattle Show Market, rather dull.

AWARDS.—To Messrs. Penfold, of Wiggentholt, for the best Fat Ox, a piece of plate, value 10l; to Mr. J. Coote, of Climping, for the best Sussex Ox, ditto, ditto; to Mr. A. Upton, of Binstead, for the best fat Steer, ditto, ditto; to Mr. Duke, of Courtwick, for the best fat Sussex Steer, ditto, ditto; to Mr. T. Duke, of Leominster, for the best Welch Runt, ditto, value 7l; to Miss Rushby, of Goring, for the best Runt, fed on succulent food only, ditto, value 5l; to Mr. T. Chatfield, of Grantham, for the best fat open Heifer, ditto, value 7l; to Mr. Field, of Arundel, for the best fat open Heifer, ditto, value 7l; to Mr. E. Searle, of Amberley, for the best ditto, fed on succulent food only, ditto, value 5l; to Mr. Newland, of Torrington, for the best 10 full mouthed or six-teeth Sheep, ditto, value 10l; to Miss Rushby, of Goring, for the best pen of four-teeth wether Sheep, ditto, value 5l; to Mr. Duke, of Leominster, for the best 10 two-teeth South-Down wethers, ditto, value 5l; to Mr. H. Upton, of Binstead, for the best pen of fat Ewes, ditto, value 5l.—Judges—Mr. Harmer, butcher, of Brighton; Mr. Gains, ditto, of Portsmouth; and Mr. Lintott, ditto, and salesman, of Horsham.

TAVISTOCK FAIR was abundantly supplied with beasts and sheep, but the latter were very limited, and at low prices, except the prime lots which are usually exhibited at this fair for the Christmas market. Three uncommonly fine oxen, from the farm of John Newton, Esq. of Milton House, attracted general notice, the largest of which, a fine animal, seven years old, is supposed to be at least fifteen hundred weight. The sale of sheep, of which there was a large supply, was also very limited, at reduced prices, in part attributable, obviously, to the altered state of the wool market.

At SHREWSBURY FAIR this week, the supply of the finest cattle was most abundant, but, owing to the numerous fairs around (three fairs occurred on the same day in this vicinity), purchasers were scattered, and many beautiful animals went away unsold. The prices for good beef were from 4½d to 5d per lb. Some capital things went higher; two heifers by Mr. Eytton, of Condovery, were sold to Mr. Ludlow, of Birmingham, for nearly 60*l*; and an ox, six years old, bred by Mr. Gough, of Gravel Hill, was sold for upwards of 40 guineas, to the Messrs. Hand, of this town. Store bullocks sold a slight shade better than at last fair. Sheep were not abundant; prime small sheep brought nearly 6d; heavy sheep, 5½d. Small pigs were higher than in November; large ones rather lower. In the cheese fair, skims were very abundant, and nearly unsaleable, at from 26s to 30s per cwt. For middle dairies the demand was rather brisk, at 40s to 47s per cwt. The best brought 50s to 55s, and was all sold. The butter market was greatly overstocked. Lumps, 8d; tubs, 8½d to 8¾d. Bacon, which was in good supply, was nearly all sold at 4½d to 5d per lb. A few hams were offered at 6d per lb, but were not sold.

EXETER ST. NICHOLAS FAIR was held on Wednesday, and a larger show of beef, it is believed, was never seen in it; but, as to the result of the day's business, a very satisfactory account cannot be given. The prime articles were, for the most part, picked up, for Christmas use, and fetched from 8s 6d to 10s per score. On the medium sort, what at other seasons would be called good, the sale was extremely dull, at from 8s to 9s per score. As regards lean stock, it was a small fair, the number of poor heifers, steers, and working oxen, being limited. For the best order of the latter 36*l* per pair was asked; but, taken generally, lean stock was not at all better worth, things having been exceedingly dull in this way, and admitting of little more than nominal quotations at from 5s to 6s per score.

At ROSS FAIR there were as many fat cows and bullocks as usual, which met with a dull sale at 5d to 5½d per lb; a few prime cows fetched 6d; fat sheep sold at 5½d to 6d per lb. But little business was done in the Horse Fair; the show was but indifferent.

At HEREFORD GREAT MARKET fat animals sold at 5d per lb, and some as low as 4½d, and store cattle went on much lower terms than at the last fair. Fat sheep sold at 6d per lb, and the demand rather slack. The show of horses was indifferent, but good animals demanded fair prices.

NEWARK FAIR was well supplied with fat beasts; there were some remarkably fine ones fed by Mr. Hebb, of Buckingham. Purchasers were not numerous.

BRADFORD FAIR.—The town has been quite in a bustle with the motions of the fair folk during the week. The show of cattle and horses has not been very good, and business generally but flat.

The cattle sale of T. W. Coke, Esq., at Holkham, took place on Wednesday, the 3d inst., and was very respectably attended. The superiority of the cattle exhibited excited a considerable degree of interest amongst the company, but the great point of attraction was the beautiful fat Devon ox, bred and grazed by Mr. Coke, and which was the chief cause of the very large attendance. It was five years old, and such perfect symmetry has been very seldom preserved with such a high state of condition, we might add, excessive fatness, as this beast possessed; fully justifying the high opinion which Mr. Coke has always entertained of the established excellence of this

breed of cattle. It was supposed to weigh from 90 to 115 stone, was bought by Mr. J. Sayer for 70*l*., and was sent, at the request of the Duke of Bedford, in a carriage built for the purpose, to Smithfield, for exhibition there. There were other beasts of the same kind very high in condition, which were supposed to weigh from 80 to 90 stone, and many of which sold at from 25*l*. to 35*l*. each.

CHRISTMAS BEEF.—The celebrated Whittleton ox, which has excited the astonishment of all who have seen it, at Hereford, Ludlow, Chester, Shrewsbury, Liverpool, Manchester, and other places where it has been exhibited, has been purchased by Mr. Bright, butcher, of Brecon, at which place it will be shown, on Saturday the 13th inst. and following days, until slaughtered. This prodigious animal, which weighs more than two tons, and is believed to be the largest in the kingdom, was bred and fed by Mr. Shephard, of Whittleton, Salop, and is of the true Herefordshire breed. A fine painting has been taken of it. Mr. Bright's autumnal show of fat Beef at this season evinces a spirited determination to preserve the memory of "the good old times,"—*Hereford Times*.

EXTRAORDINARY OX.—An ox of the Durham breed, aged three years and two months, was exhibited at Abergavenny on Tuesday the 9th instant, which for size and symmetry may be considered as unequalled, measuring nearly 11 feet in girth, and 7 inches in the small of the leg, supposed to be 1 ton 10 cwt. The animal was bred by Sir Chas. Morgan, and was purchased by E. Drew, of Brecon, as a Christmas treat to his friends.

#### GAME AT LEADENHALL.

The Grouse season closed on the 10th instant, but the dealers being allowed ten days to clear their stock, the right of selling closed yesterday. As both Grouse and Black Game are consequently very scarce we can give no quotation.—Pheasants, from 7s to 8s, and Partridges from 4s to 5s a brace.—Hares 3s 6d each.—Woodcocks, from 7s to 8s, and Snipes, from Lincoln and Devon, 2s 6d a couple.—No Marsh Birds.—Wild Ducks, (English), from 7s to 8s; and Widgeon, 4s a couple.—No Teal.—Golden Plover, 2s.—Wild Rabbits, from 8s to 14s a dozen.—A male and two females of that rare and splendid bird the Capercalzie, or Cock of the Wood, have been received from Sweden. They are all in very prime condition. One hundred of the handsomest Turkeys ever seen either in this market or elsewhere, have been consigned to Mr. Stevens, by Mr. W. Moore, of Great Salford, near Cambridge, averaging 27lb, each; in addition to which is one most extraordinary for his age, bred by the same feeder, as, though only eight months old, it weighs 29lb 10oz. This "perfect beauty" was purchased by the Duke of Gordon, intended as a present to her Majesty.—The market is full of goods.

---

#### REVIEW OF THE CORN TRADE IN MARK LANE DURING THE MONTH OF DECEMBER.

A continual depression has prevailed throughout the corn trade during the past month, and which has characterized, not only the business in Mark Lane, but likewise that of the leading country markets. The season of the year also has appeared to have exerted all its customary influence

in checking any speculative spirit, purchasers having only taken off the market sufficient quantities of grain to meet their immediate wants, though the prices from week to week have retrograded, and the quality of wheat as well as lowness of price, has afforded every inducement to the speculator and capitalist to get into stock. There however does not appear much probability of the currencies of wheat further receding, though the quotations of other grain may be still susceptible of further reduction. The consumption of wheat has been unprecedentedly large; the disproportionate value, compared with other grain, having induced its application to purposes seldom resorted to, as distilling, malting, and pig-feeding, &c., and the emptiness of the barns and granaries in many parts of England are beginning to exhibit the demand that has existed for the article; judging, likewise, from the supplies hitherto arrived from Ireland at our principal ports, it seems probable that a much less supply of wheat is to be calculated upon from the Sister Kingdom during the present season than we have received for the three preceding ones. The ricks, however, in this country, for the most part, remain standing, and will not for two or three months, be generally taken down for thrashing; but as at that period the deficiency of the crops of summer corn will have become more apparent by the falling off in the receipts, prices are likely to advance and influence in a corresponding degree the value of wheat. For the bonded holders the chances are still remote, much depending on the appearances of the next harvest, and the forwardness or tardiness of the season, for as the past has been unusually early, and should the succeeding prove the contrary, a difference of from six weeks to two months extra consumption of the present stock may be thus occasioned, and thus an opportunity be afforded for the introduction of foreign supplies to a limited extent; the low rates which have prevailed in the Baltic, and the fine quality and condition of the wheat enabling the importer to pay a high rate of duty.

During the month, from the 24th November to the 22nd of December, the following quantity of grain has arrived in the port of London:—

|              | Wheat.<br>Qrs. | Barley.<br>Qrs. | Oats,<br>Qrs. |
|--------------|----------------|-----------------|---------------|
| English .... | 38,318         | 46,255          | 4,663         |
| Scotch ....  | 1,631          | 17,875          | 45,295        |
| Irish .....  | 847            | 5,134           | 49,318        |
| Foreign .... | 510            | 2,432           | 5             |

|              | Beans.<br>Qrs. | Peas.<br>Qrs. | Flour.<br>Sacks. |
|--------------|----------------|---------------|------------------|
| English .... | 5,121          | 1,879         | 37,532           |
| Scotch ....  | 302            | 172           | 350              |
| Irish .....  |                |               | 580              |
| Foreign .... | 789            | 2,162         | 1110 brls.       |

The principal differences in the supplies, as compared with the month of November, are an increase of 3,062 qrs of English wheat; 20,700 qrs

of English, and 8647 qrs of Scotch barley, and 27,391 qrs of Scotch oats, and a diminution of 10,500 qrs in Irish oats.

The fall in the price of flour, and the unwillingness on the part of millers to purchase wheat, has caused throughout the month an additional depression in the trade, added to large supplies, principally from Essex, Kent, Cambridgeshire, and Lincolnshire; white wheat of the better qualities has receded 1s to 2s, red 2s to 3s, and secondary and inferior descriptions 3s to 4s per qr. A considerable proportion of the importations, however, have not appeared on the market, having been shipped on account of speculators, or come direct into the hands of the millers. Fine white runs have been purchased at 48s to 50s; good qualities at 45s to 47s; and best red at 42s to 43s. A very limited enquiry has existed for bonded wheat for export, at low prices, and from the out-ports inferior parcels of Foreign corn have been offering even at 10s, 12s, and 15s per qr. Samples of some thousand quarters of Archangel wheat have been shown, which have been in granary four years, without meeting any offer; prices, therefore, may be considered quite nominal, and old qualities almost unsalable, the little speculation which has existed being confined to fine new Danzig, Holstein, and Mecklenburg descriptions at the prevailing low currencies in the different markets of their growth.

The flour trade has continued in a very languid state at the decline noted at the close of November. Town made remaining at 37s, 40s to 42s; but ship marks have receded 1s to 2s per sack, and are now offering at very reduced rates. Norfolk and Suffolk household, 33s to 35s; Sussex and Hampshire superfine at similar prices; Scotch, 31s to 32s; Irish, 31s to 33s per sack. For bonded sour Flour for South America a demand has been experienced at 17s 6d to 18s per barrel, but few sellers have appeared at these quotations.

The duties have declined 1s per qr on wheat, 3s per qr on barley, 1s 6d on oats, 1s 6d on rye, 1s 6d on beans, and the same on peas. The duty of 13s 10d per qr on barley is the lowest range which that article is likely to attain for some time.

The unusually extensive supplies of barley from England and Scotland, and particularly Ireland, has had the effect of materially depressing the trade, more particularly as the article was ranging in price disproportionately high, as compared with other grain. Chevalier barley has given way in value 3s to 4s; Norfolk and Suffolk malting also 3s to 4s; and other qualities in proportion, particularly the Scotch samples, which coming more freely to hand at the close of the month, and being pressed on the market, realised very depressed rates, say 28s to 30s; fine, 32s. The new samples of Foreign which have appeared at market, have been much approved of by our maltsters, especially the shipments from Kiel, Neustadt, and other parts of Holstein; the cargoes have worked more kindly

than was anticipated, and the article weighs more than our own. At the beginning of the month one or two parcels obtained 23s per qr in bond, or 40s free, but have since participated in the depression of the market. Extensive purchases have been made at the lower Baltic ports at from 13s 6d to 14s 6d, and fine samples 15s per qr, weighing 54 lbs.

The malt trade has worn a heavy aspect, and though the ale brewers have paid high prices for Chevalier malt, yet the porter brewers, having continued unwilling to get into stock, and the decline that has taken place in barley, has caused prices of the best qualities to recede fully 2s per qr, and thin qualities 3s to 4s. By the annual statement made by the Brewers Company of the consumption of Malt in the metropolis and environs, it appears that the present year's consumption has exceeded that of 1833 by 100,000 qrs, and as a remarkable instance of the monopoly of the trade, it may be adduced, that out of the 662,713 qrs which have been returned as consumed by 210 brewers, 13 have used 490,734 qrs, and nearly two-thirds less than 500 qrs, and 60 less than 100 qrs.

The extensive importation of oats, particularly from Scotland, has created a general heaviness in the trade, and as dealers have only purchased sparingly, prices have, in consequence, declined, English feed and Polands being 2s per qr cheaper; potato do, 1s; Scotch common feed, 2s; and potato 2s to 2s 6d per qr; Irish, 1s 6d to 2s per qr. In bonded qualities little actual business has transpired, as the samples are either withdrawn from the market or held firm at the previous quotations; which evinces that speculators consider the present fall in the prices only temporary, and that the acknowledged failure in the crop in this country must eventually cause the currencies to be enhanced, and the duties on foreign qualities consequently to go lower. Irish oats for spring delivery have suffered little depreciation in value, Galways being noted at 11s; Londonderry qualities, 11s 3d to 12s; Waterford, 12s to 12s 6d; Limerick, 11s 6d to 12s; Sligo have sold at 13s, deliverable in February.

Beans having increased in their supply, and experiencing a diminished demand, have become 3s to 4s per qr lower, particularly old qualities. Bonded qualities have partially suffered in the depression, but very considerable purchases have been made on the Elbe, Weser, Eyder, and Baltic, at from 20s to 23s per qr, according to quality and freight; at present, small beans are held at the nearer foreign ports at 23s 6d to 24s.

Fine white peas have sustained no alteration in value, but the common runs have been difficult of disposal, unless at lower rates, as several cargoes of foreign have been shipped for our port, and being weekly expected to arrive, would be entered at the low rate of duty, say 6s 6d. White seed peas have been very scarce, and realized as high as 70s per qr; very superior, 105s. Until towards

the end of the month, grey and maples have been in very limited supply—in fact, scarcely a parcel offering, and prices advanced to 44s and 45s, but the receipts having increased, prices have given way 3s to 4s per qr. Peas in bond realize the same price as English, according to quality, exclusive of the duty. Large purchases have been made abroad at 22s to 24s, and sales are still being made, but at higher prices, say 23s to 25s.

The tendency to advance in the currencies of grain in France has continued throughout the last month. The markets have been only moderately supplied, and have been far from exhibiting that abundance which must always induce a cheapness of the various articles. On the contrary, at many of the principal places of supply, sellers have appeared much less numerous and pressing in their demands, as has been witnessed at a similar period during the two last years. These facts seem to substantiate the complaints of the farmers, as to the result of the crop, particularly of wheat and rye. The fabrication of flour, diminished by the extraordinary scarcity of water, has been barely sufficient to meet the local consumption, and though wheat in consequence has come sparingly to market, yet prices have evinced symptoms of improvement; the context, therefore is, that if the manufacture of the article had been more extensive, it is more than probable that the advance in the prices would have been much higher. During, however, December, the principal month of consumption, the mills have been in full operation and the currency of markets at the close will therefore indicate the character of the future trade. Rye is generally scarce, and held at comparatively low rates, and parts which were accustomed to export to their neighbours, are seeking supplies from Paris. The crop of oats has not yielded a very plentiful return, and prices have been of late enhanced; the heat of July having deteriorated the quality, and lessened much the quantity expected, added to which the scarcity of hay and straw will contribute to keep up the quotations of this latter article. The average price of wheat throughout the kingdom is about 33s 6d. At Paris wheat is obtaining 35s 10d to 40s 5d according to quality. Rye in demand, particularly for Normandy and Beauce, at 19s 11d to 20s 8d per qr., and fine qualities are held as high as 22s 10d. Heavy new Barley has been sold at 19s 3d, other qualities 17s 9d. The farmers in the environs of Paris, principally the postmasters, continue to give their horses barley; oats, though cheaper than last year, are much lighter, and barley is therefore advantageously employed as feed, the inferior qualities being selected, and after being soaked and swelled, are then given to the animals. Oats, owing to the increase of water in the rivers, are arriving in better supply, and obtain for middling qualities 16s 6d to 17s; best, 17s 9d to 18s 6d. Some speculative purchases have been effected of Cloverseed, but confined to the new qualities. The best samples, which were offering at 33s to

34s per cwt., are now held at 35s 6d to 36s; secondary new and old descriptions meet with little attention.

The anticipations entertained at the Italian markets that some of the Spanish ports will be opened for the import of Foreign wheat, owing to the failure of the crops in Andalusia, has served to keep alive a spirit of speculation, and prices have therefore sustained no depression, but on the contrary have in instances improved. At Leghorn, owing to the increased demand for the consumption, Tuscan white wheat is noted at 50s 4d; red 43s 2d; Romagna qualities, 42s 4d. At Genoa, Black Sea wheat obtained 28s 10d, and at Naples, Barletta samples were held at 30s to 31s; at Trieste, soft Italian wheat was worth 34s 7d.

In the United States of America, the arrivals of Flour from the interior having been large, prices at New York, Philadelphia, and Baltimore have receded 3d to 6d per barrel, the quotations averaging from 22s 6d to 22s 9d per barrel; wheat is also cheaper, varying according to quality, from 36s to 38s 6d. The cloverseed trade is dull, and almost confined entirely to the local necessities; the quotations, ex store, are 21s 4d to 23s 7d per bushel.

In Canada, as the shipping season was nearly closed, prices of wheat had declined, and best qualities of Upper Canada white were to be procured at 4s 3d to 4s 4d per 60 lbs.

In New South Wales the supply of wheat had been limited, and prices had advanced to 8s and 10s per bushel, and though the receipts were augmenting, yet the previous currency was maintained. Oats, 3s 6d to 5s per bushel.

At Lisbon, the late admission of wheat will, it appears, afford sufficient supply for the consumption, until April or May, and even then the further importation of corn will much depend on the prospects of harvest.

The prices which are being realised for wheat at Odessa, prevent the chance of any exports being made from the Black Sea on speculative account. The last harvest has been a middling good one in the provinces of Russian Poland, but has failed in the governments bordering the district of Odessa. The insufficiency of the crops in general however, apply more particularly to rye, barley, and oats; the currencies of which are disproportionately high as compared to those of wheat, soft wheat being worth 27s 10d to 29s 1d; hard ditto, as high as 36s 11d. Rye, 29s to 30s 4d, and at the close of November the stock of wheat was about 105,000 qrs of soft, and 8,400 qrs of hard wheat. Owing to the failure in the crops of Russia, the transactions at Archangel in grain have been extremely limited, though a few years back it formed the principal branch of the export trade. A few shipments of oats took place, but even these were effected, partly with a view of giving cargoes to such vessels as had come out chartered for seed or grain, and for which no freight had been pro-

vided. This season the crops have turned out satisfactorily, both as to quantity and quality, but there is not any prospect of a demand for exportation. The supplies, however, as to any *probable* demand, are considered almost unlimited; though not warehoused in loco. Wheat has obtained for the consumption, 22s 1d; barley, 17s 6d; oats, 9s 6d; but none of the latter article offering on contract. Good crushing linseed, 36s 7d, and fine qualities had been shipped during the season, which cost as much as 42s 1d.

At St. Petersburg, when the stocks of grain were cleared off, and it became apparent that the harvest in the interior of Russia, as well as the Baltic provinces, was only moderate in the produce of winter corn, and had turned out very unfavourably as regarded summer grain, the market evinced a tendency to advance, and higher rates have begun to be realized. Wheat, has obtained 30s 11d, fine Kubanka. Oats, as high as 15s 8d to 17s. Linseed was maintaining the enhanced quotations, Morschansky having been sold on delivery in August, at 40s 1d, with money paid down, and 42s 1d with hand money. At Riga, prices of wheat remained at 28s 6d; barley, 18s 11d: oats, 12s 8d to 13s 1d. Linseed, crushing, 13s 11d free on board in spring. At Danzig the mildness of the weather had caused the navigation of the Vistula to be re-opened, and some arrivals of wheat had taken place from the neighbouring districts. Fine high-mixed wheats had realized rather more money, say 30s to 31s; fine mixed, 29s, and some fine white wheat of 61lbs for spring delivery has obtained as much as 32s. In the interior of Poland, barley, rye, and wheat, are worth exactly the same money. At Königsberg, wheat is steady at 28s 4d for new best mixed; and high-mixed sowing linseed, 48s. At Stettin, the prices being relatively higher than at other Baltic ports, excludes at present any business being transacted for foreign account. Wheat is noted at 25s to 26s; barley, 16s 6d; oats, 13s. In Mecklenberg and Holstein, the quotations have remained steady, wheat of 62 to 63lbs being quoted at 23s to 24s; barley, 14s to 15s; oats, 11s to 12s 6d. The two latter articles meet enquiry, particularly barley, for English account. In the Danish Isles, barley is saleable at 14s; oats, at 10s to 11s of 35lbs to 36lbs. In Sweden, several parcels of oats have been sold at 12s to 12s 6d, weighing 38lbs. At Ham-burgh, little business has been passing in wheat, Upland qualities remaining at 25s 4d to 26s 4d. An extensive business however has been transacted in barley, beans and peas, for the English account, both for immediate shipment, as well as delivery in spring; barley at 14s to 15s; beans, 22s to 23s; peas, 22s to 24s on the Baltic. Rape-seed, worth 32l to 33l. At Rotterdam the grain trade has continued steady, but dull. The expected alteration in the import duties, has not yet been noticed by the government. All crushing seeds were advancing in value. For good Holstein rapeseed, 35l had been refused.

# THE POLITICAL COMPANION

TO

## THE FARMER'S MAGAZINE.

JANUARY, 1835.

No. 1.]

[Vol. II.

### THE CONSERVATIVES.

(From the Times.)

The proceedings of a Conservative meeting were recorded in *The Times* of yesterday. It was held at Ashford, in Kent, and the avowed object of it was to commemorate his Majesty's late declaration, to support "the Constitution in Church and State." Looking at the names of those who figured on the occasion, and at the toasts which were agreed upon to be given from the chair or otherwise, it may be pronounced one of your regular old "Church and King" meetings, of which the real object has long been understood by all classes of Englishmen, being no other than that the patronage of the Crown in Church and State should be carefully reserved for the exclusive benefit of one favoured party in the kingdom. When we state that Lords Winchelsea and Strangford, Sir E. Knatchbull, and the Rev. T. Manners Sutton, were the chief performers on this *well-timed* stage, our readers may form a pretty shrewd guess at the tone and disposition which prevailed among them. It will be judged at once how much sympathy with the general spirit of reform—how much attachment to the popular branches of our institutions—were manifested by the several speakers and by the company; and last of all, how much service at this particular moment the cause of Conservatism and that of the Duke of Wellington's Administration are likely to derive from the sort of alliance which a leading Conservative journal has since (erroneously we are aware) *insinuated* to exist between his Grace's principles and those of the ultra-oligarchs at Ashford.

### THE EX-MINISTRY.

(From The Morning Post.)

It is amusing to observe the shifts to which the ex-Ministerial papers are put, in order to evade the unanimous verdict of the public, which, notwithstanding all their petty attempts at agitation, *they feel* is about to sentence them and their masters to eternal oblivion. We had stated the fact, in which we were afterwards in greater detail corroborated by other Journals, that Lord Melbourne had acquainted his Majesty that a serious difference of opinion existed in the Cabinet upon the subject of further encroachments on the property of the Church. Now, see how warily, and at the same time how timidly, the *Morning Chronicle* (we willingly adopt its authority as the organ of an expiring faction) ventures upon a hesitating contradiction:—"This, however, we can safely state . . . there were no *actual* (the Italics are not ours) differences in the Cabinet, and Lord Melbourne was not aware of any questions respecting which they were disunited; but who can say what is *possible* or *not possible*?" See how cunningly the *Chronicle* evades the real question and hides himself in the mysteries of special pleading, "No *actual* difference!" That is to say no positively declared schism. But will the *Chronicle* or its

prompter venture to deny what we, in the teeth of all their denials, would still continue to assert, that there were questions of the precise kind alluded to above that were of necessity to be brought before the Melbourne Cabinet previous to the meeting of Parliament, which Lord Melbourne admitted in his conversation with his Majesty to be of a nature to lead to the resignation of Lord Lansdowne and Mr. Rice, and others, in the probable event of these Gentlemen being outvoted in the Cabinet by their more liberal colleagues! Will the *Chronicle* and its prompters deny that Lord Melbourne admitted to his Majesty, that if, on the other hand, the Cabinet could by any management overpower these attempts of the Radical portion of it, his Lordship could not conceal from the King that, in case the same anti-Church projects were broached in the House of Commons by any of the demagogues of the day, the members of the aforesaid Radical section of the Government would vote on a division against their more prudent colleagues in his Majesty's service? We have worded the foregoing sentences as queries. We boldly put them as facts. True it is that the Government, conscious of the inevitable consequence of a decision on these points, come when it might, had carefully postponed all consideration of them to the latest possible moment; and well, therefore, may the *Chronicle*, in its shallow cunning, say that "no *actual* difference" had occurred amongst its members. If by "actual difference" is meant a positive division upon a vote in the Cabinet, the *Chronicle* may, for the reason above stated, be right; but if it pretends to say that there did not, as Lord Melbourne knew and acknowledged to his Master, exist a vital difference of opinion among the Councillors of the Crown, which must sooner or later terminate in such division, and the consequent disruption of the Administration, then we say fearlessly, and we do not speak without warrant, the *Chronicle* is either egregiously misinformed or wilfully mendacious.

Who, then, can blame the King, seeing that the breaking-up of his Government must occur in a very short time, and would in all likelihood take place at a period most inconvenient for the public service, for having manfully determined to face at once the danger which could not ultimately be averted? On the contrary, will any loyal subject or right-thinking man hesitate to give his Majesty the credit which he has so nobly earned for a sound discretion no less than a genuine attachment to his people in dismissing that discordant assemblage of conflicting politicians, who possessed no one quality of a Cabinet except their salaries, and every characteristic of a debating club except its honesty?

### THE DUKE OF WELLINGTON.

(From the Herald.)

While the public, we suspect, are destined to witness—nay, indeed, are already witnessing—some

changes on the part of the public Press which add neither to its respectability nor to its influence, we have fortunately no such metamorphosis to undergo—no new adhesions to give in. Our party is that of the country—to its interests we have hitherto adhered, and shall adhere, quite regardless of who the persons or the party may be which are at the head of affairs. While their measures are such as in our opinion are calculated to promote the general welfare, they have our unbiassed support—when otherwise, our free and fearless censure.

With these preliminary remarks we proceed to notice the all-absorbing subject of the changes which are now taking place in the Administration—changes which we have long been persuaded were as inevitable as any political event which has ever taken place. The return of the Duke of Wellington to the head of affairs was not so obviously the necessary result of any change. We are not behind the warmest of the Duke's admirers in enthusiastic respect for those high claims on public gratitude and homage which he, above all men of the age, possesses. But it is not in the Cabinet that his Grace's laurels have been won; nor as a Statesman, that any portion of his splendid fame has been acquired. In that character he has hitherto been on all occasions as much behind the spirit of the age, as on the field of battle he has ever been in advance of all foes and competitors. While we admire and partake of the Duke's attachment to the institutions of the country, in mistaking salutary and timely reform for revolution, he has uniformly postponed the one till he brought the country in danger of the other. Since the Duke of Wellington last presided at the helm of public affairs, he has had more both to learn and to unlearn than any man who ever reached so high an eminence. We are not without hope that the interval may have been passed by his Grace in so drilling and disciplining his mind as to enable him to become as eminent in council as in the field. Should such be the case—should the Duke be found willing and prepared to carry out the necessary results of the Reform Bill in its true spirit, the country will hail his return to office with alacrity and confidence; with a confidence not a little enhanced by the conviction that in his hands the ancient land marks and buttresses of the Constitution will be safe from wanton innovation. In no other spirit, in no other tone, can the Duke of Wellington's Administration stand. As an earnest then of what that spirit will be, the country will, in the first instance, naturally look with anxiety to the persons of whom his Grace's Cabinet is to be composed. Perhaps it is fortunate both for the Duke and for the country that, owing to peculiar circumstances, those arrangements cannot be made in haste, but must await the return from abroad of more than of one the persons to be either consulted or included in them. This will give the new Premier breathing time. It will give him time to take counsel not only from his own mind, but from the state of public opinion, in the teeth of which no man can long hope to govern in this country. In the mean time much may be done to propitiate and to influence that opinion. Let the Duke of Wellington, for instance, lose not a moment in disclaiming and discarding the errors of his predecessors—let him begin in Ireland, that fatal scene of Whig and Tory misuse. We hear that Lord Roslyn is destined to replace the Marquis of Wellesley, and Sir Charles Wetherell Lord Plunket. We give these merely as among the rumours of the day. But this we know, that no part of the kingdom presents such a field for a statesman to distinguish himself upon as

Ireland—none where “golden opinions” may be so readily gathered, and where an earnest of good government can have a wider influence on the confidence of the whole community.

## THE IRISH CHURCH.

(From the Courier.)

But what is the system for which such an expense of blood and treasure is incurred? Though alien to the affections of the people, and hostile to the opinions of seven-eighths of the population, is it an aggressive and efficient apparatus? Is it likely soon to gain the inhabitants over to its dogmas, and produce a prevailing harmony? Does it, in the exercise of economy, without an offensive ostentation, silently pursue the good of the nation, and oppose the operation of antagonist and noxious principles? To ask these questions is enough. With a population, even but nominally, attached to the creed of the Protestant Church in Ireland, not equal to half the inhabitants of London, there have been till lately *four* Archbishops, and *eighteen* Bishops; and there are still *one hundred and eighty*, Prebendaries, *thirty-four* Archdeacons, *thirty-three* Deans, *twenty-six* Presentors, *twenty-two* Chancellors, *twenty-two* Treasures, *two* Provosts, and *twelve-hundred and fifteen* other Beneficed Parochial Clergy; and there are to be ultimately, according to modern reductions, *ten* Bishops and *two* Archbishops, who divide among themselves a revenue of *one million one hundred and twenty-five thousand pounds* per annum. Is the Archbishop of Canterbury prepared to maintain that were twice the number of these clergy, and double their revenues, allotted for the City of London, supposing it to be all Protestant and Episcopalian, that he could expect the blessing of God for the preservation of this Establishment. The Author of “Political Christianity,” who appears to have searched into this subject, says—“It appears, by recent Parliamentary returns, that there are altogether one thousand five hundred and fifty-six benefices, or livings, in the Irish Church, of which one (in the Diocese of Down) is of the yearly value of 2,800*l*; ten are between 2,000*l* and 2,600*l*; twenty between 1,500*l* and 2,000*l*; twenty-three between 1,200*l* and 1,500*l*; seventy four between 800*l* and 1,000*l*; one hundred and forty eight between 600*l* and 800*l*; two-hundred and eighty one between 400*l* and 600*l*; three-hundred and eighty six between 200*l* and 400*l*; and four-hundred and sixty five between 30*l* and 200*l*. “I should like,” he says, “to know how many of these last are above 100*l*., and how many are as low as 30*l* and under 50*l*.”

## THE FORTHCOMING ELECTION.

(From the Times.)

The electoral statistics, which would be curious in any circumstances, being now of immediate interest and importance, we hasten to throw together some information as to the extent of the suffrage under the Reform Act. Before we go into the statement it is necessary to observe that the number of electors must be less than the number in the returns, as many are counted twice over, or oftener, in respect of different qualifications; but, nevertheless, the calculations will give an outline of the form and body of the enfranchised sections of the country sufficiently to be depended on.

In England, 40 counties return 144 members, and, previous to the election of 1832, had 344,564 registered electors. The cities and boroughs are 185; they return 327 members, and their register-

ed electors up to the same date were 274,649. The total for England was thus 619,213 electors, and 471 representatives of counties and boroughs.

In Wales, 12 counties return 15 members, and their registered electors, in 1132, were 25,815. The 14 districts of boroughs return 14 members, and their registered electors were 11,309.

In Scotland, 30 counties have 30 members, and their registered electors, in 1832, were 33,114. Seventy-six cities and boroughs return 30 members, and their registered electors of the above date, were 31,332. Total for Scotland, 53 representatives, and 64,447 electors.

In Ireland, 32 counties have 64 members, and their registered electors, in 1832, were 60,607. The cities and boroughs are 34; they return 41 members, and their registered electors are 31,545. Total for Ireland, 105 members, and 92,152 electors, according to the registration of 1832.

The first remark that occurs is upon the proportion of the town to the county suffrage. In round numbers, the gross population of cities and boroughs of England and Scotland is half the population of counties; and the representation of cities and boroughs is about double the representation of counties.

Wales gives an advantage to the counties; and the returns for great Britain stand thus:—

County population, 10,446,241; Borough population, 5,816,060. Members for counties, 189; members for boroughs, 364. So that the county population is two to one against the town, and the town representation two to one against the county.

In Ireland the case is different. The county representation exceeds the borough representation, but the county population is rated at 7,000,000, and the borough at little more than 700,000. In Ireland the registered electors for counties in 1832, about doubled those for towns.

Taking Great Britain and Ireland together, the population of cities and boroughs is about one-third of the population of counties; the electors for counties are to the electors of towns about as four is to three—the numbers of the first being 403,494; of the latter, 317,290; the number of members for counties, is 253, the number of members for boroughs 405. According to the registration of 1832 the electors for the towns and counties of Great Britain and Ireland were altogether, 812,936. But, as we have before observed, this calculation must exceed the truth.

From a view of these proportions, very false inferences may, and doubtless will, be drawn. It will be contended that the landed interest is inadequately represented, and that the towns have an unfair share of representation. In such arguments the material fact will be overlooked—that population has not been made the basis of representation: and that if population be once let in as the governing rule, it will be hard to keep out universal suffrage as a consequence. Property is the basis of the Reform Act, and, according to the adopted tests of property are those numerical relations we have noticed. There is, however, really no disproportion in the case, or if there be any, the disproportion is not where at first glance it may seem. All that is to be said is, that property does not put forth its powers according to the rule of numbers. Were the test of property still further improved in the Reform Bill, as we trust it will, by the removal of the fiscal conditions, the electoral privileges of the borough population would be yet further extended.

When the borough representation and the coun-

ty representation are talked of as measuring the comparative influence of the landed and commercial interests in Parliament, a gross fallacy is involved, for the commercial interest, which has its political power in boroughs, has often a direct connection with the agricultural interest, the like of which the agricultural interest having its political power in the county suffrage has not with the commercial interest. Thus the capitalist, or prosperous tradesman, or professional man in a town, has his landed property, and by it an interest in common with the country gentleman; but the country gentleman who lives on the rents of his farms, has no direct interest in common with the mercantile, and he too often believes in an opposition of interests. To put the proposition in large terms, towns are more affected with the agricultural interests than the agricultural districts are affected with the town interests; and this is not a speculative question—we have something more solid than theory. In the corn laws we see the rural prejudices put forth against the commercial interests, and the powerful hold of the agricultural interest in the borough representation.

### THE LORD MAYOR.

*(From the Times.)*

The Lord Mayor has been pleased to reject the prayer of the requisition presented to him by a deputation of citizens to summon a Common Hall, for considering the measures which ought to be adopted in the present situation of the country. Many a fair and reasonable cause has been ruined by indiscreet supporters, and as we have not time to mince our phraseology, we must be excused for saying that his Lordship's act is that of a short-sighted simpleton. Without affecting to argue the constitutional right of the question, can there be anything more palpably revolting to common sense or to obvious policy, than an attempt to bolster up the interest of the new Ministry by an open acknowledgment like this, that it is a subject which will not bear discussion?

### STATE OF THE COUNTRY.

*(From the Standard.)*

The union of all Reformers against the King's exercise of his prerogative, is now the cry. It is a cry with which we are pleased; because, in the mouths of those who employ it, it is a plain confession of truth—an acknowledgment that all pretence of shades, distinguishing the members of the late Cabinet, from the most violent Radicals, whom they were hanging and transporting, was pretence only. Had the unlucky persons who expiated their reforming achievements upon the several gallowses of Bristol, Nottingham, Derby, &c., escaped that doom by any happy accident—had the Dorsetshire labourers remitted to the Antipodes, been permitted to remain in this country, all these unlucky sufferers by the halter and the chain would now be joyfully accepted as brethren in political faith, and fellow-soldiers in the war against the throne, by their late prosecutors. This is all as it ought to be. The friends of order, they who retain any respect for religion and the rights of property, are now left without excuse, should they suffer themselves to be again cheated under the garb of moderation—should they not see that the policy pursued all along by the Whigs in pressing forward the Radicals to clear the way for them, is but an adaptation to political hostilities, of an

old stratagem to tumultuary warfare. A brute herd of cattle, or of Radicals, as the case may be, is urged forward to break the enemy's line and receive his fire, so as to make an open and a safe passage for the party in their rear. The brutes, biped or quadruped, incur almost all the danger; but it matters little to them, for if not slaughtered in the fray, the drivers will dispose of them afterwards as at Bristol, or Nottingham, or in the butchers' quarters. Now, we would no more think of reasoning with such Radicals as at present now bellow for the Whigs, than we should think of reasoning with the four-legged animals whose functions they exercise. Let them bellow and be hanged. This has proved in the case of some of their brethren more than a chance denunciation. Let them bellow and be hanged. We address ourselves to other classes—to the classes against whom all this artificially-raised fury is directed. They see the cattle urged forward—they see, too, who are urging them, and for what purpose the savage onset is attempted—will they, again, trust the promoters of that onset? will they now encourage them by connivance or neutrality? will they not show as much alacrity and ardour in arising to defend all that is dear to them, as is shown by their enemies? If they do not, we tell them the result; they will be prostrated by the Radicals and trampled upon by the Whigs. The Throne and the Church,—but they are lost for ever, if a manifestation, instant and universal, be not made for the defence.

#### STATE OF THE GOVERNMENT.

(From the *Courier*).

We do not believe that the Duke of Wellington is aware of the tremendous responsibility he is at this moment incurring. Why not give temporary appointments to those vacant offices, to which most important and necessary duties, which may require to be performed, are attached? We have no desire to create embarrassment, but the present state of the Government is calculated to give most serious concern to all well-wishers of the country. It is impossible to foresee the dangerous consequences that may arise from it any day, and as a precedent is it to be tolerated—is it consistent with the theory or practice of the Constitution—that the country is to be subject to the rule of a Military Dictator, without responsible associates in the Cabinet, even for a week? Sir Robert Peel, if he adhered to his plan of travelling to Naples, cannot reach London for ten or twelve days to come. We hear from all quarters that the present state of suspense is creating great and increasing anxiety and uneasiness. Again we urge the Duke, for his own safety and for the safety of the country, to surround himself by responsible advisers, and to fill up the vacant offices. *Is not the Duke of Wellington at this moment setting an example of defiance to the Constitutional law of the Empire?*

#### THE TORIES.

(From the *Chronicle*.)

The Tories already seem to live again in the good old times. We may apply to them what was said of the Bourbons on the Restoration:—"They have learned nothing, and forgotten nothing." The Grey and the Melbourne administrations are already, with them, as if they had never been. The Duke of Wellington's spirit already animates the Tory organs. "County meetings are farces,"

said the great Dictator. "The Members of the Common Council of London are incapable of understanding the Royal Answer to the Address," says the Duke's organ, *The Standard*. Well does our crafty contemporary know that nothing will be more acceptable at head-quarters than abuse of whatever is liberal and popular. Horace Twiss will now regret that he recanted his horror of the middle classes. Two weeks of the Tory Dictatorship have only passed, and already the insolence of Tory domination seems to have attained its maturity.

But *The Standard* only can do justice to *The Standard*, and we will, therefore, allow our contemporary to speak for himself. In this way does he last night preface the Royal Answer to the Address of the Common Council:—

"The following is the King's truly dignified Answer to the *impertinent* Address of the Common Council:—

"*The animals to whom it is offered will probably not understand it; but the temper, grace, and calmness of the Reply, compared with the ill-mannered petulance of the Address, convey the most cutting rebuke.*"

"The people have nothing to do with the laws but to obey them." The members of the first corporation in the kingdom are already insulted by language which no superiority of understanding entitles one human being to apply to another. It is a common observation, that the character of the master may generally be learned from the demeanour of the domestics. "Like master, like man," says the proverb. If the master be contemptuous and insolent in his bearing, so will the servant. Our contemporary has already caught all the insolence of the Duke. Animals, forsooth! And this language is applied to the first corporation in the kingdom, the members of which have in all times been in the foremost rank of the champions of English liberty, and occupy a distinguished place in our history. The representatives deputed by the citizens of London to their Common Council, are considered by this organ of an insolent Dictator, as on a level "with the brutes that perish," as beings who ought not to be reasoned with.

It happens, however, somewhat unfortunately for the Duke, that the middle classes, treated with this contempt, have the power of returning the Members of the House of Commons; and though the Duke be a bold man, the middle classes will beat him. He may instruct his organs to term the citizens of London animals, long or short eared; he may heap abuse on the public bodies of the country; but this will only hasten his discomfiture. The people of England will not suffer themselves to be turned aside from their purpose either by flattery or menaces.

#### STATE OF POLITICAL PARTIES.

(From the *Globe*.)

Now, it is quite clear that the movements throughout the country have had the effect of exciting the electors, and of directing their efforts to a common and definite object. They have brought reformers of every shade of opinion together, given them the opportunity of discussing and settling their differences, and linked them in union against the common enemy. We must confess that when the Duke first accepted office, and the report of an immediate dissolution was prevalent, we trembled for the result of an appeal to the people. The blow was struck at the very moment in which the dis-

sensions between reformers were most violent and most palpable; when it was probable that the animosities of late disputes, distrusts, and affronts were rankling most deeply, and the common cause appeared to run the chance of being sacrificed to momentary schism. The events of the last fortnight have completely dispelled this dread. Let the Duke call parliament together, and he will find the undivided force of public opinion acting on that body. Let him dissolve when he likes, he will find the constituent bodies of the empire united against him. There will be no disunion between his opponents. The votes of the Radicals will not be reserved in sullen discontent, nor swell the ranks of the Conservative candidate, nor will the influence of Whigs be exerted against the popular party. The candidate that will keep out the Tory will be preferred by Reformers of all opinions. Really his Grace has done wonders by the magic of his name. He has soothed the Radical and excited the Whig to pretty nearly the same temper. He alone has reconciled the conflicting partisans of Lord Durham and Lord Brougham, and has achieved the same wondrous task of pacifying O'Connell and silencing the agitation of repeal.

#### PROSPECTS FOR IRELAND UNDER TORY RULE.

(From the Courier.)

We have frequently, and as emphatically as we can, warned our Conservative statesmen that their great error consisted, and consists, in despising and contemning the people, even in the hour of need, when they humbly appeal to them for support. We quote a specimen of what we mean from *The Standard*, and having yesterday quoted its view of the probable foreign policy of the Duke of Wellington, with approbation, it will not, we presume, accuse us of injustice, if we class it for this passage among his mischievous friends:—

"The following is the King's truly most dignified answer to the impertinent address of the Common Council. The animals to whom it is offered will probably not understand it; but the temper, grace, and calmness of the reply, compared with the ill-mannered petulance of the address, convey the most cutting rebuke."

"Animals!" Can any epithet be more contemptuous? Does the Duke of Wellington instruct the Journals in his interest to heap contempt on the Common Council of the first city of the empire, and endeavour, if possible, to provoke their anger? Such cannot be the policy of the Duke, and we do most earnestly deprecate such language, and must remonstrate against its use, let who will be its author.

We find in the following passage, copied from the *Dublin Warder*, into *The Standard* of Monday, without one word of condemnation, and, therefore, approved of, an additional reason for such a remonstrance:—

"All of the leading and influential traitors of 1798 ought to have been hanged, instead of being suffered to live for the purpose of concocting new treasons. We hope the British Government will have learned wisdom from experience, and not commit the mistake a second time. But, at present, what should be done? O'Connell, and those wretched and unprincipled creatures who have enlisted under his Jack Cade banner, are endeavouring to rouse up the King's subjects to oppose and control the King's prerogative in

the choice of his Ministers. He must submit to the dictation of the Irish apostle of sedition—the professor of repeal—the, perhaps, conspirator to separation. His Majesty must submit to this fellow's dictation, and that of the English Mustardine renegade to his order, or the land is to be convulsed, and rebellion lift its horrid head to beard and awe legitimate authority. Again, we ask, what, in such a fearful crisis, should be done? Why, this, the royal prerogative has the power of vindicating itself. While Parliament is not sitting, the King can issue his proclamation against the holding of such meetings as that which the other day took place at the Corn Exchange; and if O'Connell, or any other man, shall, in contempt of such proclamation, procure to be held such interdicted meetings, or attend such, or promote the objects of such, by speaking or writing and publishing, let him and them be taken into custody, and in due time prosecuted; but not with such mockery of public justice as when O'Connell was prosecuted, convicted, and allowed to escape the justly incurred penalties of conviction.

"The state is sick to death, and demands strong remedies—if they are not applied the patient will perish.

"The times must be quieted; the straight waistcoat of a determined and salutary Government must be put upon the *savage and unreflecting hordes* whom O'Connell has maddened to his purpose, or they will leap the precipice of rebellion, and cover the land with calamities and horrors hitherto unparalleled.

"Let not his Majesty fear to use his prerogative in Ireland—let not his Minister fear to be firm—he will have, of *Orangemen alone, a hundred thousand men, disciplined to the use of arms*, and ready to expend the last drops of their blood in defence of the monarchy and its rights, and to the maintenance of British connection against the conspiracy formed to break and dismember it, as announced by the deeply interesting paragraph which we have quoted from the *American Journal*."

Can any person read this without feeling alarm for the continuance of public tranquillity? The small quantum of mercy shown towards the Irish, in 1798, is condemned as criminal, and more fetters and more blood are demanded; and the Government is incited to put down public discussion in Ireland by the promise of support from a hundred thousand Orangemen trained to arms. Why, if it were possible that the present Government could be founded on the principle of contemning public opinion, and were to insist on the people suffering contempt and oppression in quietness—it would be a revolting nuisance which all good men ought to abate. But the present Administration is founded on no such principles. It does not condemn, it it appeals to the good sense of the people. The Duke of Wellington has once in his life most emphatically declared his abhorrence of civil war, and how then can those be his partisans who seem only eager to provoke civil strife, and temper their swords in the blood of their fellow citizens?

With sincerity, and with all the earnestness in our power, we deprecate, in these times of excitement—when the restraints of authority sit loose upon mankind, and when the respect for the law is half obliterated—the use of such contemptuous, exciting, and dangerous language. The Editors of *The Standard* and its opponents are quite at liberty to bandy the lie with each other, which we hope may suffice to carry off their bad humours, but let them abstain from rousing into ferocity the kindling passions of the mass.

## ELECTION STATISTICS.

SUMMARY, showing the population of Great Britain and Ireland, from the returns of 1831; the number of counties, ridings, parts, or division, cities and boroughs returning members to serve in Parliament, from the boundary reports; the number of members returned for each kingdom; the number of electors enrolled previous to the general election of 1832, and the proportions they bear to the population; the number and the proportion which the electors bear to the males of twenty years of age, and the proportion the representatives bear to the gross population and to the electors; the number of houses assessed at 10% and upwards, in cities and boroughs in Great Britain.

| TOTALS.. | Ireland ..... | Great Britain | Scotland.... | Wales ..... | England.... | No. of Counties, Shires, and Towns, exclusive of the Borough Population. | Population of the Counties, Shires, and Towns, exclusive of the Borough Population. | Number of represented Cities, Towns, and Boroughs. | Population of the Cities, Towns, and Boroughs, in 1831. | Total Population of Great Britain and Ireland, in 1831. | Number of Representatives. |                   | Number of Electors enrolled previous to General Election in 1832. |                  | Total Numbers of Electors in Counties and Boroughs. | Proportion of Electors in County Population. |

## NUMBER OF CONTESTED ELECTIONS

IN 1832.

|                         |                        |                     |
|-------------------------|------------------------|---------------------|
| In England.....         | 19 counties contested, | and 21 no contest.  |
| showing in England....  | 139 boroughs           | ditto and 46 ditto. |
|                         | 158 places             | ditto and 67 ditto. |
| In Scotland.....        | 20 counties            | ditto and 10 ditto. |
| showing in Scotland...  | 16 boroughs            | ditto and 5 ditto.  |
|                         | 36 places              | ditto and 15 ditto. |
| In Ireland.....         | 19 counties            | ditto and 13 ditto. |
| showing in Ireland..... | 30 boroughs            | ditto and 4 ditto.  |
|                         | 49 places              | ditto and 17 ditto. |
| In Wales.....           | 2 counties             | ditto and 10 ditto. |
| showing in Wales.....   | 5 boroughs             | ditto and 9 ditto.  |
|                         | 7 places               | ditto and 19 ditto. |

Of the 114 counties and divisions in the United Kingdom, 60 contested, and 54 no contest. Of the 254 cities, towns, and places electing members in the United Kingdom, there were 190 contested, and 64 no contest.

## CHURCH REFORM.

*(From the Courier.)*

Among the members of the Press, the Duke of Wellington has some most mischievous friends. A writer in "Fraser's Magazine," for example, while he pretends to espouse the cause of the Duke, gives the following description of the sort of Church Reform which the Tories are disposed to grant:—

"But now we say to the new Administration, in the words of the Rev. T. Manners Sutton,—'The clergy all expect church reform at your hands.' They do not deprecate it; they desire it without delay and without stint.

"But what is the reform that ought to be proposed? It is just the filling up the beautiful outline handed down to us by our forefathers. It is the adjustment of the supply of religious instruction to the wants of the people, and the disposal of the revenues of the church so as to answer most efficiently the ends for which they were designed.

"Instead of suppressing bishoprics, we want more created. Instead of leaving churches to fall to decay, we want more—hundreds more—erected. Why is it that dissent rears its head with such boldness at the present moment? Not because the people have, of their own accord, forsaken her; but because in such vast masses of population as are gathered together in Leeds, and Manchester, and Birmingham, and our other manufacturing towns, the means of religious instruction within the pale of the establishment have not been provided for them. Hence the growth of meeting houses; hence the strength and audacity of dissent; hence the obvious and pressing necessity for such a church reform as shall remedy, and not increase, that deficiency."

"The people, therefore, meaning thereby not the mere multitude, do earnestly desire a large and efficient church reform? and the clergy themselves 'all look for it.' They desire to see our moral wastes cultivated; and the establishment made, what it ought to be, *sufficient* for the wants of the community. They expect that any funds that may be needed for these purposes shall be taken in the first instance from such surplus revenues as the church may herself possess; and in case a deficiency should still exist, they, the people, by *their representatives in Parliament, will readily supply that deficiency.* We will answer for this. Let the people only see that a real honest church reform is intended, and they *will not be parsimonious in supplying the necessary means.*

The recommendation is not the less important, and excites not the less apprehension, from agreeing with Mr. Goulburn's statement in the debates on the Irish Church Temporalities Bill. A comparison having been drawn between the number of Bishops in England and Ireland, the right hon. gentleman inferred from it, that it did not prove that there were too many Bishops in Ireland, but too few in England. Perhaps the Tories mean, which actually is hinted at by some writers, to restore the abolished Bishoprics of Ireland, and, acting on Mr. Goulburn's principle, increase the number of Bishops in England fully in proportion to the original number in Ireland. All such schemes, and indeed all schemes of new policy or regulations, suggested by individuals, now fortunately require the consent of the nation, obtained through its representatives, to carry them into execution, and the fact of Dissenting Chapels being already established in all the large towns, is quite decisive as to the inclination of a large class of the people not to supply additional funds for the sup-

port of the Church. The Dissenters have in their chapels all which they desire. They already complain of paying to the Church, and, therefore, to suppose that they would willingly supply any money for erecting new bishoprics seems wholly unwarranted. To publish such projects, however, and allow it to be supposed that the Duke of Wellington or Sir Robert Peel will countenance them, must exert a fatal influence on the hopes of their friends at any general election.

## TORY CONSISTENCY.

*(From the Globe.)*

Lord Brougham's arrival in Paris, where his expressions respecting the Wellington ministry are quoted, has created a sensation.

The probable foreign policy of the British Man-Ministry, or of those to whom, in retiring from ostensible power, he may leave our Lilliput, is naturally a subject of much questioning. The first sensation impressed abroad by his Grace's surprise of the powers of government was certainly of the most unequivocal nature. Everywhere the absolutists were elated and the liberals thunder-struck. For ourselves, we gave no impulse to these sudden hopes or fears on either side; but we own we have been amused to see them infect our friends of the Tory journals, and then to see them on second thoughts disclaimed with equal alacrity as quite prematurely taken up by the parties in continental quarrels.

It is now put forward in some of the quarters which used to be most unremittingly occupied in decrying our whole line of foreign policy under the late Cabinet, that exactly the same policy will be carried on by the Man-Ministry. This, we presume, is put forth to obviate all distrust of that policy. The Brussels Correspondent of a morning contemporary says—

"I have ascertained a most important fact, for which I can vouch, as coming from authority on which I place the strongest and most implicit reliance. The Hague was the very first place to which the Duke of Wellington dispatched a messenger after he was sworn into office. The purport of his communication to the King of Holland was that it was *not his intention to depart from the course of foreign policy adopted by the late government.* Dispatches to the same effect were next sent off in succession to Paris, Madrid, Berlin, Frankfort, Vienna, and Constantinople. The quarter from which I have received this intelligence enables me *most positively* to assure you that it cannot be controverted."

What a complete self-conviction is this out of the mouths of those very detractors who have been sedulously blackening for four years past the foreign policy which has preserved the peace of Europe during that whole period! What a compliment to the merits of a system in which even its calumniators can find nothing to change!

## CHURCH AND KING.

*(From the Standard.)*

We yesterday addressed such arguments as occurred to us, in reply to our correspondents' objections to coming forward at this time with addresses to the throne. In the following letter of Lord Kenyon, we have an argument a thousand-fold stronger than any we have been yet able to offer. With a gratification higher than we have often experienced, we lay the letter before those to whom it is addressed, the Protestants of Great

Britain. If they will not come forward now upon such a summons, to rally round the King, who "has stood in the gap and stayed the plague," any further appeal from us must be vain :—

TO THE PROTESTANTS OF GREAT BRITAIN.

The crisis in which we stand will, I trust, excuse me for once more addressing my countrymen. In political questions I never interfere. On the question of reform I held my peace. This crisis, however, is a religious crisis—it is one of equal interest to all Protestants—that is to all those who are Protestants (whether Churchmen or Dissenters), from religious principles, and not as political partisans. To those who make religion or Dissent a political engine, I say nothing; for of all created beings, hypocrites, and especially religious hypocrites, are the most hateful. To all true religious Protestants I wish to offer a few observations in this awful crisis.

The time is now come to declare for real vital Christianity, or to let infidelity sweep away all moral restraints, every social tie, every domestic comfort. The battle is to be fought in and for Ireland. Is Protestantism to remain there or not? Is Popery to extirpate it? Are Protestants to be forced either to abjure their religion at home from terror, or to emigrate to save their lives, or to be massacred by Popish fury? Read the speech, my Protestant brethren, of Mr. O'Sullivan, and judge for yourselves, whether the law will be able to preserve the lives of Protestants in Ireland, if you who are electors do not exert yourselves to give them protection in parliament. Judge on reading that impressive, that overpowering speech delivered at the Lancashire Conservative Meeting at Liverpool, if you think it possible that Protestantism can continue to exist in Ireland, if a government favourable to its support is not established in England. What are you told of the conduct of our gracious King? What but this, that on its being asked of him whether he would sanction a partial extinction of Protestantism in Ireland, he replied, like his sainted father, "I WILL DIE FIRST;" and will any, who call themselves by the name of Protestants—I appeal not to the deniers of our blessed Lord's Divinity, but to Christian Protestants—will any such yield to any other motive, or admit of any other sense of duty, than that of maintaining our Protestant brethren in Ireland. The question is not one between the Church and the Irish Romanists. It is between the Romanists and Protestantism in Ireland. Who has been more religiously, more holily zealous in the cause than Dr. Cooke, of Ulster, the head of the old Presbyterians of the north of Ireland? Who has proclaimed more loudly than that pious man, that the preservation of the Protestant Church in Ireland is of vital importance to Protestantism? Shall the head of the Presbyterians of Ireland bear witness in vain? Shall your King, like his sainted father, determined to maintain what he considers his bond under his sacred obligations, be abandoned by those who claim the honoured, the Christian distinction of Protestants, when he, even in his Royal graciousness, has wished to make all possible concessions to the wishes and desires of his people, stopping short of yielding the pure Protestant faith? Shall your King, I ask, be deserted when he who so makes his stand? If Britons deserve to be called Christians, the nation's cry will be—NEVER! WE WILL STAND BY OUR KING. We will not desert our God. Now is the time for Protestants to awake from their dreams, and show that, deluded as they

may be for a time—that, biassed as they may be by the name of liberty—or anxious, as not unnaturally as they be, for political power—yet that they prize that liberty, they value that power, chiefly from its enabling them to maintain that Protestant cause, that pure profession of Christianity which has mainly given to Britain a character above all other nations, and for which we may humbly believe it has pleased God in his mercy to vouchsafe to us, in addition to that his first blessing, all other high blessings by which we are distinguished. Now, my Protestant brethren, is the time for action. Not to protect abuses; no man, no government can wish to preserve any such, not to prevent any reforms which can be shown or felt to be reforms, indeed; but it is the time to prove to our own consciences and to our God, that, wishing as we must wish to be distinguished among the nations of the world, as that country in which pure Christianity flourishes the most, and is the most highly valued, we will not tempt God in his wrath to remove that light and blessing from us, by abandoning our King when he calls on us graciously for our help in its support. In all confidence that this call will not be in vain, I am,

Your respectful Servant and Brother Protestant,  
Gradington, Dec. 1, 1834. KENYON.

HIS MAJESTY'S ANSWER TO THE COMMON COUNCIL.

(From the Standard.)

The King held a council at St. James' Palace on Tuesday at two o'clock, for the purpose of receiving the Common Council of London, who proceeded in the customary manner to present the address voted by that assembly to His Majesty. The same distinguished individuals who attended on the late occasions were summoned to assist his Majesty, and the Duke of Wellington and Earl Rosslyn had private audiences of the King previous to the arrival of the Corporation.

The following is the King's truly dignified answer to the impertinent address of the Common Council.

The animals to whom it is offered will probably not understand it; but the temper, grace, and calmness of the reply, compared with the ill-mannered petulance of the address, convey the most cutting rebuke.

"It has been, and ever will be, the object of my earnest solicitude to correct abuses, and to improve the condition of the country. I trust that the ministers I may appoint will, by the successful prosecution of this, the first wish of my heart, justify my confidence and obtain that of my people."

THE DISMISSAL OF THE MINISTRY.

(From the Scotsman.)

We intimated our belief a week ago, that the present revolution in the Cabinet had been pre-arranged. The time may not have been fixed; but the resolution was taken, and a fit juncture merely waited for to carry it into effect. Without saying, as some do, that the plot was devised by the Queen—an assertion which cannot be proved—we may safely infer, that her Majesty, who is a person of much shrewdness, could not be ignorant of its existence, and that when among her personal friends in Germany, expressions might escape her which would betray the secret. It will be remembered that her Majesty left England on the 5th of

July, just three days previous to Earl Grey's resignation, all the arrangements having been made for her Majesty's continental journey before the circumstances had occurred which led to that event. Now, it is remarkable, that some obscure intimations of a coming change had got abroad in Germany during her Majesty's residence there. In proof of this, we were shown a letter from an English gentleman of rank to a friend in Edinburgh, dated 27th August last, from a German town in which her Majesty had spent some days about a month before. The letter contains the following passage:—"I much fear that the King has foolishly committed himself by unguarded expressions to the bishops, and that he is acting another part to his Ministers, *which will come out by and by.* I have some reason for believing this on German authority that cannot well be doubted." We leave the reader to draw his own inference from these expressions, with this remark, that the writer is too acute and well-informed to attach importance to idle gossip. We shall only add, that perhaps the existence of a Conservative plot in the Court, to upset the Ministry, and place the Government on a footing more favourable to the Church, affords the best explanation of the apparently insensate conduct of the Lords, in rejecting the Irish Tithe Bill—conduct which all persons, not in the secret, regarded as an absolute sacrifice of the Irish Church.

#### LORD BROUGHAM.

(From the Sun.)

Lord Brougham has written a letter to Lord Lyndhurst, which will be found in another column, withdrawing his application for the place of Lord Chief Baron, and alleging as his reason for so doing, that, though he felt anxious to accomplish the two objects of saving a large sum to the public, and of completing the reform of the Court of Chancery, by abolishing the office of Vice-Chancellor, yet that he had recently received communications from persons in whose judgment he could confide, suggesting that his acceptance of a judicial situation, though without any emolument whatever, might appear to others to interfere with his parliamentary duties. We think Lord Brougham's friends have done him great service in venturing on these suggestions, and that he has shown great sagacity in availing himself of them. As a Judge, however exemplary he might have shewn himself in that capacity, he could scarcely have failed to be withdrawn in some degree, from political life—for the judicial duties in the Exchequer are no longer what they were some few years since, little better than sinecures, but have become so onerous as almost to monopolize attention. Fortunately, however, for himself and the country, Lord Brougham has adopted the wise and fitting course, and can now plead the cause of the people with energies wholly unfettered. He can now bring the schoolmaster's primer to bear against the Marshal's baton, and in his hands the weapon will be irresistible. To those who imagine that interested motives have been at the bottom of Lord Brougham's proposition, we who have seen the original letter, have it in our power to say, that it was prompted solely by the loftiest and most disinterested considerations. A morning contemporary endeavoured to make a great deal of the *expenses* necessarily attendant on performing the duties of the Chief Baronship—expenses of circuit and chambers in London. Now, these together, Lord Brougham calculated at about 800*l.*, or, at the utmost, 1,000*l.*, which, subtracted from the Chief Baron's salary of 7,000*l.* a-year, would create

a saving to the country of 6,000*l.* per annum. Besides this saving, the office of Vice-Chancellor would also have been abolished, by which a further saving of 7,000*l.* per annum would have been secured to the country. As a still more convincing proof of Lord Brougham's disinterestedness, he expressly mentioned his intention of declining all the patronage that might be attached to the office of Chief Baron. Now, out of these simple facts, his Lordship's enemies have contrived to weave a "web of lies and sophistry," in which they are themselves entangled! But though Lord Brougham has defeated all their puny machinations, still we cannot but regret that he ever gave them an opportunity of misrepresenting his conduct. There are few more valuable requisites in a statesman than discretion. While on this subject we cannot but express a wish that Lords Brougham and Durham would consent to lay aside their differences, and act in harmony together for the public good. This would be more than discretion—it would be a sacrifice of private considerations on the altar of the public good, worthy of the best days of Greece and Rome. It would, besides, strike a moral terror to the hearts of the Anti-Reformers, and give an impetus to the cause of justice that would ere long be irresistible. Reformers, of all classes, are combining; and we are sure that Lords Brougham and Durham will not be the last to follow so magnanimous an example. Their union is the only thing wanting to perfect the triumph of the popular cause.

#### CHURCH REFORM.

(From the Herald.)

It has been the misfortune of this country that measures of reform, though finally carried, have been delayed so long, that they have almost invariably been wrested with violence from the hands of the party in power, instead of having been conceded on the proof of their own merits or expediency. Many of such reforms and amendments also have not been productive of one half of the benefits which, had they been effected earlier, might fairly have been expected from them. To enumerate instances would, we fear, merely be to recount the delays, to which nearly every important measure of this nature has, during the last forty years, been doomed. The mode and time of carrying the bill for the emancipation of the Catholics, as well as that of reform, without at all alluding to the intrinsic merits or demerits of either measure, present two sufficiently striking examples of the truth of the above observations, which, however, are called forth from us at the present moment more particularly by what we consider the pressing nature of that most important question, Church Reform; and, if history or experience of the past is not wholly thrown away upon those in power, we cannot doubt but that this question will be at once boldly, yet cautiously, entered upon; for here again, may not the real friends of the church establishment, both in this country and Ireland, but more especially in the latter, but too justly complain of the serious evils, to a certain extent, we fear, now irremediable, which have resulted from delay?

On looking at the state of the church question, we find that the evils necessarily arising out of our present system of tithes, and the existence of abuses in the distribution and enjoyment of ecclesiastical preferments, have, during the last thirty years, scarcely been attempted to be denied. Yet, notwithstanding this, and that many most excellent

enlightened churchmen have proposed remedies for these acknowledged defects, the system of tithes, as vexatious to the clergyman as it is injurious to agriculture, exists here still unmitigated. We say *here*, for in Ireland we regret to perceive that, from utter despair of obtaining by legal and constitutional means any relief from this burden, the people of that unfortunate country have taken the remedy into their own hands; and to such an extent has this feeling now spread itself, that we confess we deem it impossible for any government, however well supported, again to collect tithe in that country, *eo nomine*, and in the same manner as formerly. That such a system of redressing grievances, or, in fact, of allowing a portion of the people themselves thus to abrogate laws, if once established, must soon be destructive to all government, no one can deny; and we do not hesitate to attribute to the feeble and vacillating conduct of the government of the day the evils which have flowed, and, we regret to say, may still flow upon the country from this source,—the inevitable result, we repeat, of all such combinations, whether under the name of a Catholic Association or a Political Union, must be the subversion of the constitution, and the dissolution of the present frame of civilized society.

When we thus speak of the absolute necessity of the question of church reform being now entertained we feel confident that we shall not be suspected of wishing to deprive the church of one farthing of its revenues. With respect to tithes, we, with all true friends of the church, are only anxious to introduce such changes, either by composition or equitable commutation for land or otherwise, or by any other plan which may be deemed more advisable, as may put an end to all heartburnings and jealousies between the Pastors and their flocks, and which would take away from the enemies of our church one of their most powerful strong-holds of attack on the establishment. It is not the clergy, we feel sure, who are in fault with respect to the tithes, but the system; and one more ingeniously contrived for the purpose of causing ill blood between the clergyman and his parishioners, more calculated to produce a litigation, and more oppressive to the soil, we defy human ingenuity to discover. As a mode of payment to the clergy, we have no hesitation in saying that there is scarcely a rector in the kingdom who receives what is his due under the present system, while there is not a single vicar who gets more than one-half of what he would be entitled to were he willing or able to put the law into strict force.

It is under such circumstances, then, that we trust that the tithe question will be, early in the next session of parliament, entered upon, and finally adjusted. Ireland has left the ministers, whoever they may be, no choice; there something must be done, and we are only anxious that remedies should be applied here ere the contagion spread, and while they will be thankfully received.

We have only space further to observe, that, with respect to the abuses which exist in our church government, such as pluralities, non-residence, &c., we have always hoped that reforms on these points would have emanated from the church itself; and we still trust that that amiable and excellent divine, the Archbishop of Canterbury, will introduce some sound and effective measure on this subject. No half-measures, or mock reforms, we need hardly say, can be of any use. The country, the great majority of which, we are convinced, are sincerely attached to the church,

are really awake upon this question—the evils they feel and see, and redress is called for. We have prolonged our observations on this subject to a greater length than we had intended, but its importance must be our justification—we say importance, for on it the late administration may be said to have fallen to pieces. On the successful treatment of it, we conceive, will hinge the fate of any future administration.

## THE NEW MINISTRY.

(From the Morning Post.)

Alas, alas! What has become of the wish “father to the thought” of our Radical Contemporaries that Sir Robert Peel would not accept of office at the present moment? How completely have the hopes of Jacobinism been frustrated, the anticipations of ex-emplarism been destroyed, by the prompt and patriotic obedience of the new Chancellor of the Exchequer to the commands of his Sovereign. We have never entertained for a moment the slightest doubts of such a result. We knew that, although the delicate and sensitive feeling of honour, which has ever been an attribute of the Right Honourable Baronet, prevented him from accepting office two years ago, under circumstances which might have exposed his conduct to the misrepresentations of those whose breath is faction, and whose trade is falsehood, that as soon as the time should arrive when Sir R. Peel thought he might accept office, with honour to himself and advantage to his King and country, he would readily and cheerfully come forward. Our anticipations have been realized, and the formation of the Administration has been entrusted to one who has more than fulfilled the splendid promises which early academical distinction held out—to one whose eloquence, statesmanlike views, and unrivalled judgment, combine with unblemished private reputation and the possession of wealth, which places him far above the love of office for the sake of its advantages, to point him out as incomparably the fittest man for rule at this important crisis. With him are associated the illustrious hero whose acceptance of the Seals of the Foreign Department is a guarantee for the honour, peace, and dignity of England, (what a contrast with Lord Palmerston!) and the learned and acute Lord Lyndhurst, who leaves to his successor (if report speak true, no unworthy possessor of his mantle) a judgment-seat which he has raised to pre-eminence and distinction, as a British Court of Justice. Will Lord Stanley and Sir James Graham join? is now the question. For their own sakes, as well as that of the country, we trust the question will be answered in the affirmative. There can now be no material points of difference between Conservatives of any denomination. Loyalty to the King, attachment to the Church, and an affectionate veneration for the ecclesiastical and civil institutions of the land, with an anxious but cautious desire to effect such reforms as may be useful or necessary, are the principles which animate in common the Duke of Wellington and Lord Stanley, Sir Robert Peel and Sir James Graham. The result of such an union cannot be doubtful—a firm, compact, and enlightened Administration, which may bid defiance alike to foes of every description, whether they muster under the banner of destructive innovation or are banded together merely by an inordinate attachment to the honours and advantages of office.

## LORD STANLEY AND THE TORIES.

*(From the Morning Chronicle.)*

Lord Stanley has refused to join the Duke's Administration, and the Tories now say that they will be better without him. This is the old story of the Fox and the Sour Grapes.

*The Standard*, not having yet been instructed to abuse his Lordship, observes—

"We have not heard how far his answer favours the hope that his Lordship will give to the Administration the aid of his great talents and noble character—we mean as a member of the Government, for of his zealously supporting Sir Robert Peel's Ministry, as a member of Parliament, there can be no doubt whatever."

We suspect our contemporary will find that he has here counted without his host. It is understood that he will give his support in South Lancashire to the liberal candidate. This is certain, that he has declined to favour the pretensions of Lord Francis Egerton (formerly Leveson Gower), to the great displeasure and mortification of the Tories. We do not wonder that Lord Stanley should be disgusted at the conduct of the wolves in sheep's clothing, new forming a pseudo-Reform Ministry. Whatever his faults, Lord Stanley is honest and straight-forward. He scorns to conceal his sentiments, and still more to profess opinions which he does not entertain. He may be proud, but he is not mean or hypocritical.

The Peel-Wellington Administration is to be purely and exclusively Tory. *The Standard* tells us that the Earl of Carnarvon is likely to hold the Privy Seal, and that Sir Edward Knatchbull will probably be a member of the Cabinet. The candidates for office are, it seems, numerous. "The Conservatives (says our contemporary) can easily afford three or four every way worthy and competent to discharge the duties of every Cabinet office." They are quite perplexed with this *embarras des richesses*, as our contemporary phrases it. Sir R. Peel has only to say the word, and Mr. Goulburn, or Mr. Herries, or Mr. William Holmes, are ready to take his place of First Lord of the Treasury, Mr. Horace Twiss, or Mr. Praed, or Mr. Halcomb, are equally ready to relieve Lord Lyndhurst from his toils. Mr. Croker can fill every situation. Four Statesmen fit for every office in the Cabinet, amount to about half a hundred in all—a great source of embarrassment, no doubt. Why they should have done such injustice to these prime Statesmen, as to run about the country after Lord Stanley and Sir James Graham, is inexplicable.

## THE "TIMES" AND ITS NEW PROTEGEES.

*(From the Morning Chronicle.)*

What is true of individuals is, we presume, true of the great plurals, the editors of newspapers. In proportion as a man finds himself in the wrong, he works himself into a passion. *The Times*, a great master of the vulgar tongue, was yesterday peculiarly foul-mouthed: "vulgar impertinence," "jackanapes," "simpleton," "conjuror," "conceited prig," "the scribe," "small-minded pedant," "calumniator;" these, together with the more usual elegancies of "abominable falsehood," "impudent liar," are a few of the flowers presented to us, in yesterday's nosegay, out of the rhetorical hotbed of Printing-house-square. The truth is, that not a little of the former success of the leading journal has arisen from the pleasure which the great mass of readers feel in the expo-

sure of their enemies; yes, and of their friends too. There is a satisfaction in seeing such terms as "knaves," "boobies," "poor creatures," "insane wretches," "zanies," "incurable block-heads," &c., applied to anybody and everybody; and it is impossible not to smile when a scavenger, all bemired himself, tosses his mud and filth by shovelfull about him; and is always the most vigorous and active in his dirty vocation, when the best-dressed and most decent-looking man crosses his path. There is scarce a public character which the Blackfriars nightman has not bespattered in his turn. Every honest man must make up his mind to the abuse of the *Times* once at least in his life;—it is like what the wise Frenchman said of marriage—"Il faut passer par là." But our snappish contemporary is never so truly rabid and hard bitten as when he is angry with himself: that is the case just now. He has made a wrong cast, and has a long, miry, roundabout way to run, before he can get upon the right scent, and join the old popular pack again. 'Tis a savage mongrel, it must be confessed; and one of his tricks is, after giving a suspicious growl or two at the heels of his master, to bark when he stumbles, and fly upon him the moment he is down.

The *Times* begins to suspect the experiment will not succeed. According to him the very formation of the new Government is doubtful. His phrase is, "We hope this will be a hint to the new Administration, if it should be formed." If—if: "talk'st thou to me of ifs?" Is it come to this? Why, it was only a day or two ago that, according to the same sagacious authority, the great mass, indeed the whole of the wealth and sense of the community, were pressed to support the Duke and Sir Robert, and it was only the vile mob who raised the voice of clamour and discontent. If so, what does the man mean by his "ifs?" Has Lord Stanley's refusal, or the coyness of dear Sir James, done this? He had better tell the truth at once; but if he will not we will for him.

The Conservatives have no chance—that is the fact. The constituencies are not to be betrayed into self destruction. The people feel that the late government have been treated with less ceremony and decent pretext for dismissal than the confidential servants of any British Sovereign have a right to demand at his hands.

The people know that the real cause of that dismissal was the determination of the government to give to them the full results of the Reform Act.

## TORY TACTICS.

*(From the Herald.)*

Though it is natural enough that Ministers, who ever they may be, should prefer praise to censure, as well as give credit to their Sovereign for partaking of the same inclination, yet that, we think, can scarcely justify the practice, so frequently resorted to, when addresses pour in to the throne, of giving authentic publicity to only such as are of a eulogistic character. This practice, we see, is had recourse to on the present occasion, and would, we are convinced, be far more honoured in the breach. There is an appearance of weak, resentful vindictiveness about it, quite unworthy of the parties or the occasion. The right of petitioning the Throne and the Legislature is undoubted; and, as long as the language employed is unobjectionable, the nature of the communication ought in no respect to influence the tone or manner of its reception. We know of no rule

which requires a public announcement of the receipt of such documents, still less their publication, in the *London Gazette*—a publication seen by none but the very few whom circumstances compel to be its purchasers, and to whom the price is enormously enhanced by this mere empty homage to vanity. At all events, if any of these productions should be published, it surely ought to be applied to all. Unpleasant truths are not always the least valuable; while to treat with contempt those who avail themselves of an undoubted right, merely because they do so in an unpalatable manner, is no proof either of wisdom or firmness.

#### DR. LUSHINGTON AND SIR R. PEEL.

(From the *Standard*.)

If the reported speech addressed by Dr. Lushington to his constituents of the Tower Hamlets be genuine, the Learned Doctor, by whomsoever bitten, must be positively insane. Let our readers take the following specimen, selected *honoris causa*, by the *Morning Chronicle* :—

“ When (said the Doctor) I hear the people say, ‘ Oh, for God’s sake, trust the Duke!—for heaven’s sake, listen kindly to Sir Robert Peel, who carried Catholic emancipation !’—I cannot help exclaiming against such folly and absurdity. The man who patiently listens to such stuff is an idiot—the man who avows his belief in them is a traitor. (Cheers.) How do men act in private life? Do you confide in those you know to be convicted swindlers? (Loud cheers.) If you seek a woman to be your companion for life, do you take as a wife, or as a mother to your families, a prostitute from the streets? (Hear, hear, hear.) If then, men are governed in private life by such feelings, should they not feel equally jealous of the character of those who govern them? Every man of common sense is governed in his dealings with an individual by his experience of his past conduct, and what safe or wiser course can we pursue with regard to those men called to the councils of the Sovereign, than be warned by the past, instead of blindly trusting to hope for the future? (Cheers.) ”

If this be not “ mere midsummer madness,” the learned doctor is something which we do not like to describe; but the reader will have our full approbation if he select the very worst word in the Dictionary expressive of meanness, malice and falsehood. Dr. Lushington has acted with the Duke of Wellington and Sir R. Peel; has acted under the Duke of Wellington and Sir R. Peel; has accepted favours from the Duke of Wellington and Sir R. Peel; and here we have him likening his benefactors to convicted swindlers and common prostitutes! We positively have read nothing so disgusting as this extract, since the celebrated *Suttee* speech in defence and for the continuance of Oriental obomiations. The phraseology is too foul for a gentleman; the Learned Doctor and Ecclesiastical Judge must have formed such a style in the select society of his mistress, Queen Caroline’s servants’ hall! The Duke of Wellington and Sir R. Peel being, or not being, such as Dr. Lushington describes them, who are the immaculate men excluded by their accession to office? Honest Mr. Ellice, honest Mr. Hume, brother Greeks, more honest Mr. O’Connell, and of all, most honest Mr. Littleton, with the whole train of Mr. Hull’s speech, Hill, &c., to complete the galaxy of unspotted integrity? It is very plain of whom Dr. Lushington was thinking when he employed one of his figures: an older recollection was, perhaps, floating in his disturbed mind, to suggest the other. The friend

of the Greeks (English Greeks we mean), and the servant of Queen Caroline, ought, however, to avoid such dangerous tropes. But, pray, what single act of the Duke of Wellington’s, or Sir R. Peel’s, we ask Dr. Lushington, ever justified the use of his “ filthy comparisons?” It is not for us to deny that they were once mistaken; but who, before Dr. Lushington, ever imputed less than a high motive for that mistake? And, if memory does not greatly deceive us, the Learned Doctor was, himself, among the loudest panegyrists of the error, and of the feelings that suggested it. Let Dr. Lushington, however, descending from his poetical diction, say what he would have the Duke of Wellington and Sir Robert Peel do? Abandon the King and country to the mercy of himself and his Destructive friends, by leaving the government in the hands of men whose proved weakness, were they good men, the majority of them being very bad men, could make no stand against the advance of the Destructive faction. It is satisfactory to know, and to know it too from the *Morning Chronicle*, that though the Tower Hamlets meeting was not at any time other than a meagre one, the disgusting speech of the Doctor was abundantly hissed.

#### THE NEW REFORMERS.

(From the *Courier*.)

It is stated in the *Standard* of last evening, and we do not suppose that our contemporary would make such a statement on light grounds, that *Sir Edward Knatchbull will probably be a Member of the Cabinet*. We confess we were not prepared for such an announcement. If it be true, Sir Robert Peel’s usual caution must have entirely deserted him, and he must be fully imbued with the daring spirit of his martial colleague. As a private individual, no man is more respectable or more highly esteemed than Sir Edward Knatchbull; but in politics he is, a century, behind the age. He is a star of the first magnitude in the constellation of Lords Whinchelsea and Roden; and by giving him a seat in the Cabinet, the Government substantially and decisively pledges itself to oppose every sort of Church reform. At the great Conservative dinner at Ashford in Kent, so late as the 26th ult, Sir Edward ascribed the late happy change in his Majesty’s councils purely to the intervention of providence, and he declared his conviction that “ *if they kept the Church and State just as it had been delivered to them by their ancestors, they would, in so doing, be consulting the best interests of the country.* ”

This is plain and explicit; and Sir Edward is not the man to doff his principles when he enters the Cabinet. His admission will, consequently, be equivalent to a declaration that the Government is constructed on the principal of opposing all further reforms in Church and State; that all the flagrant abuses and enormities of the Irish church, productive as they have been, and will continue to be, of dissension, bloodshed, and civil war, are to be maintained untouched; that juntos of self-elected corporators are to be permitted, as hitherto, without let or hindrance of any sort, to embezzle and dissipate the property of their fellow citizens; and that not one of the grievances affecting those who do not chuse to gulp down the whole thirty-nine Articles of the Church of England, are to be redressed! Any Government, even one of destructives, with Mr. O’Connell at its head, would be less revolting, less insulting, to the common sense of the country, than one formed on such in-

tollerant, bigotted, superannuated, drivelling maxims as these. If Sir Robert Peel assist in the formation of a Cabinet on such principles, a mighty change for the worse has come over him; and, whatever he may suppose, he may depend upon it he will do more than a thousand O'Connells to shake the foundation of the Throne and the Church, and to precipitate a revolution. His only course if he did not mean to become a leader among the Destructives, was to have filled his Cabinet with moderate men, and to have applied himself honestly and sincerely to the work of reformation. This might, and most probably would, have procured for him the support of the bulk of the middle classes—of those who hate abuse and fear revolution; and, backed by them, he might perhaps, have contrived to get on, and if foiled it would have been without dishonour. But if we may trust the statement in the *Standard*, he has, unhappily for himself and the country, rushed headlong into the arms of the ultra-bigots, and identified himself with the supporters of every abuse, however scandalous; and with the enemies of all change, however anxiously desired, and however advantageous! We are truly sorry for this; but as it is so, and there can no longer be a doubt that the Government is bent upon pursuing an anti-national policy, and is, in fact, insane enough to prefer the interests of 500 sinecure priests, to those of eight millions of laymen, it is the duty of every man, who has any respect for liberal principles, to exert himself to effect its overthrow. The longer a Government, opposed to all reform, and administered by the party of the Knatchbulls, is suffered to exist, the more extensively will revolutionary doctrines be diffused, and the greater will be the risk of our being involved in a *real crisis*.

#### LORD BROUGHAM'S LETTER TO E. L. BULWER, Esq.

This letter, which is subjoined to a new edition of Mr. Bulwer's "Letter to a Cabinet Minister on the present Crisis," published to-day, will be read with much interest. It is a reply to the remarks contained in that pamphlet on some parts of the learned Lord's political conduct, which have lately been made the subject of animadversion. Had our limits permitted, we should have transferred the whole of this letter to our columns. As it is, we must content ourselves with extracting the following, which are among the most important passages:—

"When you would represent me as a partial or doubtful Reformer, you surely have been listening to one or two of the hostile newspapers, and not reflecting on what you must immediately call to mind.

"I think no one need fear being considered a timid Reformer who carried through (without any other person ever taking any part whatever in its defence) the Scotch Borough Reform Bill—the first attempt at municipal reform ever yet made in England—and which was the necessary basis of the great measure of corporation reform in preparation by the late Government. I should be only fatiguing you were I to name the other measures of large and uncompromising reform with which my name is connected, and I will ask any one to point out any one instance in the whole course of my public life in which I have opposed, in any manner of way, any practical measure of reform—be it in Church or in State—in the judicial, or in the political department;—I might almost say any measure at all, for—except that I was against Annual Parliaments, Universal Suffrage, and

Voting by Ballot—I really recollect no case in which I and even the stoutest and most unsparing Reformers ever have been found to differ. My whole life has been devoted to introducing changes of a useful and practical nature, and never at all of a timid or paltry extent, into our establishments and our laws; and when I rely on the good sense and justice of my countrymen, and on their capacity to judge for themselves, and not allow their confidence in me, bestowed upon a uniform experience of above a quarter of a century, to be shaken by a few paragraphs in newspapers—the motives of which all the world plainly sees—I know that I do not indulge a vain hope that I shall continue to enjoy what has always been to me the chief reward of my exertions, next to the approval of my own mind. That my efforts have been always very much less than I could have desired, and that they have often been unsuccessful, I am most ready to grant; but even where I have not been able to do all I would, I have done what I could to prepare a triumph in better times for the principles which have uniformly, and without one single exception, guided my public life. The last occasion on which I took this course, none other being open to me, were the efforts which I lately made to abolish the taxes on newspapers (so hateful to those who would at once instruct the people, and purify the press—but so dear to all who profit, or fancy they profit by them) and to amend the law of libel; and I remind you of this matter that you may be able the better to account for the attacks to which in certain quarters I have been exposed, and also to show you that my attempts at reform were not confined to what was done in Parliament.

"No man who knows anything of our history for the last four years, dares reproach me with being a lukewarm Reformer, or very infirm of purpose in the Government, or very sparing in the measures with which I deal out political improvement. I say nothing now of law reform. All have allowed that there I have done enough for the time I had the power; and all know, though I dare say when it suits them they can forget it, that others prevented me introducing a far more sweeping reform than any yet attempted in our judicial system—I mean the local courts. All have, likewise seen that even when I quitted office, I was so anxious to have the finishing hand put to my Chancery reform, that I offered to work for nothing, instead of leading a life of absolute idleness; and this sacrifice I was ready to make (a great one, all who know my private pursuits are aware it would have proved), not only for the sake of saving the public above 12,000*l.* a year, but (what is far more important) to enable the suitors in Chancery to avoid all the evil of a double appeal. That I have been rewarded for such an offer, as I believe has not often been made to the country, by nothing but abuse, is only a proof, that at a moment of excitement, no party-man ever can expect even the semblance of justice.

"But though my efforts for law reform are not denied (at least as far as I know, for far be it from me to doubt that I may likewise be represented as hostile to that), yet you and others, who do not sufficiently reflect on the facts, and do not at all consider how mischievous such statements are to the common cause, are pleased to question my being friendly to other reforms. Subsequent events may perhaps have taught those who complained of our scanty doings in reform, that our position was not without its difficulties. But this I will assert, that had we met Parliament in office, no man would have said the vacation had been passed without abundant attempts to prepare measures of public usefulness.—IN A WORD, IMPORTANT RE-

FORMS—and I will add, that if any man shall suppose I was behind ANY ONE of my colleagues in the zealous and active support, and in the assiduous preparation of them—that man, be he who he may, will fall into the greatest mistake ever man committed.

"In conclusion, let me ask what right any one has to suspect my motives, when I happen to differ with him? My life, excepting four years, was a continued sacrifice of interest to my principles as a Reformer and friend of liberty; and even in taking office four years ago, I made a sacrifice both of feeling and of interests which some alive, and some, alas! no more, well know the cost of. But all the time I was in opposition did I ever show the least slackness to my duty in the cause of free opinion and of opposition to the Court? What abuse did I ever spare? What bad measure did I ever leave alone? What Minister did I ever suffer to rest while the country was to be served by opposing him? With whom did I ever compromise, or treat, or do otherwise than absolutely refuse all parley? SURELY, EVEN WHERE REFORMERS DIFFER, THESE ARE FACTS WHICH, AS THEY GIVE THE LAST PLEDGE OF SINCERITY ON THE ONE PART, OUGHT TO RECEIVE THE MOST FAVOURABLE CONSTRUCTION AS TO MOTIVE FROM THE OTHER.

"Yours truly,  
"H. BROUGHAM."

#### "TO THE ELECTORS OF THE BO- ROUGH OF TAMWORTH.

"Gentlemen,—On the 26th of November last, being then at Rome, I received from His Majesty a summons, wholly unforeseen and unexpected by me, to return to England without delay, for the purpose of assisting His Majesty in the formation of a new Government. I instantly obeyed the command for my return, and on my arrival I did not hesitate, after an anxious review of the position of public affairs, to place at the disposal of my Sovereign any services which I might be thought capable of rendering.

"My acceptance of the first office in the Government terminates for the present my political connexion with you. In seeking the renewal of it whenever you shall be called upon to perform the duty of electing a representative in Parliament, I feel it incumbent upon me to enter into a declaration of my views of public policy, as full and unreserved as I can make it, consistently with my duty as a Minister of the Crown.

"You are entitled to this from the nature of the trust which I again solicit, from the long habits of friendly intercourse in which we have lived, and from your tried adherence to me in times of difficulty, when the demonstration of unabated confidence was of peculiar value.

"I gladly avail myself also of this, a legitimate opportunity of making a more public appeal—of addressing, through you, to that great and intelligent class of society of which you are a portion, and a fair and unexceptionable representative—to that class which is much less interested in the contentions of party than in the maintenance of order, and the cause of good government, that frank exposition of general principles and views which appears to be anxiously expected, and which it ought not to be the inclination, and cannot be the interest, of a Minister of this country to withhold.

"Gentlemen,—the arduous duties in which I am engaged have been imposed upon me through no act of mine. Whether they were an object of ambition coveted by me—whether I regard the power and distinction they confer as any sufficient compensation for

the heavy sacrifices they involve, are matters of mere personal concern, on which I will not waste a word. The King, in a crisis of great difficulty, required my services. The question I had to decide was this—shall I obey the call, or shall I shrink from the responsibility, alleging as the reason that I consider myself, in consequence of the Reform Bill, as labouring under a sort of moral disqualification, which must preclude me, and all who think with me, both now and for ever, from entering into the official service of the Crown? Would it, I ask, be becoming in any public man to act upon such a principle? Was it fit that I should assume that either the object or the effect of the Reform Bill has been to preclude all hope of a successful appeal to the good sense and calm judgment of the people, and so to fetter the prerogative of the Crown, that the King has no free choice among his subjects, but must select his Ministers from one section, and one section only, of public men?

"I have taken another course, but I have not taken it without deep and anxious consideration as to the probability that my opinions are so far in unison with those of the constituent body of the United Kingdom as to enable me, and those with whom I am about to act, and whose sentiments are in entire concurrence with my own, to establish such a claim upon public confidence as shall enable us to conduct with vigour and success the government of this country.

"I have the firmest conviction that that confidence cannot be secured by any other course than that of frank and explicit declarations of principle,—that vague and unmeaning professions of popular opinions may quiet distrust for a time, may influence this or that election, but that such professions must ultimately and signally fail, if, being made, they are not adhered to, or if they are inconsistent with the honour and character of those who make them.

"Now, I say at once, that I will not accept power on the condition of declaring myself an apostate from the principles on which I have heretofore acted; at the same time, I never will admit that I have been, either before or after the Reform Bill, the defender of abuses, or the enemy of judicious reforms. I appeal with confidence in denial of the charge to the active part I took in the great question of the currency, in the consolidation and amendment of the criminal law, in the revival of the whole system of trial by jury, to the opinions I have professed and uniformly acted on with regard to other branches of the jurisprudence of the country—I appeal to this as a proof that I have not been disposed to acquiesce in acknowledged evils, either from the mere superstitious reverence for ancient usages, or from the dread of labour or responsibility in the application of a remedy.

"But the Reform Bill, it is said, constitutes a new era, and it is the duty of a Minister to declare explicitly—first, whether he will maintain the Bill itself; and, secondly, whether he will act upon the spirit in which it was conceived.

"With respect to the reform Bill itself, I will repeat now the declaration which I made when I entered the House of Commons as a member of the Reformed Parliament, that I consider the Reform Bill a final and irrevocable settlement of a great constitutional question, a settlement which no friend to the peace and welfare of this country would attempt to disturb, either by direct or by insidious means.

"Then, as to the spirit of the Reform Bill, and the willingness to adopt and enforce it as a rule of

government—if, by adopting the Spirit of the Reform Bill it be meant that we are to live in a perpetual vortex of agitation, that public men can only support themselves in public estimation by adopting every popular impression of the day, by promising the instant redress of anything which anybody may call an abuse, by abandoning altogether that great aid of Government, more powerful than either law or reason—the respect for ancient rights, and the deference to prescriptive authority,—if this be the spirit of the Reform Bill, I will not undertake to adopt it; but if the spirit of the Reform Bill implies merely a careful review of institutions civil and ecclesiastical, undertaken in a friendly temper, combining with the firm maintenance of established rights, the correction of proved abuses, and the redress of real grievances, in that case, I can for myself and colleagues undertake to act in such a spirit and with such intentions.

“Such declarations of general principle are, I am aware, necessarily vague; but, in order to be more explicit, I will endeavour to apply them practically to some of those questions which have, of late, attracted the greatest share of public interest and attention.

“I take, first, the inquiry into Municipal Corporations.

“It is not my intention to advise the Crown to interrupt the progress of that inquiry, nor to transfer the conduct of it from those to whom it was committed by the late Government. For myself, I gave the best proof that I was not unfriendly to the principle of inquiry, by consenting to be a member of that committee of the House of Commons on which it was originally devolved.

“No report has yet been made by the Commissioners to whom the inquiry was afterwards referred, and until that report be made, I cannot be expected to give, on the part of the Government, any other pledge than that they will bestow on the suggestions it may contain, and the evidence on which they may be founded, a full and unprejudiced consideration.

“I will, in the next place, address myself to the questions in which those of our fellow-countrymen who dissent from the doctrines of the Established Church take an especial interest. Instead of making new professions, I will refer to the course which I took upon those subjects when out of power. In the first place, I supported the measure brought forward by Lord Althorp, the object of which was to exempt all classes from the payment of church-rates, applying in lieu thereof, out of a branch of the revenue, a certain sum for the building and repair of churches.

“I never expressed, nor did I entertain the slightest objection to the principle of a bill of which Lord John Russell was the author, intended to relieve the conscientious scruples of Dissenters in respect of the ceremony of marriage. I give no opinion now on the particular measures themselves; they were proposed by Ministers in whom the Dissenters had confidence; they were intended to give relief, and it is sufficient for my present purpose to state that I supported the principle of them.

“I opposed, and I am bound to state that my opinions in that respect have undergone no change, the admission of Dissenters, as a claim of right, into the Universities; but I expressly declared, if regulations enforced by public authorities superintending the professions of law and medicine, and the studies connected with them, had the effect of conferring advantages of the nature of civil privileges on one class of the King's subjects from which another class was ex-

cluded, those regulations ought to undergo modification, with the view of placing all the King's subjects, whatever their religious creeds, upon a footing of perfect equality with respect to any civil privilege.

“I appeal to the course which I pursued on those several questions, when office must have been out of contemplation; and I ask with confidence, does that course imply that I was actuated by any illiberal or intolerant spirit towards the Dissenting body, or by any unwillingness to consider fairly the redress of any real grievances?

“In the examination of other questions which excited public feeling I will not omit the Pension List. I resisted, and with the opinions I entertain I should again resist, a retrospective inquiry into pensions granted by the Crown at a time when the discretion of the Crown was neither fettered by law, nor by the expression of any opinion on the part of the House of Commons. But I voted for the resolution moved by Lord Althorp, that pensions on the civil list ought for the future to be confined to such persons only as have just claims to the Royal beneficence, or are entitled to consideration on account either of their personal services to the Crown or of the performance of duties to the public, or of their scientific or literary eminence. On the resolution which I thus supported as a private member of Parliament I shall scrupulously act as a Minister of the Crown, and shall advise the grant of no pension which is not in conformity with the spirit and intention of the vote to which I was a party.

“Then, as to the great question of Church Reform, on that head I have no new professions to make. I cannot give my consent to the alienation of Church property in any part of the United Kingdom from strictly ecclesiastical purposes. But I repeat now the opinions that I have already expressed in Parliament in regard to the Church Establishment in Ireland, that if, by an improved distribution of the revenues of the Church, its just influence can be extended, and the true interests of the established religion promoted, all other considerations should be made subordinate to the advancement of objects of such paramount importance. As to Church property in this country, no person has expressed a more earnest wish than I have done that the question of tithe, complicated and difficult as I acknowledge it to be, should, if possible, be satisfactorily settled, by the means of a commutation founded upon just principles, and proposed after mature consideration.

“With regard to alterations in the laws which govern our ecclesiastical establishment, I have had no recent opportunity of giving that grave consideration to a subject of the deepest interest which could alone justify me in making any public declaration of opinion. It is a subject which must undergo the fullest deliberation, and into that deliberation the Government will enter with the sincerest desire to remove every abuse that can impair the efficiency of the establishment, extend the sphere of its usefulness, and to strengthen and confirm its just claims upon the respect and affections of the people.

“It is unnecessary for my purpose to enter into further details. I have said enough with respect to general principles, and their practical application to public measures, to indicate the spirit in which the King's Government is prepared to act. Our object will be the maintenance of peace, the scrupulous and honourable fulfilment, without reference to their original policy, of all existing engagements with Foreign Powers, the support of public credit, the enforcement of strict economy, and the just and impartial considera-

tion of what is due to all interests, agricultural, manufacturing, and commercial.

‘Whatever may be the issue of the undertaking in which I am engaged, I feel assured that you will mark by a renewal of your confidence your approbation of the course I have pursued in accepting office. I enter upon the arduous duties assigned to me with the deepest sense of the responsibility they inspire, with great distrust of my own qualifications for their adequate discharge, but at the same time with a resolution to persevere which nothing could inspire but the strong impulse of public duty, the consciousness of upright motives, and the firm belief that the people of this country will, so far maintain the prerogative of the King as to give to the Minister of his choice, not an implicit confidence, but a fair trial

“I am, Gentlemen, with affectionate regard,

“Most faithfully yours,

“ROBERT PEEL.”

### THE BUCKINGHAMSHIRE DINNER.

PROSPECTS OF RELIEF TO THE AGRICULTURIST AT THE HANDS OF THE NEW MINISTRY.

(From their official organ, the *Standard*.)

When the health of Lord Chandos was proposed, with what greeting received we need not say, his lordship addressed the meeting. The character of the assembly, as well as its original purpose, required that his lordship should address himself more particularly to the hope which the agricultural population naturally enough rest upon the late happy change in the King's government. The noble marquis spoke with his characteristic frank eloquence of the necessity of a Repeal of the Malt Tax in the whole, or in part. That the Malt Tax is in all attributes of a bad tax, the worst of all our taxes,—that it is the most unprofitable to the Exchequer in proportion to its burthen upon the people, that its tendency is demoralizing, beyond the tendency of any other tax, that at present it burthens the most oppressed and suffering class of the community, we have again and again argued. If its continuance deprive the public service of the Marquis of Chandos in the character of a minister, we shall consider the fact no light aggravation of the mischievous character of that tax. We believe there is no second opinion, indeed, we are sure that there is none amongst public men of whom we know any thing, that a repeal or reduction of the malt tax ought to be the very first object with a finance minister of Great Britain. There is unfortunately, however, a wide interval between what can be done, and what ought to be done. We can see that the Malt Tax ought to have been repealed many years ago; and, as many millions of taxes have been repealed, it may seem, at first sight, strange that such a tax is permitted to continue. Beside, however, the proverbial weakness of the agriculturists as a political body, urging claims, the magnitude of this evil has, as has often happened, supplied its protection. The vice of the Malt Tax lies, at least, as much in its species as in its degree. Were the tax itself reduced from two shillings and sevenpence the bushel, so long as a single penny should be left to subject the manufacture of malt to fiscal superintendence, the farmer would receive no relief, the people would gain no protection, from the vexatious and demoralizing operation of the duty. But a finance minister has rarely such a sum as

four and a half millions, the amount of the malt tax, to surrender in a single session: and if he has, he will find a host of claimants nearer to him, and more clamorous than the farmer. A tax, too, which has been levied to greater or less amount for nearly two centuries, has some prescription to plead. The question, however, now is not, *ought* the tax to be got rid of, but *can* it be got rid off?

We confess that we do not see how the whole can be repealed in any one session; and if the farmers will not content themselves with taking a repeal by instalments, as the opportunity shall arise, we have little hope that the whole tax will be ever repealed; because we do not anticipate that any minister will ever have a surplus fund of four and a half millions to dispose of, and the time for laying on new taxes has gone by.

The Malt Tax constitutes more than a third of the now available revenue of the country. To expect, therefore, that the whole of that tax can be provided for by any practicable reduction of expenditure in any one year, must be very silly. All that the farmers ought to expect, and what, we think, they and the public with them (for as all consume beer the public are really as much concerned as the farmers), have a right to expect, is a beginning, or even a proof of a disposition to begin with the reduction of this tax. A tax is not a principle, a truth of which the *Globe* and *Morning Chronicle* seem to have lost sight when they lecture upon the inconsistency of men who have voted variously upon this same subject, sitting in the same Cabinet. A tax is not a principle, and it is, therefore, a matter perfectly open for compromise. This appears to have occurred to the Marquis of Chandos, for he admitted the possibility of a gradual reduction. We are sorry to observe that one of the persons present objected to anything less than a total repeal. To raise such peremptory objections is, however, the worst possible policy for the agricultural interest. It is as much as if one should say, “What I cannot have at the instant, I will not have at all;” and if this feeling were universal amongst the agriculturists, we certainly should despair of their cause; even now how much would they injure themselves by rendering it impossible for the Marquis of Chandos to take that place in the government, to which the King, the King's ministers, and the country invite him? How much more will they injure themselves, if they destroy as, doubtless, destroy they may, the only government from which they can have any just ground of hope? If ever there was a case for compromise this is the case—let the farmers say fairly, “We generally trust those who have generously served us; we will not proscribe them from those honours and distinctions, to which they have a fair claim, by imposing conditions, impossible to be executed on the acceptance of those honours and distinctions; we will generously confide in our proved friends to do what they can in our service, but we will not disable them by requiring them to do that which they cannot.” Let the farmers take this course, and we think we can confidently promise them relief from the whole of the Malt Tax in a year or two,—perhaps relief from a part in the present year. Let them take another course, and we, no less confidently, predict that they never will be relieved from a farthing of it.

[VOL. II.

## DESCRIPTION OF PLOUGHS IN THE ENGRAVING.

Many applications having been made to us recently, several of which are from Ireland, for information respecting the best constructed ploughs, we have procured a plate of the six ploughs represented upon the engraving as exhibiting some of the approved varieties of those implements which are used in counties that rank highly for their agriculture, and border upon each other. Much, however, as these ploughs differ in form, they are, nevertheless, constructed upon the same principles. It will be observed, that the iron-frame of the plough is a distinct and separate part, to which nearly all the other parts, viz.—the beam and handle, the breast, bottom-rest, and share, are respectively attached, and may easily be removed and re-placed by the plough-man. By this plan the breast, bottom-rests, and share, may either, or all of them, be varied to suit the circumstances and condition of the land on which the plough is to be used. Improvements upon ploughs have called forth the skill of practical agriculturists and scientific men from time immemorial, and all persons interested in the progress of agriculture, must feel gratified to see the important changes for the better which such valuable implements have, from time to time, undergone; and whilst we desire to pay our tribute of well-merited approval to what has been achieved by those ingenious men who, have preceded our modern inventors, we are also glad to see the latter unremittingly engaged in the pursuit of further excellences in the plough, and we heartily desire their success, not only on their own account, but as a public benefit.

To none of those manufacturers who have devoted their attention to this laudable object, are the agriculturists more indebted than the Messrs. Ransome's, of Ipswich, by whom all the ploughs represented in the engraving are manufactured upon an extensive scale.

We shall briefly describe the ploughs upon the engraving.

No. 3. A SUFFOLK WHEEL PLOUGH, with a high carriage and wheels.—This is used on the light soils of Suffolk and Norfolk, and in some parts of Essex; and although it may appear to have rather a high and somewhat cumbersome carriage, the

ploughmen who are accustomed to it, even with a single handle, manage it with perfect ease, and perform their work to admiration.

No. 5. A SUFFOLK SWING PLOUGH, with a single handle.—Excepting only the beam and draught-irons, this plough is similar to the Suffolk Wheel Plough. Varying simply the breast, this plough is in very general use in Suffolk and counties adjoining.

No. 18. BEDFORDSHIRE WHEEL PLOUGH.—This is similar to the Suffolk Swing Plough, with the addition of a land-wheel and furrow-wheel. It has also a pair of handles, instead of a single one. Wheels applied upon this plan, admit of the plough being used either with one wheel or two, or without either. By the use of the wheels, boys at an early age may be taught the art of ploughing, and it is a general remark that land, when ploughed by wheel ploughs, is more correctly and soundly finished, than is the case when swing ploughs are used; but there is less skill in the ploughman, and unless the draught is properly regulated, there must be an increase of labour to the horses.

No. 25. KENT TURN-REST PLOUGH.—This plough has undergone considerable improvements of late years, and is now a much less cumbersome implement than formerly. These ploughs have rest-boards, which serve as mould-boards, and will turn from side to side to admit of the ploughman turning all his furrows in the same direction. This is done chiefly for the purpose of turning the furrow downward from the hills, and for occupying the whole breadth (with little or no intermission for water furrows), with the crop. It is a very powerful and effective implement. Persons unaccustomed to the use of this plough, would be astonished at the beautiful work done by the ploughmen at the annual matches. It is used with four, and sometimes six, horses, and a driver.

No. 37. ESSEX SWING PLOUGH.—This plough has a convex-shaped breast, suited to stiff, strong soils. It has a single-fixed handle, and a loose staff handle, by which it is kept steady in work, and is used to clean the breast when it clogs with the soil in moist weather.

No. 38. HERTFORDSHIRE WHEEL PLOUGH.—This is for stony and rocky soils, and is used in several counties upon land of that description.

### PROPORTION OF DRY FOOD.

The most nourishing food given to horses consists of corn; and *oats* are considered as the best adapted to their constitution; but when any other species of grain is furnished in like proportion of weight, the nicest observers have not been able to discover any apparent difference in its qualities, provided it be mixed with any apparent difference in its qualities, provided it be mixed with a proportionable quantity of straw, chopped fine, or of bran, to supply the place of the husk of the oats, without which other corn should not be given. Horses, when not pressed by hunger, often try to separate this chaff or bran, from the grain, and it is therefore customary to sprinkle it with water; but in that case the greatest care should be taken to thoroughly cleanse the manger, for nothing is more noxious to horses than food thus wetted and allowed to become stale. Grain of every description ought to be free from the natural fermentation which it undergoes if not in a perfectly dry state. Oats harvested in a wet season have been known to occasion epidemical disorders among cattle, and farmers frequently do serious injury to their horses by supplying them with it soon after it has been reaped. Corn that has sprouted is not unwholesome, provided it has not imbibed a bad smell from having been heated; and malt, or barley which has been only slightly steeped for two or three days, though without being dry-malted, is considered to be particularly nutritive. It is thought, indeed, that the completion of the process adds much to its invigorating properties, and it is often used in that shape on the continent, though not in a larger proportion than one-third of other grain; but even, if it has that effect, the duty on malt prevents its consumption by cattle in this country, and it cannot even be purposely wetted without incurring the suspicion of the excise. Many horses, also, which eat voraciously, are in the habit of bolting their food without chewing it; in which case their oats should never be given without being either mixed with chaff, or else bruised by cylinders, such as are used in bruising or grinding malt.

*Beans*, and latterly *peas*, are also largely given to farm horses, without any prejudicial effect; and, if care be taken not to supply them in summer, at which season they are found to be too heating, no bad effect will be found to arise from their use; but, as they contain an unusual proportion of sap, they should be at least a twelve month old; if they shrink in quantity, it will be made up in quality.

When horses are fed on *hay*, it is a matter of dispute whether the light and apparently arid grass of uplands, or that of more fertile natural meadow ground, or the rich produce of the artificial grasses, is to be preferred. This however must depend on the quantity of corn with which they are supplied. When that is abundantly furnished, there can be no doubt that the former will be found better for their general health, and especially for their wind; but as farm horses are generally limited in their consumption of grain, and the slowness of their movement renders the clearness of their wind a matter comparatively of little moment, the other kinds will be found the most substantial, and consequently the best adapted to support their strength.

There can be no doubt that the feeding of horses upon hay, in whatever quantity it may be supplied, can never be entirely substituted with equal effect for corn; but opinions are also divided respecting the proportion in which it may be furnished, both with regard to health and economy. On this, however, no general rule can be laid down, for it must not only depend upon the animal's constitution, but also on the work which he has to support. It has, however, been calculated by a foreign writer of great experience, that ordinarily 8lbs of meadow hay are equal in nourishment to 3lbs of oats; 7lbs however, of sainfoin, tares, clover, or other succulent hay, are supposed equal to the same quantity, though sainfoin is perhaps entitled to the preference; but 9lbs are thought to be required from hay made off poor pasture. The longer too, within a certain time, that hay is allowed to stand in the stack, the better it is, and perhaps that which is a year old is the most wholesome for horses; the second growth is not equally nourishing. It should also be got into the stack as soon as properly dried, in order to preserve the freshness of its scent, which is peculiarly gratifying to cattle.

In general, however, it is to be observed, that, when the quantity of hay is augmented with a view to the diminution of the corn, although horses will thereby acquire more fat than upon the same proportion of grain, yet they are less equal to the efforts of hard work; whereas, if the corn be increased and the hay diminished, though the cattle may appear to grow thin, yet their flesh is more firm, they are capable of greater exertion, and are in what is usually termed "better condition."

---

REDUCTION OF RENT.—At Earl Somers' audit for rent and tithes, held at the Somers Arms, Leigh Sinton, his Lordship, without any solicitation on the part of the tenants, liberally made an abatement of 10 per cent.

---

TURKISH JESTS.—The Khojah one day saw a flock of ducks swimming in a lake; he ran towards them, and they immediately flew away. Taking some bread, he sat down, and, dipping it in the water, began to eat. "What are you doing there Khojah?" said some one from the opposite side. "I am trying the flavour of duck-soup, was the reply.—A robber having broken into Násir-ed-dín's house, his wife, hearing the noise, exclaimed, "Efendi! Efendi! there's a thief in the house." "Oh," said the Khojah, "never mind; I only hope he will find something, that we may take it from him."—One day Násir-ed-dín ascended the pulpit of the mosque, and thus addressed the congregation, "Oh, true believers! do you know what I am going to say to you?" "No," responded the congregation; "Well then, said he, "there is no use in my speaking to you, and he came down from the pulpit. He went to preach a second time, and asked the congregation, "Oh, true believers! do you know what I am going to say to you?" "We know," replied the audience. "Ah! as you know it," said he, quitting the pulpit, "Why should I take the trouble of telling you?" When next he came to preach, the congregation resolved to try his powers, and when he asked his usual question, replied, "Some of us know, and some of us do not know." "Very well," said he, "let those who know tell those who do not know."

## AGRICULTURE OF THE MILANESE.

The country between Cremona and Lodi comprises the richest part of the Milanese. The irrigation, too, is brought to the highest state of perfection. The grass is cut four times a year as fodder for the cows, from whose milk is made the well-known cheese called Parmesan. The cows, which are kept in the stall nearly all the year long, are fed during summer on two of these crops of grass or clover, which are cut green, and in the winter on the other two, which are hayed.

The milk of at least fifty cows is required for the manufacture of Parmesan cheese. Hence, as one farm rarely affords pasture for such a number, it is usual for the farmers or metayers of a district to club together. The milk of fifty, sixty, or even of a hundred cows, is brought twice to the farm where the dairy is fixed: the person on whom devolves the task of making the cheese keeps an account of the milk received, and the cheese is afterwards apportioned accordingly. In this fertile plain, a farm of sixty English acres is considered as a large one. These farms are subdivided into fields of two or three acres, for the convenience of irrigation; a practice which, in the course of a few years, impairs the quality of the grass to such a degree, that it becomes necessary to discontinue it. In this case the sluices of the Gora are shut, the ground is ploughed in autumn, and, in the following spring, sown with hemp, which shoots up a great height; when this is pulled, the ground is sown with leguminous plants. In the next spring it is sown with oats, which grow to the height of six or seven feet. The richness of the soil being thus sufficiently subdued, it is next cropped with wheat. Maize is then sown in the following spring; a second crop of wheat succeeds, and finishes the course of cropping.

The ground is then left to itself, and is immediately covered with herbage. During winter it is manured, and the new meadow is then subjected again to the process of irrigation, which is usually continued for fifteen years. Thus the rotation in the Milanese extends to twenty years; five years for the growth of hemp, pulse, and grain; and fifteen for the growth of grass. Rice is also grown in some parts of the Milanese; but as it partakes of the nature of an aquatic plant—the rice-grounds are kept under water during nearly the whole period of its growth—its cultivation has been placed under considerable restriction by the government, owing to the malaria which it engenders.—*Evans's Italy and Sicily.*

## TO THE EDITOR OF THE MORNING HERALD.

SIR,—To avert national calamities, or to devise national profitable employment for the agricultural and mechanical poor, are amongst the greatest blessings which a man can bequeath to his country.

In your leading remarks upon the malt duty on the 30th ult., in which are to be found the vital principles by which we may avoid the one and accomplish the other; the extent and want of means, on the one hand, is to be supplied in the vastness of the demand in the other; the periodical duration in a species of labour derivable from a natural source, without supplanting the work of another.

However acceptable and desirable such a species of employment is, unless the life-giving word PROFIT be attached to the outlay, the best devised plans, with the combination of individual capital and talents, backed by the new poor laws, will prove but a "baseless fabric," and only mock the genius that contrived, or the judgment that founded it.

Therefore I take profit for the basis of production, and production the basis for labour; the demand to regulate the extent, the extent and the demand to supply the means of employment of the now idle, but industrious and starving, population.

In the abolition of the malt tax, however desirable this may be to the working classes, and to a few exclusives, whose incomes rest upon stationary interest, its abolition would give but little, if any, additional demand for manual labour—the effect in that way would be only as a drop in the ocean. What is wanted is effectual, at the same time judicious and permanent, employ. I am aware of the rational bearings it would have upon society, but profitable manual employment to any extent it would not produce.

But is it not, or can it not effect both the one and the other, as a profitable source for outlay by giving a stimulus to spade husbandry, or the cultivation of land for the production of barley by manual labour, the duty being the source of profit, and malt, the production from land the produce of barley, its demand and extent of growth are the platform and basis of action, and in which the poor man is to be the main performer. The natural consequence of demand is an advance of price; as in other articles, so in labour.

To make this species of labour profitable, the malt duty must be *continued*, not upon the present principles, but to effect a great national object, that of giving employment to the poor and to capital.

For this end land cultivated by manual labour, or by the spade, for the purpose of raising barley; the produce of barley from such land so cultivated (under proper vouchers) to be admitted to be made into malt duty free.

Thus, the duty being remitted, is transferred as a premium for the culture, by which the produce is effected, and consequently is a premium upon the barley, and, constituting the basis of a profitable return upon the outlay, raises a competition in favour of an extensive employment of the poor, in opposition to the present mode of culture.

The effects upon the poor rates, the advantage to the poor man's allotment system, and the probable effect on those pests to morals and character, those hells of destruction, the beer-shops, the natural effects upon articles of consumption, and the hundreds of contingent circumstances which would flow from the principle in making the malt tax a productive source of employment to the poor, in admitting barley the production from land cultivated by hand-labour—any advocacy upon such a proposal, and its general bearings, would be too long for a letter; which, if this should deem acceptable to your columns, will oblige a constant reader,

THE SON OF A FARMER.

DOMESTIC SERVANTS.—The number of female servants in Great Britain is upwards of 700,000; and if their ages were calculated we do not doubt but it would be found that two-thirds of all the British damsels between the ages of fifteen and twenty-five, are domestic servants. Yet, notwithstanding this immense supply of female labourers, the demand is superior to it; their wages rise, and their property is strikingly evinced by their elegant garments and costly decorations. Male servants are not so numerous, yet the demand is superior to the supply; and the services of a footman, gratuitously educated at the parish school, already command a higher price than the services of men who have expended large sums in the acquirement of classic lore at the Universities.

## IMPORTANT TO OUTGOING TENANTS BEING FARMERS.

TO THE EDITOR OF THE LINCOLNSHIRE CHRONICLE.

Sir,—Permit me, through the medium of your excellent, and I am happy to observe, now widely-circulated journal, to ask a question or two of your rural readers, and at the same time to lay before them a few observations which, in my humble opinion, have a very strong bearing upon their interests as farmers. I hardly need remark, that in these times, men are much given to change, the cause of which may in some measure be attributed to the march of mind: not only do we see things in a different light to that in which our forefathers saw them, but we have the vanity to think that ourselves are right in our new mode of drawing conclusions, and that they were generally wrong: hence it happens that innumerable theorists have sprung up amongst all classes of society, and by consequence of the change of sentiment above alluded to, have supplanted the old and tried practical men, who had heads to contrive and hands to execute, but unfortunately for their well-being, lacking that volubility which is so admirably calculated to mystify. Now, sir, in glancing at the pests of society, I shall be free to remark that there are many to be found amongst the fraternity of gentlemen called land-agents; of course, there are also many worthy exceptions to my rule: to come, however, at once to the point, I mean to say that a large majority of them are as ignorant of the duties of their calling as it is possible for them to be; and this, sir, upon the simple principle that they have either been drawn from a respectable law office, or else have derived their profound skill in rural economy from the vicinity of Kensington and Brompton. I trust, Sir, that I shall not fall under the imputation of wishing to deride any set of men on account of their calling, but lest I should, it may be well for me to remark that I entertain all due respect for the profession of the law, and I also esteem in his place the nursery-man. The practice, then, of which I have now to complain is this,—your theoretical agents are in these days not to be approached for any other purpose but to be presented with rent; a tenant may have grievances to redress, he may require assistance to effect improvements on his farm; or he may wish to remind your agent (after the new fashion), of a promise which was made to him at the time of entering; but is it to be credited, that if he ventures into the presence of Mr. Newstyle with any thing like a petition, it is more than probable that he will be saluted with these kind words,—“Now really you are always bothering us for something; you are never satisfied.” But, Sir, this is a mere trifle compared with what I have yet to notice. It has within the last two or three years been attempted in this country to abolish the very old and just usage of protecting an outgoing tenant in the remuneration claimable for having conducted with due regularity, certain businesses upon the farm which he is about to leave, by which his successor, the in-coming tenant, is alone to be benefited, and for neglecting of which, he, the out-goer, is told that he will be liable to an action at law. Now really, Sir, this is the very perfection of justice to be sure! A farmer quits at Lady-day, having duly prepared by a dead fallow and sown, a crop of wheat, which his successor is to reap, and yet he is to be told, that scarcely half his outlay in setting such crop is recoverable; but even if half is admitted, he is perhaps told that he may get it as he can. It is now then that

I arrive at the point for asking my questions. I will thank any man of business and character to inform me if this can be borne out by the law, and if not, I will next thank him to inform me against whom the out-going tenant has his remedy.—He may seek for it against the in-coming tenant, and having got into court, or after a non-suit, may be told that he should have brought his action against the landlord. Of course I have my notions upon this point, but as my letter is already too long, I shall for the present withhold them; in the interim, I hope to be enlightened on this very interesting subject, which must not on any account be lost sight of, for these times must cause thousands of respectable farmers either to give up or change their farms; and it is highly probable that the new race of agriculturists will partake of the qualifications of the new-fangled agents, and both combine to cheat the worthy retiring farmer of the old school.

I suppose, Mr. Editor, you are aware that an out-going tenant is of no use to his landlord after he has paid his last half-year's rent. No, no, it is to the new tenant that the agent directs his cunning; but, alas, having fixed him, he, too, is frequently left to shift for himself.

I remain, Sir,

YOUR'S AND THE FARMER'S WELL-WISHER.

Jan. 13th, 1835.

WONDERFUL TREE.—That extraordinary production of the arboreal kingdom, the *Palo di Vaca*, or “milk-bearing cow tree,” which flourishes in Para, in South America, is among the loftiest of the forest, growing to the height of 100 feet and upwards. It bears a delicious edible fruit, which has the united flavour of strawberries mixed with cream, and its trunk yields as fine bowls of milk as those from a cow! “It seems rather startling,” says Mr. Webster, in his ‘Voyage to the Southern Atlantic,’ “to talk of a tree yielding milk, but such is the fact; and it is drunk by the people in large quantities, and was used by us at the gun-room table for mixing with tea, in lieu of cow's milk, from which it is no ways distinguishable in general use. The milk is a rich, white, bland fluid, without odour, and of the taste and flavour of common milk. It mixes readily with tea or coffee, without curdling or undergoing any change, and in every respect seems like cow's milk. Boiling water does not alter it. It keeps unaltered six or seven days in the temperature of 85 degrees. \*\*\*\*\* It appears to differ from all the known milky juices of plants, and to approach in obvious properties to animal milk, from which it differs widely in chemical composition. There is no cream or caseous (cheesey) matter. I kept a bottle of the milk until our arrival at Trinidad, eight weeks after my procuring it, when it was sent to the Admiralty. Some, which I had myself, had then separated into a sourish milky water and a white solid mass, which, when taken out and dried in the air, was a white inflammable substance, not softening at the temperature of the body, melting at 144 degrees, tasteless, insoluble in water or spirits, and resembling white wax more than any other substance to which I could compare it. It burned with a bright agreeable flame, without smell, and was neither greasy nor resinous; I am therefore inclined to consider it as a species of wax.” To complete the marvel of this tree, we must mention, that it affords the most valuable timber for ship-building, and that it is so used in the dock-yard at Para.

## PROPAGATION OF PLANTS.

It is astonishing how much sound practical information and lively pleasure can be attained by a little careful attention to the structure and habits of plants. It is but too commonly remarked that persons go to a nurseryman, observe something which they admire, purchase it, perhaps at a considerable price, see it sicken almost from the very day when it is brought home, and lose it without having enjoyed the pleasure of witnessing the expansion of one healthy flower. Tired with repeated disappointments, disgusts succeed to anticipated satisfaction, and a favourite pursuit is abandoned. The metropolis and large towns infested with smoke, offer, it is true, but little encouragement; but in the country, and indeed anywhere in which the air is in a tolerably pure state, plants may be grown and kept in a vigorous health. But how is this to be accomplished? Chiefly by attending to the habits of the plant, to its physical structure, and to the constitution of the climate of which it is native. This attention implies considerable reading and observation, more perhaps than the ordinary circumstances of many individuals will permit them to undertake or bestow; the best substitute, therefore, for a knowledge of general and permanent cultivation, will be the attainment of a ready method of increasing the stock of plants already possessed. A vast number of beautiful subjects may be multiplied by cuttings of the young shoots, taking off by a sharp penknife, under a joint, that is, at the point where a minor shoot emerges from a larger branch, or just under that part where there is a single leaf or a pair of leaves. The leaf is a vital organ, it is intimately concerned in the production and support of young buds, and these buds are each a system of life, which may be separated from the mother and made to develop those organs which imbibe the vegetable nutriment. When these organs are protruded, life is established, and the plant increases in size, and produces leaves, shoots, buds, and all the parts which constitute a perfect vegetable. A pot of good garden earth of the size that will admit a tumbler or bell-glass inverted to drop within its rim, will enable any one to increase a favourite geranium, myrtle, caronilla, salvia, &c. In general, however, a cutting will be much assisted if its heel be placed in pure silver writing-sand. Three or four small holes should be made in the soil twice or three times the diameter of the shoot, and so deep that one joint may be emersed, and the joint above rest upon the surface of the soil. Things being thus prepared, a little of the sand should be poured into the hole, to the depth of a quarter of an inch; upon this the cutting is to rest, or rather it is to be pressed down a little, and then the hole is to be filled with the sand. Water should be added just to moisten the sand, and the glass being inverted over the cutting or cuttings, the first operation will be complete. But another mode of increase, and one far more interesting and instructive, remains to be pointed out; it has been extensively practised, and will be more so; though it appears certain it will not succeed with some families of plants.

Geraniums are, it should seem, one of the exceptions; but they propagate so readily in sand, or sandy loam, and sometimes by seeds, that no anxiety need be entertained with respect to them. But we will suppose that some of our readers have a fine balsam, of perfect growth, which will not flower. This is a circumstance of no uncommon occurrence; the season passes, and no bloom has been

discoverable. Again, the lemon plant, formerly termed *verbena tryphilla*, now *aloesia citriodora* (the specific name is derived from two Latin words, which imply the odour or scent of a lemon.) This plant, according to its native habit, grows high, straggling, and unsightly; it blows, but produces no seeds.—In either or both of these cases, if a cutting of two or three inches be taken off from the leading or lateral shoots, the lower leaves cautiously cut off, so as not to wound the skin or rind, and plunged an inch deep into a phial of pure water, roots will be gradually protruded into the fluid, particularly if the phial can be kept in a gentle heat (as that of a cucumber frame,) and exposed to the sun's light.

It is curious and extremely interesting to watch the development of these water roots; in the first instance a ring of a delicate texture protrudes round the base of the cutting, just within the exterior integument, this increases, and then the fibrous processes are discernible: they gradually extend, and when from half an inch to one inch in length the cutting is become a rooted plant, and may be safely withdrawn from the liquid element and transferred to soil with a certainty of success, provided common caution be employed. The roots formed in water are white as snow; and besides the beauty of the object in itself they evince a power that is altogether extraordinary. The water in which a living plant is formed remains limpid and free from taste or odour; whereas, it is a fact of common observation that if flowers or other decaying vegetable matter remain in water, an odour of intolerable fetor is developed. The contrast is wonderful, and the phenomenon affords a beautiful proof of the wise provision of nature to render all its subjects subservient one to the other. Vegetables are universal purifiers. They take up and elaborate those substances which would be not only offensive, but highly injurious to animal life.

Without dwelling longer on secondary effects, it may be added that, in the instances above alluded to, the balsam cutting has become a perfect plant, which, in nine cases out of ten, will produce a number of perfect blossoms before it attain the height of eight or nine inches. That of the aloesia also will start off rapidly, and by being shortened after it has grown to double its original height, will throw out lateral shoots and become a handsome shrub. The old plant likewise may be pruned and cut into figure; and thus, while it affords an amply numerous succession, may itself be formed anew and perfectly renovated.

The facts stated are but few, and perhaps not sufficiently explicit, but our limits will not permit us further to enlarge now; but they may, however be multiplied and extended; and should they afford to any of our readers—our female friends in particular—as much satisfaction as we experience in recording them, the obligation will be mutual and the pleasure almost without alloy.

---

OVERSEER'S ACCOUNTS. — We would remind such of our readers as fill the office of Overseers of the Poor, that by the 4th and 5th Geo. IV. c. 76, sec. 47, they are now required, "once in every quarter" to make and render to the auditors in their respective parishes, a full and distinct account in writing of all monies, &c. committed to their charge, or received, held, or expended by them, on behalf of their respective parishes.

## ON THE CORN LAWS.

Mr. Editor,—I have already shown the extraordinary act of justice to the labouring classes that is proposed by the advocates for the repeal of the corn laws, in giving them food as cheap as other nations have it; and I have now to consider their equally strange doctrine for the extension of our commerce—the exchanging our manufactures for the cheap corn of the North of Europe, that thereby we might be enabled more effectively to compete with other manufacturing nations in the general markets of the world.

Now Adam Smith has shown that the benefit derived by a nation from its trade and commerce, whether internal or external, is a per centage profit upon the amount of capital employed in them.

To this it may be added, that the extent of the trade of England with any other nation is not according to what we can export, but bounded by the means which that country possesses of giving us returns; and bounded also by our means of finding a sale for these returns at home, in barter against the produce of other labour here. We may indeed take, as returns, the precious metals as we do from South America, of which country they are the produce, and to the extent that she can give them to us; or we may take other goods to send to a third country, and there exchange them for different other wants that we require to be supplied; but we cannot have any continued trade to obtain the precious metals from another country that does not produce them. Our foreign trade can only be the barter of the surplus produce of our labour, against the surplus produce of the labour of other countries; and though bills of exchange, representing the transactions, may pass amongst the many persons carrying on that trade, and, though one export manufacturer may sell his goods abroad, be content to realise a smaller profit, and take bills representing the returns made by another merchant, in order to effect a more speedy return of his capital, and its more frequent employment in his trade, still the profit to our nation, upon its export trade is not in the sales abroad, but according to the realisation of the returns here, giving a greater or less per centage upon the capital advanced.

Then, upon what has been stated, let us take a case in practice—that of a Frenchman exporting to South America a bale of cotton goods, of the value of 90*l.*; and an Englishman sending his bale of goods of the like quantity, fabric, and quality, which, at our higher scale of value and wages, will cost here 100*l.* In South America they will both sell for the same price, which may be a sum that will purchase there 1,000 hides; but the Frenchman, after payment of freight and expenses, and at the lower scale of value in France, only gets there 94*l.* 10*s.* for them; while, at our high scale of value, 105*l.* is realised here for the same. In both cases they each obtain the same rate of profit, but the Englishman upon the higher scale of cost. Further, the course of exchange determines the relative cost of dollars and hides, and, unless the supply of the latter in South America be more than the wants of England and France, the cost of hides there will not be according to their price in France, but somewhat nearer to what they would realise at the higher scale of value in England; and thus the Frenchman's advantage in the lower scale in value of his exports, is fully counterbalanced, in his competition with England, by what is, to him, a dearer cost of returns, and by his lower sales in France.

Our higher cost of goods is, therefore, no disadvantage to us in our competition in the general markets of the world, except when there are higher import duties levied here (as, for instance, is the case upon East India sugar), that prevent our having the advantage of the high scale of value in the home market for our returns, and compel us to seek for a sale abroad, where the scale of value is lower.

The prices of goods in different countries are constantly varying, according to the supply and demand in each; and, in many instances, the advantages which our merchants would derive from the general higher scale of value in England, is taken from them by the excessive import duties levied here, so much higher than elsewhere; and, though the case above stated may not be strictly correct as regards the actual relative cost and sales, yet it will be found faithfully to represent the principles that operate in our competition with other nations in the foreign markets. And, at any rate, it is quite sufficient to show that in their arguments for the repeal of the corn laws, to increase our foreign trade, these repealers only state half the question, and that the least half. For, except corn, as returns for that trade into which they desire to force us with the Baltic, with their doctrine that gold is both the standard of value and the scale and measure of value too, and, therefore, measuring quantity of labour in different countries by the amount of money wages paid in each, they only look to the money price at which our manufactures can arrive in the general markets in the world, and the idea never seems to have entered into their profound calculations, of how the returns for our foreign trade were to be disposed of, and upon which alone the profit to the nation can be realised.

Now, though we have never been able to induce a sudden taste abroad for our manufactures to the extent of our occasional sudden wants of food, and though, like Israel's sons of old, we have been obliged to carry money in our hands to buy corn in times of scarcity, yet, unquestionably, if our ports were constantly open at a small fixed duty, the foreigners would take our manufactures for their corn.

And it is no doubt correctly stated that the price of corn would rise abroad and fall here, yet certainly fall much more here than it would rise abroad, as the price of any individual article is according to that at which capitalists will venture to hold the surplus quantity of it; and corn is not generally considered either a good or a safe article to hold. And, further, it may be as correctly stated that we might extend such a trade for foreign corn eventually to the amount of 10 or 15 millions a-year.

But what then? From the best trade in the nation that affords us a return beyond the labour and capital expended upon it in rents, and to the extent of these our imports of foreign corn; from our soil there would be just so much less produce of labour to barter against the manufacturers' products, or against the returns of what he has sent to the markets abroad, just so much less sale for them here. Mark you! this export to get foreign corn would not be any increase in the extent of our manufacturing business, as the repealers would wish us to believe; it would only be the exchange by the manufacturer of one market, the home one, which at our present higher scale of value, is a good one to him, for another, which at the lower scale of value abroad, would be an infinitely worse one.

And now see the consequences of it. I have already shown that, with barely one-fifth taken at present in taxes from the gross produce of labour, a considerable portion of the less productive part of our soil has been thrown out of cultivation, and that, with a further reduction in the price of corn, and a consequent reduction also in our scale of value, which would bring the amount of our fixed money charge to bear a much larger proportion to our then money income, a still greater part of our land would cease to be cultivated, and, therefore, so much less means afforded for the sale of the manufacturers' products, causing want of employment, misery, and distress.

But let that pass, and there still remains quite sufficient to show what an evil to our trade would be the opening of our ports to foreign corn. For, to the extent of the consequent fall in our scale of value, there would be an equal depreciation upon the 45,000,000 that we annually get in return for goods exported, and should then have to receive; and also the like depreciation upon a large part of our still greater home trade. This consideration alone is quite sufficient reason for our having the question finally and definitively settled; for that depreciation might, and certainly would, most likely, produce a convulsion in the commercial world such as we have never yet experienced; and it is but just and right that our minds should be set at rest upon the subject, and that we should not see one of his Majesty's advisers for the repeal, another neutral, and a third against it.

Again, according to the extent of the reduction in our scale of value, consequent upon the fall in the price of corn from our ports being open, would there be just so much less capital employed, not only in our foreign, but also in our still greater home trade; and the profit from them being only per centage the amount of capital employed, what benefit could our merchants and manufacturers expect from the repeal of the corn laws? Our foolish endeavours for several years past, at what is most erroneously called low prices, would teach us—for there can be no reduction in the cost of a commodity except by the saving in labour of producing it—they should teach us what we might expect if we would look at and consider them.

In 1817, after the peace, and when new markets were opened to us, the official value of the exports of British produce and manufactures, a fixed value for a given quantity, and therefore only relating to quantity, was 39,235,467*l.*, and their declared value, the actual cost, was 40,349,235*l.* And in 1831, the latest I have at hand, the official value of the like exports was 60,686,364*l.*, and their declared value 37,164,372*l.*

The extent of our foreign trade in 1831 had increased 54·67 per cent beyond what it was in 1817, and yet 7·89 per cent less capital was employed in it. Here no question can be raised about a metallic or a paper currency; for, in 1817, the price of gold did not average above 3*l.* 19*s.* an ounce. Can it be said that, with our reduced scale of value in 1831, we then obtained so much per centage profit from our foreign trade as we got in 1817 with 45 per cent. less business? It may, indeed, be asserted that our expenditure must have been lessened by the same lower scale of value; but common experience shows us that the cost of many of our wants has not been equally reduced, and, as far as they are the products of machinery, they could not be so reduced, and, so far, only reduced by improvements made in that machinery.

The capital employed in our home trade in 1831 was reduced in the same ratio as in our foreign

trade: and well then might Mr. Lewis Lloyd and Mr. Gurney, in their evidence, not long ago, before the House, exclaim of the evil of large masses of unemployed capital, though they do not seem to have exactly understood the cause of it; and this redundancy of capital reducing the market price of interest, reduced also the rate of per centage profit; and thus, in 1831, we had not only a per centage upon a less amount of capital employed, but also a lesser rate of per centage profit.

And, with all this experience before them, if our scale of value were further reduced by opening our ports to the admission of foreign grain, could our merchants and manufacturers expect—even if our trade was thereby increased 55 per cent. more than it was in 1831, which it would not be, but the reverse, destroyed—could they expect to derive benefit from it? or could the operatives expect better wages, when I have already shown, that as we reduce our scale of value, and the cost of our food, in the same ratio we increase the pressure of our fixed money charge in taxes, and lessen our means of meeting our necessary wants?

In my first letter, and so far in this one, I have met the advocates for the repeal of the corn laws upon their own ground, and chiefly argued the question with them upon their own showing of it.

But what are the real merits of the case? Why these—that, according to Adam Smith's correct idea of the cost of commodities, we, with a climate most genial to the growth of all grasses, with improved knowledge in agriculture and the rotation of crops, and with better implements of husbandry, aided by a greater spirit of rivalry, can produce a given quantity of corn cheaper than any other nation in the world; that is, with a less quantity of labour, in a given time, upon an equal quantity and quality of land.

And, now, with equal taste and elegance of fabric, we can produce our manufactures as cheap as any other nation in the world, that is, with as little labour in a given time, and, perhaps, cheaper, for there are our iron and coal close to our hand, for forming machinery and giving power to it. There are our good roads, canals, and railways, for rapid and easy transport to any part of the nation; and, moreover, there are our capacious docks and warehouses, with cranes and power, for the quick despatch of loading and unloading goods in spacious and numerous harbours all around our sea-girt island, that are open for intercourse with all parts of the globe, during the year; while, upon the Continent, their rivers, in many parts, are generally closed by the severity of the weather for two or three months, a stop put to their trade, and the interest upon the capital that they employ so long lost. And, with all these advantages, and others I could mention, and whether at a higher scale of value as formerly, or at a lower one now, yet still at a higher scale than upon the Continent, we have competed, and can still successfully compete, with any other manufacturing nation in the general markets of the world. And, further, in proof that we do manufacture cheaper than any other nation can, there is the broad undeniable fact, that with our manufactures we do get a much larger share, and our population, high and low, have the means of enjoying a much larger portion of the comforts and conveniences of life than any other country in Europe.

That our scale of value is high is quite a separate question; but it is a subject of most important consideration whether that higher scale has not mainly contributed to the attainment of that exalted commercial rank which we now hold; and

contributed also to our own attainment of the many comforts and conveniences that the whole nation possess.

For to the extent of what is produced by machinery, a very important part of our staple articles, woollen and cotton, as well as of other goods, we, in fact, manufacture at the same scale of value as the foreigners do; and, perhaps, at a less one, from our cheaper fuel for giving power. And, to that extent, the manufacturer of our home wants, and the manufacturing exporter in the sale of his return goods, get, from our high general scale of value, a decided advantage over the foreign producer in his sale of his products, at a less scale of value. Then our higher scale of value, giving us larger money income, enables us to consume tea, coffee, sugar, and other goods, bought at the scale of value in the countries where they are produced, and which add much to our comfort and good health, to consume them, even with enormous duties upon them, to a far greater extent, considering our population, than any other nation in Europe. Then, add to this, that, with this higher scale, and consequent larger money incomes, our landed proprietors and rich merchants are enabled to purchase statues, pictures, wines, and foreign commodities, which the proprietor of the like extent of soil where they are produced could not afford to buy, and then we see something of that comfort, ease, and general propriety of appearance, not only in one, but in every rank of life, which, as was then said, so much astonished the foreign Potentates during their abode in this country, as so different to what is seen abroad.

We thus show that, with two sources of industry in the country, manufactures and agriculture, it is the extent and produce of the latter alone set the former in active motion; while it is the price of that produce the object for which all do labour—their essential want—that gives the scale of value upon which the barter of the products of the one description of industry is made against the other, whether that scale be high or low. We have also shown that, circumstanced as the nation is, with a heavy fixed money charge, the lower we reduce our scale of value the pressure of that charge increases in the same ratio; and although the labouring classes may thereby have cheaper bread, yet their means of purchasing it are reduced. And we think that we have successfully shown that, as we increase the scale, not only is there more of the active industry of the people set in motion, but with the consequent increased employment for it, there is a larger rate of per centage profit upon capital; while the labouring classes are thereby better enabled to add to their comforts and conveniences, though their food be apparently dearer.

Further, a high scale of value allowing us to give a somewhat higher price for the foreign comforts and conveniences we get, and an increased produce from our soil enabling us to take a large quantity of them, we thereby increase the scale of value in the nations we traffic with, and thus enable them to take a large portion of our manufacturers' products. And hence, whether at home or abroad, we increase each other's means and comforts by the barter of our different commodities; and, bearing in mind that the first source of all these is from the produce of the soil, the bounty of Providence, we see, notwithstanding the dreams of the political economists, that we have but one common and united interest, as we have but one common Father, the giver of these blessings.

And shall we allow the refined speculations of

the economists to deprive us of them? I can suppose the case a country altogether agricultural, comparatively poor, yet happy and contented—I can imagine also the case of a great commercial and agricultural nation, progressively increasing in wealth and prosperity, under right government, yet subject to occasional reverses, from the various contingencies of bad seasons, or political events, disarranging, for a time, the natural course of its complicated and vast varied interests. Yet, to believe that a nation can exist by commerce, to the neglect of its agriculture, is as preposterously absurd as to think there is any such a thing as a vacuum in nature.

Tyre, Athens, and Carthage of old, and Venice and Holland, in after times, are not cases in point. They were the mere commission merchants and carriers of the wants of the then world; and in the same way the Liverpool merchants, as mere commission agents and carriers might, for a time, prosper, though the trade of Lancashire and Yorkshire were a losing one. Holland has still a high destiny, as the Liverpool of Germany, if the stubborn Dutchman could be brought to a sense of her true interests.

On the other hand, there is Spain, once the first kingdom of Europe. But when her capital and energies were diverted from the culture of her soil, to be employed in the delusive search for gold and silver in the New World, from that time she gradually sunk lower and lower in the scale of nations, though possessing within herself the means, under right government, of becoming a first-rate power. Then, there is the more recent example of Egypt. When the barbarians rushed in upon her, they broke down the sluice-gates of her wealth, not knowing their value, and she lay for many, many ages deep sunk in poverty; but, at last, a shrewd old man repaired them, and thereby, from being a tributary to the Porte, he, in a few brief years, raised a power from her soil that shook the Turkish empire to its very centre.

This is our case, as opposed to that of the advocates for the repeal of the corn laws. We have fairly and justly arrived at conclusions that are diametrically opposed to the political axiom propounded by the Hon. Member for Bolton, and upon which it seems the economists found their peculiar doctrines; and, therefore, I trust that I may, with all deference, express the hope, that if I have rightly read the promise in the conclusion of his speech, the Gallant Colonel will now consider about the propriety of joining the ranks of the Member for Essex; and with whom I perfectly agree, that, considering the extent of our taxation, the price at which foreign corn can be taken here for consumption, was fixed too low; though it must be allowed that there is a counterbalance in part, for that in the new mode adopted for striking the averages. What is a stumbling-block to many—the foolish way in which by the assistance of the Economists, we have contrived to render that protecting price so far imperative to the landed interests, and consequently inoperative, also, as regards the interests of our manufacturers and traders, with all the great increase to our business since 1817—can be easily explained.

I thus take leave of the Repealers; but, to render our case more perfect, I have yet to show what it is that gives the price to the produce of our soil. That consideration involves some rather intricate points; yet, still I shall give my mind to it, when I can find another week's leisure; and I trust I shall successfully show that the Economists have produced as much, if not more, confusion in

our ideas, and done much more mischief in the nation, by confounding money with credit, than they have yet been able to do, by confounding quantity of labour with the money wages paid in different countries.—I remain your obedient servant,  
MERCATOR.

### THE POOR IN LIMERICK.

But there are objects of a far deeper nature in the old town of Limerick—objects of a deeper and more melancholy interest. The reader will recollect that in Cork, Waterford, Kilkenny, and in other towns which I have visited, I have made it a part of my duty to inquire into the condition of the poor, and having been informed by those upon whom I thought some reliance was to be placed, that I should find more and deeper destitution in Limerick than in any place which I had yet visited, my inquiries in Limerick were prosecuted with all the care which I was capable of bestowing; and I regret to say that I found too dreadful confirmation of the very worst reports. I spent a day in visiting those parts of the city where the greatest destitution and misery were said to exist. I entered upwards of forty of the abodes of poverty; and to the latest hour of my existence I can never forget the scenes of utter and hopeless wretchedness that presented themselves that day. I shall endeavour to convey to the reader some general idea of what I saw,

Some of the abodes I visited were garrets; some were cellars; some were hovels on the ground floor situate in narrow yards or alleys. I will not speak of the filth of the places; that could not be exceeded in places meant to be its receptacles. Let the worst be imagined, and it will not be beyond the truth. In at least three fourths of the hovels which I entered, there was no furniture of any description save an iron pot—no table, no chair, no bench, no bedstead; two, three, or four little bundles of straw, with, perhaps, one or two scanty and ragged mats, were rolled up in the corners, unless where these beds were found occupied. The inmates were some of them old, crooked, and diseased; some younger, but emaciated, and surrounded by starving children; some were sitting on the damp ground, some standing, and many were unable to rise from their steaw heaps. In scarcely one hovel could I find even a potato. In one which I entered I noticed a small opening leading into an inner room. I lighted a bit of paper at the embers of a turf which lay in the chimney, and looked in. It was a cellar wholly dark, and about twelve feet square: two bundles of straw lay in two corners, on one sat a bedridden woman, on the other lay two naked children—literally naked—with a torn rag of some kind thrown over them both. But I saw worse even than this. In a cellar which I entered, and which was almost quite dark, and slippery with damp, I found a man sitting on a little saw-dust. He was naked, he had not even a shirt, a filthy and ragged mat was round him; this man was a living skeleton, the bones all but protruded through the skin; he was literally starving.

In place of forty hovels, I might have visited hundreds. In place of seeing, as I did, hundreds of men, women, and children, in the last state of destitution, I might have seen thousands. I entered the alleys, and visited the hovels, and climbed the stairs at a venture; I did not select; and I have no reason to believe that the forty which I visited were the abodes of greater wretchedness than the hundreds which I passed by.

I saw also another kind of destitution. The individuals I have yet spoken of were aged, infirm, or diseased; but there was another class, fast approaching infirmity and disease, but yet able and willing to earn their subsistence. I found many hand loom weavers, who worked from five in the morning till eight at night, and received from a taskmaster from half a crown to four shillings a week. Many of these men had wives and families; and I need scarcely say, that confinement, labour, scanty subsistence, and despair, were fast reducing these men to the condition of the others, upon whom disease and utter destitution had already laid their hands. The subsistence of these men consisted of one scanty meal of dry potatoes daily.

I will only add one other instance of destitution. Driving in the neighbourhood of Limerick, on the Adair road, in company with a medical gentleman, the apparition of a man suddenly appeared by the side of our car. The gentleman who accompanied me knew him; he had been a stone breaker, but had become infirm, and at length utterly disabled by disease from labour; his cabin was close by, and we ascertained that he and his family had subsisted, during the last three days, on the leaves of that yellow flowered weed which grows among the corn, and which is boiled and eaten with a little salt. I think I have already mentioned the use of this weed for a similar purpose, by the destitute poor of Kilkenny; or, if I have not, I ought to have done so.—*Inglish's Travels in Ireland.*

### TO THE EDITOR OF THE NORTH-AMPTON MERCURY.

Sir,—I request permission, through the medium of your widely circulated Paper, to make a few remarks upon the new Poor Laws. Much abuse and misrepresentation has been cast upon them by many persons influenced, I have no doubt, by different motives. If I thought that the necessitous poor would be injured by them, I certainly should not attempt to defend them. That an alteration in the old system was absolutely necessary, but few persons will attempt to deny: to abolish *that*, and substitute another, appeared so delicate a task, and surrounded with such insurmountable difficulties, that one Session of Parliament after another passed away with the promise indeed of paying particular attention to the subject, but without making any actual attempt at improvement. It was reserved for the government just driven out of office, by the appointment of a commission, to probe the wound to the bottom, and prescribe a remedy. How far the prescription will prove efficacious will much depend upon the skill of its application. If the letter of the law should be brought into operation on the commencement, instead of producing a cure, it most probably would inflict a severe wound. The gradual working of the system, under the direction of wise and judicious agents, will not only give scope for its more *effectual* operation, but will also have a tendency to disarm prejudice. It never could be expected that a perfect measure upon this difficult question could be framed by any government at one time. I have no doubt that ministers will see the necessity of making some important alterations. Their object appears to have been to frame a law that should make provision for the necessitous poor—to punish the idle and immoral, and prevent imposition. The former law was designed to make provision for the sick,

aged, and infirm, but under the wide-spreading branches of that tree the impostor and the idle and the immoral found shelter and dwelt in repose; whilst under the latter the sick and aged will receive protection and relief, but the impostor, the idle, and the immoral, will reap the fruits of their doings. It is contrary to the principles of justice for such persons to be supported by law from the resources of the honest, the industrious, and the frugal; but while this law provides punishment for the guilty, there is great danger lest the power it confers should be abused by punishing the innocent.

I beg briefly to state some objections to the New Poor Laws. The first refers to the Bastardy Clause. Under the former law the evils arising from bastardy were incalculable; in almost every parish great numbers of illegitimate children are supported by parochial assistance. Parishes have been at great expense to bring putative fathers to justice, but have seldom succeeded in compelling them to give support for any length of time. The weekly allowance secured to the mother, either from the putative father or the parish, without trouble on her part, has been an inducement to further crime. In no part of the old Poor Laws was an alteration more needful than in this case. But the question is whether the present severe measure is likely to cure these evils; if it be it ought to be enforced, but if it fails it is not only too severe, but unjust. The design of every good law is to punish the guilty, to prevent crime; but this only inflicts punishment on one party, and that the weakest, whilst the other escapes with impunity.

Another objection arises from that part of the law which relates to Settlements. Many complaints were justly made against the former laws; very heavy burdens were brought upon parishes by proving settlements, and it was high time the system was abolished, but by getting out of one difficulty there is danger of falling into another. If the new laws should continue in their present state, many populous parishes will find their expenses much heavier, through an increase of population, in sixteen years than at the present time, whilst thinly inhabited places will have their burdens greatly reduced. This will appear by the following facts—that after the passing of the present law every child will in sixteen years belong to the parish in which it is born. It is generally known that many noblemen and gentlemen, instead of providing dwellings for the poor, have pulled down cottages, and compelled them to reside in other parishes. If, then, a parish contain 500 inhabitants, and only 300 belong to it, in sixteen years all that have been born in that parish will gain settlements.

Another evil under the present Poor Laws will be a want of employment for able-bodied labourers. In populous parishes this has for a long time been a heavy burden. Farmers have been compelled to employ more labourers than they wanted, or the labourers must have worked on the roads, or been paid to do nothing. One of the greatest difficulties with which many parishes have had to contend for some years past, has been an overplus of able-bodied labourers, who would not trouble a parish if they could have constant employment. Against this evil the present Poor Laws have not provided an efficient remedy. A correspondent, who signs himself Geo. Green, has made some very judicious observations upon this subject in your Paper of last week, and concludes by recommending "government to enforce an equitable labour-rate upon the land, according to its qua-

lity, for the employment of the surplus labourers." With this recommendation I should most cordially concur if a better plan could not be devised. I beg to suggest whether a remedy for these evils might not be provided by a *tax upon all property for the support of the necessitous poor, county expenses, &c.* If this plan was adopted under the present Poor Laws, the laws relating to settlements would be abolished altogether—labourers would seek out for work, and reside where they could obtain it—farmers would have the means of employing a greater number of labourers on the land, and making further improvements in agriculture—that malignant feeling which exists against them would be removed—every person would pay according to the property he possesses, and the burdens of the country would press equally, and fall, in comparison, easily on all.—Yours, &c.,

Nov. 25, 1834.

C.

### THE GREEN HOLLY BOUGH.

I LOVE this glad season, as yearly it comes,  
With its cold to our meadows, and mirth to our homes;

I love in the landscape when whiten'd with snow,  
To mark the bright leaves of the green holly bough.

I love in the merry fresh days of the spring,  
To mark the trees budding, and hear the birds sing;  
And now, while our holiday feelings o'erflow,  
How cheerfully bright is the green holly bough.

I love in the warmth of the summer sunn'd hours,  
To wander alone in the sweet leafy bowers;  
But I love in this season to mingle the glow  
Of social delight 'neath the green holly bough.

I love in the autumn to mark o'er the trees,  
The fruitage all ripening in sunshine and breeze;  
And I love in the winter, when stormy winds blow,  
To mark all uninjured the green holly bough.

I love the warm blaze of the festival halls,  
When garlands of bright flowers hang on the walls;  
But the fire, nor the feast, nor the garlands can show,  
A brightness surpassing the green holly bough.

I love the old custom which yearly suspends  
The mystical mistletoe over its friends;  
But friendship, or love, as sweet kisses may know,  
Beneath the safe shade of the green holly bough.

I love the fresh bay, the pledge of regard;  
The conqueror's laurel—the lay of the bard;  
The fragrant myrtle which lovers bestow,  
But most the bright leaves of the green holly bough.

Then gather it quickly, the berries and spray,  
And hang it up high on this festival day;  
Let wine, mirth, and music, unitedly flow,  
All soberly, under the green holly bough.

Plough Monday. — This day, the Monday after twelfth-day, is called Plough Monday (the Christmas festivities being now terminated,) and was considered the commencement of the ploughing season. On this day those tenants who held their possessions on the tenure of ploughing their lord's lands, were bound to appear with their ploughs and other implements of husbandry, to be examined if fit for the work. It was also a practice of the ploughmen to draw a plough from door to door, and beg plough-money to drink. To this there has, in some parts of the country, succeeded another custom, namely, that of the men going about with their shirt-sleeves decked with ribbons, dancing, and begging money to be spent in festivity.

## GRANARIES.

The best situation for a granary is over the threshing floor. It may be easily secured from vermin, and, requiring only six feet in height, it will not interfere materially with the bays of the barns, especially if they be loading through the gables. The roof of the door may be made to project so far as to protect a waggon while loading; or even to continue the flooring of the granary, by which means a barn of moderate breadth might be made to run to the length of thirty feet by twelve, which is far more capacious than the common granaries. A trap-door in the floor, with a rope and pulley, raises and lowers the load in the most easy manner, besides securing it more effectually from depredators; and strong wired windows at each end ventilate it sufficiently. Corn, when either imperfectly dried or allowed to remain too long unscreened, is apt to contract a disagreeable smell. It is therefore important that the air should have free access to the granary; but although that may be secured by the ventilators in every corner of the smaller granaries, those buildings are generally not long enough in the floor to allow of its being completely screened and turned—operations, however, of great importance to the security of a bright sample. Granaries are usually divided into several partitions by deal boards, which may be shifted at pleasure, by which means the different species of the kinds of grain, as well as of different parcels of the same kinds, are effectually distinguished. The most customary mode, however, is to erect them of timber, upon small stone pillars.

It may be almost useless to mention the necessity of securing every sieve and measure for the use of grain, hung upon its own hook, that it may be in readiness. But if there is one thing that demands more particular attention than another, it is corn sacks, which one sees frequently stuffed with wisps of straw to stop the holes—a disgraceful piece of negligence, the sole consequence of “the want of a stitch in time,” by which it might have been prevented. Small articles, and those easily wearable, should be carefully put aside the moment they are no longer wanted; but even that is not enough—they should be counted; and if they want repair, it should be done before they are put aside, or it surely will be forgotten.

## YARDS.

An object of more importance is the *dung-pit*; the management of which we apprehend to be less comprehensively understood by common farmers than any other portion of their business. It is only necessary to recommend that it should be regularly removed from the stable-doors to the yard of the store-cattle. Not only will there be a certain degree of neatness in the access to the buildings, which otherwise soon become immersed in dung and urine in a most filthy state of fermentation, but, lying in such heaps, the centre is burnt or charred to a dry white substance, and loses in this state a very considerable portion of its value. Were it a regular rule that the yard-man should every day, as soon as he had done his morning work, remove and spread the horse-litter to the straw-yard, there would be little difficulty and considerable advantage in the practice. The drainage from the stables should be channelled, with a proper fall to the yards, and carried out beyond a paved causeway, which is of great use when it extends around a material portion of the buildings, and should be higher than the centre of

the farm-yard, which should be moderately concave, or sloping to the centre. This is very easily secured by a little attention in the early part of the winter, and from thence the drainage is conveyed by communications under the yard to a reservoir for the purpose.

The charge is trifling; for an open drain is better than a covered one, being more easily cleaned, and kept free from rats. It must, however, be admitted, that considerable difference of opinion is entertained on this construction of the yards, and it is the prevailing notion of some very eminent farmers that a good yard should be a dead level, its bottom coated, if possible, with chalk or some impervious substance that will prevent the escape, or filtration, of urine or other moisture. By moving the cribs regularly about it, the whole yard becomes alike saturated, and should be frequently cleaned out, and the dung laid upon some fresh soil, lightly shaken up to promote fermentation. Perhaps it would be too much to ask for gutters under the eaves of buildings, to prevent as far as possible the drainage of rain-water in the yards, though it would be essentially useful.

The *Farm-yard* should be well drained, especially on wet soils, and the private roads on such land would occasionally be the better for an odd day's attention to the levelling of the ruts. The close fences and gates should be also carefully attended to.

*Cart-sheds* should be made to open outwards from the farm-yard, or otherwise cattle will get under and do mischief. They should be made high enough to shelter a loaded waggon, and lofts should be constructed underneath for the care of some of the smaller implements of husbandry.

*Sheds*, though open, in which cows or other cattle are tied, should be fenced off, otherwise loose cattle or swine will break in upon them and injure them. The modes of fencing consist of dwarf brickwork, or of small piers carried up to support the roof, and gates between them; or of wooden paling or strong open rails and gates. The sheds should be, if possible, open to the south; they should be quite deep and dry enough to cover the animals from the rain, and the floors should be slightly raised to prevent the lodgment of water. The most approved mode of feeding the larger kind of fatting stock is in small sheds with open yards, containing each only a couple of beasts. Although compactness is necessary to be observed in the arrangement of all farm-buildings, yet a very common error often prevails in so cramping the offices as not to allow of sufficient space and shelter for the convenience of live stock. It may, however, be observed, that the too great breadth of stables adds considerably to the expense of the the roof, and that a width of 16 feet may in most cases be deemed sufficient.

In farm-houses where the *dairy* forms a material portion of the concern, it is important that the buildings should be airy, and detached; yet so near to the dwelling as to be under the eye of the mistress, and to have the command of the back kitchen, if not a boiling-house with a regular steaming apparatus, which has now become essential to the preparation of the food of most animals which are supported upon roots, and especially to cows. It should have a north, and, if possible, also an eastern aspect, to guard it as much as possible from the sun; the walls also should be well shaded by a projecting parapet roof; and if the floor were sunk a few feet below the ground, it would improve the temperature of the air.

The *pig-sties* for small farms will also be found useful if placed convenient to the kitchen; for,

although not a sightly view, no offal is thus allowed to escape the brood; but on large farms, where they require more regular attendance, it will perhaps be better to place them in a far corner of the yard.

Although *poultry-yards* are seldom thought of much importance, yet cleanliness and warmth will make a considerable difference in their flavour and product; and if it be possible so to construct their house as to let it have the benefit of a flue from the kitchen chimney, they will greatly profit by it. In this manner the Irish cotters rear vast quantities of that delicate bird the turkey, without any peculiar attention to its food, but merely by allowing it the warmth of a roost in the cottage chimney.

On most farms where cattle are maintained, a *root-house* or store-room is appropriated for containing turnips, potatoes, and other vegetables. But, as the method of covering up potatoes in the field has been found to answer the purpose, no more spare room is required than is sufficient to contain one of the beds at a time. It is however convenient to have the shed made large enough to admit of a cart being turned up and emptied within it.

*Stack-yards* should not be inclosed by high fences, for they exclude the circulation of air. Farmers are, in some places, very averse to stacking, and the barn room in some ancient homesteads, as well indeed as in some newly-erected buildings, especially in Norfolk, has been carried to an extraordinary excess; so much so, that, in some counties, even the hay claims the protection of a slated roof. Corn, however, is in general much better preserved in the open air. When the stacks are not laid upon piers of stone, or iron, they should be raised upon ridges to throw off the water. These should be paved with rough stones, and they should also have a few bavons or worn-out hurdles underneath to preserve them from the damps; but, take what precaution you may, the vermin will burrow underneath if they have a close cover.

It is, however, a great and a very general improvement in stack-building, to lay them upon low stone pillars, coped so as to prevent the entry of rats and mice, and guard against wet; they have indeed no power of climbing up stacks thus placed, unless through the carelessness of servants, who sometimes leave their forks standing against a rick during the night. It is also a most useful precaution, for the security of corn in doubtful harvests, to furnish the stack with a hollow cone of rafters, or any rough spars of timber to preserve it from heating. This is run up the heart from the ground to the top, or roof, with an opening on one side to admit the free entrance of the air. Stacks are a mere matter of taste in point of form and size; but those of moderate dimensions, say containing 15 to 20 quarters of grain, are the most used and least subject to accident. In the stack-yard at Shaw Park, in Clackmannanshire, there are 28 stacks placed on cast-metal pillars, each three feet high, with a *boss* or triangle, drawn from the centre to the roof, to preserve the circulation of the air. Each of these stacks contain 1584 sheaves, and it has been shown by an accurate experiment comparing the same quantity of wheat built on the ground, or on cast iron pillars, that the saving from vermin and wet was *2l. 12s. 6d.* per stack, which repay their cost in two years. Triangular bosses of wood may also be used, and the corn may be stacked in much less than the usual time.

The number of *thrashing-mills* throughout the country is very considerable, but they in general seem to have been placed with no other view than

that of finding some old barn ready to receive them, and thus using a building every way inconvenient for the purpose; without space for the straw or receivers for the chaff, and still less attention paid to its ready distribution to the animals that consume it. The position of a thrashing-mill should decide that of almost every other office; for it cuts, or ought to cut, the hay into chaff, together with much of the straw; and the house that immediately receives this chaff ought to be so placed as to admit of a convenient delivery to the stalls and stables. Thus the straw-barn, chaff-house, ox-stalls, and horse-stables, with the hay-stacks and the sheep-yard (if there be one), should be dependent on the position of the thrashing-mill, or they will be attended with waste and expense of labour. These, and many other circumstances, that merit attention, may be looked for in vain in most farm-yards; nor is it to be objected that, thrashing-mills being a comparatively new invention, such attentions could not be paid to their erection; for, in the first place, many of the new yards are little better, in this respect, than the old ones; and, in the next, the same requisites are demanded under the old system of flail-thrashing, with no other difference than the floor being the point of regulation, instead of the mill.—*Hereford Times.*

#### THE TIMBER TRADE.

We subjoin the following table of the total imports of timber, deals, &c., into London and the three principal ports of England, during the year 1834. It has been arranged by a gentleman practically conversant with the subject, and we have every reason to believe it to be as correct as possible. The totals only are given for the three principal outports; but, for London, the quantities imported from each country are given separately, and exhibits the proportions of foreign timber and deals from those States with which we have reciprocity treaties, and to the many interested in the trade it may prove a useful summary. On this occasion we cannot, from the want of space, give the comparative importations of the former year, but purpose to recur to the subject shortly. The portion of this table which will be the most generally interesting is that which exhibits the number of ships and the gross amount of their tonnage employed in this trade. From America, which include all our North American colonies, which, by the bye, stand sponsors, as it were, for a large portion of the United States, [as well as Memel and Dantzic timber, the importations last year to the port of London have employed 230 vessels, of a tonnage amounting to 76,559. Those engaged in the foreign timber trade exhibit, on the whole, a much greater amount; but it should be remembered that nearly all of them are foreign vessels, for] the Reciprocity Act has driven British ships out of all competition. In the trade from St. Petersburg and Riga, however, some few British ships are still employed, though at a great disadvantage. But it is not the carrying trade alone in which this country suffers. Under the Reciprocity Act of the 4th Geo. IV., Prussia most especially takes little or next to nothing of British produce, in return for her timber and corn; hence we are frequently drained of gold to pay for the importation of her produce, as well as of the other States with which we have treaties of mock reciprocity; and to make the matter worse, we are compelled to find that gold at a fixed and antiquated standard, which having first depreciated the home value of British produce, in many instances 100 per cent., in fact,

### TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir,—I, as a farmer, do not agree with the received opinion, that the repeal of the malt tax will be an immediate relief to the farmer, and benefit him to *any thing like* to the amount of the tax. I will not say that it might be a little less than it is, but I think it should not be taken off altogether. I acknowledge it will be a great benefit to the brewers; they would reap the greatest benefit, and not the public in general; and as to the price of barley, if there happens to be an extra crop, it will be no higher at all. But then, pray what benefit will the wheat growers have from that, who perhaps grow a very few quarters of barley upon their farms, so that will only be a partial relief? The tax was taken off leather a few years ago, and leather is as high as ever; the public reap no benefit from it, neither in shoes or any thing else in which leather is used. As to the duty on corn on importation, I believe a graduated duty preferable to a duty *always the same in plenty and in scarcity.*

I am, Sir, your well-wisher,

A FARMER AND SUBSCRIBER  
TO YOUR PAPER.

### TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir,—As you are concerned in a paper, which above all others is most engaged in what relates to the best interests of the farmer, I take the liberty of addressing the following observations on the repeal of the Malt Tax, &c. In the first place, the advocates of that measure expect that, in consequence, barley will be permanently advanced at least 10s per qr.; that this is a false notion I will now prove; I ask by what reasoning and what data they have come to this conclusion, have they taken into consideration the price the Danes, Prussians, and Germans can grow barley (and of as good quality and weight too, as we can)? I fear not. I will now state the present prices of their barley; the very best can be purchased at their outports at 14s per qr., weighing 15 stone 6 lbs net; freight to the eastern coast of England and other expenses, not exceeding 4s 6d to 5s per qr., making, say, 19s, which added to the duty of 13s 10d, will be 32s 10d. Now, if the German Boors can afford to sell their barley in London, at 32s 10d, and they can supply any quantity, is it probable that an advance of even 2s to 3s per qr. can take place, the present average for the country being 32s? You must bear in mind that by the Corn Law as it now stands, an advance of 1s per qr. is a reduction of 1s 6d in the duty on foreign barley, an advantage of 50 per cent. in favour of the foreign grower. Why not at once advocate an alteration in the Corn Law, viz. for barley to work upon the same scale of duties as wheat? this, on a repeal of the Malt Tax, would be a certain and great relief to the farmer. The whole of the five millions the tax raises would then go into the pockets of our own farmers, whereas without a prior alteration in the Corn Law scale of duties, the foreign grower would get at least four-fifths of the amount. The advocating the repeal of the Malt Tax before an alteration in the Corn Law, is putting the cart before the horse. But it is said that an advance in price is not the only benefit to the farmer that would follow from the repeal of the Malt Tax. The farmer would make his own malt, and the labourer would brew eight or ten gallons of ale in his own cottage copper. I don't believe either would be the case; in the first place, it would not be worth the farmer's

while to manufacture, even if he possessed a drying kiln, the little malt he would use, he could buy it cheaper; and I would ask, how is it possible for a labourer, existing on the low pittance of 9s a week in winter, and 12s in summer, to save enough to purchase the hops and malt to brew with? If a bushel of malt costs now 8s, and only 5s then, would a labourer with only 3s to spend, and that is as much, and sometimes more, than they have to spare in the week, be able to buy one? Suppose he could get the malt and hops, three-fifths of them would not work until the ale was finished. The greatest consumption of malt takes place in towns, and not in agricultural districts. There are hundreds of farming labourers in this country who don't taste malt liquor from one week's end to another, and it matters little to them whether ale is 2d or 4d a quart, if they cannot procure it. I am quite sure that a repeal of the Malt Tax *alone*, will be of no benefit to the English farmer. I remain,  
Jan. 8. A MERCHANT.

MATLOCK.—THE ELDER TREE.—A singular instance of the remarkable retention of vitality in the elder tree may now be seen at a farm on Riber Hill. About ten years ago an old elder tree was cut down, and the following hay harvest a portion of the trunk was placed under a hay-stack. At the expiration of more than a year, the stack being consumed, the piece of old wood was next used as a corner post to a temporary shed, and was observed in the following spring, to begin to sprout. The shed has long since been removed, but the corner post remains—a healthy flourishing elder tree. Our correspondent observes that he has known elder wood, when used in mines, to sprout, and actually produce leaves for two or three years.

PROPER DISTANCE OF WALL FRUIT TREES FROM EACH OTHER.—For a wall nine or ten feet high, apricots, peaches, and nectarines, twenty feet apart; for a wall twelve feet high, apples, eighteen or twenty feet apart; apricots twenty to twenty-four; figs fifteen or eighteen; cherries twelve or fifteen; pears twenty-four to thirty; and plums eighteen or twenty. For low walls of five or six feet, apples thirty; cherries and pears thirty to thirty-five, and plums twenty to twenty-four feet. The distances at which wall fruit ought to be planted depend, according to Abercrombie, on the general growth of the species, connected with other circumstances, whether the plant has been dwarfed by the mode of propagation or is a free grower; whether the species will bear to be kept within bounds by the knife, and lastly on the height of the wall, as a higher wall is a compensation for a reduced distance.—*Encyclopedia of Gardening.*

TURNIPS FROM THIS YEAR'S SEED.—It has been thought by many farmers and others that turnip seed of two years' preserving must produce bulbs of a more proportionable shape than seed kept for a shorter period. This theory, we understand, has been often put to the test by Mr. Imrie, seedsman here, who is in the practice of proving the quality of his turnip seed immediately after thrashing it out, and he finds it to bulb equally well, grow more freely, and swell to a much larger size, than seed saved in the former year. On the 9th of July last, he sowed more than half an acre with turnip seed grown this year, of green-topped yellow, bullock, and purple-topped Sweedish; and many of the bulbs produced from the former weigh more than 3½ lbs, and those from the latter 2½ lbs., specimens of which may be seen at this office, and at Mr. Imrie's shop.—*Ayr Observer.*

## BUCKS SESSIONS.

## CIVIL COURT.

THE POOR LAW AMENDMENT ACT.—The parish of Waddesdon, *respondents*; Grendon, Underwood, *appellants*.

This was the first settlement case yet brought before this Court under the new Poor Law Act. The merits of the case presented nothing particular, being an ordinary case of alleged settlement by hiring and service, and the only point being whether the terms of the contract implied a prospective or retrospective hiring; but a question with regard to the legal construction of a provision of the new Poor Law Act arose, which, like many other parts of the Statute, seems well calculated to perplex Magistrates and increase litigation.

Mr. MALTBY, for the appellants, having proved the notice of the appeal,

Mr. SYDNEY TAYLOR, for the respondents, stated to the Court that he was prepared with the necessary evidence to prove the chargeability of the pauper; but, as in the notice of the appeal, no objection was taken to the order of removal, on the ground of a want of chargeability, he doubted that he was permitted, under the new Act, to offer any evidence of that fact, although the ground of the whole proceedings. He then referred to the 81st section of the Act, in which it is provided that no evidence shall be given of any other ground of appeal than what the notice of appeal contains. In the present case there was no objection taken in the notice of appeal upon the score of chargeability, and therefore he submitted that he was not bound to prove it. His object was to obtain a decision of the Court that might regulate future proceedings, as parishes might be put to needless expense and inconvenience by uncertainty on this point.

Mr. MALTBY said that in the present case he did not mean to dispute the chargeability, but he also thought that, as this was the first case upon which the point had arisen, the Court ought to lay down some rule on the subject to define the practice of the Court, so that suitors might not be ignorant of what they were required to prove.

Sir T. AUBREY (the Chairman,) asked the opinion of Mr. Tindal, the Clerk of the Peace.

Mr. TINDAL said he did not think the Legislature meant to take away from the Court the right of inquiring into the question of chargeability in cases where no question was raised about it in the notice of appeal. The chargeability was alleged on the face of the order, and he thought the Court had still the power of inquiring into it, as the statute only spoke of respondents and appellants, but did not say the Court was not at liberty to make the inquiry for its own satisfaction if it thought proper. The question might rise incidentally.

Sir THOMAS AUBREY consulted with the other Magistrates, and said, We are inclined to think the Act was not intended to confine the Court itself to the grounds of appeal stated in the notice, but that we have still the power of requiring evidence of the chargeability, if we see reason to do so.

Mr. SYDNEY TAYLOR observed that, if the Court looked to the precise words of the Act, he thought they would not incline to that opinion any longer. He then read the words, which are to the effect that it shall not be lawful for the respondent or appellant to give evidence as to any matter but what is contained in the notice of appeal. Now, he submitted that, although in the present case he had witnesses in Court to prove the chargeability, the

Court could not ask him to offer that evidence, because the notice of appeal was silent respecting it; and as, according to the words of the Act, it was "not lawful" for him to offer that evidence, the Court could not require it, as it was not to be presumed the Court would require that to be done which was unlawful.

Sir T. AUBREY.—The words are certainly very strong. I doubt whether we have the power.

Mr. TINDAL.—It would surely be absurd for the Legislature to take away the power of the Court. It would open the door to fraud and collusion. I don't think the Legislature can have intended it.

Mr. S. TAYLOR.—If this be an absurdity it would be well if it were the only absurdity connected with this Poor Law Act. The Court cannot look to its policy or impolicy. It is not a Court of legislation. It must construe the Act according to the legal intendment of the words. If the legal construction and the words lead to an absurdity, Parliament only can amend it. The Legislature alone can correct its own blunders.

The CHAIRMAN again consulted with the Magistrates, and then stated that the Court were unanimously of opinion that they ought not to call for the evidence of chargeability; but they wished it to be understood, at the same time, that although their decision was in accordance with the interpretation put upon the Act by the Counsel for the respondents, their decision was not intended to bind future cases. It was only *pro hac vice*. When the question arose again, they should like to be free to re-consider it.

The case was then proceeded with upon the merits.

## FROM THE MONTHLY MAGAZINE.

As the swallow is to the wild sea-mew,

Whirling above the foaming tide—

Or the snowy wreath in the sky's clear blue

To the thunder cloud in its dusky pride—

Such and so distant wouldst thou be,

My frolic-boat, to the bark of the sea.

No crested wave lifts thy fragile form

With a sudden force from its silvery track ;

The distant moan of the coming storm

Puts not thy fluttering canvass aback ;

Steadily, steadily, on we sail

O'er the inland waters calm and pale.

As the fan is furl'd by the maiden's hand,

Or the bubble blown by the sportive boy,

So, aided by the breezes bland,

Do I govern thee, my trim-built toy ;

Like the fish in the water, the bird in the sky,

Now, now, we glide—now, now, we fly.

The moon is up ; o'er the inland lakes

The silence of night is stealing slow ;

Not a sound through the still enchantment breaks,

As the water parts lazily round thy prow ;

And while by the rustling reeds we creep,

Thou and the flood seem lulling to sleep.

The water-lily around us floats,

Or sparkles out from a sedgy port,

A fairy fleet of pleasure-boats,

Returning, like us, from Sylvan sport ;

The Spirit that guides them we cannot see,

But they have a Spirit as well as we ;—

The Spirit that keeps the waters calm,

That brightens the green of the waving wood,

That fills the air with health and balm,

And the world with life—the Spirit of Good.

May it bear me onward through light and dark,

As thou bearest me home my bonny bark.

## EAST SUFFOLK ELECTION,

EXTRACT FROM MR. SHAW'S SPEECH, AS GIVEN IN "THE SUFFOLK CHRONICLE EXTRAORDINARY."

He knew the farmers took great interest in the repeal of the Malt Tax. But the Malt Tax did not solely affect the agricultural interest. The Malt Tax was paid by those who drank the beer. All his friends around him, as well as the farmer, would be relieved by the repeal of that tax. He would tell them how the farmer would be relieved. If the quantity of malt now consumed be increased, and the quantity of barley remained the same, he would certainly obtain a higher price. If the barley were increased, as well as the demand for malt, he would receive that increased price on the sale of an increased quantity. But how had their friend, Sir Robert Peel, voted upon the question of the repeal of the Malt Tax? (Loud laughter, and "That's right.") What did he do? He came down to the House of Commons, to back the Whig Ministers to rescind the motion for the abolition of the Tax. (Tremendous cheering.) He would then ask them what chance they had of the repeal of the Malt Tax under the Peel Administration? (Continued cheering.) Why could they be blind to the circumstance, that Lord Chandos did not join the Administration? (Shouts of "No, no," and "he will bring the question forward," from the Anti-Reformers, and cheers.) Well then, he would ask them, what grounds, what expectations, they could have from an Administration, the Members of which put on the Tax which was abolished? And, on the other hand, how they could expect that the present Government would assent to its repeal, when Lord Chandos, whom they conceived—whom they thought so much their friend—had positively refused to join the Ministry of Sir R. Peel? (Loud cheering.) He thought he had said enough about the Malt Tax to convince them, that he had not acted in the manner attributed to him by his anonymous assailants. (Loud cheers.)

**RISE OF RENTS.**—Alluding to an estate in Wexford, Mr. Inglis says, "the land had been four generations in the farmer's family; his great grandfather paid six shillings an acre, his grandfather ten shillings, his father one pound, and he paid two pounds."

**THINNING STONE FRUITS.**—Thinning the over-set fruit, on apricot, nectarine, peach, and plum-trees, is a necessary duty, as many of these in good seasons set more than they can nourish or bring to perfection. If the fruit be very thickly set all over the tree, let it be generally thinned off to half its extent the first time, deferring the final thinning till the stoning be over—that is, till the shells be quite hard and the kernel formed. Most trees, and especially those any way unhealthy, drop many of their fruit at the time of stoning, so that the thinning had better be performed at two or three different times, always observing to reserve the fullest, brownest, and best formed fruit. If the bearing shoots of stone fruits be properly shortened, there is little danger of their falling off, unless the kernel has been injured by untimely spring frosts or excessive droughts, which ought, however, to be guarded against. The first thinning should therefore be fearlessly gone about, and the second should not be too long delayed.—*Encyclopædia of Gardening.*

## AGRICULTURAL MEETING AT OAKHAM.

The meeting on the 5th January to arrange the new Bill of Premiums for 1835, was very large, and the business of the day gone through with credit to the Society.

E. W. Wilmot, Esq. Chairman, was elected; a new Vice President also, Sir Gilbert Heathcote, Bart., M. P. with Frewen Turner, Esq. Cold Overton.

On the retirement of Mr. T. E. Pawlett, of Tinwell, as Steward, E. W. Wilmot, Esq., was also elected the succeeding steward. Also on the retirement of Mr. R. D. Healey of Ashwell as Secretary, Mr. H. I. Rudkin of Langham Lodge was elected to succeed him.—Amongst those present, I noticed, Sir G. N. Noel, Bart., M. P.; Clarke Morris, Esq.; R. W. Baker, Esq.; W. Sherrard, Esq.; Samuel Cheetham, Esq.; Christopher Smith, Esq.; R. L. Bradshaw, Esq.

**SOUTH OF FRANCE.—STATE OF AGRICULTURE.**—Throughout the south of France the landowners are almost all exclusively occupied with their crops; for they are, from the manner in which their estates are managed, obliged to spend the summer and autumn in the country; and so absorbed are they in their agricultural labours, that if they happen to fall in with a wanderer from town, they scarcely take the trouble to inquire whether there is any thing new. The fact is, that the low price of produce keeps them poor; and the phrase of the address of the Chamber of Deputies, in which the sufferings of the agricultural interest were alluded to, found an echo in the southern departments; for the low price of grain is attributed to the action of government. Nothing can destroy this idea, and they imagine that Marseilles and Provence are overflowing with foreign corn. But the sufferings of the agricultural interests proceed not only from the trifling value of the product of the estates, but also from the particular position of those in whose hands it is placed; proceeding from the general mania for employing whatever savings may be made, in fortunate years, in purchasing additional parcels of land; consequently, although the estates become increased, the funds for managing them are diminished, and recourse is had to the ruinous system of loans, and eventually the mortgaged estates are obliged to be sold. This mania accounts for the high price of land, and also for the enormous mass of mortgages with which they are burdened, as will appear from the documents which are published every year by the Administration of Registry. If a fifth or even a sixth part of the capital of the landed proprietors were to be reserved for the unforeseen wants of their families, and for the amelioration of their estates, the agricultural population would be soon brought into a state of ease; but, unfortunately, the matter has not yet been looked upon in this point of view in France. Still some progress has been made. Fashion has come to the aid of reason. Formerly a rich landed proprietor would have been ashamed of superintending his own estate, or of appearing to be attending to matters that the noble and ecclesiastical aristocracy formerly left entirely to the care of the peasantry. We have heard more than one deputy declare, at the tribune, that he gloried in having thus increased the patrimony of his ancestors.—*French Paper.*

## TO THE EDITOR OF THE "MARK LANE EXPRESS."

The plan I submitted for the consideration of the public, as detailed in my letter published in your valuable Journal of the 17th ultimo, for the relief of the existing agricultural distress, by an alteration in the currency, appears to have attracted the notice of some of your readers. Your correspondent "S." (whose letter appears in your Journal of the 8th instant) calls it "an Utopian project," and I believe thinks me little better than insane to venture upon the discussion of a subject which I am fearful he understands but imperfectly himself. I am, however, anxious to be more acquainted with all the difficulties that stand in the way of the practical working of the system of currency I have proposed, and therefore take this opportunity of expressing my obligations to him for his observations, and shall proceed at once to reply thereto. At the commencement of his letter he accuses me of "suggesting that the Bank of England, the Country Bankers, and Joint-Stock Banks, *should be annihilated at the end of three years*;"—he can hardly think I should propose a project so injurious to *my own* interests, and I would thank him to point out any words in my letter bearing such a construction, as I am ignorant of having made any such assertion. If he is of opinion that the substitution of national notes for those of the Bank of England and of country bank notes, will totally destroy the banking business, I would just ask him how it is that the London bankers can carry on business to a profit, as they issue no notes of their own, nor can they derive any advantage from the circulation of the Bank of England notes they pay out, yet I believe it must be admitted that many of them are carrying on very lucrative concerns; but their profits, instead of being derived from the issue of notes, are derived from the deposits of their customers, which they employ in discounts, investments in the funds, and other government securities: and were there an ample circulating medium such as I have described, there would be no danger of the banking concerns in the country being carried on to a disadvantage; at all events I should be quite willing to run the risk of it as far as regards myself.

Your correspondent, it appears, is apprehensive that mischief will result from the establishment of a National Bank, upon the plan of "*Government issuing its notes*;" now I expressly stated in my letter, that the National Bank should be under the direction and management of twelve trustees, appointed by Parliament, and as the House of Commons is composed of the representatives of the people, and they now hold the purse-strings of the nation, we surely might rest satisfied that they would select such trustees as would conduct the business of such a bank satisfactorily, upon the principles laid down.

Your correspondent says, "The end and object of all banking is the promotion of trade and the exchange of commodities. It is a system of credit arising out of the industry of the country, and created by the wants of the people themselves; it is best it should remain in their hands,—the less the Government have to do with it the better." It is the circulating medium of the country, and

not the *banking business* of the country, that I am desirous of seeing altered. Let us examine our present circulating medium. It consists of gold, and silver, Bank of England notes, and the notes of Country Bankers and Joint Stock Banks: with respect to the gold and silver, we know it is a commodity that represents its own value. The Bank of England paper is founded upon the credit of that establishment; and, according to the present law of the land, is liable to be paid in gold if demanded. Now, it appears by a statement that has been recently published, that their stock of bullion is not more than sufficient to cover one-fourth of their liabilities, having not quite seven millions of bullion to meet about eighteen millions of notes and twelve millions of deposits. If we inquire what is become of the capital on which the credit of their establishment is founded, we find three-fourths of it is lent to government, and the other fourth has only recently been liquidated by the creation of a sufficient amount of Stock for the settlement of that portion so the debt due from the Government to the Bank; of that we see the Bank of England is very much under Government influence, although your correspondent thinks it dangerous that Government should have anything to do with a National Bank. As regards the notes of Country Bankers and Joint Stock Banks, they are issued upon the credit of the parties who constitute the Proprietary of these Establishments—most of them, no doubt, of unquestionable solidity, but still distrust sometimes prevails as to their safety, and extensive failures have occasionally taken place. Now, the substitution of a paper currency issued upon freehold and funded property, at half the amount of its present value, must be perfectly secure, safe, and satisfactory, and would insure a remunerative range of prices, without producing an unnecessarily extended circulation; for, on the one hand, there would be many who would not be satisfied with an advance of so little as one-half upon their property, and on the other, those who would not be disposed to pledge their property in this way at all. I had no apprehension that the elevation of prices consequent upon such a change taking place, would be confined to agricultural productions, but would apply to all other commodities; notwithstanding this, I should have no fear of our ceasing to be the "workshop of the world," on the contrary, the change would I am satisfied, be quite as beneficial to the manufacturing as to the agricultural population; in the first place our home trade, which is by no means unimportant, would, I have no doubt, be very considerably increased; and in the next place our foreign trade I am satisfied, would be very greatly extended. In order to show how this is to be effected, I will suppose, that our circulating medium, according to the plan proposed, is doubled in amount; this would occasion a considerable rise in the price of all commodities. A merchant in this country is desirous of sending out a shipment of goods to Portugal, reasoning as your correspondent S. does, he would say, if I buy goods at a high price here, how am I to make my profits?—however, I will send out a small amount and see what can be done; he accordingly purchases goods to the amount of 300*l*, and consigns them to his corres-

pendent at Oporto; on their arrival his agent sells them for 1200 milreas, which at the exchange of 60d pr milrea, which is about the present quotation, he would have only in return just the amount the goods cost him without any thing to cover expences; but owing to the increase in the circulating medium here, and the consequent high range of prices, there are large importations of wines from Portugal, which are sold at good prices, and the merchants who ship these wines have to draw upon their agents in England, for the amount, and to sell the bills in the market which they find some difficulty in disposing of, so that the agent of the merchant here who sent out the 300*l* worth of goods, finds that in purchasing bills on England with his 1200 milreas, he can get seventy-two per milrea, instead of sixty-pence, so that his shipment he then finds will pay him 60*l* less, the expences, instead of returning him no profit: but your correspondent S. will perhaps say, that the Portuguese merchants who send over their wines instead of drawing bills to dispose of at that rate, would direct their agents in London to remit them the amount in specie, but when they go to the National Bank to purchase it, they find the price of gold is considerably higher as well as other things, and as they have to give the market price of the day for it, there would be no advantage in making the remittance in that way, and it would moreover be attended with considerable risk. I trust I have now shown that neither the manufacturer, nor the merchant would, suffer from that change in the currency which I am advocating.

I will now say a word or two on the subject of the importation of foreign grain at a low fixed rate of duty, as your correspondent S. apprehends, "no better plan can be devised for the destruction of the farmer." I agree with him, it would be the case with our present monetary system, but with an extended circulating medium, the prosperity of the country generally, would insure remunerative prices to the Farmer, and, in consequence of the increased consumption of wool, meat, butter, &c., more land would be required to be laid down in pasturage; and as the foreign corn that would be imported would not be paid for as it has been latterly in gold, at a fixed standard, there would be a greater demand for our manufactures. I am afraid I have almost exceeded the limits to which a communication of this sort should be confined, but I hope you will insert it in your next paper that your readers may have an opportunity of judging of the merits of the question.

I am yours, truly

A COUNTRY BANKER.

London, Dec. 26, 1834.

### IMPORTANT TO OWNERS OF COTTAGE PROPERTY.

The Overseers of the poor of the township of Ecclesall-Bierlow lately submitted to the Poor Law Commissioners for England and Wales, the following case and questions; viz. "In about the year 1816-17, when great distress prevailed in this manufacturing district, and it was found impossible to collect the

rates from the occupants of small houses, without adding to such distress, by forcing them also to swell the list of parochial pensioners, the Overseers of this and several adjoining townships proposed to allow a discount (varying according to the circumstances of each township) from the amount of rates on houses at and under three pounds per annum, as an inducement for the proprietors of such tenements to pay the rates, instead of the occupiers. In Ecclesall-Bierlow the allowance was 25 per cent., and it has continued to the present time. The overseers, however, from the trade of the place being in a tolerably flourishing state, and from an idea that such allowance (although it may have been expedient) is not lawful, have resolved to discontinue this practice, and to collect of the occupiers as formerly. This does not please the owners of such cottage property, and they propose a compromise, by which they would generally pay the poor's rates as in years past, on their being allowed 10 per cent. Would the overseers be authorised, or would they be acting lawfully in continuing any practice of this kind?" The following, signed E. Chadwick, Secretary, dated Poor Law Commission Office, Somerset-house, was received a few days after:—"In reply to the inquiry contained in your communication of the 27th ult., the Poor Law Commissioners for England and Wales wish to inform you that the overseers would not be acting lawfully in continuing the allowances mentioned under the name of discount to the owners of cottages paying the rates, instead of the occupants."

The following answer has been given by the Poor Law Commissioners to an enquiry as to the operation of the 66th clause of the Poor Law Amendment Act, in which it is provided that no person shall gain a settlement by occupation without being rated for a year; but the value of the tenement is not specified:—

Sir,—Your letter of the 2nd instant has been laid before the Poor Law Commissioners for England and Wales; and in answer to your inquiry concerning the operation of the 66th section of the Poor Law Amendment Act, the Board are desirous of pointing out that the effect of it is not to create a new species of settlement, or to give additional facilities to the acquiring of a settlement by occupying a tenement; but on the contrary, the assessment and payment of rates for a year are required as further restrictions on that mode of settlement.

With this exception, settlement by occupying a tenement remains, as to rental and all other incidents, precisely as it was before the passing of the Act.—By order of the Board.

E. CHADWICK Secretary.

### SIMPLE TREATMENT OF DROPSY.

Sir—Permit me, through your widely-circulated paper, to give publicity to the following interesting fact:—An intimate friend of mine, a timber-merchant in London, was very ill of the dropsy, and, at the suggestion of an individual, he took oatmeal mixed with a little water, the effect of which upon his complaint was very salutary; the dry quality of the meal apparently absorbing the water in the system. It is conceived this hint may be useful to suffering humanity.

Your's, respectfully,

Bourn, Lincolnshire, Dec. 17.

J. P.

## THE ABSENT MEMBER.

[This story is taken from the new volume of the 'Amulet,' just published, and is from the pen of Miss Mitford, the author of the delightful village histories. The picture seems a little caricatured here and there; but absence of mind is in itself a caricature; and whatever exuberance there is at any time in Miss Mitford's style is but truth in a state of luxuriance.]

Everybody remembers the excellent character of an absent man, by La Bruyère, since, so coldly dramatized by Isaac Bickerstaff—everybody remembers the character, and everybody would have thought the whole account a most amusing and pleasant invention, had not the incredible facts been verified by the sayings and doings of a certain Parisian count, whose name has escaped me,\* a well-known individual of that day, whose *distractions* (I use the word in the French sense, and not in the English) set all exaggeration at defiance, who was, in a word, more *distract* than *Le Distract* of La Bruyère.

He, "that nameless he," still remains unrivalled: as an odd Frenchman, when such a thing turns up, which is seldom, will generally be found to excel at all points your English oddity, which is comparatively common. No single specimen so complete in its kind has appeared in our country; but the genus is by no means extinct; and every now and then, especially amongst learned men, great mathematicians, and eminent Grecians, one has the luck to light on an original whose powers of perception and memory are subject to lapses the most extraordinary; fits of abstraction, during which every thing that passes falls into some pit of forgetfulness, like the *oubliette* of an old castle, and is never seen or heard of again.

My excellent friend, Mr. Coningsby, is just such a man. The waters of oblivion of the Eastern Fairy Tale, or the more classical Lethe, are but types to shadow forth the extent and variety of his anti-recollective faculty. Let the fit be strong upon him, and he shall not recognize his own mansion, or remember his own name. Suppose him in London, and a fire in the opposite house would, at such a time, hardly disturb him. You might, at certain moments, commit murder in his presence with perfect impunity; he would not know the killer from the killed.

\* In writing of the forgetfulness of others, a touch of that quality may be permitted in oneself. It is in keeping, and belonging to the subject: and in good truth, if one may say of this sort of *distract* as of that worst species of hallucination, called love, "they best can paint them who can feel them most," then I am a fit recorder of all the errors, blunders, and mistakes that proceed from want of memory, I being as much addicted to forget names, and dates, and places—to write one word for another—to confound authorities, and misquote verse, as Mr. Coningsby himself. I cannot even remember the style and title of my own geraniums, and only yesterday gave away a *Magalanthon* seedling (as precious to a *geranium-breeder* as an Eclipse colt to a gentleman on the turf) mistaking it for a Lord Combermere. "The force of *absence* could no further go."

Of course this does not happen every day; or rather, opportunities of so striking a character do not often fall in his way, or doubtless he would not fail to make the most of them. Of the smaller occasions, which can occur more frequently, he is pretty sure to take the advantage; and, from the time of his putting on two different coloured stockings when getting up in the morning, to that of his assuming his wife's laced nightcap when going to bed, his every day's history is one perpetual series of blunders and mistakes.

He will salt his tea, for instance, at breakfast time, and put sugar on his muffin, and swallow both messes without the slightest perception of his having at all deviated from his common mode of applying those relishing condiments. With respect to the quality of his food, indeed, he is as indifferent as Dominie Sampson: and he has been known to fill his glass with vinegar instead of sherry, and to pour a ladle of turtle soup over his turbot instead of lobster sauce, and doubtless would have taken both the eatables and drinkables very quietly, had not his old butler, on the watch against such occurrences, whisked both glass and plate away with the celerity of Sancho's physician, Don—Bless me! I have forgotten that name also! I said that this subject was contagious. Don—he who officiated in the island of Barataria—Don—no, Doctor, Pedro Rezio de Aquero, that is the title in which the gentleman rejoices.—Well, the vinegar would have been drunken, and the turbot and turtle sauce eaten, had not the vigilant butler played the part of Don Pedro Rezio, and whipped off the whole concern, whilst the good man, his master, sat in dubious meditation, wondering what had become of his dinner, and not quite certain that he might not have eaten it, until a plateful of more salubrious and less incongruous viands—ham and chicken, for instance, or roast beef and French beans, was placed before him. But for that inestimable butler, a coroner's inquest would have been held upon him long ago.

After breakfast he would dress, thrice happy if the care of his valet prevented him from shaving with a pruning-knife, or putting on his waistcoat wrong side out. Being dressed he would prepare for his morning ride, mounting, if his groom did not happen to be in waiting, the very first four footed animal that came in his way,—sometimes the butcher's horse with a tray nicely balanced before—sometimes the post-boy's donkey, with the letter-bags swinging behind him—sometimes his daughter's pony, side-saddle notwithstanding; and, when mounted forth, he sallies, rather in the direction which his steed may happen to prefer than in that which he himself had intended to follow.

Bold would be the pen that should attempt even a brief summary of the mistakes committed in one single morning's ride. If he proceed, as he frequently does, to our good town of Belford, he goes for wrong things to the wrong shops, mis-calls the people whom he accosts (seldom, indeed, shall he hit on the proper name, title, or vocation of any one whom he chances to address), asks an old bachelor after his wife, and an old maid after her children; and finally, sums up a morning

of blunders by going to the inn where he had not left his horse, and quietly stepping into some gig or phaeton prepared for some other person. In a new neighbourhood, this appropriation of other people's property might bring our hero into an awkward dilemma; but the man and his ways are well known in our parts, and when the unlucky owner of the abstracted equipage arrives in a fury, and demands of the astounded ostler what has become of his carriage, one simple exclamation, "Mr. Coningsby, sir!" is at once felt by the aggrieved proprietor to be explanation enough.

Should morning calls be the order of the day, he contrives to make a pretty comfortable confusion in that simple civility. First of all, he can hardly gallop along the king's highway without getting into a *démêlé* with the turnpike keepers, sometimes riding quietly through a gate without paying the slightest attention to their demand for toll; at others tossing them, without dreaming of stopping to receive the change, a shilling or a sovereign as the case may be; for, although great on the currency question (have I not said that the gentleman is\* a county member?) he is practically most happily ignorant of the current coin of the realm, and could hardly know gold from silver, if asked to distinguish between them. This event is a perfect godsend to the gatekeeper, who, confiding in the absolute deafness produced by his abstraction, calls after him with a complete assurance that he may be honest with impunity; and that, bawl as he may, there is no more chance of his arresting his passenger than the turnpike-man of Ware had of stopping Johnny Gilpin. Accordingly, after undergoing the ceremony of offering change, he pockets the whole coin with a safe conscience. Beggars (and he is very charitable) find their account also in this ignorance; he flings about half-crowns for penny pieces, and half-sovereigns for sixpences, relieving the same set a dozen times over, and gets quit of a pocketful of money (for though he have a purse, he seldom remembers to make use of it—luckily seldom—for if he do fill that gentlemanly network, he is sure to lose it, cash, bank-notes, and all) in the course of a morning's ride.

Arrived at the place of destination, the house at which he is to call, a new scene of confusion is pretty sure to arise. In the first place, it rarely happens that he does arrive at the veritable mansion to which his visit is intended. He is far more likely to arrive at the wrong place, inquire of the bewildered footman for some name, not his master's and be finally ushered into a room full of strangers, persons whom he neither visits nor knows, who stare and wonder what brought him, whilst he, not very sure whether he ought to remember them, whether they be his acquaint-

tances or not, stammers out an apology, and marches off again. (N. B. He once did this, whilst canvassing for the county, to a rival candidate, and finding only the lady of the house, intreated her, in the most insinuating manner, to exert her influence with her husband for his vote and interest. This passed for a deep stroke of finesse amongst those who did not know him—they who did, laughed and exclaimed, Mr. Coningsby! Or he shall commit the reverse mistake, and, riding to the right house, ask for the wrong people, or, finding the family out, he shall have forgotten his own name—I mean his name tickets—and shall leave one from his wife's or daughter's card case, taken up by that sort of accident, which is to him second nature; or he shall unite all those blunders, and leave at a house where he himself does not visit, a card left at his own mansion by a third person, who is also acquainted with the family to which so unconsciously that outward sign and token of acquaintanceship had travelled.

Imagine the mistakes and confusion occasioned by such doings in a changeable neighbourhood, much broken into parties by politics and election contests. Sometimes it did good, as between two old country squires, who, having been friends all their lives, had quarrelled about the speed of a greyhound, and the decision of a course, and had mutually vowed never to pass each other's door. The sight of his antagonist's card (left in one of Mr. Coningsby's absent fits), so mollified the most testy elder of the two, that he forthwith returned the visit, and the opposite party being luckily not at home, a card was left there also; and either individual thinking the concession first made by himself, was emulous in stepping forward with the most cordial hand-shaking when they met casually at a dinner at a third place.

But Mr. Coningsby's visiting blunders were not always so fortunate; where they healed one breach, they made twenty; and once had very nearly occasioned a duel between two youngsters, lords of neighbouring manors, between whose gamekeepers there was an outstanding feud. The card left was taken as a cartel—a note of defiance; and, but for the interference of constables, and mayors, and magistrates, and aunts, and sisters, and mammas, and peace-preservers of all ages and sexes, scene very hot blood would inevitably have been spilt. As it was, the affair terminated in a grand effusion of ink, the correspondence between the seconds, a delicious specimen of polite and punctilious quarrelling, having been published for the edification of the world, and filling three columns of the county newspapers. It came to no conclusion; for, although the one party conceded that a card had been left, and the other, that the person to whom the name belonged did not leave it, yet how the thing did arrive on that hall table remained a mystery. The servant who opened the door happened to be a stranger, and somehow or other nobody ever thought of Mr. Coningsby:—nay, he himself, although taking a great interest in the dispute, and wondering over the puzzle like the rest of the neighbourhood, never once recollected his own goings on that eventful morning, nor dreamt that it could be through his infirmity that Sir James

---

\* Erratum: For *is* read *was*. "Was a county member" will do just as well, and save the talented Editor, the eminent publisher, and respectable printer of this loyal volume from any danger of being called, innocent as they are, to the bar of the House, and committed to His Majesty's gaol of Newgate for breach of privilege; to say nothing of my own share of the peril. *Was* must be the word.

Mordaunt's card was left at Mr. Chandler's; to so incredible a point was his forgetfulness carried.

If, in so simple a matter as morning visiting, he contrived to produce so much confusion, think how his genius must have expanded when so dangerous a weapon as a pen got into his hands; I question if he ever wrote a letter in his life without some blunder in the date, the address, the signature, or the subject. He would indite an epistle to one person, direct it to another, and send it to a third, who could not conceive from whom it came, because he had forgotten to put his name at the bottom. But of the numerous perplexities to which he was in the habit of giving rise, franks were by very far the most frequent cause. Ticklish things are they, even to the punctual and the careful; and to Mr. Coningsby the giving one quite perfectly right seemed an impossibility. There was the date to consider, the month, the day of the month, the year—I have known him to write the wrong century;—then came the name, the place, the street, the number, if in London—if in the country, the town and county;—then, lastly, his own name, which, though so simple an operation as it seems, he would contrive generally to omit, and sometimes to boggle with, now writing only his patronymic, as if he were a peer, now only his Christian name, as if a prince, and now an involution of initials that defied even the accurate eye of the clerks of the Post-Office. Very, very few can have been the franks of his that escaped paying.

Of course his friends and acquaintances were forewarned, and escaped the scrape (for it is one) of making their correspondents pay triple postage. Bountiful as he was in his offers of service in this way, (and keeping no account of the numbers, he would just as readily give fifty as one), none incurred the penalty save strangers and the unwary. I, for my own part, never received but one letter directed by him in my life, and in the address of that, the name, my name, the name of the person to whom the letter was written, was wanting. "Three Mile Cross" held the usual place occupied by "Miss Mitford."

"Three Mile Cross—  
Reading,  
Berks,"

ran the direction. But as I happened to receive about twenty times as many letters, and especially franked letters, as all the good people of "The Cross" put together, the packet was sent first to me by way of experiment, and, as I recognised the seal of a dear friend and old correspondent, I felt no scruple in appropriating, for once, like a Scottish laird, the style and title of the place where I reside. And I and the postmaster were right; the epistle was, as it happened, intended for me.

Notes would, in his hands, have been still more dangerous than letters; but from this peril he was generally saved by the caution of the two friends most anxious for his credit, his wife and the old butler, who commonly contrived, the one to write the answers to all invitations and general billets that arrived at the house, the other to watch that none from him should pass without due scrutiny. Once, however, he escaped their surveillance; and the consequence was an adventure which, though

very trifling, proved, in the first instance, so uncomfortable as to cause both his keepers to exert double vigilance for the future. Thus the story ran:—

A respectable but not wealthy clergyman had been appointed to a living about ten miles off, had married, and brought home his bride, and Mr. Coningsby who as county member, called upon every body within a still wider circuit, paid a visit in due form, accompanied by, or rather accompanying his lady, which call having been duly returned (neither party being at home,) was followed by an invitation for Mr. and Mrs. Ellis to dine at Coningsby House. The invitation was accepted: but when the day arrived, the dangerous illness of a near relation prevented the young couple from keeping their engagement; and some time after, the fair bride began to think it necessary to return the civilities of her neighbours, by giving her first dinner party. Notes of invitation were despatched accordingly, to four families of consequence, amongst them Mr. Coningsby; but it was the busy Christmas time, when, between family parties, and London visitors, and children's balls, every body's evenings were bespoken for weeks beforehand; and, from three of her friends accordingly, she received answers declining her invitation, and pleading pre-engagements. From Mr. Coningsby only, no note arrived. But accidentally Mr. Ellis heard that they were to go at Christmas on a distant visit, and taking for granted that the invitation had not reached the worthy member or his amiable lady, Mrs. Ellis, instead of attempting to collect other friends, made up her mind to postpone her party to a more convenient season.

The day on which the dinner was to have been given proved so unfavourable, that our young couple saw good cause to congratulate themselves on their resolution. The little hamlet of East Longford, amongst the prettiest of our North-of-Hampshire villages, so beautiful in the summer, from the irregularities of the ground, the deep woody lanes hollowed like water-courses, the wild commons which must be passed to reach it, and the profound seclusion of the one straggling street of cottages and cottage-like houses, with the vicarage, placed like a bird's-nest on the side of a steep hill, clothed to the very top with beech woods; this pretty hamlet, so charming in its summer verdure, its deep retirement, and its touch of wildness in the midst of civilization, was, from those very circumstances, no tempting spot in mid-winter; vast tracts across the commons were then nearly impassable; the lanes were sloughs; and the village itself, rendered insulated and inaccessible by the badness of the roads, conveyed no other feeling than that of weariness and loneliness. Mr. and Mrs. Ellis, who, although not insensible of the inconveniences of their abode, had made up their minds to bear the evil and enjoy the good of their situation, could not help congratulating themselves, as they sat in their snug dining parlour, after a five o'clock dinner, on the postponement of their party. The snow is above a foot deep, and the bridge broken, so that neither servants nor horses could have got to the Eight Bells: and where could we have housed them? said the gentleman.

And the drawing-room smokes so, in this heavy atmosphere, that we cannot light a fire there, responded the lady; never, to be sure, was anything so fortunate!

And just as the word was spoken, a carriage and four drove up to the door, and exactly at half-past six (the hour named in the invitation), Mr. and Mrs. Coningsby were ushered into the room.

Imagine the feelings of four persons, who had never met before, in such a situation, especially of the two ladies. Mrs. Ellis, dinner over, with the consciousness of the half-bottle of port and the quarter of sherry, the apples, the nuts, the single pair of mould candles, her drawing-room fire that could not be lighted, her dinner to be provided as well as cooked, and her own dark merino and black silk apron! Poor Mrs. Coningsby, on the other hand, seeing at a glance how the case stood, feeling for the trouble they were giving, and sinking under a consciousness far worse to bear than Mrs. Ellis's—the consciousness of being over-dressed. How heartily did she wish herself at home again! or, if that were too much to desire, what would she have given to have replaced her claret-coloured silk gown, her hat with its white plumes, her pearls and her rubies back again in their wardrobes and cases!

It was a trial of no ordinary nature to the good sense, good breeding, and good humour of both parties, and each stood it well. There happened to be a cold round of beef in the house, some undressed game, and plenty of milk and eggs; the next farmer had killed a pig; and with pork chops, cold beef, a pheasant, and apple fritters, all very nicely prepared, more fastidious persons than Mr. and Mrs. Coningsby might have made a good dinner. The host brought out his best claret, the pretty hostess regained her smiles, and forgot her black apron and her dark merino: and, what was a far more difficult achievement, the fair visitor forgot her plumes and her satin. The evening, which began so inauspiciously, ended pleasantly and sociably: and, when the note (taken, as was guessed, by our hero from the letter-boy, with the intention of sending it by a groom) was found quietly ensigned in his waistcoat pocket, Mrs. Coningsby could hardly regret the termination of her present adventure, although fully resolved never again to incur a similar danger.

Of his mishaps when attending his duty in Parliament, and left in some measure to his own guidance (for, having no house in town, his family only go for about three months in the season) there is no end. Some are serious, and some are very much the reverse. Take a specimen of his London scrapes.

Our excellent friend wears a wig made to imitate a natural head of hair, which it is to be presumed that at the very best of times, it does not very closely resemble, and which, after a week of Mr. Coningsby's wearing, put on with the characteristic negligence of his habits, sometimes on one end, sometimes on the other, always awry, and sometimes hind side before, assumes such a demeanour as never was equalled by Christian peruke at any time or in any country.

One day last winter, being in London without a servant, he, by some extraordinary chance, happened to look in the glass when he was dressing, and became aware of the evil state of his caxon,—a piece of information for which he had generally been indebted to one of his two guardians, Mrs. Coningsby or the old butler,—and, recollecting that he was engaged to a great dinner party the ensuing evening, stepped into the first hair-dresser's shop that he passed to bespeak himself a wig; where, being a man of exceedingly pleasant and jocular manners (your oddities, with the exception of the peculiar oddity, are commonly agreeable persons), he passed himself off for a bachelor to the artificer, and declared that his reason for desiring a wig of peculiar beauty and becomingness was, that he was engaged to a great party the next day, at which he expected to meet the lady of his heart, and that his fate and fortune depended on the set of his curls. This he impressed very strongly on the mind of the perquier; who, an enthusiast in his art, as a great artist should be, saw nothing extraordinary in the fact of a man's happiness hanging on the cut of his wig, and gravely promised that no exertion should be wanting on his part to contribute to the felicity of his customer, and that the article in question, as perfect as hands could make it, should be at his lodgings the next evening at seven.

Punctual to the hour, arrived the maker of perukes; and, finding Mr. Coningsby not yet returned to dress, went to attend another appointment, promising to come back in half an hour. In half an hour, accordingly, the man of curls reappeared, just in time to see a cabriolet driving rapidly from the door, at which a maid servant stood tittering.

Where is Mr. Coningsby? inquired the perquier.

Just gone out to dinner, replied the girl; and a queer figure he is, sure enough. He looks for all the world like an owl in an ivy-bush.

To be sure he has not got his new wig on!—my wig! returned the alarmed artist; he can never be such a fool as that!

He's fool enough for anything in the way of forgetting or not attending, responded our friend Sally; and he has got a mop of hair on his head, whoever made it, that would have served for half-a-dozen wigs.

The article was sent home untrimmed, just as it was woven, replied the unfortunate fabricator, in increasing consternation; and a capital article it is. I came by his own direction to cut and curl it, according to the shape of his face: the gentleman being particular about the set of it, because he's going a-courting.

Going a-courting! exclaimed Sally, amazed in her turn; the Lord ha' mercy upon the poor wretch! If he has not clean forgot that he's married, and is going to commit—I don't know what you call it—to have two wives at once! and then he'll be hanged. Going a-courting! What'll Madam say! Going a-courting! He'll come to be hanged, sure enough.

Married already! quoth the perquier, with a

knowing whistle, and a countenance that spoke Benedick the married man in every feature. When! One wife at a time's enough for most people. But he'll not be hanged. The fact of his wearing my wig with the hair six inches long will save him. He must be *non compos*. And you that stand tittering there can be little better, to let him go out in such a plight. Why didn't you stop him?

Stop him! ejaculated the damsel; stop Mr. Coningsby! I should like to know how!

Why by telling him what he was about, to be sure; and getting him to look in the glass. Nobody with eyes in his head could have gone out such a figure.

Talk to him! quoth Sally: but how was I to get him to listen? And, as to looking in a glass, I question if ever he did such a thing in his life. You don't know our Mr. Coningsby, that's clear enough.

I only wish he had never come in my way, that I never had had the ill luck to have known him, rejoined the discomfited artist, if he should happen to mention my name as his wig-maker, whilst he has that peruke on his head, I am ruined—my reputation is gone for ever!

No fear of that, replied Sally, in a comforting tone, struck with compassion at the genuine alarm of the unlucky man of wig. There's not the slightest danger of his mentioning your name, because you may be certain sure that he does not remember it. Lord love you, he very often forgets his own! Don't you be frightened about that! repeated the damsel, soothingly, as she shut the door, whilst the discomfited peruker returned to his shop, and Mr. Coningsby, never guessing how entirely in outward semblance he resembled the wild man of the woods, proceeded to his dinner-party, where his coiffure was, as the hairdresser had predicted, the theme of universal astonishment and admiration.

This, however, was one of the least of his scrapes. He has gone to Court without a sword; he has worn coloured clothes to a funeral, and black to a wedding. There is scarcely any conventional law of society which, in some way or other, he hath not contrived to break; and, in two or three slight instances, he has approached more nearly than becoms a magistrate and a senator to a *démêlé* with the laws of the land. He hath quietly knocked down a great fellow, for instance, whom he caught beating a little one and hath once or twice been so blind or so absent, as to suffer a petty culprit to run away, when brought up for examination in virtue of his own warrant. But it is remarkable that he never, in his most oblivious moods, is betrayed into an unkind word or an ungenerous action. There is a moral instinct about him which preserves him, in the midst of his oddities, pure and unsullied in thought and deed. With all his "*distractions*," he never lost a friend or made an enemy. His opponents at an election are pazed when they get up a handbill against him; and for that great test of amiableness, the love of his family, his household, his relations, servants, and neighbours, I would match my worthy friend, George Coningsby, against any man in the county.

## TO OWNERS AND OCCUPIERS OF LAND.

Gentlemen—We are again very unexpectedly (and in my opinion very unnecessarily) upon the eve of another general election, for the purpose of trying to fix upon the country again the regular old Tory hack administration, with Sir Robert Peel and his famous Currency Bill of 1819 at its head—a measure that has produced more evil, more injustice, and mischief, than any other within the memory of man; and as Sir Robert and his tail have assumed the name of Reformers, I wish particularly to draw your attention to this subject, in order to see if we are likely to obtain any relief from a measure that must bring destruction upon the country, if not stayed in its further progress. Sir Robert still clings, with all the affection of a parent, not because it is his own bantling, but because it has increased his, and all moneyed men's and pensioners' property, at the expence of the other classes of the community, but especially of the agriculturists. This I hope to prove to you very shortly and satisfactorily from the following statement, taken from official documents, and may therefore be relied on.

A return of the annual average market price of the quarter of wheat, and of £100 three per cent. stock, from 1804 to 1834, and the number of quarters of wheat the stock would purchase in each year respectively.

| Years. | Price of<br>Wheat per<br>Quarter. | Price of £100<br>3 per Cent.<br>Stock. | Quantity<br>it would<br>purchase |
|--------|-----------------------------------|----------------------------------------|----------------------------------|
|        | £. s.                             | £. s.                                  | Qrs.                             |
| 1804   | 60 5                              | 56 16                                  | 18                               |

| 9      | 66 3                              | 85 14                                  | 26                               |
| 30     | 64 3                              | 88 15                                  | 27                               |
| 1      | 66 4                              | 89 15                                  | 27                               |
| 2      | 58 8                              | 78 0                                   | 27                               |
| 3      | 52 11                             | 83 0                                   | 31                               |
| 1834   | 45 0                              | 92 0                                   | 41                               |

Now, gentlemen, look at and examine and mark the destructive operation of this Tory Premier's Bill and Tory measures to the agriculturists.—The moment this bill is agitated and passed, from that moment does the price of money go up, and the price of your wheat and produce come down, to an extent that without this proof would be incredible. In order that we may argue the question fairly, I have taken 15 years previous, and 15 years since the passing of that bill,

which shows the price each year, both of increase and decrease, and the quantity of wheat this 100l stock would purchase. Taking the two periods of 15 years and comparing them, we find the average price of wheat per quarter from 1804 to 1819, was 85s 6d, and stock 62l 18s 4d; since 1819 to 1834 wheat is but 58s 2d, and stock 82l 14s 2d. This money for the first period would on the average purchase *Fifteen* quarters of wheat, and for the last *Twenty-nine* quarters, so that here is a revolution in the intrinsic and relative value of property of *One Hundred per Cent.*, and all in favour of the drones and pensioners, and against the industrious, frugal, and beneficial husbandman. But the injustice and injury is still more evident, by observing that in 1817, the year before the question was agitated, wheat fetched 94s per quarter, the 100l 3 per Cent. 62l 6s 0d, and which purchased thirteen quarters of wheat, whereas in 1834, yes, at this moment, the same sum will purchase *forty-one* quarters of wheat! Here is an alteration of upwards of three hundred per Cent. between those years. The stock, in fact, is part of the national debt, so that instead of having a debt of 800 millions, we in point of fact have a debt of more than *twenty-four hundred millions*, if we are to pay it in wheat. This mode of calculation applies with the same force, and in the same ratio in all our fixed payments—for instance, suppose I have one hundred pounds to pay in taxes or pensions, or half-pay, or any thing else, am I not *obliged* to sell three times as much wheat now to raise that hundred pounds as I did in 1817, before this unjust and destructive bill and Tory policy passed? Can any thing be more oppressive and destructive to the agriculturists than this, and to the nation generally? The debt, the pensions, the taxes, and all the evils of the Tory policy, were contracted in a currency, when the pound note was not worth more than 13s 4d, and now the country is called upon to pay 20s in a gold and silver currency; by such means the sources of industrious wealth have been dried up—the price and produce of land has enormously decreased—the farmer has been ruined, his house become desolate, whilst but too many have been actually pauperised. Look at this you sticklers for Tory rule and mis-rule, and I dare you to the proof. Look at this, I say, and vote for candidates to uphold Sir Robert turn-coat and his train, who have declared that too many taxes have been repealed—that the Malt Tax shall not come off—that Tithes are no grievance—that Corporations are pure, and that Ireland wants no relief. I say vote for such men if you like, but for ever after hold your peace. I have greater faith in your judgment and integrity than to believe you will do so, although an evil example is set before your eyes in high quarters, shewing a dereliction in principle in some of our Senators, which would be disgraceful to one of our destitute and demoralized paupers; but I have no fear either as to the result of the election, or the permanency of the Tory administration—a power, a spirit is abroad, that will crush the Tory administration (or indeed any administration) to atoms, unless relief is given to the country, and speedily. But for men of wealth and station to prostitute themselves for the sake of office, and violate principle unblushingly, is an abomination.—Look to measures, not men; indeed this weak and silly cry is seen through—look to men and measures, this is the point—every body knows one good volunteer is always worth half a dozen pressed men.

I have the honour to be, gentlemen,

Yours obediently,

J. RICHARDSON.

Heydon, Dec. 30th, 1834.

## POOR LAWS FOR IRELAND.

IRELAND in 1834. By H. INGLIS.—Whitaker and Co.

[The following are the answers to the queries of the Irish Poor Law Commissioners, extracted from Mr. Inglis's valuable work.]

I have before me, two sets of queries,—“Queries for the rural districts,” and “Queries for parishes in large towns;” besides a thick *brochure*, entitled, “Instructions given by the Commissioners appointed to inquire into the State of the Poor of Ireland, to the Assistant Commissioners.” I shall first take up the “queries for the rural districts,” as being, in my opinion, the most important document. The queries contained in it, have reference to particular districts. My replies to these queries refer to the whole of Ireland; and are, in truth, a repetition, in a concentrated form, of the facts which are scattered throughout these volumes.

The first three queries refer to the size of the parishes or barony, respecting which information is wanted; and to the relative proportions of wood, arable, pasture, waste and bog.

I do not very well see how any one but a surveyor could answer these queries. As my answers refer to the whole country I pass them over.

The fourth query is an important one. It is, “What is the average rent of arable land and of pasture land in your parish?”

It is impossible to state what is the rent of arable land, distinct from pasture land; because in almost every farm there is both; and the rent is, of course, so much per acre, taking both together. The rent also depends upon the vicinity of the land to a town; besides, to tell the average rent of land, is to give no real information; because without precise information as to the quality of land, of which no description can convey a just notion, no idea could be formed of the fairness or unfairness of the rent. Rents, I should say, are highest in Leinster,—next highest in Munster,—next in Ulster; and, with some exceptions, lowest in Connaught, where land is generally let, not by the acre, but in the lump. But as the only object of this query must be, to ascertain whether land be fairly or unfairly let, the best answer to it is,—that, with few exceptions, the landlords of Ireland cannot pay the rents which are exacted unless by limiting their diet and their comforts within the bounds prescribed by the absolute necessities of nature; and that, notwithstanding their privations, a large proportion are in arrear. This, I think, sufficiently answers the query.

The fifth query asks, “Are the landed proprietors absentee, or resident?” To this query another ought to have been added,—Are the *agents* of absentee landlords resident, or absentee? And in the instructions delivered to the assistant commissioners they are directed to inquire, and, of course, to report, as to the effects of residence and non-residence.

It must not be imagined that the people, on all absentee estates, are in a worse condition than they are upon those estates where there is a resident landlord. The condition of the peasantry depends on the circumstances under which the lands are occupied, much more than on the residence of proprietors; and I cannot say that it is generally an easy matter to guess, from the condition of the peasantry on an estate whether the landlord be absentee or resident. Some of the most comfortable tenantry in Ireland are found on absentee properties; and some of the most miserable on estates upon which the proprietor resides. There is no doubt, however, that were a well-disposed and unembarrassed landlord resides, fewer unemployed labourers are found—the condition of the labourer is

better—and the retail trade of the most adjacent town is materially benefited.

The two next queries inquire as to the number of labourers in constant employment, and the number in occasional employment; and, also, ask how they are maintained when out of employment?

In reply to these queries, I will take upon myself to answer, that the great mass of the labouring class in Ireland, have no constant employment, I should say, [that throughout the greater part of Leinster, Munster, and Connaught, a large majority of the labouring poor are unable to find constant employment. With the exception of Belfast, and in some few places where public works had created a temporary demand, I found no where full employment for the people. As for their means of subsistence, when out of employment, little suffices. If they have not, themselves, a patch of potato land, they, or their wives, beg among the farmers round the country;—relations, who have a little to spare, help them;—and the priest also does something for them.]

“What is the ordinary diet, and condition with respect to clothing, of the labouring classes?” is the next query.

The diet of those who are in employment consists of a scanty meal or two of potatoes, with the addition at times, of a little butter milk. The diet of the far greater number who are not in employment consists of as many dry potatoes as serve just to sustain life. In Ulster things are rather better; there are fewer of the latter class—and the former have more plentiful meals. As for clothing,—an English beggar would not lift off the ground the clothes worn by old and young of the lower classes of Leinster, Munster, and Connaught. The young can scarcely be said to be clothed at all.

“What,” continue the queries, “are the daily wages of labourers, with or without diet?”

Excluding the large towns, such as Belfast, Cork, and Limerick, and the labour employed on the domains of a very few resident noblemen, tenpence, without diet, are the highest wages ever given for constant employment; ninepence and eightpence is the more usual rate; and, in some places sixpence is willingly accepted, for constant employment. With diet, sixpence is the usual sum given. The wages of occasional employment vary with the occasion; at seasons of particular demand, one shilling or more, even may be given; but, at all other times, any number of labourers may be hired by the week, at eightpence, and even lower. In the instructions delivered to the assistant commissioners, they are desired to inquire whether higher wages are attended by a corresponding increase of comfort? I unhesitatingly reply, that they are. The whole province of Ulster bears me out in this assertion.

The next query inquires, whether women and children are employed in labour?

The labour of women and children is scarcely wanted where half the male population are unemployed. Women, employed in agricultural labour, are, generally, some part of the family of the landholder.

“What, in the whole,” says the next query, “might an average labourer, obtaining an average amount of employment, both in day work and task work, earn in the year, including harvest work, and the value of all his other advantages and means of living?”

In reply to this important query I would say, that in a country where not one-half of the people are in constant employment, it would be unfair to state “the average amount of employment” obtained by a labourer throughout the year, to be more than one-half of the year: during that half year his wages cannot fairly

be stated at more than 8d. for four months, and for the other two months, seed and harvest times, 1s. The hundred and four working days, at 8d., are 3l. 9s. 4d.; and the fifty-two days, at 1s., added to this, make 6l. 1s. 4d.; which is all the labourer, “obtaining an average amount of employment,” may earn in a year: and this sum, divided by 365—the number of days which the labourer has to support himself and his family—gives him, per day not quite FOURPENCE! I am quite confident, that if the whole yearly earnings of the labourers of Ireland were divided by the whole number of labourers, the result would be under this sum,—FOURPENCE a day for the labourers of Ireland!

But, in order that the force of this conclusion may be fully perceived, I must mention the two queries which follow. The first of them inquires, how much the labourer's wife, and four children, all of an age to work (the eldest not more than sixteen,) might earn within the year? And the second query inquires, what would be the expense of food, for an able-bodied labourer, on an average of years?

Now the first of these is a foolish query, and no way alters the conclusion I came to in answering the former query; for it is obvious that even supposing employment, to be attainable by the wife and children—a thing not at all probable where the husband has not only half employment—the average condition of the labourer would not be bettered. Early marriages and a numerous progeny are universal. If the labourer has four children able to work, the probability is, that he has at least four younger children to support: the occasional labour, and scanty remuneration paid for the labour of a child, will certainly not do more than suffice for its own support *throughout the year*; and when we consider the general dearth of employment, and the large families of the Irish peasants, we may fairly conclude that the labourer has to support his wife and two children by his own labour,—which we have seen averages 4d. per day.

With respect to the yearly expense of food,—two stone and a half of potatoes—no more than suffice for the daily support of a labourer, his wife, and two children; and taking the average price of potatoes at 2d. per stone—a very low average,—mere subsistence cannot be purchased with the whole amount of wages, supposing the whole amount available for subsistence: but rent has to be paid. Formerly the pig was sufficient for this; but the market has so fallen, that something is wanted, besides the pig, to make up the rent. Where no land is attached to the cabin,—the average rent of it being 35s.—at least 20s. of this sum must be made up from wages; so that the 4d. per day suffers a diminution of nearly three farthings. Where a little potato land is attached to the cabin, the value of the potatoes may be considered as equivalent for the amount of the rent.

It is next inquired, “of what class of persons, generally, are the landlords of cottages and cabins?”

In the country the landlords of cabins are, generally, small farmers, who are quite as hard set to make and their own rent as their humbler dependents are to pay theirs. In the suburbs of the towns great landowners, and often noble lords, are the landlords.

The next query inquires the rent of cabins?

In Wicklow, Wexford, Waterford, Kilkenny, and Tipperary counties, 30s. and 40s. is the usual rent of a cabin, either altogether without land, or with so inconsiderable a patch, that its value is scarcely any set-off against the rent. In the more western and more northern parts of Ireland, with the same rent, a

little potato land generally accompanies the cabin, excepting in the suburbs of the towns.

"Of what description of buildings are those cabins, and how furnished?"

This is the next query; and those who have read these volumes will not require to read the answer to it. My object however, is, as I have already said, to condense in this chapter the information scattered through the volumes. The only difference between the best and the worst of the mud cabins, is, that some are water-tight and some are not; air-tight I saw none; with windows scarcely any; with chimneys, that is, with a hole in the roof, for the smoke to escape through, as many, perhaps, with it as without it. As for furniture—there is no such thing; unless a broken stool or two and an iron pot can be called furniture. I should say, that in the greater part of Leinster and Munster, and in the flat districts of Connaught, bedsteads are far from general; and bed clothing is never sufficient. In the greater part of Ulster, cabins and their furniture are considerably superior.

The next query inquires upon what conditions labourers or cottiers hold their cabins and land; and whether it is usual to require labour in addition to, or in lieu of, rent?

Where labourers or cottiers hold their cabin and patch of ground of a farmer, the rent is generally covenanted to be paid in labour. Eighty days' labour is very usually required, as the rent of a cabin and small patch of land.

The next query refers to the con-acre system; and inquires as to its prevalence; and as to the highest and lowest rent paid for con-acre?

In every part of Ireland, with the exception of Ulster, where land is not the only refuge of the poor man, con-acre prevails to a greater or less extent—to the greatest extent in those parts which are the most populous. Rent of con-acre varies from 10% to 12%. I have heard of higher rents, but these were rare exceptions. Ten pounds may be stated as the usual rent; and with a favourable season, this rent can be afforded. The reader will not have forgotten another practice, to which, in my first volume, I have alluded—that which gives to the cottier the produce for one year, rent free, of as much land as he is able sufficiently to manure. In reply to the query, whether con-acre crop be on the average a remunerating crop, I should answer, that with average seasons, and at the average rent, it is a remunerating crop.

The next two queries inquire as to the number of labourers who leave their dwellings periodically to obtain employment elsewhere; and what proportion go to England; and whether they be married men; and how their wives and children are supported in their absence?

A precise answer to this query is impossible. From the west and north-west—chiefly from the lower parts of Connaught—multitudes go in search of employment; but the number of those who go to England is diminishing; while the number of those who seek employment in Leinster is augmenting with the constantly increasing tillage in Ireland. By far the greater number of the labourers so leaving their homes are married men; and in that part of Ireland from which this migration chiefly takes place, cabins have generally a bit of potato land attached to them—on the produce of which, or of a patch held by con-acre, the wife and children subsist. In Mayo, from the lower part of which many labourers migrate in the season, the wives of the cottiers earn a trifle by the spinning of flax.

The next query requests information as to the number of public houses, and the prevalence of illicit distillation?

The number of public houses appears to a stranger out of all proportion with the extent and population of the district where they are found. This is owing to the faults of the licensing system, by which the expense of the license is regulated by the sum at which the house demanding it is rated, and thus the trade is thrown into the worst hands. Illicit distillation prevails universally, and will continue to prevail, until the duty on legalized whiskey be so reduced, that the difference in price between it and the illicit whiskey will be no compensation for the risk of distilling the latter.

The next query inquires as to the number of the aged and infirm, and how they are supported?

The number of these is greatest in the towns; the ejected poor seek a livelihood in the towns, and gradually become diseased by privations. Those aged and infirm who are found in the country, are supported chiefly by their nearest relatives, by the charity of their neighbouring farmers, and by little helps from the clergy of both persuasions.

"What number of persons," says the next query, "subsists by begging?" and are alms usually given in provisions or money?"

Few beg in the country, except the wives and children of the infirm, of the diseased, and of the unemployed labourer; or widows, or frail old men. Money is seldom given; a few potatoes or a handful or two of meal are the usual aids. To the last query another ought to have been added, inquiring what descriptions of persons are the usual givers of alms? Much more the farmers than the landlords, much more those who cannot than those who can afford the offering. Good resident landlords give, but these are rare; and the beggar finds readier access to the farmhouse than to the hall—and, I fear, a better reception.

Passing over one or two queries of little importance, I come to one which inquires whether any persons are known to have died of actual starvation?

If by starvation be meant death quickly and immediately, resulting from a total want of food, I should say, that in the country this rarely happens. The Irish poor are remarkably kindly, affectionate toward each other, and a relation, or even a neighbour, will divide his potato with one who is in want. But if the word starvation be meant to comprehend those cases, in which insufficient subsistence induces disease, predisposes the individual to the attack of epidemics, or accelerates the decay of nature; then I have good reason to believe, that by far the greater number of the Irish poor die of starvation. In making this statement, however, I include town as well as country; but I shall afterwards return to this query, with reference to towns.

The next important query I come to is this,—  
"To what extent has the system of throwing small farms into large ones, taken place; and what has become of the dispossessed tenants."

There is a growing disposition on the part of landlords to get rid of middlemen—on whose estates holdings are generally much subdivided; and consequently when the middleman's lease lapses, small farms are thrown into larger farms, and tenants are necessarily dispossessed. The great landowners who have adopted this rule give the dispossessed tenants holdings at a very small, almost a nominal rent, on mountain land, out of which, however, industry may obtain a livelihood; or, in some instances, they offer to pay the expense of the emigration of the dispossessed tenants; but in all cases in

which the landlord has not the power or the will so to act, the tenants are turned adrift, penniless and shelterless, and either locate themselves on some neighbouring estate, or swell the pauper population of the nearest town. Consolidation, unless where the landlord has it in his power to provide otherwise for his dispossessed tenantry, is unjust towards the country at large, upon whose charities they are thrown—cruel towards those who are dispossessed—and impolitic as regards the State. This reply answers in part the query which follows, respecting the prevalence of middlemen. The number of those middlemen who hold their land on terminable lease, is fast diminishing; and, with the exception of those middlemen who are extensive landholders, or those holding on lease for ever—who are often better men than the head landlord—the tenants holding under middlemen are generally in a greatly worse condition than those holding directly under a head landlord.

The next query refers to emigration; and in reply to it, I would assert, that the disposition to emigrate increases; that all of the lower classes who are able to avail themselves of it, do avail themselves of it; that the persons who emigrate are chiefly agriculturists—cottiers, and small farmers, and Protestants and Catholics indifferently, but chiefly Catholics; and that Canada is their most favourite land of promise.

The last query, which refers to the rural districts, is a most important one. "Is the general condition of the poorer classes improved, deteriorated, or stationary, since the peace in the year 1815; and in what respects?" It would have been better if this query had been more comprehensive; and had included in it, the condition of the whole agricultural classes.

I regret to say, that with scarcely any exception—unless those offered by some of the large towns, which have become great points of export—I am compelled to say that the agricultural population, farmer and labourer, but particularly the farmer, has deteriorated greatly within the last fifteen years. Rents have generally continued the same; produce has fallen; and farmers have been getting poorer and poorer. As for the agricultural labourers—a body whose wages do not average fourpence per day, and who live on the verge of starvation—it is needless to ask if any improvement has taken place; none certainly in food, either in quantity or quality; nor, generally, any in lodging; but I believe I am justified in saying, that some little improvement is visible in female clothing, owing to the low price of cottons.

I have now gone through the queries applicable to the rural districts; and shall next proceed, very briefly, to go over the queries applicable to town parishes only.

Several of the first queries refer to the increase of towns in size and population; and to these queries, it may be answered, that almost all the seaports, and all towns commanding a navigation, are advancing in size and population rapidly; and that even the towns deficient in those advantages are not in general retrograding. Belfast, Limerick, Waterford, Wexford, Tralee, Sligo, Londonderry, Newry, Clonmel, Athlone, Galway, Ballina, and even the more inland towns of Enniskillen, Armagh, Thurlis, and Tipperary, are improving. Cork and Youghall are retrograding; and excepting Kilkenny, Cashel and Bandon, and some of the smaller towns, I know of none that are receding.

The next query inquires respecting the establishment of manufactures?

No manufactures have sprung up in any town in Ireland, except Belfast. Unless in the province of

Ulster, the linen trade is extinct; and no other manufacture has taken its place. There are scarcely any manufactures in Leinster, Munster, and Connaught.

The next three queries inquire, what are the occupations of the labouring classes; and whether women and children find employment?

The chief employment of the labouring classes in the seaports of Leinster, Munster, and Connaught, is that afforded by the export trade. To this, in Ulster, manufacture is added. Women, excepting in the linen trade districts, find no remunerating employment,

To the query which asks, "What are the earnings of a labourer and his family in the towns?" I would answer, that in the principal towns—Belfast, Cork, Limerick, Clonmel, Londonderry, &c.—the able bodied labourer has full employment nine months in the year, on an average; and, at wages which average 6s per week. The average, therefore, would be 4s 6d per week for the twelve months. The rate is not the same nor employment the same, in all the large towns: in Waterford, there is little more than half employment, while in Belfast there is almost full employment. In the latter town, too, wages are from 7s to 8s per week; in Waterford, not more than 5s. Excepting in the manufacturing districts of Ulster, the earnings of women and children can scarcely be reckoned.

The next query inquires, "What is the food of the working classes in the towns?" It differs little from the food of the working classes in the country. More money is spent in the towns in whiskey drinking; and the only difference in food is, that herrings, and pork offal, form a part of the diet of the lower classes in towns.

It is next asked, "whether any alteration has taken place in the food, lodging, and habitations of these classes in large towns? whether any new source of employment has been opened up to the labouring classes; and whether any change beneficial or otherwise, has taken place?"

I believe I am justified in replying, that the condition of the labouring and working classes in the large seaports has somewhat improved. I should say this of Limerick, Waterford, Cork, Tralee, Clonmel, Sligo, and some other towns. The new source of employment has been opened up to the labouring classes, is that arising from the increasing export trade in corn, bacon, provision, and butter; which, although it leaves but a scanty profit to the merchant, is a source of considerable employment to the labouring classes.

The same queries are next asked with respect to the large towns, which I have already answered respecting the country—viz., the number of the aged and infirm who cannot work, and how they are supported? the number of widows and children who have no natural protectors and how they are supported? and whether any persons are known to have died of actual destitution?

In all the large towns the number of helpless and diseased paupers, and of aged and infirm women, and destitute children, is fearfully great. They are supported by voluntary alms—by mendicancy—and by public societies; but they are supported just on the verge of starvation; and it is the opinion of the medical men of Limerick, Waterford, and other large towns, that at least seventy-five per cent. of the infirm poor die through destitution—either by the gradual wasting of nature, or by the ravages of epidemics, to which destitution renders them liable. It is a fact worth adding, that the charitable institutions in the large towns are supported not by the

wealthiest persons, or those possessing the chief property in the towns, but by the middle classes.

"How," it is next added, "are the lodging houses, which are chiefly frequented by the poor, usually provided as to beds and bedding; and in what condition are they, as to ventilation, and general repair?"

The houses of the infirm poor of the towns, are a thousand times more wretched than the worst cabins of Munster and Leinster. The latter have the air around, and the sky above them; the former are hovels, cellars, mere dark dens,—damp, filthy, stagnant, unwholesome places, into which we should not in England put any domestic animal; and as for the inquiry, "how they are usually provided with beds and bedding;" they are not provided with either; a little straw in the corner is the usual substitute for bed and bedstead,—and a ragged mat, the bed clothes. On this head, I beg to refer the reader to my notices of Limerick, near the conclusion of the first volume.

An inquiry next follows, as to the number of pawnbrokers' shops, and the classes of persons with whom their dealings are principally carried on?

Pawnbrokers' shops are exceedingly numerous in all the towns; and by the common practice of pawning articles on Monday morning, and redeeming them on Saturday night, the interest on one shilling lent and received every week throughout the year, with the expense of the duplicate, amounts to 8s 3d per annum. The classes who deal with the pawnbrokers, are not merely the lowest classes,—labourers and artisans,—but the small farmers also.

Besides these queries, I mentioned that I had also before me, the instructions delivered to the assistant commissioners. In these instructions, I find some things mentioned which are not included in the foregoing queries. Some of the most important I shall name, and annex an answer to them.

The commissioners are required to ascertain if the education of children has tended to improve the moral habits of the parents? The result of my inquiry is, that it has had this effect.

The commissioners are requested to inquire, what circulating or mechanic's libraries are in the towns?

Excepting in Ulster, there are no mechanic libraries,—nor even circulating libraries,—unless in Limerick, Cork, Waterford, Clonmel and Enniskillen.

The assistant commissioner is directed to inquire into the existence and effects of loan funds?

I have, in the course of these volumes, several times mentioned the existence of loan societies; and I am warranted in saying, that they have exerted a most beneficial influence on the districts where they have been established.

The assistant commissioner is directed to inquire into the effects produced by the use of ardent spirit?

It is the opinion of all who are best qualified to judge, that much disease, both mental and bodily, originates in the immoderate use of whiskey.

On the subject of early marriages, the assistant commissioners are directed to report; and to inquire whether any provision, in money or furniture, is made against marriage?

Among the lowest classes, marriages are universally early; and so far from any provision being made against marriage, it is no unusual thing to borrow money in order to pay the marriage fee.

The assistant commissioners are directed to inquire, whether, in districts where much misery prevails, the chief burden of relieving the needy is

borne by the occupiers of the soil, or by the proprietors of it?

I think I have already sufficiently answered this inquiry. A very large proportion of the burden is borne by the land occupiers of Ireland.

Inquiry is also directed to be made, whether those who have been dispossessed, and who have taken shelter on bog or mountain, have cultivated the waste on which they have settled?

Those who have been located on mountain land belonging to the landlord by whom they have been dispossessed, and who hold their possession at a low rent, generally proceed diligently in the cultivation of their possession. Those who have merely "taken shelter," and who have no security for their possession, have done little towards improving it.

The assistant commissioners are desired to ascertain the cause of the excessive litigation which prevails in Ireland?

The chief causes, I take to be, poverty; an inherent defect of character; and competition for land; poverty, which disables men from fulfilling their engagements; a defect of character, which renders them indifferent to the propriety of fulfilling them; and competition for land, which renders the possession of every rood, a matter involving life and death.

The chief cause of assault, which the commissioners are also directed to ascertain, I conceive to arise from disputed possession; disputed boundary; trespass of cattle; distraining for rent; and grudge against successful bidders in the land market: all which, may in like manner, be resolved into competition for land, and poverty—or want of employment, which is the cause of both.

Inquiry is directed to be made into the efficiency of mendicity societies, as a provision for the poor.

They afford no adequate provision for the poor; none whatever for the infirm and bedridden; and they are not supported in any degree, by the individuals who contribute to swell the pauper list, nor by those within the towns, who can best afford to relieve the needy. I conceive too, that the virulence of epidemics, is greatly increased by the manner in which the poor on the list of the Mendicity Society are fed. The Mendicity cart which goes through the town, is filled with offals of the most heterogeneous kind,—fish, meat, bones, soup, and vegetables of all sorts, and much that composes this mess is sour, and unfit for human food.

I shall mention only one other instruction. The commissioner is directed to inquire into the effect produced on the state of the labouring class, by any temporary increase of wages and employment, arising from a public work; whether it tends to increase the price of labour, by drawing labour from distant places; and what is found to be the effect produced on the labourers of the place, where the work has been carried on?

I have always found less complaint, and less destitution among the lower classes in a place where a public work is actually carried on—be it of what description it may. It does not generally attract much labour from a distance, or materially raise the price of labour; it only employs the unemployed, at the usual rate. The state of the labouring classes, when the work is completed, depends upon the nature of the work. If it be a work not tending to the production of capital—such as a gaol, or a barrack, then the condition of the labourers is the same when it is finished, as before it began; but if the public works were of a nature calculated to promote either agricultural or commercial activity—such as roads, canals, docks, &c., then, I conceive, the improved condition of the labouring classes would be progressive.

## FLOWERS IN MASSES.

**THUNBERGIA ALATA.**—Few among the more recent introductions can rival this beautiful climber; it is one of the eight or ten elegant stove plants which constitute a genus named in honor of the celebrated traveller, Charles Peter Thunberg, Professor of Botany in the University of Upsal, in Sweden, and successor to Linnaeus. One species only, the sweet scented (the fragrans,) was cultivated in our stoves at the close of the last century; all the others are new. *Thunbergia Alata* (date 1823) is a native of the East; its specific name is descriptive of the winged process which is found on each side of the foot-stalks (peteoles) of the leaves. These leaves are shaped some-what like the head of a broad arrow. When the plant is in luxuriant health they are rather bluntly angular, above two inches long, of a deep rich green on the upper surface, and of a paler green, and downy texture on the lower. If pressed, they emit a rather rank and unpleasant herbaceous odour. The plant is certainly a tenant of the stove, as it cannot be effectually preserved during the winter unless the temperature reach 50 deg. of Fahrenheit. But it is of extremely easy culture, and can, during six months of the year, adapt itself to the glazed pit, greenhouse, or sitting-room; and in the summer it will succeed perfectly in the open air, if it meet with a suitable soil, and can be sheltered from much wind.

*Thunbergia* is a family of the natural order Acanthaceae; the subjects whereof generally agree on two points—1st, the seed-vessels fly open when ripe, and discharge the seeds, which are fixed by little hooks to their receptacle; 2nd, the joints of the stem are swollen, and cuttings of the plants taken off just at the parts where the leaves emerge, strike root very freely.

The flowers of *Thunbergia Alata* are produced singly, from a sort of triangular covering (in volucrum) of two pale-coloured leaves, the network of which is very interesting; the real calyx is situated within these appendages, under the beaked, but globular, seed-vessel: it is minutely and deeply divided into 10 or 12 segments.

The flowers are of a full yellow buff, approaching to the late fashionable colour which ladies know by the term "maize;" they are flat, expanded, nearly regular, having a fine black or purplish eye in the centre, round the open mouth of the tube. When the flowers fall the seed vessels of a few of them swell; and in that case the whole of the integuments remain till the seeds ripen, but in general the involucre and gums fall off immature. Three or four seeds of a black colour, semi-obround in shape, the surfaces much reticulated, are found in the globe of the capsule, and from these if sown in January in a moist slope or hot-bed frame, the best plants may be raised. If an old plant be preserved all the winter, fine cuttings can be taken off at two or three joints from the summits. In moist heat these will strike readily, and soon produce good plants. March, April, and May comprise the periods when cuttings, planted in earth will most certainly succeed; but at any time between the first of March and the end of August cuttings of three joints will strike root in a bottle of water, provided the fluid be kept at a temperature of 65, 70, or 75 degrees. The young-rooted plants should be placed at first in very small pots of light vegetable or leaf mould, with a little silver sand, to strike off in. But when the first pot is full of roots, the ball entire ought, if possible, to be transferred to a 32 or 24 sized pot of pure black peat, and not sandy heath mould. Plants grown in pure peat (perhaps also in thoroughly decayed wood earth,) assume a luxuriance of growth and dimension of flower which are seldom witnessed when sandy loams are employed. Trained around a central stick, of about a yard in height, the leader being stopped when the plant has attained its summit, a continual succession of bloom, and florifer-

ous pendant laterals are produced, which render the plant one of the most enchanting objects in nature.

Probably, for open ground culture, if a bed of black leaf mould were prepared in June, and several plants were turned out of pots into it, a yard or four feet asunder, and suffered to train on the surface, pegged down at a joint here and there with proper discrimination, not only a splendid and far surpassing effect would be produced, but the plants would be wholly secure from the effect of wind, and many well-rooted plants might be obtained. The idea is offered to the admirers of this lovely flower, as it promises to add to their gratification and to enhance the pleasures of the flower garden.

**SOILS FOR GARDEN AND GREENHOUSE PLANTS.**—In this age of horticultural improvement the Press teems with periodicals, wherein every possible mode of culture is described and insisted on. It unfortunately happens that great discrepancy prevails, and upon no one point is an enquirer, unversed in practice, more likely to find himself perplexed than in that which refers to the preparation of suitable soils and composts. A few words on these subjects will tend to throw some light upon the nature and applicability of these important agents of vegetable growth. Chemists accustomed in analysis are well aware that the terms in general use afford very imperfect ideas of the true components of a soil; upon this head, however, our limits will not now permit us to enlarge. By the word loam is generally understood an earth which consists chiefly of fine sandy matter (silex,) combined with a small portion of chalk and oxide of iron, and a larger—say from one-twelfth to one-eighth of the whole weight of aluminous earth (pure clay.) Such a loam is firm, unctuous, retentive of moisture, and yet readily friable. But loams differ so materially that few persons can obtain that identical earth which is entirely propitious to another; hence, plants, apparently treated alike flourish under the management of one cultivator, but dwindle and become sickly under that of another. To obviate this difficulty an artificial loam, prepared by exposing the green turfy sods of a pasture, or the couch-grass and weeds of arable land, to the action of the air, light, and frost, till they be reduced to soil, is the most effectual substitute. Such a loam, blended with varying proportions of the black mould from decayed tree leaves, will generally be congenial to almost all plants, excepting those of the heath tribe. For these, pure sandy heath soil, such as is found where ling (caluna) flourishes, is almost indispensably required. This soil is that which, not long since, was termed bog earth; it abounds with fine white sand to the extent frequently of five-sixths of the whole. Heath mould ought always to be distinguished from peat, which is the matter found in turbaries and bogs, containing a bulk of decayed inert matter, with little or no silicious sand. It is of great use, however, to some plants, either alone or united to a fine sandy loam. For parterre, and small beds on lawns, the practice of renewing the soil every season, is of surprising utility. The old earth might be taken out, to the depth of a foot or more, in the dry weather of March, and carried to the shrubberies or kitchen garden, and the beds filled again with fresh compost. For this purpose no soil is better than the loam of a melon bed, blended with the semi-decayed leaves of the same, or of other beds, where leaves are used to excite a genial warmth in the earth of pits and frames. Plants grown in this new soil flourish luxuriantly; they assume another character—their foliage and flowers are developed upon a bolder scale, and whoever possesses the means of thus renewing the smaller beds for choice flowers will soon be satisfied that the little extra trouble is abundantly compensated, not only in the flower department but in other quarters of the garden, which are equally benefited by the rich earth that they also are furnished with; or it may as a general principle, be laid down, *that the earth which has supported one crop is amply enriched the rebey, and prepared for the production of another.*

## OCCUPATIONS OF THE PEOPLE.

## GLOUCESTER.

The manufactures of Gloucester are numerous and important, as indicated by 4,500 men being employed as clothiers, of whom there are between 4 and 500 at Wooton-under-Edge, nearly as many at Stroud, and also at Minchinhampton; between 3 or 400 at Bisley, also at Uley; between 2 and 300 at Norsley, Cam, Painswick, Rodborough, and King's Stanley; upwards of 600 men are employed in making hats or felt at Framton-Cotterell, Winterbourn, Bitton, and Westerleigh; with which somewhat intermixed is stocking-making; but at Tewkesbury nearly 300 men may be distinctly ascribed to the last-named manufacture and frame-making, and 44 to lace-making. Nearly 150 men are employed in making pins, chiefly in the city of Gloucester and the suburbs of Bristol, and several at Siston; upwards of 70 in making tin-plates at Newland and English Bicknor; 50 in making edge-tools, chiefly at Cooley; as many in making glass-bottles, in the suburbs of Bristol; at Moreton and a few other places cheese-clothes and other articles of linen are made. Add to all these the workers in brass and iron, makers of floor-cloths, lace, hats, soap, vinegar, &c., in the large commercial city of Bristol.

## HEREFORD.

|                                              |        |
|----------------------------------------------|--------|

| Other males, 20 years of age .....           | 1,011 |
| Male servants .....                          | 465   |
| Female servants .....                        | 3,741 |

The male inhabitants of this county are chiefly employed in the pits and mines, and in removing

the coals and iron-ore; and in the process of forging the iron, and otherwise preparing it for further purposes, employs about 2000 at Trevehan and Pontypool; at Upper Lanover, 380; at Aberystwith, 250; at Lanwenarth, 84; at Monmouth, 80; and 50 or 60 in other places. The preparation of tin employs 300 men at Panteague, Lower Lanvrechra, and Rogerstone; iron-wire is manufactured at Chapel-Hill by 66 men; the preparation of colours from lead, and of sugar of lead employs 76 men at Monyddmaen; and the manufacture of japanned tin (heretofore called Pontypool-ware) is not quite extinct at Usk; where, and in a few other places, a remnant of woollen manufacture is said to exist.

## OXFORD.

|                                              |        |
|----------------------------------------------|--------|

| Female Servants.....                         | 5,571  |

In the western and the northern part of the agricultural county of Oxford, manufactures exist to some extent. At Witney 200 men are employed making blankets, 60 at Hailey, and 11 at Crawley (adjacent hamlets). In the town of Banbury, and its adjacent hamlet of Neithorp, 125 men are employed in plush and girth making; 46 at West Shefford, Bourbon, and Wardington; and weavers (many of whom seem to be employed in this species of manufacture) are noticed at Bloxham, Adderbury, and elsewhere. Gloves of a superior kind are made in the vicinity of Woodstock; females so employed are numerous; 40 men at Wootton and 17 at Charlbury are occupied in the manufacture. The chair-makers at Stoken Church and Chinnor are classed as handicrafts, though they are 70 in number; horse-clothing is made at Chipping Norton; coach-wheels and axle-trees at Bensington and Deddington; and sacking at Henley-upon-Thames.

| Capitalists, bankers, &c.....                | 2,085  |
| Labourers not agricultural .....             | 6,544  |
| Other males, 20 years of age.....            | 2,885  |
| Male servants .....                          | 1,525  |
| Female servants .....                        | 8,162  |

The county of Worcester possesses a variety of manufactures in hard-ware, carpet-making, gloves, and china; at Dudley, Stourbridge, and Old Swinford collectively, are about 450 men employed at the forge who make anvils, chains, and the heavier kinds of iron tools and machinery; at Wolverley, Cradley, Bellbroughton, and Hartlebury, about 280 men manufacture gun-barrels, edge-tools, and files; at Tardebigg 360 men make needles and fish-hooks, 187 at Fekenhham, and a few at Alvechurch, Stock-with-Bradley, Inkberrow,

and Beoley; at Droitwich salt-pans are made; watch-springs, in small quantity, at Pershore; and the number of nailors throughout the county is nearly 3000,—of these, 1169 at Bromsgrove, 575 at Dudley, 539 at old Swinford, 162 at Cradley, 122 at Nathfield, 97 at King's-Norton, 87 at Worley-Wigorn, 55 at Belbroughton, 50 at Stourbridge, and 42 at Pedmore. At Kidderminster (including the Foreign of Kidderminster and the Chapelry of Lower Milton) 2300 men are employed in making carpets, and preparing materials for that manufacture; at Worcester, and in its suburbs, nearly 1000 men, and a much greater number of females are employed in making gloves; the finest description of china-ware is also made at Worcester, employing about 50 men, and many females in the burnishing and other delicate operations; at Bewdley, King's Norton, and Yardley, various articles are made, in moderate amount, chiefly of the hardware kind.

## BRECON.

|                                              |       |
|----------------------------------------------|-------|
| Occupiers of land employing labourers ....   | 1,249 |

| Labourers employed in agriculture .....      | 2,822 |
| Employed in manufacture .....                | 551   |
| Employed in retail trade or handicraft ..... | 2,818 |
| Capitalists, bankers, &c. ....               | 351   |
| Labourers not agricultural .                 | 2,547 |
| Other males, 20 years of age.....            | 522   |
| Male servants.....                           | 27    |
| Female servants .....                        | 2,221 |

The county of Brecon contains about 80 men employed in weaving woollen-yarn, the produce of domestic industry; and in the southern part of the county 470 men are employed in the iron works, of whom 126 at Llanelly, 110 at Penderyn, and 234 at Vainor, places adjacent to Merthyr Tydvil (Glamorganshire).

## GLAMORGAN.

|                                              |        |
|----------------------------------------------|--------|

| Male servants.....                           | 449    |
| Female servants .....                        | 4,936  |

The large quantity of iron ore and of coals in the parish of Merthyr Tydvil has produced a remarkable increase of population (from 7260 to 22,000) since the year 1801; nor does the last enumeration fully express the number of inhabitants in May, 1831, from the peculiar circumstances of disturbance then existing among the workmen. The same cause operated so as to diminish the return of manufactures dependent on that branch of industry who, under the name of firemen, are stated at no more than 1308; and engineers (those who attend the engines) at 18. At Whitchurch are 84 workmen in iron and tin plates, and nearly the same number at Michaelstone-upon-Avon, where chemical preparations are also mentioned. At Margam 115 men are employed in copper and tin plate work, and a few more at various places in the county. Steam-engines are constructed by 47 men at Dyffryn-

Clydoch, and chain-cables are made by 15 men at Glyn-taff; 168 weavers of woollen are scattered throughout the county.

## RADNOR.

There are 12 weavers at Rhayader; 34 in the entire county.

*British Almanack for 1835.*

## PONDS.

The watering of cattle, if not done by ponds, must be conveyed to the yards: either by a stream communicating with conduits, or by pump in a well, and must therefore be governed by circumstances. There are some parts of the country, to be sure, where water is not to be found upon the premises in dry seasons, and then tanks become necessary, which must be supplied, as far as possible, from gutters carried along them from the eaves of the buildings, to receive the rain. Chalk is the best foundation for the bottom of a pond: the water impregnated with it is sweeter, softer, and more purifying to the blood, than either spring water or that which stands upon clay or gravel: but, whatever may be the bottom, care should be taken that it be made close and tight, and that no drainage be allowed to fall into it from the stables or yard, by which the water is rendered filthy and unwholesome, and the straw is robbed of that essence which is to convert it into manure.

It is true, that the observations of many farmers appear to contradict the idea of the unwholsomeness of water thus impregnated, from their remarking that animals frequently prefer it to that which is derived from a pure source. But although that fact be undoubted, it is yet not only reasonable to conclude, that the preference arises from some medicinal quality, which, though dictated to them by instinct, may be found only occasionally useful; they should, therefore, at least, be allowed the option of a choice.

Although the most common contrivance for the supply of a deficiency of water to farm-houses is procured by means of wells, yet their construction requires a certain degree of mechanical science, which does not immediately connect it with the present work; but the formation of ponds is an object of common occurrence, which can be easily attained without the aid of masonry, by adopting the following suggestion of a foreign journal, by which they have been many years ago brought into common use.

The first object is to sink them to a convenient depth, which should be sufficient to secure them from speedy exhalation, and should not be less than five feet, nor contain a surface of less than one hundred and twenty feet in circumference. The sides of the pond should be sloped to an angle of forty-five degrees; and while it is digging a sufficient quantity of moist brick-clay should be incorporated with one-fourth part of quick lime, which should be slaked the evening before it is used, with as much water as will make it of the consistence of paste: the whole must

then be formed into large balls, a couple of feet in diameter. When the cavity is completed, and a sufficiency of the balls has been obtained, a labourer is to descend to the bottom, and, commencing as near as possible to the centre, the balls are successively thrown upon the ground with his utmost strength, until, thus regularly proceeding to the top, the bottom and sides are completely lined. If, however, the whole operation cannot be completed in one day, it will be proper to wet the row last applied on the previous evening, in order that it may adhere to, and incorporate with those remaining to be laid on. Two or three days after this lining is finished, it must be beaten with a flat piece of wood, which labour should be continued with greater strength in proportion as its firmness increases; and the surface should be occasionally moistened to prevent it from cracking, till the whole becomes a uniformly solid mass. A coating of common seal oil is then to be applied, on which a stratum of gravel of a few inches in thickness should be laid before the pond is filled. The coating will thus become firm and solid, provided the pond be kept constantly full, as those parts only which are exposed to the air are liable to be damaged by intense frost.

Or, by filling the cavity with a stratum of clay, carefully trodden down, till it becomes a compact mass from four to six inches in depth, then spreading the whole evenly over with a layer of quick lime, about an inch and a half in thickness, and again covering that with a second stratum of pressed clay, a firm bed will be formed, quite retentive of water; stones or gravel are then to be spread of such thickness as will prevent the bottom from being injured by the feet of cattle. Ponds of the former depth and extent may be constructed at a very trifling expense, provided the clay does not require distant cartage, and will last, unimpaired, for many years, as worms are prevented by the lime from penetrating through the layers of clay and damaging the bottom.—*Hereford Times*.

## SOME ACCOUNT OF THE FAIRS IN SCOTLAND.

(From the *Quarterly Journal of Agriculture*.)

BERWICKSHIRE.—(CONCLUDED.)

IV. **AYTON MONTHLY MARKETS.**—Ayton is a post town, containing 1,602 inhabitants. It is situated on the road betwixt Edinburgh and Berwick-upon-Tweed, nine miles from the latter, and 48 miles from the former. It is surrounded by a fine agricultural country.

These markets were established about two years ago, for the sale of fat stock, and they are held on the first Thursday of every month throughout the year. As at Coldstream, the spring months exhibit the greatest share of stock: from 800 to 900 cattle, and above 1000 sheep may be seen. The Morpeth dealers are the principal purchasers. A great deal of highly bred stock being reared in this neighbourhood, and the lands being generally of superior quality, the stock shown are worthy the attention of dealers. Although newly established, these markets may vie with those of Coldstream. Very few of the Edinburgh and Glasgow dealers have yet found their way to them. As the same species of stock are shown here in the season as at Coldstream, it is unnecessary to repeat the observation just made on them.

V. **EARLSTOUN FAIRS.**—Earlstoun is a village containing 1710 inhabitants, on the Leader water, a few miles above its confluence with the Tweed, and

about half way on the western line of road between Kelso and Lauder, and about 18 miles through Kelso to the westward of Coldstream.

The first fair is held on the 29th of June, at which about 1000 cattle are shewn. From 80 to 100 may be termed fat, the remainder half-fat and lean. The breed is the short-horn, of which the two-year old steers and heifers are for grazing. There is a good show of milch cows, and a few Highland cattle. The fat cattle are bought by the Edinburgh and Morpeth dealers. The grazing cattle go to Yorkshire. The same description of dealing is practised at this fair as at the Dunse June fair. The newly calved and calving cows of six years old and upwards are bought by the Edinburgh cow-dealers, and the younger by farmers and farm-servants. The Highland cattle are bought for the neighbourhood and East Lothian for grazing. Very few sheep are shown here, never exceeding a few hundreds, principally half-fat and lean for grazing, a few of which are Leicesters, the rest half-bred Cheviots, and black-faced. There is also a large show of horses at this market, but not many of the better description, although occasionally both good roadsters and draught-horses may be found here. The cattle shown at this fair have improved very much of late years, from a great stimulus being given to breeding in this part of the country, and some of the best short-horned bulls in the kingdom are now to be found within a few miles of Earlstoun.

The October fair is held on the third Thursday of the month. There are from 800 to 1000 cattle shown, half-fat and lean, two and three-year old short-horns, steers, and heifers, the top-lots of which are bought by the farmers and graziers in Berwickshire and East Lothian, for feeding on turnips and distillery offals. The inferior sorts are wintered on half turnips and straw. Any fat cattle that may be shown at this fair are bought for the Edinburgh market, and the few milch-cows are picked up by the Edinburgh cow-dealers. There are few middling fat north country black-coloured cattle, which are purchased by the country butchers. There is seldom any sheep, and the horses are neither so good nor so numerous as at the June fair.

VI. **GREENLAW FAIRS.**—Greenlaw, though not the largest, is the county town of Berwick. It contains a county jail and ha'l. Its inhabitants only amount to 1462. It is 22 miles from Berwick-upon-Tweed, by way of Dunse, in a north-west direction; and north from Coldstream 10½ miles. It lies on the mail road from Coldstream to Edinburgh.

The first fair is held on the 22d of May. The number of cattle shown amounts to 300 or 400, of which 50 to 100 are fat, half-fat, and lean cattle; but milch-cows and young heifers, calved and to calve, constitute the greatest number. They are chiefly bought by farm-servants, to make what are called "hinds' cows." This species of stock gives the characteristic feature to this fair. These cows are mostly bred on the high lands adjoining the parish. They suit this description of customers well, being of the hardy Lammernuir breed, which, although not fine-bred short-horns, are good milkers, and easily kept. The aged cows are bought by the Edinburgh cow-dealers. Very frequently a hind takes his old cow to this fair, sells or exchanges her for a young one, and goes home well pleased if he gets the young one for the price of the old. The fat stock are bought by the Edinburgh, and the half-fat and lean by the Yorkshire dealers. There are no sheep nor horses in this fair.

The second fair is held on the last Thursday of October. There is but a middling show at this market, seldom more than 100 to 150, mostly half-fat and lean cattle, rising two and three years old, which are bought by farmers and graziers for turnip feeding and wintering. The business done here is of a rather trifling nature,—one farmer selling a few surplus things, and another making up a few deficiencies. The few fat cattle and milch cows are bought by the Edinburgh dealers. To raise the character of the Greenlaw fairs, which have hitherto been chiefly confined to the sale of cows, the Lord of the Manor, Sir P. H. Campbell, Bart., of Marchmont, and M.P. for the county, attempted, in May last, 1834, to establish a market for the hiring of servants, and the sale of all kinds of cattle, sheep, and horses. It was no matter of wonder that not much business was transacted at this first fair, for few, if any south country dealers attended it, because the markets have not yet established a character, and no briskness of business can be expected at any local fair, without the assistance of dealers from a distance. The assemblage of people, however, was considerable; the hiring of servants was brisk; and the whole matter bears a promising aspect. A fair, sometime in autumn, will no doubt be held under the same auspices.

VII. OLDHAMSTOCKS FAIRS.—Oldhamstocks is a small village in the Lammermuir Hills, situate on the boundary line between the counties of Berwick and Haddington, or East Lothian. It contains 720 inhabitants. It can be approached from Dunglass on the Edinburgh and Berwick-upon-Tweed road, 37 miles from the former, and about 20 from the latter.

The first fair is held on the first Tuesday of July, and contains from 1000 to 1200 sheep and lambs, most part of the latter. It is almost impossible to describe the kind of stock shewn at this fair, as they are of all sorts. Many of the lambs belong to shepherds, and are therefore in small lots, a small proportion of which may be called Leicesters, but not of the best sort. Many of them are crosses between the Leicester tup and the Cheviot and black-faced ewes, but as the sheep farmers on the hill-sides in this neighbourhood are not very particular in selecting tups, the lambs of course do not show much of the Leicester blood and form, as they might with a little more care. Some are crosses between the Cheviot ram and the black-faced ewe, which is at best an ugly cross, if not very judiciously managed. Some of the sheep farmers in this neighbourhood are excellent breeders, but they do not show their stock at this fair. From what has been stated, it will be seen that the stock at this fair exhibit a very mixed character. They are bought by the East Lothian farmers and graziers in the neighbourhood. There may be from 50 to 100 cattle shewn, which are as difficult to describe as the sheep, being almost all of the old Lammermuir breed, which is not one of the best kind. They are bought by East Lothian graziers.

The second fair is held on the first Tuesday of Nov. The number of sheep shewn at this fair is not so great as at the July market. They consist of black-faced and Cheviot ewes and wethers from the adjoining hills, with a few half-breds. The same mixed stock is seen then as in July. The largest proportion of all the stock is bought by East Lothian graziers, some of whom are not first-rate judges, nor are they very particular of what they buy, provided they get it cheap, and it has plenty of bulk for the money. With good keeping such stock often pay very well, although coarse animals require a good deal more meat to fatten

them than the fine breeds. There are still many old-fashioned stock farmers in this neighbourhood, who dislike to part altogether with their old stock, but who nevertheless have a desire to try improvements, and this may account for the strange mixture of breeds to be found in these markets.

VIII. LAUDER FAIRS.—Lauder is a small burgh situate in Lauderdale, near the river Leader, and containing 2063 inhabitants. Within these few years Lauderdale has advanced rapidly in agricultural improvement, in which a noble example has been set by Captain Anthony Maitland, in the neighbourhood of Lauder and Thirlstane Castle, the seat of the Earl of Lauderdale. Lauder is 17 miles north from Kelso; 25½ from Coldstream, by Kelso; and from Coldstream, by Greenlaw, nearly the same distance. It is 25 miles south of Edinburgh.

Lauder First Fair for Cattle is held six weeks after the first Tuesday of March. There is a very small show of cattle at this market, principally half-fat and lean short-horns for grazing, which are mostly bought by farmers in the neighbourhood, and from East Lothian. Very few English dealers attend this fair.

The second cattle fair is held on the third Friday of June; and this being a very small one, the same remarks may almost apply to this as the last fair, with respect to cattle.

The third fair is held on the fourth Tuesday of July. This is principally a lamb fair, where generally from 2000 to 3000 are shewn, mostly half-bred Leicester and Cheviot, and a few of the shot Leicesters left from St. Boswell's fair. They are principally bought by farmers in the county, and from East Lothian, and a few by the Edinburgh dealers and butchers. There is sometimes a few lots of older sheep, which are either bought to feed, or, if fat, for the Edinburgh market. There are very few either cattle or horses shewn at this market.

The fourth fair is held on the fourth Friday of October. There is a very small show of either cattle or horses at this market, it being principally intended for hiring servants.

The Lauder cattle shows and markets were established a few years ago by the Lauderdale Agricultural Society. The First show is held in April or May, according as the time is fixed by the Society. There are premiums awarded for stallions, bulls, cows, heifers; and some excellent stock is now exhibited, which do great credit to the farmers in Lauderdale. There is also a show of cattle for sale, mostly fat, and two and three years old short-horned steers and heifers, which are generally bought by the Morpeth and Edinburgh dealers. At the last fair, upwards of 200 were shewn, some of which were of excellent quality, particularly those shewn by Captain Maitland and Mr. Purves, Lylestone.

The second Lauderdale show is now fixed to be held on the Saturday before Gifford Fair, being the third Tuesday of October. Premiums are awarded for Leicester, Cheviot, and black-faced tups, ewes, and gimmers. In 1833, some very superior sheep of all these breeds were shewn here. A great spirit of emulation now seems to exist among the breeders of this district, to vie with the breeders of other districts. It was acknowledged that some of the sheep were not inferior to most of those shewn at the Union Agricultural Society; such as the Leicesters shewn by the Marquis of Tweedale, Mr. Brodie, Upper Keith; the Cheviots by Mr. Peacock, Greengelt; and the black-faced by Mr. Usher, Tullishill. A market for the

sale of draft ewes is now established on the day of the show.

Fairs are held at the following places in Berwickshire, at their respective dates; but, inasmuch as stock is concerned, they are useless. Indeed, such fairs are only excuses for idle people collecting together and spending time, and ought to be suppressed:—

Ladykirk, 25th March, O. S.—Lambden, 25th May; Ditto, 5th September.—Eyemouth, first Tuesday of June; Ditto, last Thursday of October.—Coldingham, second Tuesday of July, O. S.; Ditto, second Thursday of October, O. S.—Mellerstain, second Tuesday of July, O. S.; Ditto, first Tuesday of October, O. S.—Cockburnspath, second Tuesday of Aug.—Aytoun, 12th of October.—Chirnside, last Thursday of November.—Swinton, third Thursday of June; Ditto, fourth Tuesday of October.

#### TO THE EDITOR OF 'THE MARK LANE EXPRESS.'

Sir,—I beg leave, through the medium of your valuable paper, to make some remarks on what appears to me most important subjects; viz.—

#### ON THE ABUSE OF THE POWER OF DISTRAINING FOR RENT, AS CONNECTED WITH THE AGRICULTURAL AND COMMERCIAL INTEREST OF THE UNITED KINGDOM; WITH SUGGESTIONS FOR THE REMOVAL OF SOME PART OF THE INCREASING DISTRESS OF THE TENANT FARMER, AND THE PREVENTION OF INCENDIARISM, &c.

The power of distraining for rent is of itself highly objectionable, as it gives the landlord "the power of being his own avenger," and of distraining, not only the goods of his tenant, but also the cattle of another, which is a public inconvenience and a private injustice, for it often prevents the poorer sort of tenant farmers from disposing of their turnips, grass, hay, &c. to advantage; as, what prudent men will run the risk of purchasing produce, or sending their cattle upon farms, where the tenants are in doubtful circumstances? for should any tenant not have sufficient stock upon his farm, they are liable to be sold for rent; and in a case, *Woodford v. Webster*, Mr. Hill "moved for a rule to show cause why the nonsuit in this case should not be set aside, and a verdict entered for the plaintiff, pursuant to leave reserved by Mr. Justice Taunton, before whom it was tried at Northampton. It was an action of trespass, for distraining the plaintiff's cattle for rent, under these circumstances:—The tenant gave a bill of sale of all his goods to the plaintiff for a debt which he owed him, who advertised them for sale; upon which, the defendant, who was an agent of Lord Winchelsea, the landlord, distrained the goods for rent. It was then agreed that the goods should be sold pursuant to the advertisement, and that the proceeds should be paid to the defendant, as far as it was necessary to satisfy the claim for rent. Among the effects for sale there was some growing grass, called a 'keep,' part of which the plaintiff purchased, and the defendant also purchased a part. The entire proceeds of the sale were paid towards the rent, but they were not sufficient to satisfy it. When the plaintiff put his cattle into the 'keep,' the defendant distrained them for rent. The Learned Counsel submitted

that as the grass was set up for sale with the consent of the defendant, and as he had received the proceeds of the sale, he had no right to distrain the cattle under the circumstances.—Rule granted." I do not know whether this rule is made absolute, or how it may terminate, but it shows, sufficiently for my purpose, the great difficulty in disposing of "keep," and it may be inferred from it, that some landlords are not particular as to whose property they take, provided they obtain their rent; in fact, I know of no exception in taking another's cattle for such purpose, except some public trades, but they do not apply to the farmer; and even these, the present Lord Chief Justice (in a case *Brown v. Shevill*, wherein the carcass of a bullock was seized for rent, and the plaintiff had purchased the bullock with his own money, and having no place to kill it, had sent it to a butcher to be slaughtered) held, that for the benefit of trade, the carcass was protected from liability to be distrained, when slaughtered for hire, and said it seemed to him that the doctrine about public trades had been already too much restricted.

The power of distraining for rent is, however, intended for the benefit of landlords to prevent a tenant from secreting or withdrawing his effects to their prejudice; and this power of distraining another's cattle, damage feasant (as it is called by lawyers) that is, trespass upon, the land, arising from the necessity of the thing itself, as (it is pretended) it might otherwise be impossible at a future time to ascertain whose cattle they were that committed the trespass or damage, is such a gross perversion of justice, that I have known a few landlords so ashamed of the right they possessed, that they have relinquished their claim upon another's cattle after they have been distrained, notwithstanding there was not sufficient goods to pay their rent.

But before I proceed any further respecting the power of distraining, let us examine from what source *rent* is derived, and we shall find that rent, in its true meaning, ought to be that part of the profit arising annually from farms occupied by tenants to which landlords are entitled according to the extent of those farms, after leaving the tenants a proper maintenance, and a fair remuneration for skill and capital employed; and, I am one of those who think landlords ought to have a full proportion of those profits in a fair value for their land, *and no more*; but if I am not much mistaken, the greatest portion of the soil not occupied by the owner, is let to the tenant farmer considerably above its value; and if so, there must be something more than the Corn Laws and the Money System, which induces the farmer to take land above its value, after so many successive disastrous years for agricultural produce, for as soon as they are unable to pay their rent in arrear from the profit of their farms, they must either pay it out of their capital (if they have any), beg time of their landlords, borrow money, or sell some part of their stock (which they ought not to do), to pay the same; in this way numbers of them contrive to eke out a miserable existence from year to year, in the vain hope of better crops and better times, till, ultimately, their creditors become clamorous, and their landlords (ever on the alert when they hear that a tenant is involved in debt, or his circumstances doubtful), pounce upon them by making a distress for rent in arrear, and generally sweep away the whole of the property, unless there happens to be an execution on the premises, and then the sheriff sells, out of which the landlord is only entitled to twelve months' rent; therefore,

should there be only sufficient to pay the execution creditor, and the landlord's rent, as is too frequently the case, they get the whole of the property, and the other creditors nothing; but, if no execution on the premises, and the landlord has a claim for more than one year, he can legally sell for the whole of the rent in arrear, and by this means he obtains his money from needy tenants; nor has he after having so obtained it, any difficulty in again letting his farm to a fresh tenant at the same rent; for no sooner is it known that a farm is unoccupied, than there are plenty of eager applicants, and it is again let to another victim, when a similar result, in all probability, follows, and will unquestionably follow *ad infinitum*, until the power of distraining is either wholly or partially taken away from the oppressing party, which must be ultimately done, for it is monstrous that instead of obtaining his rent out of the profits of his farm, he should obtain it from the following sources besides the profit: I mean the tenant farmer's capital, with which he stocks his farm, from money borrowed of his nearest and dearest friends in the hour of need, to uphold his failing credit, or from the unsuspecting tradesmen, with whom he has had dealings, viz. the blacksmith, wheelwright, shopkeeper, &c., who are generally all sufferers from the landlord's power of distraining; and the consequence is, some one of these creditors generally arrest the unhappy wretch, who is sent to gaol, and driven to the necessity of seeking the benefit of the Act for Relief of Insolvent Debtors; but if none of these creditors arrest him, in order to get released from his difficulties, and to enable him to commence business again, he obtains what is called a friendly arrest, and if opposed, on his hearing, by any of his real creditors, his petition is dismissed, and he is again thrown upon the world in a worse condition than before his incarceration; or if adjudged entitled to the benefit of the act, then during the time he is suffering this imprisonment, his wife and family (if he has one, and no property concealed) are either dependent on their friends for support, or they are obliged to procure relief from their parish; when he comes out of gaol, he nine times out of ten becomes a pauper, and is cast another burden upon the very land he formerly occupied; so that, supposing there be good and bad landlords in the same parish (which is frequently the case) this precious law of distraining not only allows the landlord who lets his land above its value, to rob the tenant of his capital, and the creditors of their just demand, but it enables them to saddle paupers upon the parish, and compels good landlords' tenants to pay their quota towards their support; a fact which I think cannot be substantially contradicted.

I shall now take leave to examine the description of applicants who are so ready to take farms when they are to let, and what sort of selection landlords generally make from such applicants; I mean needy, grasping, avaricious landlords, &c.—for that we have many, a great many, good ones, no man can for a moment deny, and who use a sound discretion in choosing their tenants,—it is not of such landlords I am now speaking, for I could, if necessary, bear willing testimony of their kindness and attention to the interest and welfare of their tenants; bad as the times are there is no necessity for such gratuitous evidence, as they are to be found to a great extent in every county in England; men who are anxiously alive to the principle of "live and let live." No, countrymen, it is your oppressive landlords I

wish to hold up to public view, for the purpose of inducing you, in furtherance of your own interest, to petition the legislature to do away with or limit the infamous power of distraining for rent, as far as regards agriculture, and if possible to put you in a proper situation to treat with your landlords on taking their farms, plenty of which will, if I mistake not, soon become vacant. But I am digressing from my promised examination of the description of applicants who are so ready to take farms: they consist no doubt of several varieties, but I shall confine myself to three:—

First—a good tenant with sufficient capital and skill, of good character, and of whom there can be no reasonable doubt but he will fulfil his engagement with his landlord, as far as it is possible for him to do so; and of these, we may boldly assert, there are still many to be found.

Secondly. A tenant deficient in capital, but who can borrow money to stock his farm tolerably well; in character, perhaps, unexceptionable, and who if possible would endeavour to benefit himself and his landlord.

Thirdly. A tenant with little or perhaps no capital, but that deficiency supplied by a marvellous stock of conceit; very plausible, a great promiser; in short, a "neck-or-nothing" sort of fellow, perhaps from a distant county; and although in total ignorance of the peculiar mode of agriculture adopted on the farm in expectancy, yet ready to make a trial, having little or nothing to lose, and blest with an equal portion of inclination to pay.

Now, I think, it cannot be denied that the landlords often let their farms to the two latter class of tenants, much above their value, and if they keep a watchful eye over them, they will by means of distraining for rent always secure its payment, though the land be let above its value; but is this an honest way of obtaining it? Certainly not; and I cannot but think that every honest man, whether landlord or tenant, must see that the sooner this disgraceful statute, empowering the landlord to distrain, is altered in favour of agriculture, the better for good landlords, and good tenants; for although they are enabled to let their land above its value by this arbitrary power, yet it would be an easy matter to prove, that supposing they get an extra rent, yet their land is deteriorated in value accordingly, so that they who let their lands at a fair remunerating value, ultimately profit most; and I have no hesitation in saying, that if this obnoxious law was altered in favour of the tenant farmer, the needy, grasping, avaricious landlords before mentioned, would be more circumspect in choosing their tenants as far as practicable; they would know that as they had not an unlimited power of distraining, they must look to the wealth, respectability, skill, and industry of their tenants, as their best security for the punctual payment of their rents; and it is to be hoped the day is not far distant when this disgrace to our statute book, will be at least so far modified as to enable the opulent farmer, who wants keeping for his stock, to take the same with safety, as it would be extremely beneficial to the poorer sort of tenant farmers; and the power of distraining for rent being limited to a definite period, would have the beneficial effect of reducing the rents in the course of a short time throughout the United Kingdom. But the best way would be, perhaps, to "reform it altogether," (as it does more general harm than individual benefit,) and thus effectually put it out of the power of unprincipled landowners to let their land above

its value *with safety*; thereby preventing the third class above-mentioned, who would know it would be useless from galloping off as upon a race, immediately that a farm is reported to be at liberty, to the landlord's door to have the first chance of taking it at any price they can; creating an injurious competition, deceiving the latter into a belief that his land is of greater value than it really is, or gratifying his avaricious disposition, and giving him a plausible apology for not lowering his rents according to the depression of the times; or if they did choose to do so, they would be in no better situation than other creditors, provided their tenants could not pay their rents. It appears to me after mature consideration, that taking away the power of distraining is the only way to prevent land from being let so much above its value, while the reduced rent would enable the tenant farmer to pay his labourers more liberally, and be a great means of satisfying the laborious class; thereby preventing incendiarism, which has of late increased to such an alarming extent, and cast a stain of the deepest dye both upon our English peasantry and our national character, for which there appears to be no extenuation, unless it can be found in the reason ascribed by the Earl of Darnley, and mentioned in a letter from your intelligent correspondent at Frindsbury; wherein his lordship declared it to be his opinion, that the deplorable ignorance, and utter want of proper feeling, and knowledge of spiritual matters, was to be attributed to the non-residence of the clergy, with which opinion I cordially coincide.

In endeavouring to make these observations beneficial to the tenant farmer, I beg to state that I do so with great diffidence, and could have wished that some one more experienced than myself had done so; but, however, as my humble efforts on the behalf of the tenant farmers may draw the attention of others more able than myself, I shall feel obliged by your inserting these remarks in the "Mark Lane Express," which I ardently hope will continue to advocate the interests of that oppressed class, which nothing will promote so effectually, and tend so much to reduce the rent of land to a fair value, as the partially, or wholly taking away from landlords this arbitrary power, as it would be the most effectual mode of preventing them from letting their land to inefficient tenants, and the continuance of what must be considered a public grievance. It is only limiting, or taking away this power that will open their eyes to the value of a good tenant, which is a landlord's best security; and should this ever be carried into effect, the malt-tax taken off, and a poor-law for Ireland to prevent the Irish labourer from doing that work which ought to be done by the surplus labourers of England, and the corn-laws continued as they are; we may then look forward to a brighter era, and a more friendly feeling between landlord and tenant, which ought always to be encouraged as their interests are mutual and inseparable, and their acting in unison upon the principle of "live and let live," would as before stated, enable tenant farmers to give their labourers a fair remuneration for their toil, so that they might provide the common necessities of life for themselves, wives, and children; which finding they could do, industrious labourers would no doubt work cheerfully to support their distressed families, and would also stimulate them to feel a reciprocal interest in their employers' welfare; thus forming the best and most effectual safeguard against incendiarism and midnight spoliation, and check that bitterness of animosity at present sub-

sisting to such an alarming extent between the agriculturist and the labourer.

The valuable observations made by your correspondent Mr. Dean, in the "Mark Lane Express," No. 155, under the head of Agricultural Reports, are worthy the serious attention of both landlord and tenant: after speaking of the ruinously low price of wheat, and the consumption of potatoes, &c., he says, "no doubt another cause is the contraction of the currency, and the restrictions upon country bankers, which has prevented their lending that assistance, which they cheerfully rendered when it was in their power; and frequently prevented the prices being forced down to an unnatural level by assisting necessitated farmers, who otherwise would have been compelled to resort to forced sales to pay their rent, taxes, &c.; and in my humble opinion nothing would tend so much as a moderate expansion of the currency; an increased facility given to country bankers; and the commutation of tithes. Rent and tithes must be reduced to the scale of 1795, which was 20 per cent. below the war prices of 1812 to 1814, (wheat was then 12s, barley 4s, and oats 2s 6d to 3s per bushel; wheat now is 6s, barley 3s to 3s 6d, and oats 2s;) or no farmer can pay the heavy burdens imposed upon the land, which now swallow up nearly all the produce of the estate, and leaves him to pay the rent out of his capital; such at least must be the case this year, with slender hopes of improvement in the next." If, however, rent were reduced to the scale of 1795, or thereabout, this reduction would enable the tenant farmers to pay their labourers fair wages; in fact almost every thing depends on landowners; and if tenants cannot afford to employ a sufficient number of labourers, the landlords ought to employ the surplus in permanent improvements; such as underdraining, marling, &c., and afterwards charge their tenants, interest upon the capital so expended for their advantage, which a great proportion of them would willingly pay.

Of course these remarks only apply to agricultural districts, and not to great towns; but even in these, this iniquitous law prevents necessitous tenants from letting their apartments and lodgings, therefore proving injurious to the poorer sort of tradesmen, who cannot afford to occupy a whole house. But in respect to the surplus labourers, no man able to work ought to have it in his power to say truly, "I am willing to work but cannot obtain it,"—it should be found by either the landowner or the tenants, and it is not reasonable that the latter should be obliged to employ them, and pay their wages out of his own capital.

But I am afraid the former will not reduce their rents so long as they can obtain them by distrait; and until there is a commutation of tithes, and a great reduction of rent, so long will incendiarism continue to disgrace the country, and land let above its value. The way of compelling bad landlords to reduce their rents is to take away from them the power of distraining, or in other words compelling them to either accept good tenants and a fair value for their land, or leaving them to let it above its value with all the consecutive consequences; and if they madly choose the latter, it is but just that they alone should be the sufferers; and even then they would only be in a similar situation with a tradesman who sells his goods at a high price upon credit, and one is equally as much entitled to protection as the other.

If then, bad landlords are foolish enough to let their land to tenants unworthy of credit, let them abide the result, and the evil will ultimately cure

itself, as it is too much to expect that any but themselves should suffer for their temerity. To Ireland these remarks will apply with double force,—in that fine country, the greatest portion of the farmers and cottagers are worse situated than the English labourer; they have been kept in a state of agitation and feverish excitement for ages, from want of a commutation of tithes, and by middle-men distraining for rent; and as to that unhappy class—the Irish labourers—there cannot be a doubt but thousands of them die annually from starvation through the want of poor-laws.

If, however, these abuses were removed, the currency expanded, and an improved system of management adopted, (the latter of which will follow the reduction of rent) I shall look anxiously forward to the dawn of brighter prospects for the tenant farmer, and the industrious labourer, both in England and Ireland.

I have prolonged these observations to a much greater length than I intended; but, considering the power of distraining for rent so greatly abused, and of so much greater importance than any thing else to the interest of the tenant farmer, and the public good, that it should be done away with as speedily as possible, I must make it my justification for dwelling so long on the subject, and reiterating so many points of flagrant abuse and injustice. To this arbitrary power I attribute most of the misery, privation, and suffering under which the once flourishing tenantry of this empire are now writhing; and to their inability to pay their labourers a fair remunerating price for toil, may, as I before urged, be traced the primary cause of the past and present innumerable cases of incendiarism; but I am afraid the landlord is not wholly to blame, for it cannot be denied, I believe, but that there have been some alarming fires on the estates of good landlords; and I would warn those tenants who do not farm upon the improved system, under such landlords, and who neither employ a fair portion of labourers, nor give them fair wages, that to them also may be traced the same cause of incendiarism, they being just as culpable, and perhaps more so, than bad landlords, for it is an act of ingratitude towards their landlords, and of injustice to their neighbours: however, I hope there are not many of such to be found. In fact, good tenant farmers are trebly wronged—first, by bad landlords, in not reducing their rent where necessary; secondly, by bad tenants, who can afford to employ their portion of labourers, but who neither employ a fair portion nor give fair wages,\* and thirdly, by ignorant, malicious

labourers, in the foul crime of incendiarism. Nor will these wrongs cease so long as bad landlords can obtain their rents from unworthy tenants, by means of the despotic power with which the laws has armed them, or bad tenants are suffered to occupy the farms of good landlords.

I would, however, give landlords a cheap and speedy way of recovering rent in arrear, and obtaining possession of their farms without ejectment; which might be done by a short Act of Parliament, giving the judges power, after action brought, to make an order for the Sheriff to try causes for rent in arrear, although above 20l., and after a verdict for the landlord, he should be at liberty, on the tenant entering into a recognizance with sureties (to his satisfaction) for payment of verdict and costs, to allow him a reasonable time for such payment, or to apply either to a judge at chambers in vacation, or the court in term, for a new trial: but, in the event of a *Fieri Facias* being issued, and the goods actually sold by the Sheriff, the landlord, on filing *Fieri Facias*, with the Sheriff's return thereto, with the proper officer of the court, should, if there was not sufficient goods to satisfy the verdict and costs, be entitled to issue writ of possession. This would save the expense of an ejectment, and frequently put him in a better situation than he now stands. But, in the event of the full rent in arrear and costs being paid by the Sheriff's sale of the goods seized under the *feri facias*, then the landlord should not be entitled to writ of possession; but, on rent in arrear for the same premises again becoming due within twelve months, and not paid within fourteen days after demand in writing, he should, on filing an affidavit of such demand having been made, and of the debt due for rent, be entitled to a judge's order to issue writ of *feri facias* and writ of possession, without bringing fresh action.

In respect to the surplus labourers, tenants should employ them in spade husbandry whenever it can be beneficially done; and, by their employing them in this way, and the landlords also in real improvements, as before-mentioned, they might be kept usefully, and, it is hoped, profitably, employed. But it cannot be expected that English landlords and farmers will employ the surplus labourers of their own country in this way, while the Sister Isle is without a Poor Law, and the "finest pisantry in the world," can, for a small fare, come over in steam packets, in swarms, unprecedented but by those we read of in holy writ, which darkened the horizon and devoured the produce of the land of fertilized Egypt. Immediately on their landing, they are ready to do any work at reduced, or in fact, any wages; therefore, until Ireland is compelled to provide for the maintenance and employment of its own poor there will always be more working men in this country than can be profitably or beneficially employed, and Ireland will still be considered as a millstone round the neck of impoverished and ruined England.

As to real improvements made by farmers, landlords often take a most unfair advantage of them, by raising rents immediately they are made, thereby discouraging the progress of all improve-

\* THE NEW POOR LAW BILL IN THE COUNTRY.—On Tuesday, a large body of labourers, amounting to nearly twenty-six able-bodied men, apparently in great distress, applied at the vestry at Brehill, near Calne, Wilts, for some relief, as it was impossible for them to subsist on what they earned. The vestry, however, refused them both assistance in money or labour, by which alone a prospect of obtaining an allowance of bread might be confidently entertained. The unfortunate labourers determined to apply at once to the Marquis of Lansdown, who was most fortunately at his seat at Bowood. The labourers repaired, without a moment's delay, to the residence of the Noble Marquis. His Lordship stated to them, through his steward, in reply to their humble inquiries, that the farmers were undoubtedly the proper persons to apply to for profitable employment, and that he was not aware but that his estates were let at so moderate a rent as to enable his tenants to employ all their parishioners, and to give them, at the same time, a fair and just price for their labour; however, at any rate, he (the Marquis)

would immediately institute proper inquiries into these circumstances, and see that all their reasonable grievances should be redressed. The labourers, upon this assurance of his Lordship, went quietly to their homes.  
—Cheltenham Free Press.

ment whatever, and in the aggregate is extremely injurious as well as injudicious.

There are two other points to which I wish particularly to draw the attention of the land-owners,—they are the improper periods at which rent days are usually fixed, and the hardship often experienced by out-going tenants, in not being allowed for permanent improvements made by them at their own expense, where they have not remained a sufficient time upon the premises to reap the full benefit thereof,—I mean such improvements as under-draining, marling, &c. Here the landlord should step in, and, before he lets his farm, insist upon the incoming tenant making a fair allowance for the same, which would be in some measure tantamount to leases, and highly beneficial both to landlord and tenant; for if it was known that the landlord always protected the out-going tenants in this way it would be an encouragement to enterprising and spirited tenants who farm upon an improved system, to lay out their money on real improvements, such as above-mentioned; and in respect to rent days, they are generally, in England, fixed at Ladyday and Michaelmas; periods particularly inconvenient to those farmers who have not half a year's rent in arrear, and who principally occupy arable land, and breeders of cattle; for the former Christmas would be a much better time, as it would give them an opportunity of gradually thrashing out their corn, instead of forcing it into the market to pay their Michaelmas rent; and, in respect to the breeders of cattle who depend, in the Spring, on the sale of lean stock for their rent, it would give them opportunity, in a backward season, to defer the sale of stock until the grazier wanted them, instead of forcing them into the market at a low price to pay the Lady-day rent. These alterations being in the power of the landlord, I hope the suggestion may have some good effect, to know which would be to me a heartfelt pleasure.

There being now a Peel Administration, there is no hope of an alteration in the currency at present, and as little of the malt tax being taken off or reduced; I shall therefore conclude by recommending the farmers of England at the ensuing election, not to support any member who will not either pledge himself to vote for the whole of the malt tax being taken off, and a property tax laid on instead thereof, or half the malt tax, without a property tax. As to the currency, it would perhaps not be wise at present to require any pledge thereon; but the pledge for the rescinding of the malt tax, wholly or partially, as above-mentioned, should be strictly enforced: and I hope that the farmers of England will not, upon any account, omit to obtain this most important pledge, now there is so favourable an opportunity, as I think it will be the best means of improving the condition of the landlords and tenants, and of obtaining from the legislature the repeal of this obnoxious tax, which has been so long unjustly withheld; the working labourer would not only obtain more beer from the farmer but he would be able to either brew his own or get it at a cheaper rate; and if there was a moderate property tax, it would not only enable ministers to repeal the malt tax, but they could then afford to take off the window tax and the duty on bricks, which would give a stimulus to building, employment to labourers, and tend to improve trades; and that they will ultimately have to resort to a property tax I think there can be no doubt, and the sooner "the bull is taken by the horns" the better, for it is only a property tax that can enable the legislature to

take off the duties on those articles that are used as the common necessities of life, or empower them to relieve the present distress. Should, however, the power of distraining for rent *not be repealed*, the malt tax, and the obnoxious duties on the necessities of life continued, and a property tax not laid on, then will the increasing distress of the tenant farmers drive them from their native land, and they will be under the necessity of emigrating to a foreign country, and landlords will have their farms thrown upon their own hands, which I sincerely hope may be averted. I hope that landlords will lend a willing hand towards removing the present increasing distress of the tenant farmers, and those labourers who cultivate the soil, as I am convinced by so doing they will best promote their own interest; for it is impossible they can prosper while the tenant farmers are going to ruin. With this impartial view of their condition, and with best wishes for better times,

I remain, Mr. Editor, yours, &c.,

R.

Dec. 20, 1834.

#### TO THE EDITOR OF THE "MARK LANE EXPRESS."

SIR—Your Correspondent, "*A Country Banker*," feels himself aggrieved at the construction which I have placed on his scheme of a National Bank, and invites me to point out any words in his letter, authorizing the interpretation which I have given to them, viz. "*that the Bank of England, the Country Bankers, and Joint Stock Banks, should be annihilated at the end of three years.*" I am no wrangler about words, except in so far as they tend to elucidate principles,—but in carrying out a principle, all reasoning men naturally look to the consequences likely to result from a proposed course, which words alone can convey to the human understanding. The words he uses are these—"The National Notes to be made a legal tender, and be current for all purposes of trade, and received by the Government in payment of all taxes, duties, and excise; when a sufficient amount of such notes are in circulation, the Bank of England to withdraw theirs, and do be reimbursed for the loss of their circulation by the Government out of the interest received for the advance of the National Notes,—that the Country Bankers and Joint Stock Banks should be allowed three years, (or such other period as may be thought necessary) for retrieving their notes from circulation. The notes to be issued should consist of one pound notes, to take the place of the present gold currency, and all the larger denomination of notes issued by the Bank of England"—and further, "in order to regulate the exchanges, the Government (mark! the Government!) should empower the Trustees of the National Bank to purchase both gold and silver at the market price of the day, until they have a stock of 10 or 15 millions, or whatever amount is considered necessary to hold as a national reserve."

Now, I grant to your Correspondent, that he does not use the word *annihilate*,—but I will ask him, in candour and fairness, whether this scheme which he proposes would not as assuredly annihilate the Bank of England, and all the Country and

Joint-Stock Banks *issuing notes*, as if he had said so, "*in multis verbis!*" Only deprive the Bank of England of the power of *issuing notes*,—that gigantic privilege of supplying the currency of the kingdom,—render its stock of bullion unavailable, by discontinuing the circulation of gold—may worse—an absolutely unnecessary and unprofitable incumbrance to its coffers,—as having no longer notes in circulation, they would not require to provide against a run. Deprive them of their allowance for the management of the public debt, the interest on Exchequer Bills, and the various other items of profit unnecessary to enumerate, *which would of course be transferred to this National Bank*,—deprive the Bank of England of all this, and answer in sober seriousness, would it not annihilate it? What would become of its Charter? Would it not be as reasonable to draw the last drop of blood out of a man's body, and expect him to perform the physical exertion of active and robust vitality? The Joint-Stocks and Country Banks may be similarly illustrated; their profits would be woefully curtailed, if, instead of creating a circulation of their own, they were compelled to operate upon the currency of a National Bank, advanced to them on interest, accumulating on the stock which they would require constantly to hold in their hands.

That private Banks are established in London, who do *not* issue notes, and yet obtain large profits, is no argument in favour of the National Bank. It is well known that these Banks would issue notes if the existing Charter of the Bank of England did not prevent them,—and they have been called into existence from the anti-commercial character of the Bank itself. Such Banks would still exist, whether the National Bank or the Bank of England predominated; the question does not arise, whether these establishments would continue to perform their functions in contributing to public convenience, and their own profit, with or without the power of issuing paper; but whether the Bank of England, and the Joint-Stock and Country Banks would be destroyed by this National Bank?

But your Correspondent is obscure in some parts of his argument. He says "*it is the circulating medium of the country, and not the banking business of the country, that I am desirous of seeing altered.*" I have all along been supposing that "*the head and front*" of his proposed plan, if not in words, at least in essence, was to establish a new Bank upon a new principle, which would engross *the whole circulation of the kingdom, other Banks being required to withdraw theirs?* Is this *no alteration* in Banking business? I do not mean to contend that *advances or deposits* will not be made by his plan as well (although that is questionable) as by the present; but I do not understand that these two simple words embrace *every thing* which is understood by Banking business. In my humble conception, the "*circulating medium*" has *much* to do with the question, and to put them forward as two separate and independent considerations,—looks like arguing for a distinction where there is no difference.

With respect to the interference of Government

in Banking concerns, I repeat, that I think it dangerous in the highest degree,—there is no part of my former letter which should lead your Correspondent to infer, that because I condemn it in a National Bank, I justify it in the case of the Bank of England,—on the contrary, I held it up as one of the greatest calamities to which, as a nation, we have been subjected. We stand not alone in this. The Bank of Amsterdam, the Bank of Venice, the Bank of the United States, all established upon principles somewhat similar to those advocated by your Correspondent, present striking instances of the calamity entailed upon the industry of the nation by Government interference. But, after all, the Bank proposed by your Correspondent, has little of novelty to recommend it, and I fear I may wither some of his laurels, as the inventor of so hopeful a scheme, by telling him that it has little claim to originality, as the same plan was proposed by Dr. Chamberlain about the time Patterson established the Bank of England in 1694. It was even in those days considered impracticable, and Patterson's plan was preferred. But at that time they had no Banks in England, and *might* have given it a trial, without the danger of upsetting existing establishments.

Your correspondent is satisfied, that by an *elevation of prices*—manufacturing as well as agricultural—our foreign trade would be very greatly extended; and in order to support his position, he assumes an hypothesis, which to say the least of it, is exceedingly unfortunate for his theory. To illustrate the advantage to our foreign trade, he supposes that a merchant embarks in *one small adventure* to Portugal of the value of 300*l*, while at the same moment, in consequence of the increased circulating medium and high range of prices here, there are *large importations of wine from thence*, which enable him to obtain remittances on England at 72*d* instead of 60*d* per milrea, thereby rendering his transaction a profitable one. What a one-eyed view of the case is this? It is fairly begging the question,—and the whole is built on a flimsy hypothesis. Is this an example of the anticipated *increase* to our foreign trade? This the mouse *for which* the mountain has been groaning? Would it not be more natural for your correspondent, having assumed that our circulating medium is *so much increased*, to suppose that speculation *would increase with it*, and that instead of *one small adventure*, the foreign market he has fixed on, is inundated with goods from this country? That appears to me a necessary consequence of the state of things which he supposes. The result must then be, that the manufactures of England, *bought at high prices*, come into competition in the Portuguese market, with the *low priced* goods of France and Germany, leaving your correspondent to calculate the advantages (if he thinks them so) which will thereby accrue to the English merchants, I may, *en passant*, glance at the probable rate of exchange at which the produce of the English goods are negotiated in the Portuguese market.

Having assumed (as I am entitled to assume) an *excess* of goods exported from England, I am equally justified in assuming that the demand for

Bills on England is greater than the amount Portugal has to draw, and that consequently the English Agent must be content to receive a *smaller quantity of pence* in exchange for his milreals, than he would receive were the excess in favour of Portugal. But really, we gain nothing to the argument by theoretical illustrations of this kind. The nature and operation of exchanges are well known, and may be sufficiently illustrated by an axiom which I think your correspondent will scarcely dispute,—viz., that gold is the standard by which exchanges are determined, and the commodity resorted to, to restore the equilibrium between nations trading with each other—that gold itself is influenced by the value of commodities, as it is found invariably to be drawn towards that country where prices are low; leaving that, where prices are high. If this axiom is sound, and I believe it is indisputable, your correspondent will find it no easy matter to reconcile the corollary, with his theory of high prices.

I would here leave the question, which your correspondent has re-agitated, but he closes his communication by attributing a sentiment to me which I scarcely think my letter justifies. He charges me with stating that to allow the importation of foreign grain on a low fixed rate of duty, would be the best plan that could be devised for the destruction of our farmers. Surely he must have overlooked the spirit of my remarks, which referred entirely to *his own proposition*, pointing out the inconsistency of admitting foreign grain at a low rate of duty, *with an elevation of prices at home!* I can assure him, that so far from being opposed to foreign grain being imported at a low fixed rate of duty, *I am an advocate for it*,—nay, I go much further than he does, he thinks it inconsistent with our *present monetary system*—but so far from thinking it inconsistent, I am persuaded the farmers will be ruined, unless some regulation of this kind is adopted. At present they are groping in the dark, and have no certainty that the market may not be overstocked with foreign grain the moment the averages have attained such a height as to enable the importer to avail himself of the opportunity of doing so, at the favourable rate provided for by the graduated scale of duties.

Your correspondent argues a bad cause with so much ability and good temper, that I have some hope of his becoming a convert to the doctrine which I have espoused; as it often happens that men, however widely they may at first differ in opinion, arrive nearer to the truth, although they like not to confess it, by the gentle weapons of reason and argument. In taking leave of your correspondent, I cannot therefore refrain from acknowledging the courtesy of his communication,—and am,  
Sir, Your's very respectfully,  
Jan. 1, 1835. S.

## LORD WESTERN AND AGRICULTURE.

The following is a copy of the letter received by the President of the Chelmsford Agricultural Society, and mentioned by him at the late dinner. It was accompanied by the proposed measure for

*bonding malt*, which is printed at the conclusion of his Lordship's communication:—

"I am sorry I cannot attend the Agricultural Meetings at Chelmsford on the 8th and 12th; but my health is so indifferent that I am obliged to give up everything to it.

"I am *most seriously* alarmed at the distressed state of the agricultural community; indeed, their declining condition has long pressed grievously on my mind. The *grand* question which ought first to be anxiously considered, is the *cause* of its unprecedented depression. My opinion upon the subject is well known; but I will not press it upon the meeting now, *though* no remedy of a permanent character can be expected whilst the *cause* of the distress remains undiscovered.

"My object now is to offer to the consideration of the meeting the outline of a measure which I think would be productive of *some little* relief, and in a manner consonant with my own views of the cause and remedy, and yet, I believe not objectionable to those who differ from me upon it. The effect of the measure would be to add to the facilities of credit upon a *sound* principle, and thus increase, as far it goes, the circulating medium of the country. If the Meeting approve it, they should memorialize the Government upon it. The idea did not originate with me, but I readily adopted it, and immediately submitted the plan to Lord Melbourne, who promised to give it a favourable consideration.

"I shall send some Stock to the Show on the 12th; but unless there is any *premium* for what is termed, on these occasions, *extra Stock*, I have no chance of a prize; for I shall not come within the *rules* of either class. I think they are too restricted respecting age and other conditions to allow of many competitors, and too many premiums to *admit* of their being, according to the funds of the Society, sufficiently large to cover the expenses even to the successful candidate of either description of stock.

"I am fully alive, as you know, to the propriety of giving every encouragement to ploughmen, knowing well, that upon the skill and attention of the ploughmen all good farming must depend: nor less am I convinced of the duty we owe to the industrious labourer, who has nobly struggled, under all difficulties, to maintain the honest pride of independence which his bosom has never ceased to feel."

### THE PROPOSED MEASURE.

"On account of the distressed state of agriculture, the following observations are submitted respecting the consumption of barley. At present the *growers* of foreign corn, the *distillers* of foreign spirits, and the *manufacturers* of foreign wine, are all indulged by having their respective articles placed in bond in this country, to wait a sale for home consumption, but the *English manufacturers* of malt from barley of the growth of England, are *not* allowed any such indulgence, and they are often prevented from making malt to keep in store on account of the duty being payable a *short time* after it is made. It is, therefore, suggested that malt be allowed to be made and placed in bond for any period not exceeding two years. The *malster* would then be able to convert a more considerable quantity of barley into malt than at present, as payment of the duty would then be deferred to a definite period, in which case he would place the property under the King's lock, a circumstance that would afford greater facilities for raising money than at present, remedying, in a slight degree, the inconvenience and loss which he has sustained by the withdrawing of the 1*l* notes. The same indulgence

ought to extend to every article subject to Excise, being manufactured from the growth of this country."

"N. B. Barley will not malt the second year; it even becomes worse towards the end of the first malting season, namely, the end of April: it does, indeed, begin to deteriorate the beginning of March, variably according to the season; when made into malt it will keep two or three years, without being deteriorated materially more than five per cent., if good malt at first. Now the farmer cannot turn his barley into malt, nor can the maltster purchase barley to malt, beyond the immediate demand, on account of payment of the duty. If they were allowed to malt and bond it, it would afford greater facilities of credit to both these parties, who stand greatly in need of it, they might then obtain advances upon the barley so malted, and put under the King's lock, and this, with security to the parties making the advances and consequently to the public. Another advantage will be that of regulating the supply to the demand, and equalizing the price, and reducing the necessity for foreign importations.

"The same reasoning applies to the case of the British Distillers; they are compelled to send the article directly into the market, which is further objectionable, inasmuch as the spirit would most unquestionably improve in quality by keeping, and its noxious properties would be somewhat diminished; they would, likewise, have a fair legitimate ground for a credit accommodation, whenever they might require it.

"The hop-growers, also, upon an equitable principle, should have the same power."

### POOR LAW BILL.

The following correspondence, which has taken place between the respected visitor of the Swansea House of Industry and the Poor Law Commissioners, will be interesting to the heads of other parishes, and capable of general application—

"TO THE POOR LAW COMMISSIONERS, LONDON.

"Gentlemen,—As the period fixed for the appointment of officers by the act passed in the 22d George III., chap. 83 (under which this parish has been placed), is regulated by a moveable festival, namely, Easter, inconvenience arises from the unequal length of the year, as in the instance of last and this year, the former having consisted of 50 weeks only, the present of 55; thereby making the comparative statements of the year's accounts disproportionate, and, as by the 41st section of the fourth and fifth of his present Majesty, chap. 76, you have the power of directing that elections of officers shall be made according to the provisions of the said act, I beg to have your sanction for calling the future meetings for the appointment of officers, conformably to section 38th of the said act—that is to say, on the 25th of March, or within fourteen days thereof.

"I have the honour to be, gentlemen,

"Your most obedient servant

"W. R. GROVE, Visitor, &c.

"Swansea, Dec. 4."

"Poor Law Commissioners'-office,  
Somerset-house, Dec. 9.

"Sir,—The Poor Law Commissioners for England and Wales wish to express their thanks for the suggestion contained in your letter of the 4th instant, which they conceive to be of general ap-

plication, and which will receive the careful consideration of the Board at the earliest convenient opportunity.

"By order of the Board,

"E. CHADWICK, Secretary.

"To W. R. Grove, Esq., Visitor, &c.,  
Gloucester-place, Swansea."

### COMPARATIVE BURDENS ON MANUFACTURING INDUSTRY IN FRANCE, ENGLAND, AND BELGIUM.

The *Journal du Commerce*, in a well-written article upon the Commercial Inquiry, in which the question of tissues is particularly alluded to, states, that among the different materials employed in the spinning, weaving, dyeing, and printing of stuffs, there is not one upon which lighter duties are not paid in England and Belgium than in France. This assertion is supported by the following table:—

|                                                                               | Duty in France. | Duty in England. | Duty in Belgium. |
|-------------------------------------------------------------------------------|-----------------|------------------|------------------|
| Cotton (United States), per 50 kilogrammes .....                              | 11 0            | 7 73             | 0 96             |
| Wool (common, being valued at 1 fr. the kilogramme), per 50 kilogrammes ..... | 16 50           | 5 0              | duty free.       |
| Wool (fine, being valued at 2 fr. the kilogramme), per 50 kilogrammes .....   | 33 0            | 10 0             | ditto.           |
| Potash destined by bleaching tissues, per 50 kilogrammes .....                | 9 90            | 1 50             | 0 96             |
| Barilla, ditto, ditto .....                                                   | 6 32            | 6 25             | 0 48             |
| Indigo .....                                                                  | 41 25           | 35 0             | 4 80             |
| Campeachy Wood .....                                                          | 1 10            | 2 80             | 0 24             |
| Madder .....                                                                  | 13 20           | 7 50             | 2 40             |

Other drugs and materials for dyeing also pay much higher duties in France than in England and Belgium. It is well known what enormous charges the manufacturers have to pay upon iron, coal, &c. A steam-engine of 20-horse power costs from 20,000 to 25,000 francs at Manchester; the price is not higher at Verviers and Ghent, but in France it could not be had under 35,000 or 40,000 francs. Tools and other mechanism for the manufacture of tissues are at still more disadvantageous prices in France, as compared with the two above-mentioned countries.

As to coal, it costs 9 francs the 100 kilogrammes at Manchester, 14 or 15 at Verviers and Ghent, and 37 or 37½ at Rouen, Elbenf, and Muhlhausen; partly in consequence of the heavy duty of from 11 centimes to 1.70 the hectolitre.

It is true that, on the other hand, wages are lower in France, as will appear from the following table:—

|            | A DAY'S WAGES      |                      |                     |                    |                      |                     |
|------------|--------------------|----------------------|---------------------|--------------------|----------------------|---------------------|
|            | At Muhlhausen.     | At Rouen.            | At Manchester.      | At Muhlhausen.     | At Rouen.            | At Manchester.      |
| Spinners.  | fr. ct. 2 0 to 3 0 | fr. ct. 2 50 to 3 50 | fr. ct. 6 25 to 0 0 | fr. ct. 2 0 to 3 0 | fr. ct. 2 50 to 3 50 | fr. ct. 6 25 to 0 0 |
| Weavers.   | 1 25 .. 2 0        | 1 50 .. 2 75         | 2 90 .. 0 0         | 1 25 .. 2 0        | 1 50 .. 2 75         | 2 90 .. 0 0         |
| Printers.  | 1 25 .. 3 50       | 3 0 .. 6 0           | 5 0 .. 0 0          | 1 25 .. 3 50       | 3 0 .. 6 0           | 5 0 .. 0 0          |
| Labourers. | 1 25 .. 1 50       | 1 50 .. 2 0          | 2 0 .. 3 0          | 1 25 .. 1 50       | 1 50 .. 2 0          | 2 0 .. 3 0          |
| Women.     | 1 25 .. 2 0        | 1 25 .. 1 50         | 1 60 .. 3 0         | 1 25 .. 2 0        | 1 25 .. 1 50         | 1 60 .. 3 0         |
| Children.  | 0 25 .. 0 75       | 0 60 .. 1 0          | 0 50 .. 1 50        | 0 25 .. 0 75       | 0 60 .. 1 0          | 0 50 .. 1 50        |

"But," says the writer, "are they as eligible and well-instructed in their business? Are they as well off? This is doubtful. Why are not the schools for our workmen augmented? Above all, why are not efforts made to better their lot by reducing the duties upon their articles of food? Modifications are specially called for in the Corn Laws, in the interest of our manufactories, of which the workmen are the living capital."

## THE STOCKBRIDGE FARMERS AND THE MARQUIS OF CHANDOS.

The following gratifying Address from the Landowners, &c., of Stockbridge, to the Marquis of Chandos, with the noble Marquis's reply.

"To the most noble the Marquis of Chandos, M.P.

"WE, the undersigned Landowners and Land-occupiers in Stockbridge and its vicinity, deeply impressed with a sense of the essential services rendered by your Lordship to the agricultural interest of this country, beg permission to present this our address of congratulation and confidence to you, who have been so emphatically and justly recognized as the Farmer's Friend. It has been a cruel mortification to those peculiarly connected with the land to find, that, while their grievances have been invariably acknowledged, they have as invariably remained unredressed.

"The Committees of 1821 and 1833 told the same melancholy tale, and his Majesty's most gracious speech, on the opening of Parliament, alluded to and recognized "the continuance of distress among the proprietors and occupiers of Land." Two hundred and two independent members of the House of Commons supported the resolution which, in our opinion, your Lordship so judiciously proposed in February last, namely—That in any practicable reduction of the burthens of the country, due regard should be had to the necessity of relieving the agricultural interest." And yet how the Session of Parliament passed away with the repeal, indeed, of the House Tax, but to us, the suffering class, with only a small pittance of commiseration, and without any measure of practicable relief.

"While, therefore, we would tender to your Lordship the sincere expression of our gratitude for the services which you have already performed, we would no less anxiously implore you to persevere in the course which you have hitherto pursued.

"We would earnestly entreat your Lordship to be early in the ensuing session, in the field: the Agriculturists, we are persuaded, will not, on their part, be slack in affording you, by petition, their co-operation; and bold indeed will be the Minister who shall dare to turn a deaf ear to the remonstrances of those whose admitted grievances seemed to demand a speedier adjustment.

"We beg again to offer your Lordship our humble tribute of approbation, and our unfeigned expression of gratitude, and to subscribe ourselves—Your Lordship's faithful and obliged servants."

The foregoing Address was signed by about 160 Farmers, and, at their request, presented to his Lordship by Charles Baring Wall, Esq., M. P., who received the following reply:—

"Pall Mall, November 28, 1834.

"My dear Sir,—I hasten to acknowledge the receipt of your letter, together with the address from the owners and occupiers of land, in the neighbourhood of Stockbridge. Allow me to request you to convey to the gentlemen who signed the address my grateful acknowledgments for the very gratifying proof of their approbation and esteem, and, at the same time, to assure them, that they may rely on my continued exertions in their cause, which I am determined to support and protect, by every means in my power.

"Believe me, my dear Sir, yours very truly,  
"CHANDOS."

## POOR LAWS.

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

SIR—I think the success of the Poor Law Amendment Bill will entirely depend on the discretion that is used in bringing it into operation. To remedy an existing abuse will always be a first object, alike with a wise man and a wise Legislature; but to remedy that abuse gradually and cautiously, and particularly in a matter in which the many are so seriously affected as they are by this measure, renders the caution with which this remedy is applied a high component part of the wisdom of the whole. Every attempt has been made by the greater part of the press to mislead and disgust the mind of the public on this subject, and statements have constantly been advanced for that purpose, in no degree authorized by the tenor of the Bill itself. If the Commissioners in whom the power is invested abuse that trust, then let these Commissioners be exposed; but it is unwise to condemn a principle that is good, from a fear that men will pervert its intention; because against such a perversion the public voice would immediately and irresistibly be raised. Let us then, rather than attempt to destroy that which if used with humanity and circumspection, may be a blessing and protection to individuals and to property, closely watch both ourselves and the Poor Law Commissioners in the exercise of this new power. By watching ourselves, I mean especially the middle class of persons, we shall individually avoid in our situations of parish officers, unnecessary harshness, temper, oppression, and, above all, any imputation of acting from favour or caprice. By watching the Commissioners, we shall soon discover if they be men qualified by nature, and the experience they possess on the subject, calculated for their high and responsible situations. That the provision and employ of the poor of this country, under existing circumstances, is as difficult a matter as can occupy the human mind I readily admit: but I do think these difficulties are considerably increased by the views and arguments of two opposed parties on the subject. The persons who compose the first of these parties, are the rigid political economists; the other junta comprises those persons who carry their views of the rights of the poor so far beyond a just, reasonable, or safe point, that one cannot help doubting the sincerity of their motives. Without favour or bias to either party, let us consider the doctrines of both separately. First, the political economist, who tells us that the labour of the poor man must be brought to market, where its value will be ascertained, and what it is worth it will fetch; and what it will there realize, he must be content to support himself with, and be satisfied that he is justly dealt by. Now, under certain circumstances, this theory can be, and, in fact, is practically acted on; as, for instance, in the United States of America, as well as in several of the British Colonies, it would be worse than madness to have either a legal provision for or price of labour; because here the demand for labour is always equal to, and often beyond the supply, and, consequently, the price obtained for it is sufficiently remunerating. But in these countries there is not a superabundance of people; in truth, the fact is the reverse of this; neither has there been for a long succession of years a perversion of a good principle, to the destruction of the morals, prudence, and industry of the labouring class; and it does appear to me,

that it must be entirely relative to the present state of society (the difficulties which exist, and which difficulties were brought about mainly by the abuses that have crept into the administration of the Poor Laws) that the poor man's claim to protection must be considered, both as to provision and price of labour. Not that I would for a moment endeavour to support the practice of the old Poor Laws, for I well know that nothing can be more destructive, either in practice or in principle, than such a state of things; at the same time I confess that, both in prudence or in principle, I am opposed to any great SUDDEN change, that would lessen or destroy the present comforts of the poor. What has in a great degree occasioned early and imprudent marriages? The Poor Laws. What has been the occasion of the immense increase of the population? Early marriages and the late Bastardy Laws. What has led to rioting, discontent, drunkenness, and poverty? The indiscriminate and equal protection afforded by the Poor Laws, alike to the industrious, sober, and contented, with the drunken, the profligate, and the idle.

If this be all true, says the philosophical reasoner on economy, let us *immediately* remedy such a state of things, and the power given by the Poor Law Amendment Bill is sufficient for the purpose. This is quite true; the power given is sufficient to remedy the evil; but still, I contend, the market hire of labour, and such jargon, will not, under existing circumstances, exactly suit our disease; it is only by gradually and cautiously applying the antidote, that it can be rendered efficaciously just or humane. I often hear it said by persons who call themselves "political economists" that the success of the Poor Law Amendment Bill depends entirely on the precipitancy and firmness with which it is applied, and that to loiter on the way would neutralize the intended remedy. Let such persons take a lesson from Cowper's tale of "John Gilpin," and reflect that when the hero of this tale arrived, as he did, splash and dash, at his friend's house at Ware,—if he, luckless wight, had been content to have dismounted his unmanageable horse, and instead of endeavouring to return at the same headlong speed he advanced at, and had been satisfied to have *led* his steed *steadily but surely* back, he would have had far better chance of joining his wife at Edmonton.

Let us now take a view of the doctrines of the soft-hearted, unthinking, and, in most instances too, where the following notions exist—the *untaxed* philanthropists. Here we are told by the laws, both of our Maker and of man, that the poor are entitled to support; and if this support is withheld, or even if it be inadequately supplied to them, the poor in such case are quite justified in helping themselves to their richer neighbour's goods. To the former part of this reasoning, in substance, I readily assent, and particularly to the Divine Mandate, of the rich providing for the poor. But I feel my views of "provision" differ widely from the construction of that word by the persons with whom I am now about to contend. This description of reasoners I find never make any distinction in the provision they advocate for the destitute. Oh, no! to do this would appear to be callous hearted; to distinguish between the destitute from age and misfortune, and the destitute from indolence and vice, would be adopting by far too much of the tone of the report of the Poor Law Commissioners. The consequence is, they make a mixed medley of the whole, and then

talk of provision for the poor! Whatever may be said to the contrary, by those who advocate the allotment system, or the colonization of the barren commons and waste lands of this country, we have a considerable surplus of labour. Now in Canada, and other British Colonies, labour is much wanted at a high price. In these colonies the government is the same as in England; in some the soil and climate is equal, and in others it is superior to that in this country; and every protection from injustice and oppression is as duly observed. *Here, then, is a provision for the poor;* and a provision far more adequate to their wants than circumstances will permit at home. Here is offered to the young and able-bodied high wages in exchange for moderate labour. Here is offered to the industrious, the virtuous, and the frugal, present employment, and future advancement in life. Here can those energies of body and mind, which have heretofore laid dormant for the want of employment, develop themselves with effect. Here it is, in the prosperity and comfort which they enjoy, that the English emigrants discover the false doctrines of those political writers in England, who advise the poor to do anything rather than emigrate,—who call emigration transportation, and many other hard names: and it is here, those emigrants, employed, well paid, and comfortable, become satisfied that such advice was given either from ignorance, or from a motive which it may be better not to mention here. It is very easy to find fault,—it is most easy to condemn any and every remedy offered for the better provision of the poor; but it is very difficult to *suggest* a plan for this object. In the last sentence—if one may judge from circumstances—the party I now allude to will undoubtedly think with me, for although they condemn *in toto* every measure offered, never by any chance, in condemning one measure, do they point out a better.

It is generally understood to be the intention of the Poor Law Commissioners, to entirely stop, some month in next summer, the present allowance of flour made to large families, *in proportion to the number of children*. Although this allowance is objectionable on principle, and requires to be remedied; we think in this neighbourhood it would avoid much distress to gradually remedy the evil, in preference to the doing so at any given period. In consequence of this feeling, a memorial to the Board of Commissioners, of which memorial the following is a copy, was signed by all the most influential owners and occupiers of land in this neighbourhood, and which I presented to Mr. Pilkington, the Assistant-Commissioner for Western Sussex, and this gentleman promised me it should be duly *forwarded* to its destination.

#### "ALLOWANCE TO CHILDREN.

"We, the undersigned, considerable rate-payers and parish officers of different parishes in the western division of the county of Sussex, submit, through Mr. Pilkington, to the Board of Poor Law Commissioners, the following plan for the gradual abolition of the above abuse, hoping that the Board will authorise us in due time to carry it into effect.

"That after an early and appointed day (say (Lady-day next) it shall be announced in each parish by the overseers, that no child shall thenceforth be put upon the allowance list, but those already on it be allowed to drop off at the accustomed age, that is to say, ten years old. The promulgation of this order would instantly correct a vicious principle, which encourages early marriage. The method of carrying the reform into

effect would each year lop off a portion of the burthen, till at the end of eight years all vestige of it would be effaced. For as it is, only the children above two in each family who are allowed for; no child comes on the list till two years old, and which child leaves it again at ten years old. By carefully making out the list in each parish, *with the names of the children*, all collusion of substituting one child of a family for another would be prevented, and the allowance, while continued, would be only in flour, and not in money. The privation and denial to the labouring classes would thus affect them separately, as each parent had a fresh child born; and to the rate-payer, the progressive wearing away within eight years, an evil of at least thirty years antiquity, would be considered sufficient and satisfactory. Whereas, the suddenly withdrawing it on any given day, considering the vast numbers in every parish interested, appears to us of very questionable propriety."

I am, Sir,

Your obedient and very humble servant,  
Sussex, Jan. 6, 1835.                      AGRICULTOR.

P.S.—I have the great pleasure to inform my friends in Wales, that Mr. Walter Calhoun, of Binderton, near Chichester, from whose flock I bought the ewes I sent to Pembrokeshire last Autumn, obtained the premium, at the late Chichester show of stock, for the best pen of fat South-Down ewes, and also the premium for the best pen of stock South-Down ewes.

## ON THE HUSK IN CATTLE.

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

Sir,—Having seen, through the medium of your useful pages, various remedies, most of which seem to have proved ineffectual, for this prevalent and destructive disease, I now beg leave to offer to your notice a simple remedy, which I have found by experience to be highly beneficial, particularly to weaning calves. I generally wean from fifteen to twenty every year, feeding them chiefly on skim milk till the latter part of May, when they are put into some good grass, where they remain till the beginning of July; when I get some fresh lime mixed with some light earth or sand, and put about 25 quarters to an acre of land, where I intend feeding my calves during the season. I prefer putting it on an old summer-leaze, as they generally feed better on that than any other pasture. I consider two acres of land sufficient for twenty calves, but the lime must be repeated annually; then as soon as there has been sufficient rain to wash in the lime and earth, I begin feeding my calves upon it; and if any of them has the cough, or husk, ever so violent, it generally leaves them in the course of a week or two, and if they are fed on the limed land before the disease comes on, I have ever found it to be a certain preventive. So trifling is the expense of this remedy, that I would recommend every person that is troubled with this disease in their cattle, to try the experiment, and I doubt not but they will find it give ample satisfaction. Such is the ardent wish of

Your obedient servant,

A DORSETSHIRE FARMER.

Dec. 29, 1834.

## TO THE AGRICULTURAL ELECTORS OF GREAT BRITAIN & IRELAND.

"A proper distribution of the resources of the State is absolutely necessary to the integrity of its existence, because the neglect of it must terminate either in ANARCHY or DESPOTISM."

FELLOW-COUNTRYMEN, LAND-OWNERS, AND FARMERS,—This is a momentous crisis in our affairs! During twenty years of profound peace we have been gradually sinking deeper and deeper into distress; and, after four years of political agitation, in which our grievances have been disregarded, and feelings tantalized with various barren and fraudulent schemes of relief, we find ourselves again called upon to exercise our right of elective franchise.

What then is our position? and what the line of conduct to be adopted by us? Self-preservation is the first law in nature, and the first also in political science. On this principle we take our stand.

To say nothing then of tithes, the commutation of which will convert, but not extinguish, an onerous burthen, we are overwhelmed with the following evils:—

1. POOR RATES.—We are paying 10,000,000l yearly, to support, not extinguish, a body of fictitious pauperism; whilst we are paying 10,000,000l yearly to foreign growers for corn, flax, hemp, and tobacco, all of which we might grow at home, had not our means been misapplied, our exertions crippled, and ourselves deceived, by the negligence or ignorance of our rulers.

2. MALT TAX.—We are loaded with a tax on the beverage of the nation, to the amount of about 5,000,000l yearly; which has decreased the consumption of beer *weekly* to one pint for each individual, while the allowance if raised to a pint *daily*, would give circulation, per annum, without exaggerating the result, to a capital equal to 50,000,000l sterling.

3. ROAD DEBTS, &c.—To keep up an expensive, complicated, and prejudicial system of inland communication, which has hitherto acted as a most injurious prohibition upon social intercourse, we have encumbered ourselves with 10,000,000l of road debts, with upwards of 1400 road trusts, and more than 4000 road acts.

4. TURNPIKE TOLLS, &c.—To maintain turnpike roads and highways, and to pay the interest of the debts upon them, we are burthened with tolls, statute labour, and mileage duties, (including what is levied by the contractors, over and above the rental of the toll gates) to a frightful amount, probably not less than 10,000,000l sterling annually.

5. MORTGAGES, &c.—It was estimated at the close of the war, that land was mortgaged to the extent of 1,500,000,000l, which sum, borrowed in PAPER, at the value of sixty-three per Cent., is now, from the change in the currency (for want of a corresponding adjustment at the same time of all pecuniary obligations and contracts between man and man) made payable, capital and interest, in GOLD at the value of ninety per Cent.

6. MEAL MONOPOLY.—Whilst our starving working classes are excited against us, and made clamorous for cheap bread, by other acts than our own, the want of a bread assize has permitted a handful of meal trade monopolists to impose a tax upon the staff of life, equal to twelve and a half per Cent., or more than one-eighth of the value of the whole consumption of the nation: an evil

which far outweighs in iniquity even the most obnoxious impost thrown upon our necessities by past Governments.

7. GENERAL DISTRESS.—Yes! General distress: “On the testimony of the late Lord Chancellor,” says an authority, “I assert that *general distress* of a frightfully tremendous, and (if not checked) utterly exterminating nature, does exist at this moment in this country; his lordship’s words are, ‘We suffer under evils, the extent of which no tongue can adequately describe, the possible extent of whose consequences no fancy can adequately picture.’” Since the peace, population has increased twenty-five per Cent.; poor-rates three hundred to four hundred per Cent.; insolvencies one hundred per Cent.; crime three hundred per Cent.; and emigration four thousand per Cent.!

Fellow land-owners and farmers of the United Kingdom, such is our present condition:—but this is not all!

By the CURRENCY change, a deficiency in 1835, as compared with 1818, exists in the circulating medium to above 100,260,958! *i. e.* the general prices or resources of productive and rural industry throughout the country have been depreciated one hundred per Cent. State expenditure has been curtailed from the period of the war establishment to the extent of 40,000,000! yearly! The FREE TRADE system, by impoverishing all classes of home producers, has immensely aggravated these evils, and diminished internal consumption—the index of internal prosperity—to an incalculable degree. During the same period, the manufacturing classes have multiplied, by mechanical agency, their productive powers, to the overwhelming extent of 40,000,000 of effective labourers; which again has cast upon us the support of the human hands which machinery has displaced, with diminished means to bear the additional burthen. The operation of the *Poor Law Amendment Act* is now about to let loose upon us the thousands of desperate and discontented paupers, whom even the allowance system did not prevent from nightly destroying our property by fire. Whilst last, not least, the extension of the railway system, and the contemplated general introduction of mechanical conveyance by Joint Stock Jobbing Companies, five years from this date, will in effect REPEAL THE CORN LAWS. Yes! Repeal the Corn Laws, and that in a way which would cause the abandonment of the ancient *thoroughfares* of the kingdom; which would throw out of cultivation, eventually, 100,000 acres of valuable soil; cause GLUTS in our markets, and diminish our prices, whilst the *cost of production would remain the same*; sweep away the income by which the public roads of the kingdom are now supported; place the whole intercourse of the nation at the mercy of chartered monopolists, and rivet upon us the despotism of the MONEY-OCRACY for ever!

Fellow Countrymen, Land-Owners, and Cultivators!—How are we to avert these calamities? preserve our position as an independent body of producers to the State? and protect that branch of industry which the late House of Commons recognised to be “the first and greatest concern of the nation, and the foundation of its prosperity in every other matter,” but which it did nothing whatever to protect, much less to *relieve*?

There is but one method. “The first creditor on every country is the PLOUGH. This original indefeasible claim supersedes every other demand.” Let us, then, assert this principle; now is the moment when circumstances admit of its being done by new and effectual means: whilst also a

Statesman presides over affairs—the introducer of “that terrific measure, that germ of revolutionary evil which has now been working in its destructive course for fifteen years,”—who owes a debt to the agriculturists which the repeal of the malt tax alone will not liquidate. The following then, is the REMEDY which we submit for your co-operation.

Various Committees of Parliament have recommended a consolidation of turnpike trusts, and a general system of controul over the roads of the United Kingdom, as necessary to prevent an increase of debt, and give relief from the burthen of statute labour, and the high rate of tolls.

*Well—let this be done; but at the same time, by a legislative act, let mechanical conveyance, (which a committee of parliament has declared practicable and profitable,) and the post-office be added; and let their joint returns be appropriated for the service of the state.*

Such is our remedy; and what to us in especial, and to the public in general, would be the advantages of such a consolidation?

1. IT WOULD PERFECT SOCIAL INTERCOURSE.—“Next to the genial influence of the seasons, upon which the regular supply of our wants, and a great proportion of our comforts, depend, there is no circumstance more interesting to man in a civilized state than the perfection of interior communication.” In exchange, then, for the injurious, expensive, defective, conflicting, oppressive, and incongruous system of conveyance now in use, we would have a uniform, cheap, and well-regulated system throughout the three kingdoms, under a responsible direction.

2. IT WOULD REDUCE TAXATION.—Connected with the roads, stage-coaches, poor-rates, and the sum paid yearly to foreign growers for flax, hemp, &c. there is an annual expenditure of 40,000,000! sterling, *one-third* of which may be saved by the consolidation suggested; and if to this we add the increased fares which will arise from an improved system of locomotion, Government would net yearly a new revenue of from 10,000,000! to 15,000,000!, which would admit of the repeal of the malt-tax, tolls, and every other burden pressing upon the land.

3. IT WOULD ABSORB SURPLUS LABOUR.—For years past England has been paying about 8,000,000! per annum to support pauperism, the burden of rates is daily becoming more insupportable in Scotland, whilst a legal provision for the poor in Ireland is no longer postponable. Let, then, the whole sums required for the relief of the distressed in the three kingdoms, as a national fund, be applied to accommodate the roads for mechanical conveyance. The improvement of 30,000 miles of turnpike roads, and 150,000 miles of high-ways, will afford beneficial occupation for the whole of our redundant population; to say nothing of the impulse which manual industry would receive in all its branches from the partial displacement of that brute power which now does the work of twelve millions of effective labourers.

4. IT WOULD CHEAPEN FOOD WITH PROTECTION TO AGRICULTURE.—Our social condition is daily demonstrating the fact, that the importance of a sufficiency of *cheap food* is paramount to all other considerations. There is no exaggeration in the assertion, that upon its low price, relatively speaking, the position of the nation, in the scale of civilization, will be determined; because, by it, production of every kind is restrained within the narrowest limits, or its development permitted to the utmost possible extent. This *cheap food* will

shortly be obtained by the displacement of brute power, whether the consolidation suggested be made or not: but it is by its adoption alone that a fall in prices can be rendered innoxious; viz. by its admitting of the repeal of all those iniquitous burdens affecting the *cost* of agricultural production, which make prices dear to the buyer, and yet not remunerative to the grower.

5. IT WOULD AGAIN BALANCE PRODUCTION AND CONSUMPTION.—The partial application by the manufacturers of mechanical agency to the loom, has immensely cheapened and multiplied every species of *commodities*, whilst this has not been provided for by any corresponding increase and cheapening of *necessaries*. Hence, glut, stagnation, and embarrassment;—a condition which must inevitably remain until it is counteracted by the extension of mechanical agency to the team.

6. IT WOULD DISTRIBUTE WEALTH.—The exclusive system of accumulating wealth pursued by the capitalists, in conjunction with the currency and the reform bills, have greatly disadjusted the balance of power between the *landed* and the *monied* interests which is essential to the security of property, and the safety of the state. That balance must either be adjusted by the appropriation suggested, or the monopoly of the enormous revenue that will arise from mechanical conveyance by the money-jobbers must totally and irretrievably destroy the equilibrium.

7. IT WOULD RESTORE INDUSTRY, PEACE, AND PROSPERITY.—All classes of Producers are languishing under the decay and distress of the landed interest. Agriculture is the store-house or belly of the state, and the other members cannot mutiny against it without being involved in a common ruin. Its regeneration will benefit all parties, and the adoption of the plan propounded will diffuse public wealth, with public benefit, and public satisfaction, by removing those causes which now cover the country with feebleness, poverty, disease, and crime.

What, then, fellow land owners and cultivators, ought to be the line of our common policy? What the direct means to secure this substantial and necessary relief? Remember what the last House of Commons did for us, even though it was declared from the Woolsack, "that every thing betokens the approach of what has been termed an Agrarian War;" and reflect that, during the *term of the next House of Commons*, a change in locomotion will be introduced by which as a body we must *stand or fall*. Yes! no power can avert the sweeping away of brute labour; and according to the *mode* of its displacement shall we, as a class of producers, *live or die*. We must be up and doing, for our all is at stake! If properly introduced, a larger amount of domestic happiness will be the result, than any which has as yet blessed the families of the United Kingdom. Let us merge then our profitless differences, our minor considerations, and shades of political feeling, and make the pledged support of a Legislative Consolidation of the roads, post office, and mechanical conveyance, a *sine qua non* with every Agricultural Representative of the United Kingdom. Let our enfranchising object be *social regeneration*, our hustings watchery—'No Mammonists, no Malthusites, no Ricardoites, no Coarser Food-mongers, no Long-tailed Dog Redemptionists, no Skin-deep Reformists, of whatever complexion! but men of a determined and thoroughgoing character who will go at once to the root of our grievances! Men who will make our distresses the fulcrum,

and who, 'by a long pull, a strong pull, and a pull altogether,' will make mechanical agency the lever by which to raise up the whole mass of our prostrate interests, and enable us in justice to ourselves, and mercy to our fellow subjects both '*to live and to let live*.'

Jan. 3, 1835.

A LAND-OWNER.

N. B.—The Authorities for the statements here given will be found in a pamphlet entitled '*Appeal to our Rulers and Ruled*,' &c., just published by Mr. Mortimer, 2, Wigmore-street, Cavendish-square, London. Of whom also may be had, Nos. 1, 2, and 3 of '*Railway Impositions Detected*,' which, with the forthcoming number, will exhibit in detail the consequences of railway communications to the *landed* interest in England, Scotland, and Ireland.

## IMPORTS AND EXPORTS OF WOOL AND WOOLLEN MANUFACTURES.

(From Parliamentary Documents.)

WOOL IMPORTED AND EXPORTED.—An account of the quantity of Sheep's and Lambs' Wool imported into the United Kingdom in the year 1833, from the following countries:—

|                                            | lbs.       |
|--------------------------------------------|------------|
| Russia . . . . .                           | 1,380,823  |
| Sweden . . . . .                           | 24,259     |
| Denmark . . . . .                          | 372,490    |
| Prussia . . . . .                          | 305,378    |

**ANECDOTE OF ROOKS.**—(From a Correspondent at Lewes).—In a garden bordering on the outskirts of the town of Lewes, is a walnut-tree, which, for the last five years, has been nearly stripped of its fruit by the common rooks. They begin their depredations just as the fruit is ripe, and carry it off with such expedition that the trees seldom worth the trouble of thrashing. I have been amused for hours together by observing their proceedings. They come one after another so quickly that I counted, one morning, fifty in twenty minutes, each taking one; and sometimes I have seen them carry away a whole bunch. Some of them are quite adepts. They fly towards the tree, and when within ten yards, stop, and seem to float in the air for about a second, as if surveying the tree to discover what nuts are easiest of access; they then dart at the tree, and seldom miss their object, but if they do miss it, they find some difficulty in recovering their balance. Others, which I suppose are the young ones of the existing year's brood, settle on the tree, and knock a great many down before they can get one firmly enough in their beak to fly away with. The old ones will sometimes attack the young and oblige them to let their booty fall, when, such is their quickness and certainty of aim, they will sometimes catch the walnut before it reaches the ground. They invariably

fly into an adjoining field, where they break open the walnuts with their beak, and as soon as finished, return for more, unless the report of a gun should frighten them. They have, to my recollection, been at this tree, year after year, for the last five years: there are other walnut-trees situated in the town, but they have not yet had the boldness to attack them.

**RUTLANDSHIRE AGRICULTURAL SOCIETY.**—It is an extraordinary fact that fourteen premiums or medals were awarded at the Smithfield Club Show to persons residing within fourteen miles in a direct line from Oakham, the central point of the district; and twenty-one premiums and medals only were awarded to the remaining part of the kingdom. This is a matter of no small pride to the Society.

The two oxen, Mr. Robert Smith's and Mr. Baker's, that won the first and second prize at Oakham (the former won the first prize, first class, at Smithfield, and the latter the medal in extra Stock), were bought by Mr. Slater, of Kensington, and it is said by him that he never killed two riper oxen.

**CANADA.**—The quantity of good soil in Canada compared with the extent of country is equal to that of any part of the globe, and there yet remains location for many millions of the human race. The best lands are those on which the hardest timber is found,—such as oak, maple, beech, elm, black-walnut, &c., though bass-wood, when of luxuriant growth, and pine, when large, clean, and tall, also indicate good land. Many of the *cedar swamps*, where the cedars are not stunted and mingled with ash of a large growth, contain a very rich soil, and are calculated for the finest hemp grounds in the world. So great is the fertility of the soil in Canada, that fifty bushels of wheat per acre are frequently produced on a farm where the stumps of trees, which probably occupy an eighth of the surface, have not been eradicated; some instances of sixty bushels per acre occur; and near York, in Upper Canada, one hundred bushels of wheat were obtained from a single acre! In some districts, wheat has been raised successively on the same ground for twenty years without manure.—*Martin's History of the British Colonies.*

**TO MAKE COFFEE AS THE FRENCH MAKE IT.**—Have a coffeepot with a lip; pour into it as many cups of boiling water as you wish to make cups of coffee; let the water boil, then put in as many tablespoonfuls of coffee as there are cups of water, stir it in, and let it simmer till the head falls. When the coffee is done, take it off the fire, pour in a cup of cold water, set the coffee on the hearth, and let it stand ten minutes, when it will be fine. For breakfast, put one cupful of this coffee to three or four cups of boiled milk, and sweeten to your taste, and you will find it a luxury, at a small expense, as great as wealth can procure.—*Household Almanack.*

## ANECDOTE OF A SHEPHERD'S DOG.

We often read of the sagacity of the shepherd's dog, but the scene of its manifestations is usually placed far away in the highlands of Scotland or Wales. Yet a person who notices the proceedings of the dogs employed to assist the drovers in conveying a flock to London, or through its streets, might collect a large number of curious facts in illustration of its character. A correspondent informs us that, a short time since, a flock of about 200 sheep was advancing towards town by one of the northern roads. As it passed through the village of Tottenham, about a dozen of the same species were seen approaching in the opposite direction; and the drivers of this small detachment became, as usual in such cases, anxious lest any of their diminutive number should desert to the stronger party; to prevent which they gathered their few sheep to one side of the road, and surrounded them, as it were, with a wall of men, until the larger flock should have passed. One of them, however, baffled all attempts to prevent his escape, and, forcing his way between the legs of the men who surrounded him, sprang into the midst of the other flock, in which he appeared, to the unpractised eye, completely lost. A vigorous pursuit immediately commenced, and the drivers, running to and fro, made every effort to recover the fugitive, until they were obliged, from mere exhaustion, to give over the endeavour. The head driver of the larger flock, who had looked on apparently enjoying the transaction, then gave the word to his dog, who dashed forward and brought the affair to a very speedy conclusion. He singled out the runaway without the least hesitation, and seizing him by the loose skin of the neck, bore him to the ground, and held him fast until the drivers came up and fully secured him. The larger flock now passed on, and a bystander expressing his pleasure at the sagacity of the dog, the driver put the animal into vigorous employment; and he was seen now urging on the main body,—now restraining stragglers,—now at his master's feet,—and now, again, circling the flock, and barking with all his might. After this display had continued for some time it was interrupted by an outcry from behind, and the stray sheep was seen renewing his attempt at an escape. In this he again succeeded, although his pursuers were now aided by a number of bystanders; and the poor animal, no doubt thinking the coast clear, came bounding onward in eager haste. As before, however, his triumph was but of short duration. The dog, having again waited for the signal, encountered him in his career, and masterng him as before, delivered him a second and last time to his rightful owners!

## NATIONALITIES.

"A Frenchman is more cheerful than an Englishman—that is, in company, for a Frenchman appears to be miserable when left alone. On this point the Englishman has certainly the advantage, as he is not dependent upon others for enjoyment. Nevertheless, the sociality of the Frenchman appears the more amiable: give him salad, soup, and chatter, and he wants nothing more to fill up the day. The Frenchman makes a parade of his feelings; the Englishman studies to conceal them. The one affects the enthusiast, and the other the stoic. A Frenchman does not forget that the world is looking on him even a *Particle de mort*. How many smart sayings were prepared for utterance at the last moment by those who fell by the guillotine during the reign of terror! The *perruquier*

who, a few weeks since, committed suicide, because, according to his own account, he had calculated all his chances, and found he could never be so great a man as Napoleon was perhaps quite sincere in his grief; but was it not genuine French vanity, the ostentation of feeling, that induced him to make this display? The grief alone did not cause the suicide, but the opportunity of making it known to the world in this very striking and theatrical style was so tempting!—"Another incident of a kindred complexion is still more recent.—A little girl kills herself in the regular charcoal way, because she feared her parents did not love her! But mark the desire for exhibition and effect even in a child. This little creature had taken the pains to learn to write, solely for the purpose of leaving behind her a letter explaining her motives! She might have done this orally to her parents, her relatives and acquaintance; but this was not sufficient, the world must know it, and a suicide would not be regularly sentimental without a letter. Here again we have the *coup de theatre*.—"It has been remarked that, in times of great political excitement, the French theatres are the most crowded, while the reverse is true in the case of the English. A Frenchman is everything in a crowd, he is nothing alone; only persuade him that *toute le monde* will do this or that, and he is ripe for it at once. Under this excitement there is no excess, good or bad, of which he is not capable. But '*saute qui peut*' is a sound that puts his self-possession to flight.—Look at a French crew in a shipwreck; what panic, insubordination, blind precipitancy, confusion and despair! How different from the cool presence of mind which an English sailor preserves in the same circumstances! It is here that the individual is everything.—How many a British ship has foundered at sea, and gone down with every man at his post!"

## SANATORY EFFECTS OF CULTIVATION.

Vegetation, when assisted by human contrivance, is the best possible means of improving the air, and rendering a country fitter for the abode of mankind. Cultivation removes the corrupt and decaying vegetables; and by turning them under the earth makes them nourish the ground instead of poison the air. Many of our colonies, at one time so deadly, are now healthy, not so much from the care of the new-comer in avoiding the remote cause of disease, as from the greater number of these causes being removed by cultivation. I mean here, by *cultivation*, that treatment of the land by which it will furnish the largest possible quantity of food for man, and the domestic animals he employs. Wherever we find the *cerealia* capable of growing, that country is, or by human labour may be made, healthy. Cultivation, likewise, always renders a country warmer, for a large quantity of vegetable matter is raised on a given space; and what is vegetable life but the conversion of certain gases, oxygen, hydrogen, azot, and carbonic acid into solid matter, and a change of form—an alteration from a rarer to a denser state—which must be accompanied by the extrication of heat. What is it that makes living vegetables so difficult of being frozen, compared to dead ones, but this constant formation and existence of caloric in them. As an example of the evolution of heat, by the process of vegetation, it may be mentioned, that on looking into a wood in spring, we will find the small plants more advanced in size and strength than those of the plains. In the woods of North America, small berries are found much sooner ripe than in the cleared lands.—*Kilgour's Therapeutics*.

## AGRICULTURE AND MANUFACTURES.

We invite the earnest attention of our readers to the following pages on the subject of Agriculture and Manufactures, with the tables giving the rate of duties imposed upon certain foreign articles when imported into this country,—extracted from “Dunn’s Remembrancer for 1835:” and in which Mr. Dunn ably exposes the fallacy advanced by the advocates of free trade,—*that the importation of Foreign Corn, duty free, would be highly advantageous to the British manufacturers.*

“Merchants and manufacturers seem to have been the original inventors of those restraints upon the importation of foreign goods, which secure to them the monopoly of the home market.

“Country gentlemen and farmers are, to their great honour, of all people the least subject to the wretched spirit of monopoly!!!

“*Merchants and manufacturers are the people who derive the greatest benefit from the monopoly of the home market!!* The prohibition of the importation of foreign cattle and salt provisions, together with the high duties upon foreign corn, which, in times of moderate plenty, amount to a prohibition, are not near so advantageous to the graziers and farmers of Great Britain as other regulations of the same kind are to its merchants and manufacturers! Manufactures, those of the finer kinds especially, are more easily transported from one country to another, than corn or cattle. In manufactures a very small advantage will enable foreigners to undersell our own workmen, even in the home markets.\*

“Landlords, farmers, and labourers, have seldom opposed the enhancement in the price of commodities caused by the monopolies established by merchants and manufacturers; they have neither fitness or inclination to enter into combinations; and the clamour and sophistry of merchants and manufacturers, easily persuade them that the private interest of a part, and of a subordinate part of society, is the general interest of the whole.

“*The expence of the landlord and farmer is in home-made commodities.*

“*The greatest and most important branch of the commerce of every nation, is that which is carried on between the inhabitants of the town and those of the country.*

“The interest of the landholder is strictly and inseparably connected with the general interest of society; whatever either promotes or affects the one necessarily promotes or affects the other.”—*Vide Adam Smith’s Wealth of Nations.*

\* Especially bearing in mind that foreign mechanics and artisans work for about one-third the wages English journeymen work for. For instance, at Marseilles the rate of wages for a good mechanic or labourer, is from 9s to 10s weekly, (and even that is considered in France high) and corn there, ranges from 38s to 42s per quarter, or 5s per bushel; the average price of corn in England is now (October) 43s 2d per quarter, or 5s 3d per bushel. Will the mechanics and workmen of Great Britain take Marseilles wages as well as corn at the Marseilles price, in exchange for British wages and food at British prices?

A Table of the Rates of Duty imposed upon the Importation of Foreign Goods and Manufactures, into Great Britain, in order to secure to its Merchants, Manufacturers, and Artisans, the Monopoly of the Home Market.—*Vide* 3 and 4 Will. IV., cap. 56.

### AVERAGE MONEY PRICE OF CORN AND WAGES.

"The average money price of corn, regulates more or less, that of all other commodities."

"The real value of every commodity is generally measured and determined by the proportion which its average money price bears to the average money price of corn."

"The money price of corn regulates that of all other home made commodities; it regulates the money price of labour!!!"

"The money price of labour, and of every thing that is the produce of either land or labour, must necessarily either rise or fall in proportion to the money price of corn."—Vide Adam Smith's *Wealth of Nations*.

Table of the Money Price of Wages and Labour in England, and on the Continent of Europe, showing that the average Price of Corn for an aggregate Number of Years, regulates in all parts the Money price of Wages.

## KINGDOM OF PRUSSIA.

Agricultural Labourers' wages, per week, 2s 6d ! !  
(or 5d a day.)

"This large description of the inhabitants of Prussia, live on the lowest and coarsest food—potatoes, rye, or buck wheat. Clothing—linen from flax of their own growth, and wool spun by their own hands, both coarse, and worn as long as they will hold together."

## POLAND.

Wages lower than in Prussia. "Food of the Agricultural Labourer—cabbage, potatoes, with (sometimes,) peas and black bread, and soup, or rather gruel, without the addition of butter or meat; chief drink, water. Clothing—coarse, ragged and filthy even to disgust."

"The highest price of wheaten flour of the first quality at Paris, is 29s 8d the sack of 280lbs weight, and 11½ sous the 4lb loaf; and the highest price in London is 46s the sack; therefore flour is 55 per cent. dearer in London than in Paris; and a man may buy 434lbs of flour in Paris, for 46s, whereas for the same money he can only buy 280 lbs in London.

"This is the state of things in other parts.—Caen, 39s 9d per quarter; Cognac, 32s 11d; Havre, 35s 8d; Cambray, 32s; Hamburgh, average price, 27s 5d per quarter; Stettin, 30s; Danzig, 34s."

Av. of England .... 43s 2d per quarter, October\*.  
Av. of France .... 33s 6d per quarter.

[Wages in England and France may now be considered high, and food cheap; but the standard of remuneration for labour, is neither guided by a period of depression, when wages are low and food high, or the reverse, but by the fair average of successive years].

It would appear by the annexed tables, which for accuracy of detail may be fully relied upon, that the highest price paid for wages at Marseilles, (where wages are considered high), is 9s or 10s weekly, consequently for one week's work in England, a man can earn double what he would be paid for a week's work in France, a difference which greatly outweighs to the mechanic and artisan, the nominal advantage of 434lb of flour being in Paris as cheap as 280lbs are in London, for the weighty reason that a man earns 20s in England, in the same period of time (for the same work) he could only earn 10s in France. This is the state of things in other parts of Europe. In Prussia and Poland, those happy kingdoms, whose happy natives enjoy to the fullest extent the blessings of "cheap corn," and "cheap food," and also cheap wages, in either of the two kingdoms above named, the weekly earnings of an agricultural labourer, do not exceed 2s 6d weekly; consequently, one English labourer earns as much in one week as four Prussian or Polish; and an English journeyman tailor, shoemaker, or cotton spinner, would think himself very greatly underpaid, unless he could earn nearly four times the wages workmen of a similar description can obtain in the flourishing commercial city of Danzig; a circumstance well worth the serious attention of mechanics, artisans and workmen, seeing that a free import of foreign manufactures and goods must either precede or take effect simultaneously with the free importation of foreign corn, (to make the thing

\* On an average of 6 weeks ending 16th of October, 1834—the weekly average for England is now 41s 10d quarter per Imperial.

fair between agriculturalists and manufacturers.) The notion of a free import of the one without the other, is a shallow delusion foisted upon the public by mercenary men, whose pretended sympathy and professions of great anxiety for "cheap food" and "cheap corn" for the poor, is "not that they care for the poor, but because they have the bag, and bear that which is put therein."—Merchants and manufacturers well know, that a general fall in wages will follow the importation of foreign corn, which will enable them to narrow competition abroad, and extend the market for their goods, *thereby increasing their own gains*: from which cause arises their interested and noisy demands for cheap corn and cheap food, that their own immediate interests may be advanced, and not the interests of the country at large. We take the privilege of questioning the soundness and equity of the pretensions put forward by the loudest clamourers for a repeal of the Corn Laws, and deny that a general demand or wish exists for this dangerous innovation under the present circumstances of the country. The extension of foreign commerce will be, beyond all doubt, a benefit to a certain extent—but a benefit not to be purchased at such a costly sacrifice as the destruction of the most important interest in the country; or by filling the nation with misery and discontent, from a general and sweeping alteration in the rate of wages, from an altered standard in the value of corn. If, say the manufacturers &c., we have food cheaper, we can then compete better with foreigners. Aye, so they can, but by what means? *but by lowering wages!!* How can cheap food make manufactures cheaper, if wages remain the same! Let the honest truth be avowed by the manufacturers, and then the workman will be able more clearly to distinguish the benefit of a 4lb. loaf for 4d.—a free trade in corn—and Continental wages!! To conceal the main part of the affair from him, (namely, that his wages will sink in a greater proportion than his food), is an artifice, at once dangerous and treacherous,—an artifice by which the workmen of the United Kingdom are made dupes of for the intended benefit of manufacturers, capitalists, and fundholders, who wish to increase their profits and incomes, and who well know, that in the event of a free trade in corn, 300*l*. a year will then be equivalent to 450*l*. by reason of *both food and labour* being cheaper; and who are also perfectly well aware that wages, and the remuneration for labour, must sink in proportion to the altered value in the price of corn, by which means a great benefit will arise to their own interests.

Two all powerful cases will co-operate effectually to produce this result.—First, Because the manufacturing interest can then no longer claim, or except a tittle of right to the monopoly of the home market, but will be compelled by their own suicidal act, to compete with foreign industry at home, and will also enjoy the merit of forcing their journeymen into a struggle with foreign workmen—who work for half, or even a third part of the present rate of British wages; and hence would rise a constant struggle and contention between masters and men, each striving to shift the load of loss on the other's shoulders. Will the master manufacturers find the task of effecting the alteration in wages, attendant on the repeal of the Corn Laws, to enable them to meet the competition of foreigners, practicable, or easy? This is one great cause which would arise from the repeal of the Corn Laws, as affecting the interests of masters and men connected with the manufactur-

ing interest, tending to lower prices of goods, *and also wages of workmen*, to a level with wages and prices on the Continent of Europe.

And to come nearer home, the contemplated diminution in the cost of produce, corn, meat, butter, cheese, &c., &c., arising from the ports being opened for the importation of foreign produce, &c., it is estimated will amount to a reduction of one-third of the present total cost, consequently, —the landlord, farmer, and agricultural labourer, between whom this reduction will have to be divided, (for there still, under any circumstances, will be owners of land, tenants, and labourers, and as it will appear, the entire rental of the land does not amount to, and is not equivalent in value to, one-third of its annual produce), instead of therefore (the landlords, farmers, and labourers) having 15,000*l*., 1,500*l*., or 150*l*., to expend in the purchase of manufactured articles of luxury, use or necessity, in the next town or city, they will only have 10,000*l*., 1,000*l*., or 100*l*., so to expend; therefore it follows, that all over Great Britain, the manufacturers, traders and mechanics, can only obtain from all connected with the landed interest,—from all purchasers of their commodities, deriving their incomes from land, in the best market in the world, (the home market,) 10*l*. instead of 55*l*.;—10*l*s instead of 15*l*s,—and 10*d* in lieu of 1*l* 3*d*. And hear! oh! traders of Great Britain! the great and mighty benefit of saving two-pence per diem in a quarter loaf, is to be purchased at the sacrifice of one-third of your present annual returns now received from all connected with the agricultural interest!!

For the landlords, &c. in Great Britain receiving 80 millions yearly in lieu of 120 millions, can only have 80 millions to lay out; consequently the 40 millions\* worth of goods now sold to this great

\* Summary of the annual value of all real property as assessed April 1815.

|                                                                      |             |
|----------------------------------------------------------------------|-------------|
| England .....                                                        | £49,744,622 |
| Wales .....                                                          | 2,153,801   |
| Scotland .....                                                       | 6,652,635   |
|                                                                      | £58,551,078 |
| House rental of England and Wales }<br>alone, ending 5th April 1830. | 11,154,109  |
|                                                                      | £47,396,969 |

The estimate above stated of the value of freehold property, including in that estimate the annual value of 136,000 farm houses, it will be observed was taken in 1815, since which period a great reduction has taken place in the annual value of such property, *consequently the entire annual rental of all the land*, (for we apprehend that it will even be found that other property besides land or houses is included in this estimate), in England, Wales, and Scotland, can now barely exceed, *if it even amounts to, the reduction in value, which it is held out will fall on the landlords only, and not on the farmers and labourers.* 120 millions, say these vague reasoners and visionary theorists, is the estimated value of all the produce of the land in Great Britain, and our nostrum of a free trade in corn (the landlords' property, as it is termed), will reduce this full one-third, that is to 80 millions, and yet they add, only the landlords will suffer in receiving a reduced rent!! How can this be, when all the rent together of every landholder in Great Britain will not even amount to the sum of 40 millions, therefore upon whose shoulders will the burthen fall?

body, (the landed interest,) in the home market, must seek another vent if it can be found; and the reduced cost in the price of provisions, (estimated at 40 millions yearly,) it will be observed, is not a benefit to that amount to the people of England by a reduction in the cost of their food, (seeing that wages will fall also in a greater proportion,) but given as a sort of bonus or premium at the expense of the English landlord, farmer, and labourer, to the like classes of other countries, as a bait to induce them to become larger purchasers of some branches of our manufacturing industry. What can be more clear than that the landlord, farmer, and labourer, receiving only 10*l*. instead of 15*l*., can only have 10*l* to spend instead of 15*l*., and this will reduce the manufacturers, traders, and their workmen, to the alternative of either selling in the home market the same quantity of goods which they now dispose of to the agriculturists for 15*l*., for 10*l*., only—or of selling, at the present price, (if they can get it, with foreigners hard upon their heels, and no 20, 40 and 50 per cent. monopoly duties to protect them) 10*l*. worth of goods only in lieu of every 15*l*. worth they now sell !!! And this will also tend to cause a reduction to masters in the value of their goods, and to men in wages. The equivalent held out for this certain loss and destruction is,—that free trade and reciprocity will increase foreign trade, and turn England into a workshop for the world !!! It may be desirable, and very beneficial, to drive the population in shoals from the healthy occupation of cultivating the soil, into the corrupting atmosphere of a factory; but the public may not all be enlightened enough to view it in that light—and we would ask, if it is in the factory or workshop we are in future to look for frames and mines capable of asserting in arms the proud pre-eminence of British valour? The French interpretation of reciprocity,\* it appears by the official returns of the state of commerce between England and France, means, a benefit to their own interest. Prussia and Denmark seem to be of the same opinion, though no doubt these nations look forward with great anxiety to that period when they may be allowed to raise their own rents, and benefit their own landlords, farmers and labourers, at the expense of England—expatiating and extolling loudly, the great benefits of reciprocity and free trade, meaning at the same time, how great would be the advantage and how certain the benefit to needy foreigners, in being enabled to get rid of produce, raised by a wretched race of half-starved vassals and serfs, in the market of the richest nation on earth.

We here find France purchasing the trifling quantity of 892,009*l*. 13*s* worth of British and Colonial produce from England, and England purchasing from France upwards of three millions worth of French produce and manufactures !!!

France, Prussia, Russia and Denmark, are the countries most anxious to benefit themselves at the expense of Great Britain, by swamping the agricultural interests of the United Kingdom with their surplus provisions—a surplus, it would appear, by the state of the working population of Poland and Prussia, obtained by keeping their own peasantry in a state of destitution, bordering on starvation.\*

Injure or destroy that great interest, (the landed,) interwoven as it is by a thousand ramifications, with the frame and very existence of society, and what will the increased foreign trade of London, Liverpool, and Manchester, &c. be in the scale by comparison? The impetus given to foreign trade by repealing the Corn Laws, might cause a transient and fitful gleaming of apparent prosperity to arise amidst the gloom and darkness in some branches of our manufactures, not exposed to destruction from foreign competition; but the coming of that period of partial good and certain evil, would be for Great Britain the advent of an era, not of joy and gladness, but of sorrow, disappointment and gloom—of blighted hopes, and blasted expectations.

“Manufacturers,” (exclaims that profound political economist, Dr. Adam Smith,) “may flourish amidst the ruin of their country, and begin to decay upon the return of its prosperity,”—and the false appearance of prosperity, purchased at such a sacrifice, which might then partially arise, could not display the country’s well doing, or bespeak a sound and healthy state; for what short of ruin, can arise from forcing the agricultural and manufacturing population of this kingdom into an useless and hopeless struggle with the mendicancy of a continent—a struggle in which they would to a certainty, be oppressed and overpowered, (not by the superiority of foreign skill and industry,) but inundated and overwhelmed by incessant irruptions of the beggary and poverty of the serfs and barbarians of Northern Europe.

Touching the prices of food and wages relatively, we find the average price of corn in Danzig, is 34*s* per quarter—the average price in England, 48*s*. The wages of a mechanic or artisan at Danzig, being 6*s* 9*d* weekly, and corn being there 4*s* 3*d*, per bushel, it follows, one week’s wages of a shoemaker, tailor, or any other workman, will purchase in Danzig, about 1½ bushel of corn; whereas, in England, the wages of a journeyman tailor, shoemaker. or artisan, may be fairly taken at 24*s* weekly, and the average price of corn at this time, being 48*s* per quarter, or 6*s* per bushel, that it appears one week’s wages of an English mechanic will buy 4 bushels of corn in England, whereas the Prussian journeyman’s weekly wages will only purchase 1½ bushel in his own country, which leaves no room for doubting, that an English journeyman working for English wages, and eating British corn at British prices, is better off than Russian, French, or Poles, with their cheap corn, and what follows as matter of course, cheap wages !!!

We maintain it is the bounden duty of those who inveigh in language so unmeasured, and in terms so indignant, against the monopoly of the agriculturalists, to state the truth,—the whole truth,—and nothing but the truth. Let the fundholders and capitalists, who look forward to the repeal of the Corn Laws, as a means whereby their 10,000*l* will be transformed into, or render equivalent to 15,000*l*., and their 3 per cent. consols, into 4½ per cents. who calculate upon 10*l*., buying as much corn and produce as 15*l* now will; and those

manufacturers, who anticipate in the reduction of the workmen's wages, arising from the fall in produce, and competition of foreign workmen and labourers in the home market an increase of their own profits—a widening of the foreign market—and a narrowing of competition abroad; and whose sentiments upon affairs of state are guided not by the balance of the general good, but the balance of profit and loss, to their own immediate interest. Let these innovators inform those whose understandings they obscure with their sophistry, that the repeal of the Corn Laws is a measure which would not only cut asunder the profits of the landlord and farmer, burthened as they are with tithes, land tax, poor rates, county rates, and highway rates, and reduce the agricultural labourer to a level with the miserable serfs and vassals of Prussia and Poland; (and by such means make bread cheaper)—but that it would likewise at the same time cleave in twain the wages of every operative in the United Kingdom,—and that the blessing of a 4lb. loaf for a groat, would be purchased at the cost of half their weekly wages. But no, these philosophers can only repeat one tale, “the monopoly of the landlords, and the bread tax.” What hear the public about the monopoly of manufacturers, and their tax upon the agriculturists? a monopoly which gives the manufacturers, with their unions and combinations to boot, the advantages of a monopoly for their goods, in the wealthiest and best market in the civilized world—the home market of Great Britain. If manufacturers and merchants are so averse to monopolies, why not begin at home, and endeavour to remove the monopolies which they have taken care to obtain against the public in their own favour—to suit their own interests—and increase, by enormous protecting duties, their own profits. To hear these people talk, we might almost be led to imagine that they suffered at the same time the two evils of foreign competition for want of protecting duties, and the agriculturalists’ monopoly in corn, &c. It is but just that when the working classes of this kingdom are called upon to aid in sinking their fathers or brothers, relations or friends, (the agricultural peasantry), into a similar state of mendicant poverty with the labourers of the continent, (labourers who eat black bread and drink water; who are clothed with rags and covered with filth, and work for 2s 6d a week,) and to render themselves liable to be employed or stand idle—to be famished or fed at the nod of a foreign despot; that they should at the same time clearly ascertain what is the vast boon they are to receive,—in what manner manufactures are to be sold cheaper, when the Corn Laws are repealed, unless by a reduction of their wages; and likewise what is the benefit the country is to derive from this great sacrifice, a sacrifice computed to amount to forty millions yearly, withdrawn from the circulation of the home market, (being one-third of the supposed produce of the land in Great Britain, or rather more, as the official returns will prove, than the rental of all the land in Great Britain put together.) We will inform the working classes what the great benefit will be to them—a reduction in the value of provisions to a level with France, or perhaps Prussia and Poland, and also a reduction in the amount of their wages with those of France, or perhaps Prussia and Poland. These will be the inevitable results to their own body; to which may be added, that the home market for their manufactures generally, must at the same time be thrown open to competition with foreign workmen, who

work for wages varying between 5s and 10s weekly. Can a Sheffield cutler and saw grinder, for instance, say to a ploughman, I will not eat that which is procured from ground you plough, or sow, or reap, unless you sell it to me for the price I could obtain it for in France, or Prussia, without at the same time granting to the ploughman the privilege of obtaining his razors or pruning knife, his sickle, scythe, or plough share, from Strassburgh, where men work 15 hours a day for 7s 6d a week, or in any market where all he required could be bought cheaper, than made by the hands of the British mechanic. On what ground could any manufacturer then claim a protecting duty against foreign competition? The protecting duty on corn (a duty by the way, which gives way to any pressure which may arise,) is a reciprocal benefit, amply counterbalanced by the monopoly given to every manufacturer and journeyman in the kingdom, in preference to the manufacturing industry of other nations: for the British mechanic not only eats food at English prices, but *works also for English pay.*

In some manufactures, which by the power of machinery, and the facility of obtaining coal, stand unrivalled without fear of competition, the advantage of a repeal of the Corn Laws, we admit, would be clear and without deduction. But the question is not if one or more particular branches of our manufacturing interest will be increased—but, manufactures generally? Whether the reduction in the wages of workmen, and the total alteration in the value of all commodities, with the consequent disturbance of every existing contract arising from such a step,—whether the balance of good or evil emanating from such a measure will be for the weal or woe of England in the change? Merchants and manufacturers are deeply interested in the task of opening the eyes of the operatives against the dangerous delusions of those who hold out a reduction in the price of food, and increased foreign trade, as the sole results which would arise from a repeal of the Corn Laws, without also impressing upon their attention, the certain event of a reduction in wages likewise following as the inevitable consequences. This is the rock against which the well meaning and good intended philanthropists, uninfluenced by any motive but a sincere wish of benefiting the condition of the industrious classes split; the fallacy of keeping up wages at the British standard, with food imported at the Continental standard—it is a dangerous fallacy, which cannot be too strenuously guarded against, and a pit into which the manufacturers themselves would be the first to fall headlong. The free importation of foreign corn will truly reduce the price of food and cost of subsistence, and *it will likewise reduce in a much greater proportion (from foreign competition), the means by which most people obtain their subsistence,* and lower the scale of remuneration for labour of every description in Great Britain, (which by comparison with other parts may be called liberal), to a level with the moderate remuneration given in France, or what is more likely still, to the scanty remuneration given in Prussia, Poland, Germany and Russia. This is a plain truth to which the eyes of all classes cannot be too widely open—theoretically, nothing appears more just, fair and reasonable, than that people should obtain their means of living from that market where it can be obtained cheapest and best, and exchange the workmanship of their hands and fruits of their industry in that market wherever it can be found—practically, in the existing state of

the country, this would be found a great delusion; for it cannot be too often repeated, or too well known, that with cheap food (so obtained), follows *cheap wages*, and the loss to the manufacturing, trading and working classes, of 40 millions annually expended by the agricultural interest in the purchase of the luxuries and necessities of life in the home market, and also the competition of foreign workmen; who would then, by the necessary withdrawal of the present restrictions on the importation of their goods into Great Britain, be easily enabled to undersell and ruin numerous branches of our manufacturing industry, and steep the operatives engaged in them in misery and distress. The inducement and advantages held out in lieu for this mighty change is, "an addition to the foreign trade of the country," and consequently an anticipated increase in some branches of our manufactures; the means by which this change has been endeavoured to be brought about would appear to consist of very unfair attempts to make the industrious classes of the country dissatisfied, by holding up to their view the difference in the price of food in England, as compared with France, Poland, Prussia and Germany, without at the same time stating the remuneration given for labour, and the average rate of wages in those countries, by which alone people would be enabled to form a correct estimate of the advantages of "cheap food and cheap corn;" which would appear in fact to be an advantage (looking at the state of wages in France, Poland and Prussia, as a criterion), solely nominal,—the injury which must inevitably arise from such a measure, by altering the existing distribution of property alone, would seriously affect the industry and welfare of considerable masses of the population. The shock might indeed first fall on the proprietors, occupants, and cultivators of land, but would speedily be felt by all other classes with electric force and quickness.

The following will be submitted to the next meeting of the Market Harborough Agricultural Society:

"At the Annual meeting of the Leicestershire Agricultural Society, held at Market Harborough.

"It having been reported to the meeting that the Corporation of London had resolved to apply early in the ensuing Parliament for powers to enlarge and improve Smithfield Market, according to a plan now produced and which outlay is calculated, with the various improvements, to amount to about £90,000., and to apply for additional tolls to repay £50,000 of the said £90,000, by charging on all cattle an extra toll not exceeding *twopence* each, and on all sheep an extra toll not exceeding *fourpence* per score until the £50,000. is repaid, which is calculated to take about 38 years, and then the additional toll to cease, and the present toll of 1d for bullocks and 2d per score for sheep to be the only toll. By this arrangement the Corporation asks for tolls for £50,000., and the remaining £40,000 will be paid from their own funds.

"Resolved,—That the establishment of two London live cattle markets would be highly injurious to the Agricultural and Grazing interests.—That no other site for a cattle market can be found so well adapted and possessing so many advantages as Smithfield.

"That the enlargement proposed by the Corporation (about one acre) will give every accommodation required, and that the additional tolls are equitable and reasonable. That this meeting is of opinion that the establishment of any second cattle market should be strenuously opposed.

"Signature—Place of Abode—No. of acres."

## HIGHLAND AND AGRICULTURAL SOCIETY OF SCOTLAND.

The anniversary general meeting of this Society was held in their Hall on Tuesday, 13th January, for the dispatch of business. The all-engrossing subject of the Parliamentary elections, and its being the first polling day for the City, and the day of nomination for the County of Edinburgh, unavoidably occasioned the absence of many; but there was, notwithstanding, a full attendance of members, including his Grace the Duke of Buccleugh and Queensberry, the President, the Earl of Morton, the Earl of Strathmore, the Earl of Roseberry, Lord Greenock, the Right Hon. Sir John Sinclair, and above one hundred gentlemen of property and influence connected with all parts of Scotland.

The Noble President having taken the Chair, the usual preliminary proceedings for the election of members were proceeded with, when her Grace Harriet, Duchess of Buccleugh and Queensberry, having been duly proposed, was, by unanimous acclamation, elected a member of the Society; and a ballot having been afterwards taken, in terms of the charter, about fifty gentlemen were duly elected; among whom were, Lord Ramsay, Sir Alexander Bannerman, of Elsick, Bart.; Sir John Drummond Erskine, of Torry, Bart.; Colonel Thomas Hunter Blair, of Dunskey, &c.

Previous to the election of officers, the Secretary explained that his Grace the Duke of Buccleugh had now filled the chair for the period limited by the constitution of the Society. The admirable manner in which he had discharged its duties was known not only to the members but to the country at large; and the Board of Directors, with whom rests the responsibility of the ordinary business in Edinburgh, had felt it a duty to record their feelings by a resolution communicated to the Noble Duke, and unanimously adopted by the General Meeting.

The Noble Duke expressed, as he evidently felt, strongly the estimation in which he held the opinion of the Society, and, in taking leave for the present of the chair, made a very appropriate address, replete with the best sentiments, and expressive of his resolution, at all times, to promote the objects and interests of the Society by every means in his power. The Duke of Buccleugh concluded by proposing, in very handsome terms, his Grace the Duke of Gordon as President of the Society.

The Earl of ROSEBERRY said he had great satisfaction in seconding the nomination.

The Duke of Gordon was accordingly unanimously elected President, and other Noblemen and Gentlemen unanimously chosen Vice-Presidents, Directors, and Officers for the current year.

The Treasurer submitted a view of the Society's funds.

The SECRETARY submitted for the consideration of the meeting a concise abstract of the proceedings of the Directors since the General Meeting in July. He then proceeded to state, that since the meetings of the Directors were resumed, after the usual recess, they have decided upon the various claims lodged in competition for the premiums offered by the Society last year: with reference to which, it is sufficient to observe, that the emulation among all classes of competitors has been most satisfactory. Altogether, six hundred and fifty claimants, or (deducting those who competed in more than one class,) about six hundred individuals, entered the lists as competitors for

the Society's premiums within the year: and if any thing is more gratifying than another, it is the circumstance that on no previous occasion had such emulation been evinced by the industrious cottagers to obtain the reward offered by the Society, for neatly kept cottages, and the little gardens attached to them.

MR. MACMICKEN TORRANCE, of Kilsaintninian, Convener of the Committee named to decide on the Essays and Reports lodged with the Society last year, stated the proceedings of that Committee. The premium of 25*l.* for an account of the Quarries of Scotland, particularly limestone (including marble,) and slate, was awarded to Mr. James Carmichael, Strontian; and the silver medal to Mr. John Wallace, Mansfield House, Ayrshire; and Mr. Gordon Maxwell, Dalbeattie, Dumfriesshire, for Reports on individual slate quarries. In competition for the premium on the causes of the recent failures of the Potato Crop, there were above twenty communications. The premium was awarded to Messrs George and James Macdonald, Huntly, Aberdeenshire; and the silver medal to Messrs. Malher and Winder of Liverpool, for the paper next in merit. Several of the other papers contained interesting facts, and thanks were voted to their authors, with a request that they will allow the information afforded by them to be given to the public, through the medium of the Society's transactions. Mr. Campbell, of Islay, transmitted a report of a very extensive and successful improvement on his estate, by allotments to industrious tenants, on a liberal footing, and the thanks of the Society were voted for it as a communication, although not sent in the form to compete for a premium. In competition for the gold medal for the best report of a system of improvement carried on by a proprietor on his estate, by settling crofters on waste land, three reports were received. The premium was awarded to Mr. Thomson, of Banchory, Kincardineshire, and an extra gold medal to Provost Blaikie, of Aberdeen, for a valuable report of an extensive improvement of that description on the estate of Mr. Menzies, of Pitfodels. The Society's gold medal was voted to Mr. Dempster, of Skibo, for a report, in terms of the conditions, of his having planted on his estate above 1,100 acres within the last five years, and Mr. Mackenzie, of Kilcoy, likewise obtains the gold medal for a report of plantations made on his estate of the required extent. The meeting ordered all the valuable papers they had received to be published in the Quarterly Journal of Agriculture and Transactions of the Society.

LORD GREENOCK, after some complimentary observations on the manner in which the late Agricultural Meeting at Aberdeen was conducted, brought up from the Directors a series of resolutions, which were unanimously adopted, thanking his Grace the Duke of Buccleugh and Queensberry, President; his Grace the Duke of Gordon, and the Most Noble the Marquis of Tweeddale, Vice-Presidents of the Society, for their attendance at the late General Show of Live Stock at Aberdeen, and for the energy and zeal displayed by them in forwarding the objects of the Society on that occasion. Likewise the Hon. Fox Maule, and the other Members of the Deputation of Directors who attended at Aberdeen, for their zealous exertions in regulating and superintending the details of the meeting.

MR. ROBINSON, Secretary of the Royal Society of Edinburgh, reported from the Committee on the Geological Map, that the measures which had been taken by the Directors for the gradual acquisition

of information regarding the mineralogical resources of Scotland, having been fully stated in former reports, little remained to be communicated on this occasion. Several valuable essays and papers had been received in consequence of the premiums offered by the Society, and there is good reason to indulge the hope that a spirit of investigation had been raised, which may lead to advantageous results.

It cannot but be highly gratifying to the Society to learn that the efforts which they are making to advance mineralogical and geological enquiry in Scotland are duly appreciated in a quarter well competent to judge of their value. The geological section of the British Association for the Advancement of Science, after listening to the Society's views, so ably developed by Lord Greenock, and being made acquainted with some of the results which had begun to be obtained, came to the following resolution, which has been officially communicated by the Secretary of the Association:—"On the motion of R. J. Murchison, Esq., seconded by Professor Sedgwick, it was resolved—That the thanks of the British Association for the Advancement of Science be given to the Highland and Agricultural Society of Scotland, for their liberal and zealous endeavours to promote enquiries into the geology of Scotland."

MR. FERGUSON, of Kilkerran, reported from the Directors that all the arrangements for the general show of live stock and agricultural meeting, which takes place at Ayr next autumn, were in favourable progress. The Society approved of all the arrangements, and named Colonel the Hon. F. Macadam Cathcart, of Craigengillan, in whose absence T. F. Keunedy, Esq., of Dunure, to be Convener of the Committee of Superintendence, and Mr. Ferguson to be Chairman of the Deputation of Directors appointed to attend the Ayr Meeting.

Professor Low, of the University of Edinburgh, reported the proceedings of the Committee on the general shows of live stock. A subject submitted to the Committee had been, how far it might be expedient for the Society to intermit for a time these annual shows, with the design of availing themselves of the interval to perfect the system, by collecting farther information, and by founding upon the experience already acquired. The first step taken by the Committee was to ascertain the feelings and wishes of agriculturists with respect to this course. The Professor stated that the wishes of agriculturists were universally expressed in favour of a continuance of the shows; and nothing, therefore, remained to the Society but the grateful duty of responding to this call, and to the Directors that of employing every means in their power to render the shows efficient and worthy the continued favour of the country. With respect to the latter of these subjects, he observed, that a strong recommendation of the Committee was, that these shows should no longer be limited to the live stock of Scotland, but be thrown open to that of all the kingdom. We had received our most useful lessons, and derived our finest stock from England. We were now ready to show our Southern countrymen that we had profited by the lessons they had given us, and were willing and able to enter with them into the field of fair competition. One subject, he observed, had occupied the consideration of the Committee, which was, that in the offer of premiums, the attention of agriculturists should be directed, in an especial manner, to the property in a breed, of a disposition to feed at an early age. To this end it had been proposed that no ox, in

the competition for symmetry, fat, and weight, should exceed the age of three years off—that is, that it should be under four at the time of the Society's shows in autumn. The opinion, however, expressed by many intelligent agriculturists communicated with had been, that however important the principle was, it would be difficult, in certain parts of Scotland where artificial food could not be procured in sufficient quantity, to bring animals forward in the common course of farm management until the age of four off. The Committee had no wish to push a principle to the extreme, and every good purpose would be served by having pointed out to the breeders of the country the principle which the Society was desirous to inculcate.

Mr. LOCKHART, of Tarbrax, reported that the preliminary arrangements for the general show of live stock at Perth, in 1836, were in great forwardness. It will be the second meeting the Society has held there, and it promises to excite, if possible, greater interest and emulation than the first. From its situation Perth is admirably adapted for such a meeting, and the splendid depot affords facilities for placing and classing the stock beyond any other enclosure in the country.

Mr. HUNT, of Pittencreeff, reported that the Veterinary School continues to increase in celebrity. During the present session, seventy-one students attend Mr. Dick's Lectures, including several from England. The Society, Mr. Hunt observed, cannot too highly prize Mr. Dick's services, and the numerous and regularly increasing attendance at the school shows that they are appreciated by the country.

Mr. LAMONT, of Knockdow, called the attention of the meeting to a Systematic Treatise on the Theory and Practise of Draining, just published and dedicated to the Society, by Mr. John Johnstone, whose professional talents have long been favourably known. This work, which gives the result of the writer's extensive experience, Mr. Lamont observed, must be exceedingly useful to every landlord and tenant.

Many other subjects of importance occupied the attention of the Society before their sitting was concluded.

On the motion of Sir JOHN FORBES, the Treasurer, the meeting, as the last part of the business, placed a liberal sum at the disposal of the Directors, to be by them applied in promoting the interests of the institution.

On the motion of the Earl of MORTON, seconded by the Earl of STRATHMORE, the thanks of the Society were given to the Duke of Buccleugh, who so ably presided; and his Grace, having returned his acknowledgments, the meeting adjourned.

WINCHAM.—CURIOUS FACT.—There is now living, and in the possession of Mr. Thomas Plant, a highly respectable farmer, of this place, a mare twenty-seven years old, which, although it has been regularly worked during its life, has neither been so unwell as to require blood-letting, or the administration of any kind of physic. The same gentleman has likewise in his possession a cart which was made at the time the above mare was broken in, and which cart, although regularly worked during that period, has never required the slightest repair, not even so trivial a one as that of a single nail. This cart is still in use. What will some of our careful farmers say to this?

#### FROM A CORRESPONDENT OF THE BRIGHTON GAZETTE.

Broom House, near Berwick-on-Tweed,  
Dec. 4, 1834.

Berwickshire, Roxburghshire, and the Lothians have long been greatly distinguished for the advanced state of their agriculture, called mixed-husbandry, or live stock and tillage united; and the result is permanent fertility from the large quantity of manure supplied by the cattle in the courtains or fold-yards, which are well managed, the result of education, practical skill, and sufficiency of capital, and not from facilities of climate, in which the southern counties have a decided advantage. It is also much to be attributed to the patriotic, liberal, and active patronage of the proprietors at large, particularly of the Dukes of Northumberland, Roxburgh, and Buccleuch, Lord Grey, and the establishment of Agricultural Societies. The farms, on an average, consist of 500 acres, and some much larger, let on leases of 15, 20, and 30 years; and many young gentlemen from various parts of England are received for instruction, which cannot be sufficiently learnt from books, though Mr. Robert Brown's "Treatise on Agriculture and Rural Affairs" can be recommended, a farmer of Markle, county of Haddington, in regard to the conditions of farm servants; they are called double and single. Unmarried servants are generally paid 15l or 20l per annum, and are lodged and boarded in the farmer's dwelling. Married are supplied with a cottage and vegetable garden each, belonging to the farm, receive 4l. called sheep money, or in lieu of keeping sheep, as formerly, nine bolls of oats (a boll is six bushels), three ditto of barley, and one or two ditto of peas or wheat, or part of each—in all 13 or 14s bolls. The amount of corn is called by them the boll, though consisting of many. He brings a cow of his own with him, for which he is allowed grass during summer, and turnips or hay and straw in winter. He has also as much prepared and manured land as required for planting a boll of potatoes, and all coals he wants brought by the farmer, but bought by himself. He on his part is charged with the care of a pair of horses, ploughs with them, and works were ordered at anything, or in any manner. He has also to keep for the use of the farmer a daughter or hired servant, full grown, to be at his employer's call to work on the farm, on being paid from 8d to 1s per day.

Offered to your consideration by the recommendation of an experienced Magistrate and County-Member:—

Query.—Which at this time have the ascendancy in England—Landlords or Tenants?

If landlords, why do they allow arrears of rent, and their land to be racked out to such a degree that a Norfolk steward warned his employers, before they accepted their rents, to ascertain whether they were the produce or price of the land, as becomes apparent when sold.

But if an example is attempted to be made by an action, what probability is there that a jury would award damages, when many of the pannel might be liable to similar prosecutions, and therefore disposed to check inquiry by blaming the tyranny of the landlord, who should require the due performance of covenants from his poor tenants, when even an influential landlord excused the increase of parochial burthens, from tenants being too poor to maintain the surplus labourers: till this same honest steward (himself a tenant thriving by diligence) showed there would be no

labourers out of employ, if tenants did not hire more land than they had capital to use, with profit to themselves and justice to their landlords. Just as speculators in other lines bring ruin on themselves and all connected with them, who incur blame, not pity, unless it can be shown they have been misled.

And have not our English tenantry been misled in the power given them under the denomination of occupiers, to levy on all other classes eight millions a year, with indefinite increase? And as they generally fill the office of Overseers, do appropriate to keeping, in wet days, the men and their families (whom they pay themselves only when they have their services); without a choice, either on the part of the men themselves, or those who really support them. To which tenants acknowledged, though they pay the rates, they do not contribute.

As the probable amount of rates, whether specified or not at hiring, is invariably deducted from what would otherwise be paid as rent; and is so paid as rent in Scotland, where no tenant has any control in the management of the funds for the poor, unless appointed proxy for a proprietor; together with tradesmen and little resident proprietors, who are interested their own rates should not increase.

But although tenants say, whilst they have votes they must use them as others do, they are so sensible that the command of the rates is not a real advantage to them, whilst it is the ruin of all other classes, that on the 25th of April they numerously signed the annexed petition; which, if granted, and the rates are assessed on proprietors only, it will be for them to consider whether it is most desirable to pay thousands a year to maintain men as at present, unproductively, or let, at its full value, to each pauper as many roods as would maintain them at spade husbandry; which rents the Labourers' Friend Society testify are punctually and thankfully paid.

When greater tenants, finding their land useless without labourers, would invite them back into their yearly service, to the great increase of the produce of the soil, augmentation of rents, and satisfaction of the labouring class.

Monopoly of land in England, by checking competition, enhanced prices, till high prices stimulated Irish industry to furnish so much corn and cattle, that the cry now is—"Give poor laws to Ireland." Where if one-third of the labouring class was supported as in the south of England, unproductively, Ireland would indeed have little to export. But till Europe, Asia, and America agree to do the same, we might ruin Ireland,—but should we benefit England?

April 25th, 1834.

To the Right Honorable the Lords Spiritual and Temporal in Parliament assembled.

We, the undersigned, liable to the payment of Poor Rates, earnestly petition your Honorable House, that all owners of property be rated to the maintenance of the poor instead of the occupiers, and that the owners be empowered to appoint proxies, as in Scotland.

Rated at  
Eastbourne.

EXTRACT OF A LETTER TO LORD VISCOUNT ALTHORP.

My Lord,—Since your Lordship, in your intro-

ductory speech on the Poor Law Bill, in the handsomest manner invites communication on the subject, I venture to state that in this parish, where the rates have been for many years 16s in the pound of two-thirds rental, last year, by the adoption of a labour rate they were reduced to 9s 6d; but a more permanent relief, in my humble opinion, would be letting labourers hire land at a fair rent near their cottages, by which owners would be no losers, as such rents are punctually paid, and the Poor Rates reduced.

The enormous abuses of the Poor Laws have arisen from the legislative error of intrusting *tenants* with the management of the rates, instead of committing them to the owners, who are interested in preventing mal-appropriation.

In Scotland, your Lordship probably knows, the heritors (landowners) or their proxies, are the sole managers of the funds of the poor, and hence, whilst in England the Poor Rates are an intolerable burden, in SCOTLAND THEY ARE HARDLY PERCEPTIBLE.

In a parish in the Highlands of Scotland, which is a fair specimen of the whole (with which I am well acquainted) consisting of about two thousand inhabitants, the whole rates raised amount to no more than 50l per annum, a great proportion of which is raised at the church doors.

I have for many years felt a deep interest in the welfare of the labouring class, and used my individual exertions for bettering their condition, which I hope will plead my excuse for now addressing your Lordship, and, with the sincerest respect, I remain,

Your very humble servant,

J. ALEX. ROSS.

Westwell Vicarage, near Maidstone, May 7, 1834.

No tenant, as tenant, has a vote in Scotland, though liable to *repay* half after the whole has been assessed by and on the proprietor, as is explained in 76 and 77 pages of Dunlop on the Scotch Poor Law Bill, in the British Museum.

"The power of imposing, apportioning, and levying an assessment, belongs solely to the magistrates in burghs, and in parishes to landward to the heritors and kirk sessions; and the magistrates and kirk session are entitled to call to their assistance such of the inhabitants as they may consider best qualified for that duty."

The kirk session is a kind of vestry composed of owners and their proxies; and tenants as proxies, *answerable to their employers*, act so well that the poor rates do not exceed 5s in the Highland, and 30s per 100l full rental, on the parts bordering on England.

CHURNING IN CHILI.—In Chili butter is packed in sheep-skins, with the wool side out, and would be very good in spite of appearances, were it not so much salted. The operation of churning is performed by a donkey. The cream is put into large gourds or dry skins, placed on his back, and then the animal is kept trotting round the yard till the butter is made. In this art they seem not to have advanced a single step since its discovery; for we are told that a countryman somewhere lost a large jug of cream by carrying it for a distance on a hard trotting horse, which accident led to the important invention of churns and butter. A friend told me that he had presented, some years ago, a Yankee churn to a family residing near the capital, and taught them to use it. So long as it was a novelty they were pleased, but at the end of a few weeks they decided that the donkey made butter just as well, and consequently threw it aside!—*Three Years in the Pacific.*

## AN ELECTION SQUIB;

CONTAINING A FEW PECULIARITIES OF SOME RECENT  
RETURNS.*Not by Scott,  
But by an old Scot and Lot.*

Mr. Editor,—

May I presume to address you,  
For you're Lord of the Press—though I don't mean  
to press you.

I've been looking with hopes, and with fears and de-  
jections,

To the different results of some different elections,  
And 'tis sad to observe that in spite of the law,  
Some Boroughs are bought,—for, if clearly I saw,  
Both Sandwich and Radnor have not been so nice,  
But that each has by some means discover'd its  
Price;

Whilst Cardigan, and I suppose without trouble,  
Has found out its *Pryse*, and has got that *Pryse*  
double.\*

Then the borough of Cricklade, my search has re-  
veal'd,

And Chippenham, too, for a member have *Neeld*;  
While, at Yarmouth, to keep up this pitiful trade,  
Whether pious or no, for a member they've *Praed*.  
Though this, Sir, is true, and precise to the letter,  
I wish they had kneel'd, aye, and pray'd for much  
better.

The city of Gloucester has taken good scope,  
For in the next Session, they're sure of a *Hope*;  
While at Norwich, if brib'd, sure they heed not  
the form on't;

Though the sin is as *Scarlett*, they always are warm  
on't,

And this time they've ended by making a *Stormont*.  
At Dorchester much of good stingo they boast,  
Where poor wat'ry ale must appear like a ghost,  
Their tubs, butts, and barrels, will want no recorder,  
For they've chosen a *Cooper*, to keep them in order.  
Then, Beverley thinks that its *Burton* is stout;  
And Christchurch has *Tapps*, to let such good stuff  
out.

It will please, without doubt, the most critical reader,  
That Bridgewater sends to the Commons a *Leader*;  
While, if they should ever want driving much smarter,  
There's Portsmouth has sent up a Corporate *Carter*.  
At Cambridge, their taste they have well prov'd this  
time,

For they've made up their minds to have *Rice*, and  
its *Pryme*.

It was said of old Pontefract, some time ago,  
'Twas a *Gully*-hole made; but sure this was some  
foe

Whowish'd much the Yorkshire-men's fancy to sully,  
But *Gully*'s a good one, so good luck to *Gully*.  
At Southampton, much time about boats they employ,  
Who so fit, then, to represent them as a *Hoy*?  
At Windsor, that loyal old borough,—'od rot 'em!  
The sheepish electors have sent a *Ramsbottom*.

Some odd things, besides, have occur'd, as I'll  
show,

For, though members move, boroughs don't often go;  
Yet, there's Barnstaple—and 'tis a thing, Sir, at  
which I stir,—

Has gone all the way, for a member, to *Chichester*;

\* *Pryse Pryse*, Esq. It may be as well to observe  
here, that all the Italics in this article refer to the  
names of Members returned.

And if Bristol don't travel itself, yet remember,  
It has done something like it,—sent *Miles* for a mem-  
ber.

The next in the oddities surely is Shoreham,  
Where the wise ones have fix'd upon *Goring* to gore  
'em.

Then, the *Peels* are too thick to my fancy, I own,  
Though I hope that the Orange will not be much  
shown;

And I wish the good folks, as they do at the play,  
Would their oranges suck, and the *Peels* throw away!  
Then, amongst Venal boroughs, the Tories still  
sharing 'em,

There's a whole batch of *Barings*, in truth, there's no  
bearing 'em.

It might be a Houyhnhnm house, some folks say,  
For Peebleshire sees that it shall not want *Hay*;  
Whilst Stafford, to keep up the same horse-like feel-  
ing,

Has a *Goodricke* supplied,—very clearly revealing,  
They're thinking of horses; if so, let me say,  
That I hope to the Tories they'll oft give a neigh.  
Then, to wind up the whole, and to help Mother  
Church,

And for which the electors deserve a good birch,  
At Woodstock—and who can laugh now refuse—?  
To help out the Church, why the *Churchill* they use!

Mr. Editor, pardon my quips and my cranks;  
And, though I can hardly e'en hope any thanks  
For such doggrel as this, yet I am not much fearing,  
As each throws his squib during electioneering,  
So my feeble cracker may happen to tell,  
And I beg to subscribe myself,

Yours,

J. M. L.

FOX HUNTING.—ANOTHER SPLENDID RUN WITH  
THE CAMBRIDGESHIRE.—These hounds met at  
Eltisley Wood on the 19th inst. but did not find;  
they then trotted on to Croxton Thorns, where no  
sooner were the hounds thrown in than a brace of  
foxes were found, and a "halloo away," was given  
on the opposite side of the cover. The hounds, by  
the exertions of Jack, the huntsman, (on whom  
too much praise cannot be bestowed throughout  
the run), were got away at his brush. He took a  
line towards St. Neots, for a few fields, and then  
turned as if for Croxton Park; then crossing the  
Cambridge road, 'went in a line for Toseland  
Wood, but turned again, leaving that cover to the  
left, and went for Yelling; from thence across the  
Eltisley open fields, to Papley Grove, crossing the  
London road towards Papworth Wood. Leaving  
that wood to the right, he then went as if for  
Swansley Grove; then turning to the left, went  
between Elsworth Wood and the village, and from  
thence to Knapwell Grove; then facing the Box-  
worth open field, to Boxworth hedges. Here Rey-  
nard was nearly done; but still willing to try, he  
attempted the open again, in a line for Madingley,  
but being headed he turned into cover, and after  
running him there for a short time he was killed.  
The ground ran over cannot be estimated at less  
than ten miles, which was done over an extremely  
heavy country within an hour. The fox proved to  
be one which had on two or three previous occa-  
sions given this admirable pack extraordinary  
runs. On this occasion, however, he was com-  
pelled by an excellent scent to yield.—To Mr. Bar-  
rett, the owner of the hounds, sportsmen ought to  
be extremely indebted, both from his urbanity in  
the field and for his indefatigable exertions to show  
sport—the latter may also be said of his huntsman.  
—*Cambridge Chronicle*.

## VALUATION FOR COUNTY RATES.

The valuation upon which the county rate is levied, varies extremely in different counties. In some it is so ancient that its origin and date are lost; in others it was fixed more than a century ago, and bears with most unequal pressure on different parts of the county. Mr. Portman states in his evidence:—

“I can mention one particular case of a very small agricultural parish paying a larger amount of county rate than the town of Weymouth and Melcombe Regis; and another paying a larger county rate than the town and borough of Lyme.”

“Mr. Hinxman refers to the same instance:—

“Thus, in all cases where new property has been created, in the case of the county of Dorset for instance, the rate has not been revised since the town of Weymouth has been built; therefore the town of Weymouth does not contribute a single 6d towards the payment of the county rate.

“There have been also upwards of 40 inclosure bills in the county of Dorset, which is not a large county (I believe the whole county only comprises an area of about 600,000 acres, and therefore it is rather a small county), and in this county there have been upwards of 40 inclosure bills; now there is not a single acre of the new lands inclosed under these bills which contributes one single 6d towards the payment of the county rate, and therefore necessarily must make it more heavy upon the other rate-payers.”

—Report of the Committee on County Rates.

**COMMON HONEY BEE.**—At a late meeting of the Verulam Philosophical Society, Kenton More, Esq., Vice-President, in the chair, the Secretary, C. Dewhurst, Esq., read some interesting observations on the natural history and management of the *Apis Mellifica*, or common honey bee, wherein he detailed a plan of securing the honey without depriving the bees of life, and which is now generally adopted in the county of Suffolk, and originated with his father, the Rev. C. Dewhurst, of Bury St. Edmund's. It is as follows:—The hive which is employed by this gentleman is similar to the common one, but with an opening in the roof, of about four inches in diameter, with a moveable top, and which is pegged down during the period the bees are filling the hive. As soon as the hive is full, Mr. Dewhurst then carefully removes the top, (while the bees are absent,) and then places a wooden box of about eight inches square in its place, and into which the bees work; when this box is full of honey, it is removed, and another substituted, and, by repeating this process, great quantities of honey may be yearly obtained, without the least loss or injury to the community.

Statement from the thermometer at the door-way of Messrs. Swaine and Co., 93, Fleet-street, during one week in January, 1834, and the corresponding week in January, 1835:—

| 1834.                 | 1835.                  |
|-----------------------|------------------------|
| January 15....49 deg. | January 15....51½ deg. |
| 16....54½             | 16....47               |
| 17....51½             | 17....42               |
| 18....49              | 18....41½              |
| 19....49½             | 19....42               |
| 20....47½             | 20....34½              |
| 21....52½             | 21....31               |

**EXTRAORDINARY RUN WITH THE COTTESMORE HOUNDS.**—On the 17th Jan. these hounds threw off and found in Woodwell-head, went away by Hopkinson's Gorse, as if going to Cottesmore, then bore to the right betwixt Market Overton and

Barrow, leaving Cottesmore Gorse on the left, crossed the canal at the Cottesmore Wharf, bore to the left, leaving Ashwell on the right, and got nearly to Langham Lodge: reynard here bore to the right, as if going to Ranksbro', but was headed at the road leading from Langham to Whissendine, and turned to the right; he then left Whissendine on the left, the keeper's house, at Teigh, on the right, and went nearly as straight as a line and swift as the wind to Wymondham, through the homestead there, and pointed as if going back to Woodwell-head. He then bore to the left, nearly to Coston Cover, then to the right and left Buckminster village on the right, through the park and plantation, leaving Sproxton Heath Gorses on the left, through Stoke Pasture, is if going to the School-plats; turned short to the right back nearly to Skillington, and through Stoke Pasture again on the same line, and here made through the School-plats to Sproxton; on leaving which place the hounds had three or four scents, and it was then thought prudent to stop them, as all the horses were completely dead beat. There was a fair field, and some of the first-rate horses out, but the run was the most severe that has been experienced, being one hour and fifty-five minutes from breaking away to Stoke Pasture, almost without a check, and the whole distance occupying *two hours and three quarters*, consequently there was, though a fair show at starting, a very select few at the call-off, and those who were there, including the huntsman, Lambert (who occupied his accustomed place at the tail of the hounds, all the way), acknowledged it to be the most severe and swiftest run that they ever witnessed.

**AN AMERICAN LOCK.**—The Americans have been having their fancy fairs, or, as they term them, “institute” fairs. A recent New York Paper occupies four of its lengthy columns in describing the contents of one of these exhibitions; it more resembled our annual exhibition of the Society of Arts, but on an enlarged scale, proceeding upon the *utilitarian* system, admitting specimens of improvements in botany, &c., as well as in the arts and sciences, trades, &c. The following is an extract from the descriptions:—“Among the splendid specimens of hardware, we observed a great variety of locks. A remarkable door lock and key, for banks and stores, attracted much attention. It is of *very simple construction*, and yet a false key cannot be made to it. It has 16,382 combinations, or different ways of adjusting and using the key, so that a man might lock up his premises *differently every day during the period of forty-five years*.

The shipping of this country has hitherto gone on increasing. Thus, for instance, there entered into the Port of London, in 1832, 3,167 ships, amounting to 626,026 tons; in 1833, 3,365 ships, amounting to 669,835 tons; and in 1834, 3,721 ships, amounting to 730,554 tons. The foreign shipping entering the same Port has, during the same period, increased from 150,394 tons to 212,514 tons; and as the latter has increased in a higher ratio than the former, the British shipowner is dissatisfied.

The cheapness of living in Ireland, added to the salubrity of the climate, form no small counterpoise to the inconveniences arising from the unsettled state of the country. In the inland towns the following may be taken as a specimen of prices:—Beef, 3d per lb: mutton, 3½d; pork, 2d; a fine turkey, 1s 9d; a goose, 10d; fowls, 8d a couple; oysters, 3d a dozen; potatoes, 3d a stone,

## AGRICULTURAL REPORTS.

## BEDFORDSHIRE.

The month of December, like most of its predecessors of the past year, closed upon us with fine open weather, and scarcely any rain. Indeed, the whole year has been remarkable for the little downfall we have had; so much so, that the oldest man scarcely remembers the rivers, brooks, and springs to have been so low as at the present period. The first fortnight of the new year was alike dry, about three days of which were a little frosty, but without the least appearance of snow. The rain set in, however, this morning pretty heavily, with a low and falling barometer, so that at length the ground will be likely to be thoroughly saturated.

The season ever since the harvest has been most propitious for all farm work, such as ploughing, carting, housing potatoes and mangel wurzel, as also for sheep and cattle, both in the pastures and in feeding off turnips; for all these varied operations we never remember a more favourable time.

Wheat is generally looking well, though not so forward as might have been supposed from the very open winter. The winter tares and young seeds progress pretty well, as also the trefolium where drilled on the unbroken ground, but where the land was ploughed it is generally a failure, an evil which our farmers will remedy in future from experience. There is little else at this season of the year to report concerning the crops which can be at all interesting to the public. The wheat and meat markets remain in a most stagnant state, and wool has fallen in value since our midsummer fairs about twenty per cent.

We have understood that, from the generally prevailing distress in the farming districts, the rents at the last audit have only been very partially paid: indeed, it must have been evident that the Midsummer payments are only made from the high price of wool, and that only on stock farms. If, in fact, rents, which in this county are generally adjusted upon the scale of 60s per qr. for wheat, can be paid when the farmer realizes but 40s per qr., then they may be paid, come what will. We are very happy, however, to learn that there has been, partially, at least, some disposition to meet the times in some little degree. The good example set by Sir John Sebright, on the northern side of Hertfordshire, in reducing his rents 15 per cent. upon the whole year, is, we understand, followed by the member for Bedford, Samuel Crawley, Esq., so that while the farmers have in that gentleman a determined and consistent friend to the repeal of the malt tax, it is not, as our enemies have misrepresented, sought only as a subterfuge for keeping up rents. We wish that those who thus libel the best friends of the poor and of the farming interests, would only manifest as much liberality themselves. We hear also that Lord Holland, both at his Midsummer and Christmas audits, made an abatement to his tenants near Amptill. Well intended, however, as these reductions are, and as such they ought to be gratefully received, still, it must be evident to all acquainted with farming concerns, that they are nothing when compared to the reduction in the price of agricultural produce. For the sake then of setting those ignorant people right, who merely suppose a little reduction in rent is all that is necessary to place farmers in a state of prosperity, I give the following impartial case:—

Take for example a farm of 300 acres of moderate convertible arable land, rented under the

Duke of Wellington's corn bill, with wheat at 60s per qr., and barley at 36s; rent 300l per annum.

Allow first 20 acres for hedges, roads, and waste, which under good farming would leave 70 acres each for wheat and barley.

|                                          | £     | s. |
|------------------------------------------|-------|----|
| Take those 70 acres of wheat at 20 bush. |       |    |
| per acre, at 7s 6d per bush. . . . .     | 525   | 0  |
| Barley 70 acres at 32 bush. per acre, at |       |    |
| 4s 6d per bushel . . . . .               | 504   | 0  |
| Total . . . . .                          | £1029 | 9  |

Contrasted with the prices below.

|                                          | £   | s. | £    | s.    |
|------------------------------------------|-----|----|------|-------|
| Wheat 70 acres, at 20 bush.              |     |    |      |       |
| per acre, at 5s per bush. . . . .        | 350 | 0  | }    | 686 0 |
| Barley 70 acres, at 32 bush.             |     |    |      |       |
| per acre, at 3s per bush.* . . . .       | 336 | 0  |      |       |
| Tenant's deficiency in wheat and barley, |     |    |      |       |
| only . . . . .                           |     |    | £343 | 0     |

So that if the tenant's charges remain as they were, he loses 43l more than the entire rent in the price of his corn alone, and it is not a departure from the truth, if we say, with the exception of manual labour, which is about 10 per cent. lower, that his other charges of poor-rates, county rates, king's taxes, tradesmen's bills, on an average are not 5 per cent. lower than at the former period. What a stupid dolt must that man be then, who merely drives at rent, and who supposes the landlord can do everything for him. It must therefore appear evident to every man not blinded by the grossest prejudice, that the landlord's and tenant's interest are mainly one, and that the rent can be permanently no more than what is left of the value of produce over and above the varied costs of production. It is, however, deeply to be lamented, that for a length of time rents have been chiefly paid either out of the tenant's capital, or out of what ought to have been his profits; and that landlords of late have been in too many instances far too indifferent in keeping up that community of interest between themselves and their tenantry.—Jan 16.

## GLAMORGAN.

The wheats, especially the late sown ones, were much retarded in their growth by the long continuance of dry weather, which however has given the farmer an opportunity of effectually cleaning his lands for barley and oats. Few have sufficient spirit left to go to much expense in this way; and it is much to be feared, lest, when good husbandry meets with so bad a return, the state of agriculture will retrograde, and a more slovenly system be substituted. This is even now the case in the hilly districts where improvement was making its way, but its march is absolutely stopped by the extreme distress of the farmers, who confine themselves to the supply of their own moderate wants from the produce of their lands, and rely entirely on the rearing young cattle for payment of their rent. The repeal of the malt tax, a measure which has long had the hopes and wishes of the whole country, as well commercial as agricultural, would raise the spirits of the farmer, and encourage him

\* It may be objected that the farmer makes more than 3s per bushel of his barley, but it must be evident to all that this is entirely owing to the deficiency of the crop, and that the farmers in general would have been better paid with a good crop at 2½s per qr., than with the present crop and present prices.

to attempt at any rate to improve his condition. Some of the farmers are thinking of ploughing for barley on favourable soils, but the late frost, which has been harder than any for the last three years, has for the present put a stop to it. The ground will, however, be much benefitted by it. Prices are so low as not to be worth quoting.

#### HERTS.

Having read the reports of farmers from all other counties with pleasure and profit, particularly the reports proceeding from Beds and Bucks; the latter of which, inserted in your last number, contains much information, though there are some remarks which we do not fully accord with, or such as we should not give of the state of the same circumstances within our own county. We give it as our opinion that there is as much wheat thrashed and unthrashed in our county as usual at this period of the year, though we know that there are many causes beyond the control of any legislature to counteract, or that have a tendency towards any rise taking place in the price of wheat. The average of oats about equals the average of wheat, and barley exceeds it; and it is to be observed, that the price of wheat affects the price of all the articles of grain which the farmers of our county have to sell. We think that wheat growing into use as malt, where it has been tried, has been found superior to the best barleys of the year, by 20 per cent., which being the case, it is likely that an increase for the demand of wheat in future will take place. Every circumstance appendant upon the four elements, as regards the welfare and prosperity of agriculture, are most satisfactory; but all the other concerns (generally speaking) of agriculture are reduced to almost an unprofitable state, which nothing but the taking off of the present malt tax can remedy, and which we hope will be amongst the first acts of his Majesty's ministers, as the promptness of so doing will much enhance the value in the estimation of all classes of society.—Jan. 14.

#### OXFORDSHIRE.

We had a continuance of the same mild dry weather, which has been so remarkable a characteristic of the year 1834, down to the close; the consequence has been that all kinds of team labour is in so forward a state as can scarcely be remembered by the oldest farmer living. Another striking feature will be found in the low state of the springs, and we daily witness the novel sight of water carts plying to and from the rivers and brooks to supply the cattle in December and January. Where this very necessary point, that of affording a constant supply of water, or where cattle have depastured in fields adjoining a running stream, their doing so has been admirable, and this with but little or no hay; and where there is the amount of stock proper for the farm, the meadows and uplands were never eaten down more level or better than they now are or will be; but we are very sorry to add, that in too many cases the want of the needful to produce sufficient stock is but too visible, as is exemplified in the half-eaten pastures. The abundance of autumn food has kept down the price of hay, and in all probability the at one time apprehended scarcity of this article will not be materially felt. The wheat crop, as well as vetches, winter beans, seeds, &c. are looking very well; but the latter are by no means generally a good plant. We have not heard of any spring corn being planted yet, but if the weather

continue favourable, planting beans will speedily commence. Our corn markets have continued in the same ruinous state since the new year commenced; there has been a shade of improvement in wheat and barley, but beans, notwithstanding that in many places the late crop proved so deficient as barely to produce little more than the seed again, still they continue (both the old and new) in a very depressed state. Fat stock, although never better in quality, have recently sold badly. Wool, in which there was some small stir previous to the dissolution of the ministry, has since been quite stagnant.

The elections have passed on the whole quietly in this county, nor have we had any repetition of the crime of incendiarism. Labour 7s to 8s per week.

We hope all our agricultural friends will unite in making one grand effort to get rid of that obnoxious impost the malt duty, and not suffer themselves to be led away by the specious plea put forth by interested persons of embarrassing ministers by their petitions. No, let every farmer do his duty, and when the Chancellor of the Exchequer finds it must be repealed, he will soon, as on other similar occasions, find a substitute.—Jan. 16.

#### WILTS.

The last three winters have been so unusually mild that a hard frost was almost welcomed as an old friend. However its visits may be felt by the poor of this county, especially where fuel is so dear, its presence is extremely beneficial to the farmer, by mellowing the soil and destroying an infinity of grubs and other vermin; its continuance has been but short, and the rain which has followed has done much good to the wheat, which stood in great need of moisture, especially on the dryer soils. There is but little to report in other matters, except to express a hope that the legislature will at length take into consideration the extreme depression of the agricultural interests, and afford relief in the only way which appears to be practicable. The farmers of this extensive county should exert themselves, and they have the stronger reason for so doing, in the knowledge that in one at least of its representatives they have a firm, active, and zealous friend. Let it be always borne in mind that John Bennet, of Pythone, has always stood forward among the first of those true friends of their country who have urged the repeal of the malt tax.

**CHILIAN AGRICULTURE.**—The following account of ploughing and sowing, extracted from a new work on South America, will amuse our agricultural friends:—"The 'espinos,' or thorn-bushes, overgrow wheat fields and pasture grounds, and are always cut even with the soil at the time of ploughing and sowing, which take place after the first rain in the month of June. On a large hacienda, this operation presents an interesting and animated scene. I saw a hundred and sixteen pairs of oxen and as many ploughs working at the same time. They were marched and countermarched like troops of soldiers. Each ox had its name, and each ploughman was shouting and goading at the same time, presenting a spectacle not easily described. Like everything in Chili, the operation of sowing wheat is performed on horseback. The sower carries before him, on the pommel of his saddle, a quantity of seed in his poncho, which he holds with one hand, while with the other he scatters it over the ground as the horse walks along."

## AGRICULTURAL INTELLIGENCE, FAIRS, &c.

**CIRENCESTER AGRICULTURAL SOCIETY.**—The Premium of 20*l.*, given by C. W. Codrington, Esq., M.P., to the renting farmer for the best cultivated farm in the county of Gloucester, whose whole farm shall not be less than 300 acres, 200 of which to be arable land, was awarded to the late Mr. Edmund Wood, of Siddington; the other competitors were Mr. Thomas Kimber, of North Cerney, and Mr. Wickendon, of Williamstrip.

At **SHREWSBURY FAIR**, the supply of cattle was not large, but there being very few purchasers, a great part went home unsold. Good fat cattle were hardly worth 5*d* per lb., and many good things were sold at lower prices. Stores were in no demand. Small sheep were in demand at nearly 6*d* per lb.; but large sheep were not saleable except at a diminution of 4*s* or 5*s* per head, and with difficulty then. Pigs rose considerably in value; bacon pigs being worth 3½*d* to 3¾*d* per lb, and small stores from 3*s* to 4*s* a head higher. The supply of butter was exceedingly large, and prices fell to 7½*d* and 8½*d* per lb; a vast deal remains unsold. Skim cheese was sold from 20*s* to 30*s* per cwt.; a few middling dairies from 35*s* to 45*s*; and some of the best at 55*s* and 60*s*. Bacon was in good supply, and nearly all sold at 4*d* to 4½*d* per lb.

**APPLEBY NEW MONTHLY FAIR** fully answered the expectations of both buyer and seller. There was a large number of fat cattle in the market, the whole of which were sold at about 23*s* per stone; calves were also in good demand. There was a good show of fat sheep, the greatest part of which were sold. The next fair will take place on the 5th of February.

At **ST. THOMAS MARKET, CRIEFF**, there was a good supply of fat cattle, which sold at fair prices, and may be quoted at from 6*s* to 6*s* 6*d* per stone. Lean stock were in little request, with prices considerably on the decline. There were but few milch cows in the market, for which pretty high prices were obtained.

**KELSO.**—At the monthly cattle market here there was a good show of sheep, the demand for which was dull, at from 4½*d* to 5*d* per lb. The show of fat cattle was very fair for the season of the year, but sales were not brisk; prices may be quoted at from 4*s* 6*d* to 5*s* 3*d* per stone.

**PRESTON HORSE FAIR.**—This fair has been pretty well attended, and tolerably brisk, though slightly interrupted by the election proceedings. A considerable number of good horses were bought up at fair prices without being exhibited in the streets. For inferior kinds the demand has been less, and the prices obtained proportionably smaller.

The newly established Cattle Fair held at Stratford-upon-Avon, was much larger for Beef and Mutton than (for the season) was generally expected. The supply of Mutton was great, in fact, many more sheep were penned than usually are at the Warwick Fairs, in the winter season. The trade for Beef was brisk at from 4½*d* to 5*d* per lb, and nearly all were sold. The supply of mutton exceeded the demand and the trade was dull at about 5½*d* per lb, yet on the whole a great deal of business was done, and the butchers expressed themselves fully satisfied with the supply. There is no doubt, from the number of graziers and farmers who have pledged themselves to support the Cattle Fairs at Stratford, that in future the supply of stock will be considerable, and the next Fair will take place the last Monday in March next.

At **OSWESTRY FAIR** cows sold well, and also fat cattle, from 4*d* to 5*d* per lb; stores were rather a drug. Fat pigs 3½*d* per lb, but small stores, of which there were great numbers, fetched good prices, and are on the advance. Sheep from 5*d* to 6*d* per lb. Of horses there was but a poor show, and few good ones.

**YORK FORTNIGHT FAIR.**—We had a pretty good show of fat beasts at market this morning, which sold very freely at from 5*s* 3*d* to 6*s* per stone; in the lean beast market the show is also pretty large, but not much business doing; of sheep the supply is large, and they seemed to be well bought up at from 5*d* to 5½*d* and 6*d* per lb.

**YORK PIG MARKET.**—In this market the supply of pork pigs was but small, with a good demand, at from 5*s* 3*d* to 5*s* 6*d*; store pigs, the market about the same as last week; bacon pigs, 4*s* 6*d* to 5*s*; Hams, 6*s* per stone.

**NEWBURY.**—Our corn market on Thursday was thinly supplied, and in a very unsettled state, owing to the failure of Mr. Gough, who for many years had been a confidential porter and corn-dealer; the sum for which he failed is reported to be from 10,000*l.* to 12,000*l.*; a large number of farmers, as buyers, are great losers, which will be more felt owing to the depressed state of the corn trade. We hope our market will not be permanently injured, as there are several respectable persons who have come forward as porters and salesmen, among whom we mention the names of Mr. Gordon (who was for some time landlord of the King's Arms Inn,) and Mr. Vidler (who is well known as a corn-dealer in Newbury and its neighbouring markets) who will give security for all property put under their care, if required.—*Reading Mercury.*

**IMPORTATION OF IRISH CATTLE.**—The following is a statement of the number of cattle, sheep, pigs, and horses, imported into Bristol from Ireland during the year 1834:—

|                           | Pigs.   | Sheep. | Cattle. | Horses |
|---------------------------|---------|--------|---------|--------|
| January, Feb., March ...  | 45,398  | 317    | 146     | 25     |
| April, May, and June ...  | 37,441  | 1342   | 738     | 97     |
| July, August, & Sept. ... | 20,918  | 1997   | 1116    | 61     |
| October, Nov., & Dec. ... | 25,775  | 160    | 557     | 90     |
| Total in 1834 .....       | 129,582 | 3816   | 2557    | 273    |
| Total in 1833 .....       | 96,291  | 2730   | 2482    | 281    |

By this account it will be seen that the increase last year in the number of pigs was 33,241; sheep, 1086; cattle, 75; and a decrease of eight in horses.

**EXTRAORDINARY PRODUCTION.**—Anewe, belonging to Mr. Fuller, of Loddon Bridge, this week produced five lambs, every way perfect.

**AN ENORMOUS PIG.**—On Monday, the 12th inst. a pig, the property of William Lund, of Flaxton, on being killed, weighed the extraordinary weight of 749*lbs*, or 53½ stones.

**FRENCH FOXES.**—The Marquis of Hastings, one of the leading Meltonions of the day, has imported into this country, at considerable expense, a great number of foxes from France, the cover in Leicestershire having been neglected and ill-stocked.

**REMARKABLE FOREIGN TREES IN ENGLAND.**—The largest tulip tree that I ever saw in England is at Mount Edgecombe; the largest cork trees and ilices at Mamhead; one of the largest cypresses is at Powderham Castle; the largest cedars are at Wilton; a remarkable one is also at Althorp. A large deciduous cypress at Port Eliot, and another at Ken Wood.—*Correspondent of Gardener's Magazine.*

An Agricultural Society has been recently established for the Hundred of Dunmow and its neighbourhood.

Commercial accounts from Leghorn to the 3d inst. state that there were in depot there, at the above date, 230,530 sacks of wheat, 21,606 of maize, 28,251 of barley, 20,983 of rye, and 14,644 of oats.

Earl Spencer has announced his intention to give a prize of ten sovereigns to the person who shall exhibit the best cart stallion, at Althorp Park, on the 6th of March next.

The premium of 5l 5s, given by W. R. Cartwright, Esq., for the best crop of Swedish turnips, grown by a tenant farmer in the county of Northampton, has been gained by Mr. Richard Linnell, of Stowe. Mr. Linnell gained the same prize last year.

The weight of Earl Spencer's fine Durham ox, which was slaughtered by Mr. Strachan, of Dean-street, Westminster, was 236 stone 6 lbs. The meat proved to be as fine as could possibly be.

The weight of Mr. Hillyard's beautiful Durham cow, which was slaughtered by Mr. Sebo, of Tottenham-court-road, was 196 stone. Finer marbled flesh was scarcely ever seen.

Above 100 English agricultural labourers, in families, have already been sent to Jamaica to work in the plantations, and about 500 more are now enlisting for the same purpose. A gentleman who has resided in Jamaica for many years, is actively engaged in this service, and the best results are anticipated from this new feature in the management of our West India possessions. The greatest care and comfort are promised to these people during their service in Jamaica, and even land is farmed out to each, contiguous to the estates, on their arrival. None are engaged except such as can be well recommended by the clergymen of their different parishes. The absolute refusal of negroes to work for wages during their own time, their indolence during the allotted hours of labour, and the inefficiency of the stipendiaries to enforce industry, or even obedience, have left this as the only alternative to a total abandonment of the cultivation of the estates.

A most singular circumstance was discovered one day last week:—A sow, properly spayed, was put up with others of the same kind to fatten about six months since, by Mr. J. Y. Willatts, of this town; it had now attained the weight of 16 score, and was killed on Tuesday week. The person who killed it finding a hard substance enveloped in the cawl, and very near the part usually called the maw, gave it to a professional gentleman to open, when, to his great astonishment, he found a perfect black and white spotted pig, perfect in every part, and the hair on in some considerable length. It is supposed to have been alive at the time the sow was killed!—*Reading Mercury*.

The dead weights of the three Leicester wether sheep, exhibited by Lord Exeter, in class 7 (shearlings), at the last Smithfield Show, and which were sold to, and killed by, Mr. T. Maynard, butcher, 6, Hampstead-road, London, were as follows:—

|             | st. lb. |           | st. lb. |
|-------------|---------|-----------|---------|
| Sheep ..... | 25 7    | Fat ..... | 2 7     |
|             | 25 6    |           | 2 1½    |
|             | 26 1    |           | 3 1½    |

Averaging 25st 7lb for sheep—or 51lbs per quarter.

NOTE.—It is extraordinary, that the three sheep which obtained the prize averaged only 20st 2lb.

## REVIEW OF THE CORN TRADE IN MARK LANE DURING THE MONTH OF JANUARY.

The extended period that the wheat trade has assumed so discouraging an aspect, would almost seem to remove the hope of any revival in the trade, and those connected with Mark Lane have required no ordinary share of patience to endure the dull and uninteresting uniformity, which has, since harvest, characterized the proceedings. Though the speculators in foreign wheat have had during the past year some opportunity offered them of quitting part of their stock, owing principally to the demand for Portugal, yet the prices realized have been, in most cases, far from remunerative, and the sale chiefly confined to Russian and inferior samples. The fine quality of the growth of last season throughout Germany, Prussia, Poland, Mecklenburg and Denmark; and the low currencies which have prevailed, fine high-mixed Danzig qualities being sold at 29s to 31s; Königsberg, 28s to 29s; Pomeranian, 24s; Mecklenburg, of 62lbs to 63lbs, 21s 6d to 22s 6d; Danish, of the same weight, 21s to 22s; Marks, Saale, and Magdeburg descriptions, 23s 6d to 24s 6d of 61lbs to 62½lbs; caused some speculative spirit to arise, and purchases have been made of the above qualities for English account; which, should any fortuitous chance occur in favor of the bonded holder, such as a failure in the ensuing crop, or a very retarded harvest, will command a preference in the market; but the aspect for the speculators in wheat, the produce of previous years, is of a very gloomy character; for it may be estimated that three-fifths of the bonded wheat in the United Kingdom, say about 400,000 qrs, consists of inferior descriptions; and taking into calculation the expenses of a large portion of the bulk for three years and a half, including prime cost, freight, granary charges, incidental expenses, and interest, it would require an average price of 70s per qr, with a duty of only 1s to clear the outlay, setting aside all idea of profit; that is, allowing Danzig wheats to be worth 80s, and the inferior, 60s. Before, however, the currency could obtain so high a range, we should have considerable quantities of the new growth awaiting the decline in the duty, to the almost total exclusion of the old qualities. It is therefore difficult to divine the ultimate fate of these inferior qualities of wheat, with expenses monthly increasing, and the corn becoming entirely unsaleable. It would, indeed, be a boon on the part of the government, and which in justice ought to be granted to the importers, in order not to make the article entirely useless, and to prevent a total loss, the permission to have their stock ground into flour for exportation; rendering the act doubly beneficial, making the article thus marketable to the holder, and enabling the home manufacturer to supply the colonies with biscuit and flour at a rate equal to that of the fo-

reign markets. The amount of foreign and colonial wheat entered for the home consumption in the United Kingdom during the year 1834, has been about 47,000 qrs, and the quantity of foreign exported, 122,000.

During the month, from the 22nd of December to the 26th of January, the following quantities of grain have arrived in the port of London.

|              | Wheat. | Barley. | Oats,   |
|--------------|--------|---------|---------|
|              | Qrs.   | Qrs.    | Qrs.    |
| English .... | 35,899 | 31,576  | 5,368   |
| Scotch ..—   | 1,272  | 9,267   | 36,014  |
| Irish .....  | 951    | 9,033   | 104,567 |
| Foreign .... | 245    | 5,608   | —       |

|              | Beans. | Peas. | Flour. |
|--------------|--------|-------|--------|
|              | Qrs.   | Qrs.  | Sacks. |
| English .... | 56,76  | 1,889 | 35,999 |
| Scotch ....  | 1,192  | 859   | 926    |
| Irish .....  | —      | —     | 1,494  |
| Foreign .... | 1,034  | 1,780 | 2,171  |

The principal differences in the supplies, as compared with the month of November, are a decrease of 14,679 qrs of English barley, and 6,608 qrs of Scotch ditto, but an increase of 3,899 qrs of Irish ditto. In oats, the principal disparity exists, the supplies of English having augmented 705 qrs, and of Irish, 55,249 qrs, while from Scotland the arrivals have diminished 9,281 qrs. Of foreign Barley we have received 3,176 additional qrs.

At the commencement of the month, the Christmas holidays and the approaching elections exciting general attention, both in town and country, caused Mark Lane to be thinly attended. But the supplies being only moderate, the finer qualities of white and red wheat proved saleable at the currencies, which had sustained no improvement from the depression experienced during December. It was however thought, that, generally, the feeling of the trade was rallying, and that prices, having attained so low a range were not likely to be susceptible of any further decline. Indeed extra selected parcels of white wheat, in some instances, obtained 1s per qr. more money, added to several speculative purchases of wheat at many of the leading country markets. But towards the close of January, these faint hopes of brighter prospects again became clouded; the dampness of the atmosphere had operated unfavourably on the samples, and though prime dry parcels obtained the previous rates, yet the fine as well as secondary sorts moved slowly off hand at a decline of 1s to 2s per qr, [millers] purchasing sparingly at this reduction. In bonded wheat not much business has transpired. Some inferior parcels have been purchased at low figures ostensibly for Guernsey, and better qualities have been taken for shipment to Leghorn, to which destination the exports from hence have amounted to nearly 4,000 qrs.

The town millers in the early part of the

month having pressed on the market a good deal of stock, forced down the rates of ship qualities to a very low currency; Essex, Kent, and Suffolk samples being only worth 30s per sack; Sussex and Hampshire, 30s to 32s; Northumberland and Scotch, 29s; Irish, 30s, being a reduction of 2s to 3s per sack, as compared with the prices of December. These depressed currencies attracted a little speculative attention, and fine fresh samples obtained an advance of 1s per sack, at which the quotations remain, though the trade has become again languid. Town made qualities remain nominally at 40s to 42s.

The alterations in the duties consist of a decline of 2s per qr. on wheat; 1s 6d per qr. on Barley; 3s per qr. on Beans, and 1s 6d per qr. on Peas.

The supplies of Barley compared with the foregoing month, have considerably diminished, chevalier and other fine Malting qualities having formed a very small proportion of the arrivals, fine Chevalier samples have advanced 3s to 4s, and other malting sorts 2s per qr. The distillers have bought moderately at the quotations noted at the beginning of January, and in grinding descriptions there has been no variation. The Irish samples have been pressing on the market, and the low currencies they have realized has checked any improvement in the averages, good parcels being only worth 24s to 25s; inferior, 22s 6d to 23s. There is little doubt however that the trade will rally, as it is now become evident, that the deficiency in the produce of barley is to a considerable extent throughout England, which has been exhibited in the shortness of the straw, thinness of the plant, unevenness of growth, and in the deficiency of the yield. In the northern districts of Scotland, the growth has been large, but in the Lowlands, the produce will not much exceed the local demand for distilling and grinding. In Ireland, the cultivation of the article has been much extended, and the crop plentiful, but the yield generally only fit for grinding. Neither therefore from Scotland nor Ireland can the failure in malting qualities be made up, and recourse must be had to foreign importations. The demand therefore throughout the month for bonded qualities has been animated, particularly for Danish and Holstein samples, as the growth of these countries, is this year superior to any other part of Germany, Prussia, or Russia. The shipments of these descriptions, which have come to hand, have realized from 38s to 40s; latterly only Danish cargoes have been offering, which were saleable at 22s 6d per qr, in bond. Prices in Denmark remain at 14s to 14s 6d, and 15s to 15s 6d for Holstein. The Mecklenburg qualities are inferior this season in weight, and not so kindly as the produce of Denmark or Holstein.

Fine samples of malt have been scarce, and realized an advance of 1s to 2s per qr, with a ready sale; the stock on hand being generally light.

The receipt of oats from Ireland and Scotland have been large, particularly from the former country, the arrivals for the week ending the 17th of January, having exceeded 43,000 qrs, making the supply one of the largest by 6 or 7,000 qrs ever received within a similar period. The deliveries of English oats have also increased, but are yet very deficient as compared with the supplies of previous years at this season. Notwithstanding, however, the extent of the importations, prices had continued to advance, the trade preserving a steadiness of character, which could alone be re-communited by the certainty of the deficiency in the yield of the last harvest. English qualities have advanced 1s to 2s per qr, Irish 1s per qr, best Scotch potato qualities, on the contrary, owing to their advanced prices and a large supply, have receded 6d to 1s per qr. Oats, free on board in Ireland, have improved 3d to 6d per barrel from all ports; and it may be remarked that the present prices will not return within 1s 7d per barrel of the free on board prices at present paid in the sister isle. The growth of oats in England is estimated fully one-fifth deficient, as compared with the produce last year, from which the consumption left no surplus, and this deficiency is further increased by the general scarcity of fodder, the small quantity grown of peas and beans, and the high price of linseed cakes. The weight of oats is lighter per bushel than usual. In the north of Scotland there is a fair average produce, but in the Lowlands the yield is below an average. In Ireland the growth is estimated nearly one-sixth short of an average crop; in the southern counties it does not exceed this estimate, but is better towards the North, and the deliveries from the farmers are much advanced for the early period of the season, and there are only small stocks held by the merchants. In the Baltic ports the stocks of oats are extremely limited, and in Mecklenburg and Holstein there will be very little left for export; prices were ruling from 12s to 13s, which were the currencies in Denmark as well as Sweden. At Riga oats were held at 13s 8d. At St. Petersburg at from 14s to 16s.

The duty on beans having advanced to 14s, caused the article to become rather steadier in price, which had, at the beginning of the month, receded fully 1s per qr; since then the trade has been dull, and prices unaltered. Bonded beans have met little attention, but holders have not given way in their demands. Extensive purchases have been made on the Elbe, Eyder, and Weser, at 22s to 23s per qr for small quantities.

A quantity of white foreign peas have arrived, and previous to the duty advancing from 6s 6d to 8s, from 4,000 to 5,000 qrs were entered for the home consumption, which depressed the trade, that had already been rendered extremely heavy, and prices altogether are 2s to 3s per qr lower. Maple qualities have receded 1s per qr, but fine qualities

for seed are in demand, at former rates. Hog peas, owing to the arrival of several Scotch samples, must be noted also 2s to 3s per qr cheaper. Extensive purchases have been made in the Baltic for spring shipment, at 22s to 25s.

The markets in France have generally remained firm in price, and in many places, particularly those where the drought has still continued, the currency of wheat and barley is advancing. The young plants, for want of rain, with difficulty have raised their heads above the ground, and are weak and unpromising. The worms and field-mice have continued their depredations, and so serious have been the ravages of these latter destructive little animals, that fields have been obliged to be re-sown with grain. At Paris the supplies of wheat have been extremely limited, which, in part, was attributed to the lowness of the water in the rivers preventing the navigation of the craft into the Seine. It was, however, the opinion of some speculators, that the deficiency in the yield of the new crop was more extensive than at first anticipated, and that, even with the facilities of water carriage, the supplies would fall far short of the usual arrivals at this season of the year, and that prices, therefore, were more likely to advance than recede, it being instanced that, in certain districts, purchases of wheat had been effected from whence the metropolis was wont to receive large deliveries. Incendiarism, likewise, as in this country, was committing its dreadful ravages on agricultural property. Cloverseed, at Paris, was dull, at 35s to 36s. At Rouen and Havre, prices nominal at 30s to 33s. At Bordeaux the trade was very limited; the quality this year being inferior to that produced in the Northern Departments, the rates quoted were 30s to 32s per cwt. The last aggregate average price of wheat, throughout France, was about 34s per qr.

At Hobart Town, Van Diemen's Land, the prices of wheat, owing to the shortness of the stock, had advanced to 16s per bushel; supplies, however, were expected, and 5,000 bushels had arrived from the East Indies, and arrivals were looked for from the Cape of Good Hope, so that the currency had been reduced to 14s per bushel, and the Governor, on account of the high price and scarcity of wheat, had directed it to be notified, that settlers and others were authorised to issue to their assigned servants, barley-meal, in the proportion of one-third of that article to two-thirds of wheaten meal.

At Montreal and Quebec, the weather had become severe, and the St. Lawrence was frozen over; the shipping season having therefore closed, the trade in grain had become quite nominal; Upper Canada white wheat remained at 4s for 60 lbs; red Lower Canada ditto, 3s 9d per minot; Barley, 2s 10d to 3s; Oats, 1s 4d; Indian Corn,

4s to 5s per minut, which is equal to about a bushel.

In the United States of America, the markets were being scantily supplied with flour and grain, as the inland navigation had been impeded by the freezing of the canals. Flour varied in value from 20s 6d to 22s 6d per barrel, as in quality. Wheat realized from 32s 3d to 38s 10d. Cloverseed was saleable at Baltimore at 23s to 24s 2d per bushel; Philadelphia, 19s 1d to 22s 6d per ditto; New York, 5d to 5½d per lb. It had been reported at New York, that the under-writers, in consequence of the allusions towards France in the President's speech, had refused to insure; this, however, has proved incorrect, the refusal having been only made when vessels were undertaking unusually long voyages.

The Italian markets remained firm, and at Leghorn a speculative demand has arisen for wheat, the stocks being unusually short, not much exceeding 43,000 qrs. Danzig, Hamburg, Stralsund, and other qualities of wheat, had obtained from 26s 6d to 28s 6d and 29s 6d per qr, freight and charges included. English white wheat was worth 34s to 35s; red, 32s 6d. Most of the cargoes of the Northern qualities of corn had arrived from Lisbon, being shipments excluded from that port. The prospects of the young wheat plants had improved, owing to the seasonable rains. All crushing seeds were held on high terms, owing to the failure in the crops, and the advanced rates oil was maintaining.

At St. Petersburg, the government order for closing the Russian ports in the Baltic against the free admission of grain, except at a certain rate of duty, as 3 roubles per tschetwert on wheat and peas, 2 do. on rye and barley, and 1½ do. on oats, had caused no alteration in the currencies. The ports in the Black Sea and Sea of Azoff only were to remain open until the close of the present year. Rye was selling as high as 26s 4d to 27s. Prices were even higher in the interior provinces, and as fresh supplies could not be received from the more distant governments until July or August, and the crops in the Baltic provinces being by no means abundant, it was thought probable that before the next harvest the advance in prices might compel the ports to be re-opened. Morschansky Linseed remained firm at 41s to 43s 10d. At Riga, there has been nothing transpiring in the wheat trade, Courish qualities remaining nominal at 24s to 28s 5d per qr. Courish rye, of 54 to 55lbs, has been contracted for at 22s 5d, with 10 per cent. advance. Courish Barley on the spot, of 48 to 49lbs, has been bought at 18s 6d, and Russian oats, in loco, at 13s 8d per qr. For crushing linseed on contract, to be delivered next spring, 45s 3d is demanded, and for good quality, 44s 3d is offered; a parcel of a very fine description has been bought at 47s 3d, with 10 per cent. advanced, the remaining pay-

ment on delivery in the spring. Hempseed has been purchased at 27s 7d. all cash advanced, and at 28s 7d per qr, with 10 per cent. advanced.

At Danzig, the demand for wheat had rather increased, and the finest white qualities had been sold from 31s to 33s, the finest high-mixed, 28s to 30s; and fine mixed, 25s to 27s per qr, free on board. During the past year, 71,040 qrs of wheat had been exported, of which only 21,410 qrs had been shipped to this country; the supply, therefore, had much exceeded the demand, and left on hand a large stock, amounting to 250,000 qrs, of which, however, only about 3,000 qrs were of the new growth.

At Konigsberg no business was passing in wheat; beans, peas, tares, and linseed, however, were in request; beans, at 22s; peas, 23s to 24s; tares, 20s 6d to 22s; linseed, 45s to 46s. At Memel, the latter article was held at from 45s to 47s. At Stettin prices remained high; wheat, 25s 6d; barley, 16s to 16s 6d; oats, 12s 6d. In the Mecklenburg, Holstein, and Danish ports, no alteration had taken place in prices; but in Mecklenburg, the low price and fine quality of the wheats had created some speculative spirit on the part of merchants, some of whom had purchased stock at 22s to 22s 6d, for quality of 63lbs., and even 64lbs. The demand for barley, generally, was much less animated, but prices remained steady. Mecklenburg qualities, 14s to 14s 3d, weighing 51 to 52lbs.; Holstein, of 42 to 44lbs., 15s to 15s 6d; Danish, ditto., of the same weight, 14s to 14s 6d. At Hamburg, the transactions in grain were to a very limited amount, though all articles maintained their previous currencies. White Cloverseed, owing to the demand which it had experienced for England, was firm at the improved rates; best Silesian, 46s 6d to 47s 6d; Bohemian, 40s to 41s per cwt. In East Friesland, prices of oats remained steady; new brew, of 39lbs., 13s 3d to 13s 9d; old, ditto., of 40 to 41lbs., 18s per qr.; new feed, of 34 to 35lbs., 11s to 11s 6d.

# THE POLITICAL COMPANION

TO

## THE FARMER'S MAGAZINE.

### MESSAGE OF THE PRESIDENT OF THE UNITED STATES.

*Fellow-Citizens of the Senate,  
And House of Representatives:—*

In performing my duty at the opening of your present session it gives me pleasure to congratulate you again upon the prosperous condition of our beloved country. Divine Providence has favoured us with general health, with rich rewards in the fields of agriculture and in every branch of labour, and with peace to cultivate and extend the various resources which employ the virtue and enterprise of our citizens.—Let us trust that, in surveying a scene so flattering to our free institutions, our joint deliberations to preserve them may be crowned with success.

Our foreign relations continue, with but few exceptions, to maintain the favourable aspect which they bore in my last annual message, and promise to extend those advantages which the principles that regulate our intercourse with other nations are so well calculated to secure.

The question of the north-eastern boundary is still pending with Great Britain, and the proposition made in accordance with the resolution of the Senate for the establishment of a line according to the treaty of 1783 has not been accepted by that Government. Believing that every disposition is felt on both sides to adjust this perplexing question to the satisfaction of all the parties interested in it, the hope is yet indulged that it may be effected on the basis of that proposition.

With the Governments of Austria, Russia, Prussia, Holland, Sweden, and Denmark, the best understanding exists. Commerce, with all, is fostered and protected by reciprocal good will, under the sanction of liberal conventional or legal provisions.

In the midst of her internal difficulties the Queen of Spain has ratified the Convention for the payment of the claims of our citizens arising since 1819. It is in the course of execution on her part, and a copy of it is now laid before you for such legislation as may be found necessary to enable those interested to derive the benefits of it.

The treaty of Amity and Commerce between the United States and Belgium, brought to your notice in my last annual Message as sanctioned by the Senate, but the ratifications of which had not been exchanged, owing to a delay in its reception at Brussels, and a subsequent absence of the Belgian Minister of Foreign Affairs, has been, after mature deliberation, finally disavowed by that Government as inconsistent with the powers and instructions given to the Minister who negotiated it. This disavowal was entirely unexpected, as the liberal principles embodied in the Convention, and which form the groundwork of the objections to it, were perfectly satisfactory to the Belgian Representative, and were supposed to be not only within the

powers granted, but expressly conformably to the instructions given to him. An offer not yet accepted, has been made by Belgium to renew negotiations for a Treaty less liberal in its provisions on questions of general maritime law.

Our newly established relation with the Sublime Porte promises to be useful to our commerce, and satisfactory in every respect to this Government. Our first Treaty with the Emperor of Morocco was formed in 1786, and was limited to fifty years. That period has almost expired. I shall take measures to renew it with the greater satisfaction as its stipulations are just and liberal, and have been with mutual fidelity and reciprocal advantage scrupulously fulfilled.

After referring to the intestine divisions of the South American States the President adds:—I confidently hope that the apprehensions entertained that some of the people of these luxuriant regions may be tempted, in a moment of unworthy distrust of their own capacity for the enjoyment of liberty, to commit the too common error of purchasing present repose by bestowing on some favourite leaders the fatal gift of irresponsible power, will not be realized. With all these Governments, and with that of Brazil, no unexpected changes in our relations have occurred during the present year.

It becomes my unpleasant duty to inform you that this pacific and highly gratifying picture of our foreign relations does not include France at this time. It is not possible that any Government and people could be more sincerely desirous of conciliating a just and friendly intercourse with another nation than are those of the United States with their ancient ally and friend. This disposition is founded as well on the most grateful and honourable recollections associated with our struggle for independence, as upon a well grounded conviction that it is consonant with the true policy of both. The people of the United States could not, therefore, see without the deepest regret even a temporary interruption of the friendly relations between the two countries, a regret which would, I am sure, be greatly aggravated if there should turn out to be any reasonable ground for attributing such a result to any act of omission or commission on our part. I derive, therefore, the highest satisfaction from being able to assure you that the whole course of this Government has been characterised by a spirit so conciliatory and forbearing as to make it impossible that our justice and moderation should be questioned, whatever may be the consequence of a longer perseverance on the part of the French Government in her omission to satisfy the conceded claims of our citizens.

The history of the accumulated and unprovoked aggression upon our commerce committed by authority of the existing Governments of France between the years 1800 and 1817 has been rendered too painfully familiar to Americans to make its repetition either necessary or desirable. It will be sufficient here to

remark that there has for many years been scarcely a single Administration of the French Government by whom the justice and legality of the claims of our citizens to indemnity were not, to a very considerable extent, admitted, and yet near a quarter of a century has been wasted in ineffectual negotiations to secure it.

Deeply sensible of the injurious effects resulting from this state of things upon the interests and character of both nations, I regarded it as among my first duties to cause one more effort to be made to satisfy France that a just and liberal settlement of our claims was as well due to her own honour as to their incontestable validity. The negotiation for this purpose was commenced with the late Government of France, and was prosecuted with such success as to leave no reasonable ground to doubt that a settlement of a character quite as liberal as that which was subsequently made would have been effected had not the revolution, by which the negotiation was cut off, taken place. The discussions were resumed with the present Government, and the result showed that we were not wrong in supposing that an event by which the two Governments were made to approach each other so much nearer in their political principles, and by which the motives for the most liberal and friendly intercourse were so greatly multiplied, could exercise no other than a salutary influence upon the negotiation. After the most deliberate and thorough examination of the whole subject, a treaty between the two Governments was concluded and signed at Paris on the 4th July, 1831.

The Treaty was duly ratified in the manner prescribed by the Constitutions of both countries, and the ratification was exchanged at the city of Washington on the 2nd of February, 1832. On account of its commercial stipulations it was in five days thereafter laid before the Congress of the United States, which proceeded to enact such laws favourable to the commerce of France as were necessary to carry it into full execution; and France has from that period to the present been in the unrestricted enjoyment of the valuable privileges that were thus secured to her. The faith of the French nation having been thus solemnly pledged, through its constitutional organ, for the liquidation and ultimate payment of the long-deferred claims of our citizens, as also the adjustment of other points of great and reciprocal benefits to both countries, and the United States having, with a fidelity and promptitude by which their conduct will, I trust, be always characterised, done every thing that was necessary to carry the treaty into full and fair effect on their part, counted with the most perfect confidence on equal fidelity and promptitude on the part of the French Government. In this reasonable expectation we have been, I regret to inform you, wholly disappointed. No legislative provision has been made by France for the execution of the treaty, either as it respects the indemnity to be paid or the commercial benefit to be secured to the United States; and the relations between the United States and that power, in consequence thereof, are placed in a situation threatening to interrupt the good understanding which has so long and so happily existed between the two nations.

Not only has the French Government been thus wanting in the performance of the stipulations it has so solemnly entered into with the United States, but its omissions have been marked by circumstances which would seem to leave us without satisfactory evidences that such performance will certainly take place at a future period. Advice of the exchange of ratifications reached Paris prior to the 8th of April,

1832. The French Chambers were then sitting, and continued in session until the 21st of that month, and although one of the instalments of the indemnity was payable on the 2d of February, 1833, one year after the exchange of ratifications, no application was made to the Chambers for the required appropriation, and in consequence of no appropriation having then been made, the draft of the United States Government for that instalment was dishonoured by the Minister of Finance, and the United States thereby involved in much controversy. The next Session of the Chambers commenced on the 19th of November, 1832, and continued until the 25th of April, 1833. Notwithstanding the omission to pay the first instalment had been made the subject of earnest remonstrance on our part, the treaty with the United States, and a bill making the necessary appropriations to execute it, were not laid before the Chamber of Deputies until the 6th of April, nearly five months after its meeting, and only nineteen days before the close of the session. The bill was read and referred to a committee, but there was no further action upon it. The next session of the Chambers commenced on the 26th of April 1833, and continued until the 26th of June following. A new bill was introduced on the 11th of June, but nothing important was done in relation to it during the session. In the month of April, 1834, nearly three years after the signature of the treaty, the final action of the French Chambers upon the bill to carry the treaty into effect was obtained, and resulted in a refusal of the necessary appropriations. Although the gross amount of the claims of our citizens is probably greater than will be ultimately allowed by the Commissioners, sufficient is nevertheless shown to render it absolutely certain that the indemnity falls far short of the actual amount of our just claims, independently of the question of damages and interest for the detention. That the settlement involved a sacrifice in this respect was well known at the time, a sacrifice which was cheerfully acquiesced in by the different branches of the Federal Government, whose action upon the Treaty was required from a sincere desire to avoid further collision upon this old and disturbing subject, and in the confident expectation that the general relations between the two countries would be improved thereby.

The refusal to vote the appropriation, the news of which was received from our Minister in Paris about the 15th day of May last, might have been considered the final determination of the French Government not to execute the stipulations of the Treaty, and would have justified an immediate communication of the fact to Congress, with a recommendation of such ultimate measures as the interest and honour of the United States might seem to require. But with the news of the refusal of the Chambers to make the appropriation, were conveyed the regrets of the King, and a declaration that a national vessel should be forthwith sent out, with instructions to the French Minister to give the most ample explanations of the past, and the strongest assurances for the future. After a long passage the promised dispatch vessel soon arrived. The pledges given by the French Minister upon receipt of his instructions were, that, as soon after the election of the new Members as the charter would permit, the Legislative Chambers of France should be called together, and the proposition for an appropriation laid before them; and all the constitutional powers of the King and his Cabinet should be exerted to accomplish the object; and that the result should be made known early enough to be communicated to Congress at the commencement of the present session. Relying upon these pledges, and not doubting that the acknow-

ledged justice of our claims, the promised exertions of the King and his Cabinet, and, above all, that sacred regard for the national faith and honour for which the French character has been so distinguished, would secure an early execution of the Treaty in all its parts, I did not deem it necessary to call the attention of Congress to the subject at the last session.

I regret to say that the pledges made through the Minister of France have not been redeemed. The new Chambers met on the 31st of July last, and although the subject of fulfilling treaties was alluded to in the speech from the throne no attempt was made by the King or his Cabinet to procure an appropriation to carry it into execution. The reasons given for this omission, although they might be considered sufficient in an ordinary case, are not consistent with the expectations founded upon the assurances given here, for there is no constitutional obstacle to entering into legislative business at the first meeting of the Chambers. This point, however, might have been overlooked had not the Chambers, instead of being called to meet at so early a day, that the result of their deliberations might be communicated to me before the meeting of Congress, been prorogued to the 29th of the present month, a period so late that their decision can scarcely be known to the present Congress prior to its dissolution. To avoid this delay our Minister in Paris, in virtue of the assurance given by the French Minister in the United States, strongly urged the Convocation of the Chambers at an earlier day, but without success. It is proper to remark, however, that this refusal has been accompanied with the most positive assurances on the part of the Executive Government of France of their intention to press the appropriation at the ensuing Session of the Chambers.

The Executive branch of this Government has, as matters stand, exhausted all the authority upon the subject with which it is invested, and which it had any reason to believe could be beneficially employed.

The idea of acquiescing in the refusal to execute the treaty will not, I am confident, but be for a moment entertained by any branch of this Government; and further negotiation is equally out of the question.

If it shall be the pleasure of Congress to await the further action of the French Chambers, no further consideration of the subject will, at this season, probably be required at your hands. But if, from the original delay in asking for an appropriation, from the refusal of the Chambers to grant it when asked, from the omission to bring the subject before the Chambers at their last Session, from the fact that including the Session there have been five different occasions when the appropriation might have been made, and from the delay in convoking of the Chambers until some weeks after the meeting of Congress, it was well known that a communication of the whole subject to Congress at the last Session was prevented by assurances that it should be disposed of before its present meeting, you should feel yourselves constrained to doubt whether it be the intention of the French Government, in all its branches, to carry the Treaty into effect, and think that such measures as the occasion may be deemed to call for, should be now adopted, the important question arises, what those measures shall be.

Our institutions are essentially pacific. Peace and friendly intercourse with all nations are as much the desire of our Government as they are the interests of our people. But these objects are not to be permanently secured by surrendering the rights of our citizens, or permitting solemn treaties for their indemnity, in cases of flagrant wrong, to be abrogated or

set aside. It is undoubtedly in the power of the Congress seriously to affect the agricultural and manufacturing interests of France, by the passage of laws relating to her trade with the United States. Her products, manufactures, and tonnage, may be subjected to heavy duties in our ports, or all commercial intercourse with her may be suspended. But there are powerful, and, to my mind, conclusive objections to this mode of proceeding. We cannot embarrass or cut off the trade of France without at the same time, in some degree, embarrassing or cutting off our own trade. The injury of such a warfare must fall, though unequally, upon our own citizens, and could not but impair the means of the Government, and weaken that united sentiment in support of the rights and honour of the nation which must now pervade every bosom.

Nor is it impossible that such a course of legislation would introduce once more into our national Councils those disturbing questions in relation to the tariff of duties which have been so recently put to rest. Besides, by every measure adopted by the Government of the United States with the view of injuring France, the clear perception of right which will induce our own people, and the rulers and the people of all other nations, even of France herself, to pronounce our quarrel just, will be obscured, and the support rendered to us in a final resort to more decisive measures will be more limited and equivocal. There is but one point in the controversy, and upon that the whole civilized world must pronounce France to be in the wrong. We insist that she shall pay a sum of money which she has acknowledged to be due; and of the justice of this demand there can be but one opinion among mankind. True policy seems to dictate that the question at issue should be kept thus disencumbered, and that not the slightest pretence should be given to France to persist in her refusal to make payment by any act on our part affecting the interests of her people. The question should be left as it is now, in such an attitude that when France fulfils her treaty stipulations all controversy will be at an end.

It is my conviction that the United States ought to insist on a prompt execution of the treaty, and in case it be refused, or longer delayed, take redress into their own hands. After the delay on the part of France of a quarter of a century in acknowledging these claims by treaty, it is not to be tolerated that another quarter of a century is to be wasted in negotiating about the payment. The laws of nations provided a remedy for such occasions. It is a well settled principle of the international code, that where one nation owes another an unliquidated debt, which it refuses or neglects to pay, the aggrieved party may seize on the property belonging to the other, its citizens or subjects, sufficient to pay the debt, without giving just cause of war. This remedy has been repeatedly resorted to, and recently by France herself towards Portugal, under circumstances less unquestionable.

The time at which resort should be had to this, or any other mode of redress, is a point to be decided by Congress. If an appropriation shall not be made by the French Chambers at their next Session, it may justly be concluded that the Government of France has finally determined to disregard its own solemn undertaking, and refuse to pay an acknowledged debt. In that event, every day's delay on our part will be a stain upon our national honour, as well as a denial of justice to our injured citizens. Prompt measures, when the refusal of France shall be complete, will not only be most honourable and just, but will have the best effect upon our national character.

Since France, in violation of the pledges given

through her Minister here, has delayed her final action so long that her decision will not probably be known in time to be communicated to this Congress, I recommend that a law be passed authorising reprisals upon French property, in case provision shall not be made for the payment of the debt at the approaching session of the French Chambers. Such a measure ought not to be considered by France as a menace. Her pride and power are too well known to expect anything from her fears, and preclude the necessity of a declaration that nothing partaking of the character of intimidation is intended by us. She ought to look upon it as the evidence only of an inflexible determination on the part of the United States to insist on their rights. That Government, by doing only what it has itself acknowledged to be just, will be able to spare the United States the necessity of taking redress into their own hands, and save the property of French citizens from that seizure and sequestration which American citizens so long endured without retaliation or redress. If she should continue to refuse that act of acknowledged justice, and, in violation of the laws of nations, make reprisals on our part the occasion of hostilities against the United States, she would but add violence to injustice, and could not fail to expose herself to the just censure of civilized nations, and the retributive judgments of Heaven.

Collision with France is the more to be regretted on account of the position she occupies in Europe in relation to the liberal institutions. But in maintaining our national right and honour all governments are alike to us. If, by a collision with France, in a case where she is clearly in the wrong, the march of liberal principles shall be impeded, the responsibility for that result, as well as every other, will rest on her own head.

According to the estimate of the Treasury Department the revenue accruing from all sources during the present year will amount to twenty millions six hundred and twenty-four thousand seven hundred and seventeen dollars, which, with the balance remaining in the Treasury on the 1st of January last, of eleven millions seven hundred and two thousand nine hundred and five dollars, produces an aggregate of thirty-two millions three hundred and twenty-seven thousand six hundred and twenty-three dollars. The total expenditure during the year for all objects, including the public debt, is estimated at twenty-five millions five hundred and ninety-one thousand three hundred and ninety dollars, which will leave a balance in the Treasury on the 1st of January, 1835, of six millions seven hundred and thirty-six thousand two hundred and thirty-two dollars.

Thus it appears that after satisfying all those appropriations, and after discharging the last item of our public debt, which will be done on the 1st of Jan. next, there will remain unexpended in the Treasury an effective balance of about four hundred and forty thousand dollars. That such should be the aspect of our finances is highly flattering to the industry and enterprise of our population, and auspicious of the wealth and prosperity which awaits the future cultivation of their growing resources. It is not deemed prudent, however, to recommend any change for the present in our impost rates, the effect of the gradual reductions now in progress in many of them not being sufficiently tested to guide us in determining the precise amount of revenue which they will produce.

Free from public debt, at peace with all the world, and with no complicated interests to consult in our intercourse with foreign powers, the present may be hailed as that epoch in our history the most favour-

able for the settlement of those principles in our domestic policy which shall be best calculated to give stability to our Republic and secure the blessings of freedom to our citizens.

Circumstances make it my duty to call the attention of Congress to the Bank of the United States. Created for the convenience of the Government, that institution has become the scourge of the people. Its interference to postpone the payment of a portion of the national debt that it might retain the public money appropriated for that purpose to strengthen it in a political contest; the extraordinary extension and contraction of its accommodations to the community; its corrupt and partisan loans; its exclusion of the public Directors from a knowledge of its most important proceedings; the unlimited authority conferred on the President to expend its funds in hiring writers, and procuring the execution of printing, and the use made of that authority; the retention of the pension money and books after the selection of new agents; the groundless claim to heavy damages in consequence of the protest of the bill drawn on the French Government—have through various channels been laid before Congress. Immediately after the close of last Session the Bank through its President announced its ability and readiness to abandon the system of unparalleled curtailment and the interruption of domestic exchanges which it had practised upon from August 1, 1833, to June 30, 1834, and to extend its accommodations to the community. The grounds assumed in this annunciation amounted to an acknowledgment that the curtailment in the extent to which it had been carried was not necessary to the safety of the Bank, and had been persisted in merely to induce Congress to grant the prayer of the Bank in its memorial relative to the removal of the deposits, and to give it a new Charter. They were substantially a confession that all the real distresses which individuals and the country had endured for the preceding six or eight months had been needlessly produced by it, with the view of effecting through the sufferings of the people the legislative action of Congress. It is a subject of congratulation that Congress and the country had the virtue and firmness to bear the infliction; that the energies of our people soon found relief from this wanton tyranny in vast importations of the precious metals from almost every part of the world; and at the close of this tremendous effort to controul our Government the Bank found itself powerless and no longer able to loan out its surplus means. The community had learned to manage its affairs without assistance, and trade had already found new auxiliaries; so that on the 1st of October last the extraordinary spectacle was presented of a National Bank, more than one half of whose capital was either lying unproductive in its vaults or in the hands of foreign bankers.

To the needless distress brought on the country during the last Session of Congress has been added the open seizure of the dividends of the public stock to the amount of one hundred and twenty thousand and forty-one dollars, under pretence of paying damages, costs, and interest upon the protested French Bill. This sum constituted a portion of the estimated revenues for the year 1834, upon which the appropriations made by Congress were based. It would as soon have been expected that our collectors would seize on the customs, or the receivers of our land officers on the money arising from the sale of public lands, under pretences of claims against the United States, as that the Bank would have retained the dividends. This measure resorted to by the Bank is disorganizing and revolutionary, and if generally resorted to by private citizens in like cases would fill the land with anarchy and violence.

It seems due to the safety of the public funds remaining in that Bank and the honour of the American people, that measures be taken to separate the Government entirely from an institution so mischievous to the public prosperity, and so regardless of the Constitution and laws. By transferring the public deposits, by appointing other pension agents as far as it had the power, by ordering the discontinuance of the receipt of Bank checks in payment of the public dues after the 1st day of January next, the Executive has exerted all its lawful authority to sever the connections between the Government and this faithless Corporation.

The high-handed career of this institution imposes upon the constitutional functionaries of this Government duties of the gravest and most imperative character, duties which they cannot avoid, and from which I trust there will be no inclination on the part of any of them to shrink. My own sense of them, is most clear, as is also my readiness to discharge those which may rightfully fall on me. To continue any business relations with the Bank of the United States that may be avoided without violation of the national faith, after that institution has set at open defiance the conceded right of the Government to examine its affairs; after it has done all in its power to deride the public authority in other respects, and to bring it into disrepute at home and abroad; after it has attempted to defeat the clear expressed will of the people by turning against them the immense power intrusted to its hands, and by involving a country otherwise peaceful, flourishing, and happy, in dissension, embarrassment, and distress; would make the nation itself a party to the degradation so sedulously prepared for its public agents, and do much to destroy the confidence of mankind in popular governments, and to bring into contempt their authority and efficiency. In guarding against an evil of such magnitude, considerations of temporary convenience should be thrown out of the question, and we should be influenced by such motives only as look to the honour and preservation of the Republican system. Deeply and solemnly impressed with the justice of these views I feel it to be my duty to recommend to you that a law be passed authorising the sale of the public stock; that the provision of the charter requiring the receipt of notes of the Bank in payment of public dues shall, in accordance with the power reserved to Congress in the 14th section of the charter, be suspended until the Bank pays into the Treasury the dividends withheld; and that all laws connecting the Government or its officers with the Bank, directly, or indirectly, be repealed; and that the institution be left hereafter to its own resources and means.

Events have satisfied my mind, and I think the minds of the American people, that the mischief and dangers which flow from a national bank far overbalance all its advantages. The bold effort the present bank has made to controul the Government, the distresses it has wantonly produced, the violence of which it has been the occasion in one of our cities famed for its observance of law and order, are but premonitions of the fate which awaits the American people should they be deluded into a perpetuation of this institution, or the establishment of another like it.

Happily it is already illustrated that the agency of such institution is not necessary to the fiscal operations of the Government. The State banks are found fully adequate to the performance of all services which were required of the Bank of the United States quite as promptly and with the same cheapness. They have maintained themselves, and dis-

charged all these duties while the Bank of the United States was still powerful, and in the field was an open enemy; and it is not possible to conceive that they will find greater difficulties in their operations when that enemy shall cease to exist.

If the several States shall be induced gradually to reform their banking systems, and prohibit the issue of all small notes, we shall in a few years have a currency as sound and as little liable to fluctuations as any other commercial country.

No event has occurred since your last session rendering necessary the movements of the army, with the exception of the expedition of the regiment of dragoons into the territory of the wandering and predatory tribes inhabiting the western frontier, and living adjacent to the Mexican boundary. It became necessary for the peace of the frontiers to check these habitual inroads, and I am happy to inform you that the object has been effected without the commission of any act of hostility.

No important change has, during this season, taken place in the condition of the Indians. Arrangements are in progress for the removal of the Creeks, and will be soon for the removal of the Seminoles. I regret that the Cherokees east of the Mississippi have not yet determined, as a community, to remove.

I refer you to the accompanying report of the Secretary of the Navy, and the documents with it, for a full view of the operations of that important branch of our services during the present year.

When we reflect upon our position in relation to other nations, it must be apparent that, in the event of conflicts with them, we must look chiefly to our navy for the protection of our national rights. The wide sea which separate us from other Governments must of necessity be the theatre on which an enemy will aim to assail us, and unless we are prepared to meet him on this element we cannot be said to possess the power requisite to repel or prevent aggressions. We cannot, therefore, watch with too much attention this arm of our defence, or cherish with too much care the means by which it can possess the necessary efficiency and extension. To this end our policy has been heretofore wisely directed to the constant employment of a force sufficient to guard our commerce, and to the rapid accumulation of the materials which are necessary to repair our vessels, and construct with ease such new ones as may be required in a state of war.

In accordance with this policy, I recommend to your consideration the erection of the additional dry dock described by the Secretary of the navy, and also the construction of the steam batteries to which he has referred, for the purpose of testing their efficacy as auxiliaries to the system of defence now in use.

After noticing the revenues of the Post Office, and some abuses in it, the President recommends, that it be organised with an auditor and treasurer of its own, appointed by the President and Senate, who shall be branches of the Treasury Department.

Your attention is again respectfully invited to the defect which exists in the judicial system of the United States. Whatever may be the difficulty in a proper organization of the judicial system so as to secure its efficiency and uniformity in all parts of the Union, and at the same time to avoid such an increase of judges as would encumber the supreme appellate tribunal, it should not be allowed to weigh against the great injustice which the present operation of the system produces.

I trust that I may be also pardoned for renewing the recommendation I have so often submitted to your attention in regard to the mode of electing the

President and Vice-President of the United States. All the reflection I have been able to bestow upon the subject increases my conviction that the best interests of the country will be promoted by the adoption of some plan which will secure in all contingencies that important right of sovereignty to the direct controul of the people. Could this be attained, and the terms of those officers be limited to a single period of either four or six years, I think our liberties would possess an additional safeguard.

The President, after entering into a long consideration of the question of applying public money to local improvements, approves of its application only on such occasions as these:—Improvements of light-houses, beacons, bouys, public piers, and for the removal of sand bars, sawyers, and other temporary and partial impediments in our navigable rivers and harbours.

He had refused his assent to a bill for improving the Wabash, and thus concludes:—

I sincerely regret that I could not give my assent to the bill entitled "An Act to improve the Navigation of the Wabash River;" but I could not have done so without receding from the ground which I have, upon the fullest consideration, taken upon this subject, and of which Congress has been heretofore apprised, and without throwing the subject again open to abuse, which no good citizen entertaining my opinions could desire.

I rely upon the intelligence and candour of my fellow citizens, in whose liberal indulgence I have already so largely participated, for a correct appreciation of my motives in interposing, as I have done on this and other occasions, checks to a course of legislation which, without in the slightest degree calling in question the motives of others, I consider as sanctioning improper and unconstitutional expenditures of the public treasure.

I am not hostile to internal improvements, and wish to see them extended to every part of the country. But I am fully persuaded if they are not commenced in a proper manner, confined to proper objects, and conducted under an authority generally conceded to be rightful, that a successful prosecution of them cannot be reasonably expected. The attempt will meet with resistance where it might otherwise receive support, and instead of strengthening the bonds of our confederacy it will only multiply and aggravate the causes of disunion.

ANDREW JACKSON.

Dec. 1, 1834.

#### THE MALT TAX.

(From the Herald.)

Without professing to be in possession of Cabinet secrets, our information leads us to believe that the demand for the repeal of the malt tax, which has been responded from one side of the country to the other, has already caused much deliberation in the Ministry; and we hesitate not to say that, unless Sir Robert Peel and his colleagues lay aside all the frivolous objections to the repeal of this tax, which from time to time have been put forth by their predecessors, they will have much miscalculation on the support they expect to receive from the country gentlemen of England. We know that one of the present objections raised against the removal of this heavy burden from the agriculturists and the industrious poor, is the difficulty of providing for the deficiency of four millions and a half which this tax produces; but this was one of the silly subterfuges by which the Whig Administration succeeded in again saddling the country with this crippling burden, after a vote of the House of Commons had expunged it from the Budget.

But then we had a blundering Chancellor of the Exchequer, who led a servile House of Commons, whenever an attempt was made to move the reduction of the people's burdens, by talking of the breach of faith with the public creditor, or the necessity of imposing other taxes instead, whilst the reduction of the Four per Cent. Annuities into a Three-and-a-Half per Cent. Annuity was held to be no breach at all. But surely the present Chancellor of the Exchequer does not intend to follow the weak example of his predecessor; neither will the new House of Commons do their duty to their constituents if they tamely permit him. The present administration must put their shoulders to the wheel—they must not flinch from the reduction of any imposition which presses upon the industry of the people. Let them in a manly and straightforward manner begin with the malt tax; it will be better to volunteer it when it will be received with gratitude, than to have it wrested from them by a determined House of Commons, which will certainly be the result; whilst their spontaneous concession of the boon will secure to them the lasting confidence of the country. The only objections which present themselves to the present Cabinet are the means by which this desirable consummation is to be brought about. To impose other taxes in lieu would only be to shift the burden from the shoulders of one party to another. Let Ministers, then, meet the wishes of the country by raising a loan of two millions and a half; this, with the boasted surplus of two millions, coupled with a just economy in the administration of the finances, will meet the reduction of the four millions and a half caused by the repeal of the malt tax; and the increased capabilities of consumption thus given to 6,500,000 of people engaged in agriculture will soon enable the Government to pay off the loan. But an objection may be started as to the principle of raising a loan for two millions and a half during a time of peace, and this, we believe, is one of the difficulties likely to be mooted in the Cabinet.

We would, however, appeal to the common sense of the country, and put it fearlessly to them, whether it is not equally politic, and by far more noble, to raise a trifling loan during a time of peace, in order to remove an odious and onerous tax, and thus to promote the profitable industry and consuming power of a large portion of the empire, as it would be to raise twenty times the sum yearly, to carry on a war for 22 years, which has been done, the justice of which has often been called in question by the ablest politicians?

#### THE MALT TAX.

(From the Courier.)

The election for Buckinghamshire has terminated in the return of three members who are denominated Conservatives. We will not dispute the title, but we beg our readers to remember that the chief rallying cry under which they have been returned, was the Repeal of the Malt Tax. The Marquis of Chandos, to whose influence and whose speeches, at meetings of the agriculturists, the success of the party is ascribed, refused to join the present Ministry, because Sir Robert Peel, who voted in the last session for the preservation of the Malt Tax, objected to pledge himself to repeal it. The burthen of the harangues of the noble Marquis was the distressed state of the agriculturists, and the necessity to give them relief; that pecuniary topic kindled the zeal of his supporters; and his return, therefore, and that of his friends, is due to a wish to have the Malt Tax repealed, to which Sir Robert Peel is as much opposed as were the late Ministers. We cannot consider this suc-

cess, therefore, as a triumph for Sir Robert; it is simply the expressed determination of the farmers of Buckinghamshire, who are, we believe, in a more distressed state than any other agriculturists in England, to have the Malt Tax repealed.

But if this success be not a triumph for Sir Robert Peel, it is still less a triumph for the Conservative party. That party is determined to resist the pressure from without; this is the success of that pressure in, for the Conservatives, a most pernicious direction. It says, in plain language, that the agriculturists will no longer bear what they conceive, erroneously, in our opinion, to be an unfair share of the national burdens, and which the Legislature has hitherto considered to be only a fair share. It says, "we must have relief, though the national creditor suffer, or though a tax be laid on property." It propounds emphatically the principle of a scramble or contest for a diminution of taxation, regardless of the public service and of national faith. In fact, it is a triumph of the disorganizing or destructive principle, far more dangerous to the stability of our institutions than the success of Mr. Grote and Mr. Pattison, or even than the success of Mr. Wakley.

Suppose the agriculturists of Buckingham should succeed, there would be so much cut off from the taxes, for it will hardly be expected that a Ministry which professes reform and economy, will be able to impose any other tax in place of the Malt Duty. So much cut off from the taxes would be so much cut off from the power and means of Government, and so much allowed to remain in the pockets of the industrious people. Now, it was correctly observed in the *Chronicle* a few days ago, that the diminution of taxation which the Duke of Wellington blindly, for his present purposes and for the interest of his party, sanctioned prior to 1830, was one of the main causes of the relative strength of the people in that year, and their triumph. Every diminution of taxation, in fact, weakens the Government and strengthens the people; and, according to the Tories, and certainly while they are in office, the people and Government are antagonist powers. The success of the Buckingham farmers, therefore, though it be so much admired by the foolish old-womanly Tory prints, is, in fact, the damage of their masters. It is the success of the principle of reduction of taxation which strikes at the root of Tory power.

But those who are acquainted with the operation of the malt tax, and the causes of the farmers' distress, will not for a moment believe that its abolition will give them any relief. The farmers will be assuredly disappointed. What then will be the consequences? The impost which most immediately and severely presses on them is tithes. Disappointed as to the malt tax, they will insist on relief, using the pressure from without, by the commutation or abolition of tithes. They desire that already. There is no class of people who come so much into contact with the clerical tithe owners, and who are so earnest to demand that the tithe source of the wealth of the Church be stopped, as the farmers. Their triumph in Buckinghamshire, therefore, is the triumph of an interest directly opposed to that of the tithe owners; and although probably many of the clergy have contributed to it, we shall be slow to credit that their success will strengthen the Tory interest. As the Duke of Wellington, by first increasing the people's power, and then provoking them to use it, contributed, however much against his wishes, to ensure the triumph of reform, so the Conservatives, who now boast of success, are contributing, by exciting

the farmers to demand relief at the hands of the Legislature, to the effectual destruction of all those institutions which press upon agriculture.

It is nothing new, we presume, in the history of politicians, that they very frequently promote measures most injurious to themselves, and the successful politicians of Buckinghamshire are not an exception to the rule. Wishing to have the malt tax repealed, they are rejoicing that the Whigs are turned out, and Sir Robert Peel and Mr. Baring have got in, though the one opposed the repeal of the malt tax, and the other is a great stickler for a surplus revenue, to insure the fullest price for the Three per Cents. The farmers of Buckinghamshire may learn, however, from Mr. Gordon's speech, delivered the other day at Cricklade, that if the Whigs had remained in power the malt tax would have been reduced. We must quote the passage at length for the special edification of the electors of Buckinghamshire, who are told, by those whom they trust, that they best serve their own interest by opposing the Whigs. Mr. Gordon said—

"You neglected to petition, but I did not neglect to take every opportunity of enforcing the subject on the consideration of the Government; in fact, I so bothered and teased them that that gave me the nickname of the Malt Tax, and whenever I entered in their presence they would say, 'Here comes the Malt Tax.' Nevertheless I did not relax in my importunities; they could not, however, spare it last session, and I was forced to vote with the Government against the repeal, contrary to my own opinion, or withdraw from the Government, and thereby lose all power and chance of attaining my object at some more opportune time. As soon as Lord Melbourne became Prime Minister, I told him flat and plain that he must take off the Malt Tax; for his Lordship is a personal friend of mine and an old school-fellow, and therefore I could urge the point with greater chance of success, and at length I attained my desire; and it is well known in a certain quarter that a variety of returns were made to Government from sources best calculated to furnish information, and the plan for the total repeal of the Malt Tax was, I am proud to say, entrusted to my management, and every thing was in preparation for the next session. I don't mean to say that we should have got rid of the whole of the duty, for the plan was to have imposed an annual licence on all maltsters according to the capability of the cistern, which it is calculated would have realized about a million and a half of money; so that in point of fact, upwards of three millions out of four and a half would have been wiped away, but every man would have been able to have made his own malt."

By this illustration of the present blindness of the Buckinghamshire politicians and the past blindness of the Duke of Wellington, we are confirmed in our opinion that those who incite the farmers of Buckinghamshire to believe that the Legislature can and ought to relieve them, are assuredly preparing the way for the extinction of tithes, and of the very essence of all Tory government.

#### THE MINISTERS AND THE MALT TAX.

(From the *Mark Lane Express*.)

It will be in the recollection of our readers that we positively stated that the Marquis of Chandos had refused to take office in the present administration, because Sir Robert Peel had refused to take off the Malt Tax. We

subjoin the declaration of the Noble Marquis himself, made the other day at the nomination of members for the county of Buckingham, confirmatory of our statement. This comes just in time before the County Elections to apprise the farmers what better prospect of relief from that odious tax they have at the hands of the present Ministers than from the last.

The Marquis of CHANDOS addressed the meeting, but the clamour which prevailed almost rendered him inaudible. He observed that he had met with an accident that prevented him speaking from the table. He claimed a hearing from all parties; for himself, especially, as he should not trespass long on their time, his principles being well-known and he having no new professions to make. During the sixteen years that he had been in Parliament he had done his utmost to serve his country faithfully. Allusion had been made by Mr. Ricketts to the fact of his not being a Minister of the Crown, and that therefore the course Government would adopt with respect to agriculture would be inimical to that interest. At that moment, he (Lord Chandos), stood forward the same humble advocate of the farmer he had ever been. It was true that he had received the commands of his Sovereign to enter his council, but on finding that the Prime Minister entertained a different opinion from his own on the subject of the malt-tax, he immediately declined, at the same time stating to the Minister his determination to press the repeal of that tax. The noble Marquis sat down amidst an equally divided number of hisses, groans, and plaudits. There was an individual cry of "One cheer more," but that cry was not responded to by more than a dozen of the electors. The attempt was made a second time, with similarly painful results.

#### IMPORTANT ANNOUNCEMENT.

CONVERSION OF THE STANDARD NEWSPAPER TO THE CAUSE OF REFORM.

#### REFORM IN THE CHURCH.

(From the Standard.)

The Reform Bill has been productive of this good consequence, which, rightly employed, may go a great way in neutralizing its mischievous effects. It has extinguished, for a time, all fear of making a beginning of change. To our institutions it has been what the fire of London was to our metropolis, the means of making room for great improvement; and though no good and prudent man, certainly, would either burn a city or destroy a constitution, in order to improve its model, or correct its details—virtue and prudence will at once suggest that, in times like 1667 or 1835, it is a high duty to employ, for the best, the opportunity created, even with wicked designs.

Perfect in all other respects, the constitution of the Church of England wanted, as all human works must want, a principle of perpetual adaptation. "Time," says Lord Bacon, in a passage much more frequently quoted than understood, "is the great innovator." Time constantly changes the local distribution of the people, the distribution and value of what the lawyers call *real property*, the physical habits of society, the aptitude and inaptitude for instruction, and many other of the *accidents* of social life essentially connected with the relations of a clergy and a nation. Now, to meet these changes, so as to improve the efficiency of the Church, and to extend its just spiritual influence, must be the dearest object of every true Churchman; and this, we are confi-

dent, is the object of Sir R. Peel, as it was the object of Mr. Spencer Perceval. The reforms in contemplation are not, we repeat it, directed to pleasing the enemies of the Church, but to the extension of its just influence, by extending religious instruction to all, and thus rendering more warm the attachment and increasing the number of its friends. May we not, then, confidently rely upon the clergy and the laity of the Church of England to lend their cordial and zealous co-operation to their friends now in power, in effecting such reforms? It is of great importance that all Churchmen, of all ranks and denominations, do lend this cordial and zealous aid; because such an opportunity of strengthening the Establishment by the fairest and most effectual means, can scarcely again offer in our time: and because, without some such reinforcement of its foundations, as can be derived from an increase of moral attachment to it, and of its spiritual influence, the temporal establishment may fall.

#### LORD STANLEY AND THE MINISTRY.

(From the Herald.)

Lord Stanley's address to his constituents, the electors of the northern division of Lancashire, is a document which cannot fail at this moment to make a powerful impression both upon the country at large and the new Ministers in particular. The latter, we apprehend, must feel not a little awkward under the reason at length avowed by Lord Stanley for not accepting the invitation of Sir Robert Peel, viz., "Because he had no public grounds for confidence that they would boldly and strenuously act upon those principles of reform which he believed to be essential to the national welfare;" while, on the other hand, they may derive some consolation from the noble lord's subsequent assurance, that "should he find that the King's Government, however composed, gives full and free scope to the principles to which every day's experience serves but to confirm his attachment, he shall give them his cordial aid toward carrying them into effect." Did the country at large require any proof of Lord Stanley being one of the most enlightened and promising men of the present age, the address in question furnishes a striking corroboration of it. There is a strain of manly, straightforward openness about this short address which we apprehend will come home to the general taste and feeling. After having, as above, announced his undeviating attachment to those principles of reform upon which he had joined, and afterwards abandoned, Earl Grey's Government, Lord Stanley, in his address, goes on to say, "Should I find them (the Ministers) rashly endangering the institutions of the country, I shall labour earnestly to protect those institutions; should I find them slow to remedy acknowledged grievances, or madly resisting the rational desire for temperate improvement, my voice will be but one among the vast majority of my countrymen who will compel them to advance in the steady progress of unflinching, but constitutional reform."

It would be difficult, we apprehend, for any man justly alive to the spirit of the age, and to the better part of public opinion, to frame just now a political creed for a Statesman upon sounder views and materials than those here set forth. That they are in accordance with our own, our readers have not to learn. We anxiously hope that they will not be lost upon the King's Ministers, who, if they wish, as the Ministers of a popular Government ever must do, "to catch the breeze and prosper

by the gale," will do well to adopt what may be wanting among them of the spirit thus announced by a man no way inferior to any of them in political sagacity and foresight. It is Lord Stanley's good fortune, though young, to have an old head upon his shoulders. He brings into public life the result of a knowledge and experience which the much longer lives of other men have failed to imbue them with. It is in this spirit, and in this spirit alone—the spirit of Conservative reform—in which any Ministry can hope to govern the country with success, and to save the vessel of the State from those fearful breakers which present themselves in any deviation from that course.

### THE MINISTRY.

(From the Chronicle.)

On all hands it seems to be now admitted, that the present contemptible Cabinet cannot possibly exist a week after the meeting of Parliament. The threat of dissolving Parliament again and again till a Tory majority can be obtained, excites only derision. They little know the character of the people of this country, who think that they can cram down their throats a Ministry, the scorn of the respectable part of the nation, by means of menace and intimidation. The Tories are utterly ignorant of the character of the people of this country. They constantly mistake the calmness which confidence in their power gives them, for a confession of defeat and submission. The Duke of Wellington conceived, that because he was suffered to be dictator for nearly a month, he had become the favourite of the nation; and Sir Robert Peel boasted at the Mansion-house, that agitation was now at an end, and that a Tory millenium was at hand. They now find, to their cost, that the people were too wise to foment disorders, from which they themselves must have been the principal sufferers, when they possessed the means of driving the Tories from power by the calm exercise of their constitutional privileges. As to the threat of setting a majority of the Commons at defiance, and dissolving again and again, this somewhat exceeds the measure of Tory courage. There are ways to bring them to their senses, as was well observed by Sir John Campbell, at Edinburgh. Alluding to the farce of *High Life Below Stairs*, where the servants of the Duke and Sir Harry represent the two Houses of Parliament, the Duke of course, contending for the peerage, and dwelling on their dignity, while Sir Harry asks—"Where would your dignity be if we withheld the supplies?" Sir John observes, "Should Ministers remain in office after a vote of the representatives of the people shall tell them that they do not enjoy the confidence of the country, then I say the supplies ought to be withheld (*immense cheering*). There is our remedy, and I rather think a very effectual one. That is the distinction between the two Houses of Parliament."

Let us only suppose the Tories mad enough to advise the King to dissolve the next Parliament after a vote of want of confidence in them—do they suppose that the country would not from one end to the other be filled with indignation at the reckless disregard of the welfare of the industrious classes evinced by such a proceeding? Do they suppose that the majority against them would not be increased rather than diminished in a new Parliament? In the meantime, the engagements of the country must be met, and there would be no means at the disposal of Ministers. But this is not

all. Would the Ministers who so far misconducted themselves be suffered to escape with impunity? Most assuredly not. The Commons of England would soon show them the difference between an absolute and a constitutional monarchy. No, no;—the Tories are not quite mad enough to push their experiments on the patience of the nation so far as they boast they will in their moments of excitement. They will take their departure from office quietly enough; and they are quite aware that their days are already numbered.

### THE ELECTIONS.

(From the Standard.)

People of England look to this! Above all, shopkeepers of England look to this! You stand upon the brink of anarchy and ruin! We know what the French Revolution did to a whole people; but we know, also, that the shopkeeper class, who were the authors of that Revolution, were the most grievous sufferers by it. The clergy, even the nobility, left some remnant. The small landed gentry scarcely suffered, except where they took a violent part in politics. The great capitalists, the *Millionaires*, were even gainers; but the shopkeeper class, and the tradesman class, were wholly swept away, until the name of "shopkeeper" became a name of contempt and reproach. It was an instructive beginning of the Revolution in France, and its first victim was one of that shopkeeper and tradesman class whose conduct had produced it. He was a baker, hanged by the summary jurisdiction of the reforming people for the crime of incivism, the crime of asking from a street ruffian the price of goods snatched from his shop. For this the French reforming baker was hanged at his own door; and to mark the peculiar horror with which his offence was regarded by his brother reformers, his head was severed from his body! his cold lips pressed upon the lips of his wife, who with difficulty escaped capital punishment as the accomplice of his crime,—and the bloody head was borne in triumph to the Hall of the National Assembly, the French Reform Parliament!! This was the beginning of the sufferings of the shopkeeper and tradesman class in France, from the consequence of this their own work! Where did these sufferings end? Whose bones are bleaching in the fields of Belgium and Holland, along the track of 1500 miles to Moscow, in Spain, in Portugal, in Italy, in Poland, in Austria, in Bavaria, in Bohemia, upon the mountains of Switzerland, and the sands of Egypt! The bones of the tradesmen and shopkeepers of France! The cultivators of the soil were too necessary to the national existence, to be squandered in the game of ambition. But when wealth, and confidence, and trade with them, were banished by the Revolution, the tradesman and the shopkeeper became useless incumbrances; and they were scattered over the fields of Europe and of Africa to deposit in every soil the memorials of successful liberalism!!

Tradesmen and shopkeepers of England look to this! If you have wives and children look to them. Remember the fate of the tradesmen and shopkeepers of France; and then, if you please, go and give your vote for the revolutionist, and every one is such who now calls himself a Reformer in the slang of the hustings.

Wives and children of tradesmen and shopkeepers, may the God of Mercy direct those to whom he has committed your temporal destiny, to

be wise by experience. But do you, at least, your parts to avert scenes like those, which, within less than 40 years, have passed within a few miles of your own coast. Remonstrate, supplicate. Ask, will the cry of "Reform," and "No Tories" give us bread, employment, security, and peace? Will it not rather plunge us in blood, want, and ruin! When you have destroyed your employers, broken down the laws, banished the wealth and industry of the kingdom—renounced your Church—to whom can you confidently appeal on earth for relief?—to whom in Heaven for forgiveness? Does not the present revolutionary movement carry a curse in its forehead? Was any good or happy work ever begun by a declaration of hostility, or a profession of indifference to the church of God?

### THE IRISH CHURCH.

(From the Courier.)

If we were anxious for the complete triumph of the Catholic faith in Ireland, we should strenuously approve the policy of leaving the Established Church and the Catholic priests exactly as we now find them, being well convinced that the same system which has multiplied the Catholic population *ten fold*, while the Protestant has remained about stationary, must be the most favourable to the former, and the most injurious to the latter that it is possible to devise. But we deprecate any such results; and, above all, we deprecate the dismemberment of the Empire. And hence it is that we are most anxious that the Catholic Clergy should be conciliated; that they should be detached from the party of the agitators, and attached to the party of England and the English connexion; and that, consequently, they should no longer be treated by Government with neglect, contempt, or cold civility. Such being our views, we should act a dishonest part, if we contributed to spread the idea that any reform of the Irish Church, however searching, or any application of its revenues to ecclesiastical purposes, or Protestant purposes, embracing that of education, would be enough to introduce tranquillity into Ireland. We must have all this, but, to make it of the least use, we must have more. And we hesitate not to say that no Government, whether it be headed by Sir Robert Peel or Lord Grey, is adequate to the exigencies of the present crisis, or that it ought to receive the public confidence and support, unless it will boldly undertake to do justice to the Catholic Clergy of Ireland, by securing to them a moderate but adequate public provision. We have had enough of the miserable but expensive and bloody quackery of coercive laws, jibbets, racks, and bayonets, and of a State Church opposed to the religion, and detested by the mass of the people. It is high time that now, at the eleventh hour, an opposite policy were adopted. And if the British nation have neither magnanimity, sense, nor justice enough to make them treat Ireland as she ought to be treated, they may depend upon it that their oppression and misgovernment will have its day; and that the English Church in Ireland, and the English connection with that country, are not destined long to survive.

### TRIENNIAL PARLIAMENTS, AND VOTE BY BALLOT.

(From the Sun.)

There is a point of much importance to which we earnestly desire to direct the attention of

electors. In the approaching contest it is not improbable that the eagerness of zeal for *men* may obscure the crying necessity of certain *measures*. Triennial Parliaments and Vote by Ballot must not be forgotten, and every Reform Candidate should be urged to speak out honestly and unequivocally upon this subject. It is possible that no caprice, miscounsel, or cogeny of reason may render necessary the exercise of the Royal Prerogative for seven years to come—too long a time by a great deal for the people to remain unappealed to. Now, in the present altered state of society, and the changed condition of the spirit of the times, Septennial Parliaments are far and away too extensive a cycle of time to be permitted for Legislative gambols; seven years, it must be borne in mind, constitute the tenth part of a whole generation, and in the mighty advances which all the sciences are now making, it is not at all improbable that certain discoveries in the science of Political Economy may render necessary a more frequent reference to the sentiments of the people, to enable Representatives to understand with clearness and precision the tendency of their wants under new or altered conditions of moral being. It by no means follows that if a change comes over the spirit of a Constituency, a corresponding change shall take place in that of the Representative whom they chose some years ago. Man, as he individually grows in age, becomes prone to a rather obstinate adherence to the doctrines he espoused in his earlier days: a people do not make these hasty strides towards senescence. Three score years and ten are the allotted period of the life of man; the age of the world is supposed to be now approaching to three score centuries and a half; yet only at this day begins the light of reason to glimmer forth on the correct government of civilization. Hitherto men seem to have been governed chiefly as regarded their physical being; the epoch has at length arrived when legislation must be directed to the government of mind. For this great reason the law-givers of our present choice must be prepared to move with the same celerity of progress as marks the advances of moral society; and that they may not lie too long unwisely fallow, their periodical endurance must be abridged.

There can be no harm in this, as we showed in a recent number. A good steward becomes rarely a cast-away; his providence and honesty are qualities too valuable to be scurvily entreated by his employer. His constant preparation, moreover, to expose his accounts, as it is one of the surest tests of his probity, so does it conciliate the confidence and subdue the suspicions of his lord.

It will be a wise precaution, therefore, in the electors to make known their wishes upon the subject we have suggested. Triennial Parliaments, and Vote by Ballot (which mode of voting, perhaps, may not be required when the people shall have been a little better accustomed to the exercise of their independence than they have heretofore been,) are measures of instant importance to be secured to them: the one ensures the caution of the Elected, the other the safety of the Electors!

## ERRATUM.

By an egregious error of the Press, the word "Metropolitan," in the description of the Plate, on the first page, has been substituted for "Neapolitan."

pressed state of the Agricultural interest. My eye inadvertently glanced down to two columns, which the Address occupied in the "Times," with the hope of being arrested by the mention of the Malt-Tax,—that odious and demoralizing impost, with its concomitant evil, the Beer and Hops—having done more injury to moral society than it is possible to be imagined; except by those who, from situation and occupation, have had both special opportunity and interest to observe and feel on this subject. I fear, that it is not Sir Robert Peel's intention to relieve us from this Tax, from the circumstance of his not having mentioned it in his address, combined with the fact of the Marquis of Chandos declining to join the Ministry.

As regards the wisdom of the Tax itself, as relates to the expense of the collection, in respect to the amount levied, &c., I must refer your readers to a very clever paper on the subject contained in your last month's Magazine, which has afforded me both amusement and instruction, and confine myself at present to its destructive operation, to the comforts and morals of the Agricultural labourers.

Some persons condemn the Malt Tax, and at the same time advocate the system of beer shops, while others condemn the beer shops and advocate, for the sake of expediency they say, the Malt Tax. Now, in this conduct, there is an obvious inconsistency, because the one evil occasions the other. It is held by some that the new beer bill destroys the odious monopoly the large brewers formerly enjoyed, and that the trade being thrown open more persons are enabled to partake of the profits of that trade. Now does not the practical effect of the bill itself contradict at once this specious reasoning? Has one small brewery in twenty, which have been established under the new beer act, succeeded in the undertaking? Is it

this effect of itself, and which has been consummated under the new beer bill.

It is a national feeling, that a moderate quantity of beer is requisite for the support of a working man; and if there be in the community a few persons, and taking apart the Irish landlords, with Mr. O'Connell at their head, who are opposed to poor laws in Ireland. I doubt that any such would be found, who may deny that beer is a necessary of life to the labourer; let such persons, strong and healthy as they may be, engage for one week in the turning of a dung mix, the throwing of a ditch, or the filling of the manure cart, and I will ensure by Saturday night that they will be complete converts to the national feeling; but let them remember even then they have not partaken of the more laborious parts of the agricultural labourer's avocations; oh, no, there is threshing of corn, sowing of clover and grass, and the harvest work, which commences soon after four in the morning, and lasts until dark; all this is hard work, indeed, employed in these matters. Oh, how the philosophers would pray for a draught of beer, and when nearly famished with thirst, to be told that water was the only beverage their wages would admit of, beer being beyond their means on account of the Malt Tax, how they would rave at the Malt Tax and its inquisitorial effects. Well, then, beer being admitted to be a necessary of life to the laborious classes, in their work, to produce luxuries for us, how, may I be allowed to ask, has the government of this country, for many years past, dealt with this necessary to the comforts of the poor? Why, by putting a prohibitory tax on its chief ingredient; for it is obvious with the price of labour at 9s per week, and the price of malt at 8s. per bushel, that it is a prohibitory price; still beer remains a necessary of life, and

## THE PLATE.

The subject of the Plate is three twenty-six weeks' old Metropolitan and Chinese Pigs, belonging to the Earl of Harborough, which obtained the first prize of ten sovereigns at the last Smithfield Show. They were bred by his Lordship at Stapleford Park, Leicestershire; fed on barley, wheat-flour, and skim-milk. A silver medal was also awarded to his Lordship as the breeder.

## MALT TAX AND BEER SHOPS.

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

SIR—As a farmer I read with some anxiety Sir Robert Peel's address to the Electors of Tamworth, because I fully expected to see some allusion made by the Right Hon. Baronet to the present depressed state of the Agricultural interest. My eye inadvertently glanced down to two columns, which the Address occupied in the "Times," with the hope of being arrested by the mention of the Malt-Tax,—that odious and demoralizing impost, with its concomitant evil, the Beer and Hops—having done more injury to moral society than it is possible to be imagined; except by those who, from situation and occupation, have had both special opportunity and interest to observe and feel on this subject. I fear, that it is not Sir Robert Peel's intention to relieve us from this Tax, from the circumstance of his not having mentioned it in his address, combined with the fact of the Marquis of Chandos declining to join the Ministry.

As regards the wisdom of the Tax itself, as relates to the expense of the collection, in respect to the amount levied, &c., I must refer your readers to a very clever paper on the subject contained in your last month's Magazine, which has afforded me both amusement and instruction, and confine myself at present to its destructive operation, to the comforts and morals of the Agricultural labourers.

Some persons condemn the Malt Tax, and at the same time advocate the system of beer shops, while others condemn the beer shops and advocate, for the sake of expediency they say, the Malt Tax. Now, in this conduct, there is an obvious inconsistency, because the one evil occasions the other. It is held by some that the new beer bill destroys the odious monopoly the large brewers formerly enjoyed, and that the trade being thrown open more persons are enabled to partake of the profits of that trade. Now does not the practical effect of the bill itself contradict at once this specious reasoning? Has one small brewery in twenty, which have been established under the new beer act, succeeded in the undertaking? Is it

not notorious that the large brewers, those who enjoyed the old monopoly, have increased their trade in an extraordinary degree, to the ruin of their new competitors? and for this reason, that they, the large brewers, can afford, from the extent of their business and from the superior accommodation of their establishments, brew both a better and cheaper beverage than the small brewer, who has but an inconsiderable trade and very little convenience for his operations, consequently the original intention of the beer bill, to destroy a monopoly, has been signally defeated; but the object of its being an accession to the revenue has exceeded, I believe, the calculations of the originators of the measure. But can the fact of an increase of revenue from this source be matter of congratulation to any but a statesman? And does not every wise and thinking man of the community deprecate the raising of revenue by the sacrifice of the morals of the people? Is it not in truth mortgaging the best security of the state to present necessity, and can it be doubted by any but that the Malt Tax has for years gradually had this effect of itself, and which has been consummated under the new beer bill.

It is a national feeling, that a moderate quantity of beer is requisite for the support of a working man; and if there be in the community a few persons, and taking apart the Irish landlords, with Mr. O'Connell at their head, who are opposed to poor laws in Ireland. I doubt that any such would be found, who may deny that beer is a necessary of life to the labourer; let such persons, strong and healthy as they may be, engage for one week in the turning of a dung mix, the throwing of a ditch, or the filling of the manure cart, and I will ensure by Saturday night that they will be complete converts to the national feeling; but let them remember even then they have not partaken of the more laborious parts of the agricultural labourer's avocations; oh, no, there is threshing of corn, sowing of clover and grass, and the harvest work, which commences soon after four in the morning, and lasts until dark; all this is hard work, indeed, employed in these matters. Oh, how the philosophers would pray for a draught of beer, and when nearly famished with thirst, to be told that water was the only beverage their wages would admit of, beer being beyond their means on account of the Malt Tax, how they would rave at the Malt Tax and its inquisitorial effects. Well, then, beer being admitted to be a necessary of life to the laborious classes, in their work, to produce luxuries for us, how, may I be allowed to ask, has the government of this country, for many years past, dealt with this necessary to the comforts of the poor? Why, by putting a prohibitory tax on its chief ingredient; for it is obvious with the price of labour at 9s per week, and the price of malt at 8s. per bushel, that it is a prohibitory price; still beer remains a necessary of life, and

in the perversion of this necessary to a riotous luxury, the supporters of the Malt Tax are especially answerable.

Before the introduction of the Malt Tax the labourer regularly brewed his own beer, and abstemiously partook of it, because beer *then* was unconnected with the pipe and tobacco, the cribbage board and cards,—the fawning and dangerous landlord,—the merry and riotous associates,—*now* a pint of beer is synonymous with all these evils and corruptions. The working man cannot brew his own beer. He must slake his thirst, and he enters the den where it is provided; there the temptation is irresistible; there he spends the money which should be a provision for his family; there he sacrifices the hours of labour of that day to *beer and tobacco*, and the effect of this excess renders him unfit for his occupation on the following day. It is unnecessary to enlarge on the distress, the immense distress, occasioned to senseless individuals by this terrible state of things, brought about and still supported by the legislature of this country. Let me not be misunderstood, it is the TEMPTATION which I mean was created, and is still supported by the government. It is questioned by some if the evil has increased under the present system of beer shops. Why the *increase of temptation*, occasioned by the increased number of houses where "beer is sold," and also the improved quality of the beer at once solves the doubt, and, although it may appear anomalous to quarrel with the last named circumstance, the improvement of the beer, still under the present state of things, I hold it to be a great misfortune that the quality of the beer sold by retail is improved,—a misfortune equal in the exact degree to the blessing, the advantage such an improvement in the beverage would be, provided it was made at home, where it would be moderately used.

I have heard the evil of gin shops compared to the evils of beer shops, and indeed I have often heard the former denounced as the most injurious to society. The evil occasioned individually to the unhappy votary of either, and to their immediate families, may, I admit, be about equal; but that the evils arising from beer shops extend through the victims of these establishments more injuriously to the community generally, than those which arise from the "other hell" the gin shops, everyday experience fully illustrates. I have been in gin shops in the metropolis. I have there seen the feeble enervated self-destroyer, totter from the entrance to the counter on which he sought to lean for support, and demand the glass of gin which was taken and consumed with palsied hand and lip, and then immediately retire to make room for twenty other like instances of human depravity and vice, and numberless others not yet matured in the devoted habit which leads to certain destruction and disease. This sad scene brought to my mind the starving children and unfurnished comfortless dwellings all to be attributed to what I had just witnessed. I confess on the impulse of the moment I exclaimed—the gin shops are the pest of society; they are worse in their effects than the beer shops; but subsequent reflection has satisfied me that gin shops are the least evil of the two. This may be thought impossible by persons living in towns who do not, and who cannot, know the horrid effects arising from beer shops—a few of which I will endeavour to explain. The first danger which exists in the one and not in the other is, evil counsel, for seldom does the beer shop frequenter, like the dram-drinker, take his

pint of beer at a draught and be off; no, if it be cold weather, the comfortable *settle* which incircles the good fire and the merry companions who occupy the *settle*—enjoying themselves with their beer and tobacco, ensure his loiter for a time; and at the end of half an hour they reckon him one of the company for the night; and on the other hand if it be fine warm weather he sees his companions in the "Alley," for the window of the kitchen usually is managed to look into the garden which is metamorphosed into a four corner yard—a nine-pin green—a space for pitch and hustle—a ring for marbles and new named the "Alley," surrounded with elbow seats, chairs and stools with one or two "shady bowers." He promises himself he will only look at them for five minutes while he drinks his pint of beer; he *will not* stop longer. How this promise made to themselves by half the beer shop frequenters when they first enter is kept, is best answered by the peals of clamorous delight which on a summer's evening are heard to arise from these places. When the fumes of the beer and tobacco have alike destroyed the discretion and temper of the party, a quarrel and fight among themselves often occurs, and still more often the unseasonable and senseless abuse of their neighbours, the head of the parish, the clergyman, the squire, and the farmers. From this abuse of character in the first instance brought about perhaps by unfounded statements and erroneous views of things (of course I do not mean that reflections on the character, and conduct of the superiors of a parish are always unfounded) associations are formed for a strike for higher wages; some nocturnal depredation is agreed to be committed on the person or property of some unpopular parish officer, or one or two more desperate than their companions plan and execute the incendiary fire.

How many poor wretches since 1830, have expiated on the gallows this crime, and who perhaps when the first *pint of beer* was taken on the afternoon which led to the offence, had no more thought of committing such a crime than the reader whose eye is now on your pages. Such melancholy instances have frequently occurred, the fire has not been lighted from any settled villany of purpose or long withheld determination of revenge; but from some slight offence not reckoned mighty five minutes before this sad step was taken, so injurious to the community, so fatal to the deluded martyr of the beer-shop council.

It is thought by some persons that the habit of public house and beer shop going is from long custom so completely engrafted in the nature of the lower orders, that even if the malt tax was repealed, and they were again enabled to brew at home, very few only would have the inclination to do so, and the majority would continue their old habits of intemperance and riot, and that immediately on the repeal of this tax, the number of beer shops would increase.

I cannot believe that this would be the fact. Not that I think the repeal of the malt tax would operate like magic on the habits of degraded men, but I hope it would gradually and surely have the effect so much desired, namely; to give domestic habits to thousands who are now destitute of this social virtue. As regards the few of the number of beer shops increasing with cheap beer, let government interpose and parry this evil by placing a high duty on beer sold by retail, and in truth there is no moral doubt but the government would take this step, for having provided by other means for the necessary supply of the deficiency of the revenue which would be occasioned by the repeal of

the malt tax, (and this deficiency I believe must be supplied from some source or other before the malt tax be repealed), the motive to support these places would be at once destroyed, and then the least sagacious of our legislators would not be backward in the discovery that the system of retailing beer had long been the Moloch of the age.

Then too, it may be hoped with such an inducement as the repeal of this tax would hold out to the labourer to have comforts at home in preference to vice and riot abroad, the force of example would be brought more completely to bear. Men in a state of destitution are not prone to imbibe virtuous precept and fair example, and they are the less inclined to do so when this destitution is brought about by some glaring act of imprudence of their own; and when it is admitted that wages at this time are lighter in respect of the necessities of life than they have been at former periods when the lower classes were better supplied with those necessities, it is a clear proposition that this falling off must rest with the people themselves. This they are conscious of, and neither are they ignorant of the real source of the evil. A working man yesterday observed to me "it is impossible to resist the temptation, whatever field we are at work in, there is a beer shop close at hand."

I am, Sir, your obedient and very humble servant,  
Sussex, Feb. 6, 1835. AGRICULTOR.

### THE AGRICULTURAL INTEREST.

Mr. Editor,—At this moment, when Parliament must in a few days meet to deliberate on the measures best calculated to relieve those interests of the country which are now suffering under severe depression, I am anxious, through the medium of your columns, to call the attention of the public to the state of the agricultural interest. The price of agricultural produce generally, but especially wheat, has long been below a remunerating price to the producer, even if he had cultivated his land rent free; therefore no reduction of rent on the part of the landlords can remedy the evil. But even could a great reduction of rent effect the necessary relief, I would here ask why the landlords, who have contracted debts and mortgages, and entered into contracts, with wheat at 8s. or 10s. the bushel, while Parliament was declaring that it should never be below 8s., why are they to be compelled, by the fall of prices, to sacrifice their rent, and consequently their prosperity (for they cannot reduce their mortgages and engagements)—why are they to be reduced from affluence to poverty—why are the labourers, servants, and tradesmen, among whom the landlords' incomes have been spent—why are they to be turned adrift on the world, deprived of their means of support? Is it in order that the fundholder's pound may buy him four bushels of wheat where it used to buy him only two? But, at present prices, if rents were reduced from 30s. the acre even to 5s., even then, generally speaking, except on the very best lands, corn could not be grown with profit to the tenant. Therefore it is clear that one of two things must be effected—either the expenses of agriculture must be reduced to range with present prices, or the prices must be raised to range with present expenses. It is clear to all those practically acquainted with agriculture, that the expenses of farmers cannot be reduced below the present scale; unless, indeed, the labourers would willingly suffer themselves to be brought back again into a state of greater poverty, or rather brought

back to inferior food, clothing, and houses, so as to be willing to live on three shillings a week less than at present. If labourers' wages were reduced only in proportion to the fall in wheat, the labourer would still be infinitely worse off than ever, because the taxes prevent the retail prices of general commodities bought by labourers from falling in proportion to the fall in the wholesale price of wheat. Moreover, expenses cannot be reduced while the poor-rates continue high. The rates must continue high until better prices enable farmers to be able to employ the labourers with profit to themselves. Thus, then, expenses cannot be reduced without reducing and diminishing the means and comforts of the labouring classes; and who, besides the political economists of the Malthusian school, would wish to see the poor worse off than at present? Nor can expenses be reduced without diminishing the poor-rates, which reduction cannot be effected until the means of profitably employing labourers are afforded. Therefore, the only remedy is to raise prices generally by such an alteration of the money-laws as shall permit a more extended circulation of money on a sound basis. The general ignorance of the causes of high and low prices is so great, that I must trespass on your time for a few moments. Price signifies the exchange of money for an article. The rate of exchange depends on the comparative value of each thing to be exchanged—the value depends on the comparative estimation in which the exchangeables are held—the estimation depends on the supply as compared with the demand. If then the demand for money and articles continue the same, and the quantity of each in the market remains the same, the price of the article will remain stationary. If an article increases in quantity while the quantity of money remains the same, the demand for the money also remaining the same, the article will sink in estimation below the money—for there will be the same demand, the same money, but more of the article; therefore the exchanging value or price will be less—so likewise the converse, viz. the article diminishing will produce the opposite effect, as then the increase or decrease of an article (the demand continuing the same) affects the price or value of the article, so likewise the increase or decrease of money affects its price or value. The price or value of money is exemplified by what it will sell for, or, in common terms, by what it will buy. If then the quantity of money is diminished while the demand for it and while the quantity of articles remain the same, the money will rise in estimation above the article—that is, the price of the article will fall; the converse of this is also self-evident—the demand for wheat has been annually increasing with the increasing population. The increased supply in this country, including Irish, colonial, and foreign wheat, has not more than counterbalanced the increased demand, and yet the price has fallen one-half, so that money has risen one-half in value, for the pound will buy double what it formerly did. At the same time we know that the quantity of money circulating has been diminished one-half. How then can we doubt the cause of the fall of prices? or feel any hesitation as to the mode of remedy? But it is said higher prices will injure the labourer, and destroy foreign trade; but, so far from injuring the labourers, higher prices would benefit them. As prices rise the farmers will be able to afford to employ more labourers, the labourers will therefore naturally demand and obtain higher

wages; the taxes not being increased, retail prices will not rise in proportion to wholesale. Moreover, a labourer produces say six times more than he consumes—his wages will rise in proportion to the rise in the value of the six parts—his expenses will increase only on the one-sixth part which he consumes—therefore the rise of prices producing the rise of wages will benefit him.

As to foreign trade, the prosperity of it depends on our being able to undersell the foreign manufacturers. Underselling is the being able to give more of our goods in exchange for foreign goods than other nations can give for the same goods. If we are all prosperous at home, we naturally want and consume an increased supply of foreign goods. Therefore, as our prosperity increases, we make a larger demand for foreign goods; that is, they rise in value at home; therefore our merchants can afford to give more of our goods to obtain foreign goods, because they are worth more when brought here. By this means we undersell foreigners.

Now a rise of prices will restore a remuneration to industry, will enable landlords, manufacturers, and the whole body of the productive classes to make a demand for foreign goods, and thus will benefit our foreign trade. To conclude—unless something speedily is done, the whole tenantry of the kingdom will be utterly ruined, for they are paying their rents out of their capital, though the rents have been reduced 40 and 50 per cent. Before long no one will be found to cultivate the soil, and famine must follow.

Feb. 10.

A FARMER.

#### MATTERS BETWEEN OUT-GOING AND IN-COMING TENANTS FURTHER CONSIDERED.

*To the Editor of the Lincolnshire Chronicle.*

SIR,—The remarks which I addressed to you on the 23rd of January last, on the above subject, have at length elicited a reply from your correspondent who signs "An Old Farmer." Your old-fashioned men are the men for me, and greatly am I obliged to him for his sensible observations. Truly the usual course when a change of tenancy takes place is, that each party shall appoint his man to value crops set, whether corn, or seeds, ploughing, &c., these men also appointing a third, should they not agree; and I doubt not that, in case the in-coming tenant should not comply with a decree so made, that then the law would step in and protecting the out-goer.—This, sir, was in truth my impression, when I last addressed you; but how strange then it is that some of your old arbitrators should show a disposition to deviate from this plan of justice and sound principle, and that they should be looking about for new systems. I have heard one or two, who are called clever men in these matters, assert that they would never again allow for rent in the dead fallow; than which, nothing can be more absurd, unless you overturn the time-out-of-mind usage of a neighbourhood, by calling upon all landlords to pay to their present tenants the amount which such tenants paid for rent of the dead fallow when they entered, by which mode it might cease to be a part of the entry charge. But why overturn a system which, while it admits of no objections, has a tendency to induce an out-going tenant to make such preparations as are likely to be highly beneficial to his successor, and which cannot, by any possibility, have a contrary effect.

I assure you, sir, that I am not making more of this subject than it deserves, inasmuch, that farmers of all gradations are in hundreds of instances suffering from the innovations upon it. I at this moment have my eye upon the following case.—An incoming tenant is even now actually refusing to discharge the amount of his entry because—but who will believe it—because forsooth the out-goer is unwilling to abate him at the rate of two pounds per acre for deficiency upon an oat-crop, he not having been permitted to enter before Lady-day to set such crop, alleging that the deficiency arose out of the lateness of the sowing, as it was performed after Lady-day. Now, I would ask, what business had the in-coming tenant to enter for sowing until the one in possession had quitted? Of course, however, he could only enter on sufferance; but I happen to know that he was not prevented entering; that he would not have been prevented; but that he never asked permission. Well! even doctrine of this sort is not without its advocates strange to say. Oh, Mr. Editor, these things cannot be allowed to obtain—your theoretical agents will not do for these times; we must have practical men, or—mark my words, landlords!—you must soon all turn farmers yourselves. I say—and though I speak in the character of landlord, I speak practically—that a vigorous effort must be made to meet the occupier of the soil, or he sinks for ever, and this instantly. His premises must be made ample and restored, if out of order, at the landlord's cost—his land must be drained at the landlord's cost—and with respect to the rents, as these are known to vary as much as 30 or 40 per cent. in relative amount, why, if we are to have any at all, it must be but little, unless the produce shall carry a better price.

There is a point upon which I was anxious to receive information, which my friend, the "Old Farmer," has disappointed me in by not noticing, namely, whether an out-going tenant has his remedy against his landlord or not for crops set and left, &c. &c. As he has not answered this question, I will venture to assert that the landlord would be liable; for suppose the farm about to be vacated should not be re-let, I presume the person quitting is not to lose his just claim; and hence I arrive at the conclusion that the landlord is in all cases equitably, if not legally, liable, but I think legally too; and therefore it is his agent's bounden duty to protect the out-going tenant, and to take care that he is paid, whether the farm shall have been re-let or not.

I remain, Sir, yours, and  
THE FARMER'S WELL-WISHER.  
Feb. 16th, 1835.

#### MR. HENRY HUNT.

Mr. Hunt, whose death has recently been announced, was born at Widdington-farm, in the parish of Upavon, in the county of Wilts. For a number of years he regularly attended Devizes market, seldom, if ever, missing a market day. After his father's death, he was elected, or rather promoted to his seat, which was that of chairman of the table of the principal dining-room of the farmers at the Bear Inn; the daughter of the landlord of which Inn (Miss Halcomb), he married. Fond as he was of pleasure, no man attended more strictly to his farming business, and the farms of no man in the kingdom were managed better, or were in higher condition. He had also the best flock of Southdown sheep in the county, bearing the finest fleeces, the wool of which sold for the

very highest prices. Some idea of the extent of his farming business may be formed from the following fact : During Mr. Pitt's administration in the year 1801, the fear of an invasion was so great, that the Lord Lieutenant of the county caused letters to be written to the churchwardens and overseers of every parish, to return an account of all the moveable property, live and dead stock, &c. In Hunt's schedule was enumerated : wheat, 1600 sacks ; barley, 1500 quarters ; oats, 400 quarters ; hay, 250 tons ; cart horses, 30, value from 30 to 70 guineas each ; working oxen, 10 ; cows, 20 ; sheep, 4200 ; &c., &c., altogether valued at upwards of £20,000 ; the whole of which he voluntarily tendered to the government, to be at their disposal, in case of an invasion. He also engaged to enter himself and three servants, completely equipped, and mounted upon valuable hunters, as volunteers, into the regiment of horse, that should make the first charge upon the enemy. The liberal and patriotic offer was talked of all over the country ; and he received the thanks of the Lord Lieutenant. The years 1801 and 2 may be said to have been the zenith of the farmer's glory : wheat being at this time 4*l* a sack. Although Hunt generally drove four-in-hand to Devizes market, he was able to do a day's work with any labourer in the county ; and it is related of him, that after returning one Wednesday evening from a jaunt of pleasure, he was informed that his thrashers had struck for higher wages. A quantity of wheat was necessary to be thrashed out for the following day's market at Devizes. Determined however not to yield to his laborers, within five minutes after he dismounted from his carriage, he was in the barn, and, with the assistance of his coachman, and some of his household servants, thrashed out the requisite quantity, and attended the market with it on the Thursday morning. Before marriage, he spent one Sunday with Miss Halcomb at Heytesbury, a distance of nearly thirty miles from his father's house, where the time passed so pleasantly that the clock struck twelve before he recollected that he had an engagement with his father's mowers, at four on the Monday morning, to attack a field of oats of seventeen acres and a half, a very heavy crop, to see if they (five in number) could not cut it down the same day. It was one o'clock before he started ; within two hours, however, he arrived home, and without waiting to take off his tight leather breeches (which were in fashion at that time) or his boots, he mounted another pony, and reached the field of oats (three miles off,) just as the four men were stripped and whetting their scythes in order to begin. He went to work with them, and in ten minutes after the sun had sunk below the horizon, the last swath was laid flat, and not one oat left standing ;—a day's work which stands unrivalled in this county ; and which is the more uncommon, as, in fact, there were only four scythes at work during the greater part of the day ; for it being exceedingly hot, one of the men, the worst mower of course, was principally employed in riding to and from the inn at Everley, to replenish the bottles.

Hunt was an enthusiast in every thing he undertook, and in nothing more so than as a hunter. One day whilst holding the plough, the hounds passed by ; when Hunt, without hesitation took the fore-horse from the team, and, mounting it without saddle, was first in at the death, and triumphantly cut off the brush.

On another occasion, at the end of a very severe stag chase, after a run of nearly thirty miles, the

hounds pressed the animal so close, that they caught him as he was swimming over a deep part of the river Avon, between Salisbury and Stratford. Hunt, with the master of the hounds (Mr. Michael Hicks Beach) and two or three gentlemen were up with the hounds at the time, and they were all much distressed to see the noble animal, which had afforded so much sport, becoming a prey to the hounds. While every one was lamenting its fate, it being nearly exhausted, Hunt hitched his horse's bridle to a stake in the hedge, and stripped in *buff*. He dashed head foremost into the stream, when the remainder of the pack which had kept pelling on the banks, now leaped in after him, thus placing him in considerable danger. Many of the hounds, too, that had been worrying the stag, seeing a naked man rise as it were from out of the deep, quitted the animal, and swam towards him. Hunt's fellow-sportsmen apprehended his inevitable destruction, and seeing the hounds seize upon him, implored him to retreat ; but Hunt, calling each hound by its name, swam and fought his way through them. They all now turned, and continued to swim with him again to the poor stag, with the exception of one old hound, *Old Trojan*, who, unperceived, seized fast hold of the thumb of his right hand. Hunt dragged it under water, and seizing it by the throat with the other hand, held it there till it let go its hold. During this struggle they both disappeared under the water together, to the great consternation of the beholders. Up they came together, but Hunt continued to grasp the dog firmly with his left hand by the throat, and for a short time exhibited it with its mouth open and tongue out ; then giving it another ducking let it go. He then continued his course towards the stag, followed by every hound in the pack except *Old Trojan*. On coming up with the animal, and laying his hand upon its back, the whole pack began their attack upon it with redoubled vigour. A gentleman threw his whip to Hunt, which he applied to the heads and ears of the hounds, but without effect. He then took another course. The first hound that came near him, he grasped by the throat ; and in this state, with its mouth still open, he held it a short time under water. This had the desired effect. He continued it until the stag was free. By this time he was nearly exhausted himself, for it was on a cold day in February ; however, he took the animal around its neck, and swam with it to the opposite bank ; but as the bank was four feet above the river, those on the outside were obliged to fasten the thongs of their whips round different parts of its body, and it was with difficulty they could drag him safe on shore. Hunt himself was afterwards dragged out in the same way, with the thongs of his fellow-sportsmen's whips ; he soon recovered, however, and, mounting his mare, rode with his friends to the Bear Inn, the only house in Old Sarum.

Hunt was a Member of the Yeomanry Cavalry, but in consequence of some misunderstanding, he received a letter from Lord Bruce, saying, "that his services were no longer required in the Marlborough troop, and requesting that he would return his sword and pistols by the bearer. Hunt replied, that he was astonished at the communication—that he would attend on the next field day for an explanation, and that he should not fail to bring his arms with him, not recollecting an instance of his having failed to perform the duty of a soldier. On the next field-day, he accordingly fell into the ranks.—The sergeant called over the roll call, and the moment Hunt's name was omitted in the re-

gular order, he put spurs to his horse, and brushed furiously up to the sergeant, of whom he sternly demanded the authority for passing over his name. The sergeant said it was done by order of Lord Bruce. Hunt then went up to Lord Bruce, and asked what charge he had to make against him either as a soldier or a gentleman. His Lordship replied—"I make no charge, but as commanding officer, I have a right to dismiss any man without assigning a reason." Then (said Hunt) "you are no longer my officer. You have offered me a deliberate insult. I demand that satisfaction which is due from one gentleman to another; and unless you give it, I shall post you as a coward." For this offence, Hunt was indicted in the Court of King's Bench, found *guilty*, and sentenced to pay a fine of 100*l*, and to be imprisoned for six weeks.—In prison he met with Waddington and some other radicals, to which may be attributed his subsequent political sentiments.

### THE TIMBER TRADE.

Office of Committee of Privy Council for Trade,  
Whitehall, Feb. 19, 1835.

Sir,—I have received, and laid before the Lords of the Committee of the Privy Council for Trade, your letter of the 18th inst., requesting, on the behalf of the Shipowners' Society, information as to the intentions of the government with respect to the future admission of foreign timber from our North American Colonies; and their lordships having taken the same into their consideration, have directed me to state to you, for the information of the Society for which you act, that in their opinion the inducement held out by the existing law for sending round by our North American Colonies European timber intended for this market, is an anomalous incident of a regulation which had a very different object in view; and that although they cannot at present disclose the nature of the correction which they may think ought to be proposed to parliament, still it may be due in fairness to those persons who might otherwise engage in the circuitous voyage for the present season, to apprise the trade that their lordships do intend to suggest some legislative measure, the operation of which would prove injurious to the interests of those parties who should adventure upon that voyage, under belief that no change would in the meanwhile be made in the present state of the law.

I am, Sir, &c. &c.

(Signed) THOMAS LACK.

W. Oviatt, Esq., Secretary, Shipowners' Society.

**TITHES.**—The first charter by which tithes were granted in England may be considered as a curious historical document. The following is given as a literal translation of it:—"I, Ethelwolve, by the grace of God, King of the West Saxons, &c., with the advice of the Bishops, Earls, and all persons of distinction in my dominions, have, for the health of my soul, the good of my people, and the prosperity of my kingdom, taken the honourable resolution of granting the tenth part of the lands throughout my whole kingdom to the Church and Ministers of religion, to be enjoyed by them with all the privilege of a free tenure, and discharged from all the incumbrances incident to lay-fees. This grant has been made by us in honour of Jesus Christ, the blessed Virgin, and all Saints; and out of regard to the Pascal Solemnity, and that Almighty God might vouchsafe his blessings on us and our posterity,—Dated at Wilton, Ann. D., 854, at the feast of Easter."

### AGRICULTURAL SOCIETIES.

We have upon many former occasions endeavoured to impress the agricultural community with the importance, nay, the absolute necessity of forming societies for the protection of their interests in every county in the United Kingdom, and, indeed, there are but few counties in which from their extent, several societies, which should upon important occasions co-operate with a central one, might not be advantageously formed. A careful observation of the success, or otherwise, of those societies which have existed for some years, and among which the Smithfield Club and the Bath and West of England Agricultural Society have pre-eminently flourished, has led us to the conclusion that the total exclusion of politics and political feeling, so rigidly adhered to in these two societies, are essential to promote that "union" in which alone "strength" consists. It is possible that an individual possessing a large extent of landed property may have a body of tenantry who with their dependants will be sufficient to form a considerable agricultural association. These instances are, however, very rare, and it may be safely asserted that the usefulness of agricultural associations will be very materially impaired if not altogether destroyed as soon as they shall become a species of Political Union. It was with much regret we learned the declaration of the Duke of Buckingham, when presiding recently at a great meeting of farmers in Buckinghamshire, "that he considered such meetings as strictly political meetings." The Buckinghamshire association is one of the kind to which we have just alluded, which in consequence of the property and personal influence of one, two, or three individuals, may be maintained as a political club. But where landed property is more equally distributed when there exists in the same district men of all shades of political opinions, and all equally "interested in the prosperity and the protection of agriculture" as in the county of Northampton, it must be a source of deep regret to those who have really the interest of agriculture at heart, to witness the exclusion of any individual from an agricultural association, apparently from political motives, and that, too, in direct violation of the *rules and declaration* of the association itself. It may not, perhaps, be generally known to our readers that the first annual meeting of an association styled the "NORTHAMPTONSHIRE ASSOCIATION FOR THE PROTECTION OF AGRICULTURE," was held on the 17th of January, at Northampton. A declaration had been some time previously agreed to and published, which contains the following words. "Having this object (the protection of agriculture), solely in view—disclaiming any desire to obtain for themselves any undue preponderance over any other class of the community, or to associate for party or political purposes, many owners and occupiers of land in the county of Nor-

thampton have agreed to form themselves into an association to be called "THE NORTHAMPTONSHIRE ASSOCIATION FOR THE PROTECTION OF AGRICULTURE." On the 27th of December last, a resolution was passed at a meeting of the Provisional Committee, "*that all owners and occupiers of land in the county of Northampton, and others interested in the prosperity and protection of agriculture may become members of the association agreeably to the rules of the society, on payment of a subscription of ten shillings each, by expressing their wish to do so to the secretary, on or before the 17th of January, inst.*" In pursuance of this resolution, publicly announced in the county paper, Lord Milton, who had besides been specially invited by the provisional committees to become one of their vice-presidents, expressed by letter his wish to become a member of the association. The letter was read at the annual meeting on the 17th inst., whereupon Mr. Watkins, of Daventry, "objected to the admission of the Noble Lord, and trusted the association would not be such idiots as to elect a man who was the sworn enemy of the agriculturalists." Much confusion and discussion took place upon the question of admitting the noble Lord, which terminated in a division, upon which his Lordship was excluded, whereupon many gentlemen left the room, stating their intention of retiring from the association altogether, amongst whom was Mr. Hildyard, the President of the Northampton Agricultural Society, one of the most eminent practical agriculturists in the kingdom, and a most zealous friend of the farmer. Thus have the seeds of dissension been sown in this infant association by the mistaken zeal of some persons, who, however honest in their motives, are lamentably wanting in discretion. Mr. Watkins "trusted the association would not be such idiots as to elect a man who was the sworn enemy of the agriculturalists." Now who is this "sworn enemy of the agriculturalists?" [The heir to one of the largest landed estates in the kingdom, and who, as much, if not more than any individual in the country, must be deeply interested in the prosperity of the agricultural interest. It is indeed true that the views of the Noble Lord, as to the protection afforded to the British farmer by the duty imposed upon the importation of foreign corn are peculiar, and upon which we altogether differ with him, but that very circumstance seems to point him out as a most fitting individual to be received as a member of an association composed of gentlemen whose zeal for the cause appears to be unbounded. In what manner would the mistaken notions of Lord Milton be so likely to meet correction as by frequent communication with yeomen and gentlemen who have all their lives been practically engaged in agricultural pursuits, and who from sad experience can testify to the neglected, the depressed condition of the British farmer? Does Mr. Watkins entertain such apprehension of the talents of Lord Milton, as to fear his mislead-

ing all the other members of the association, and thereby converting the society into an association for the "DESTRUCTION," not the "PROTECTION" of agriculture? From the respect which his family has long been accustomed to command, from the influence which his station in society and his extensive property must give, it was worth something to gain over the Noble Lord to a right view of so important a national question, and we think the Northamptonshire Association has not acted wisely in losing an opportunity of effecting an object so desirable. We cannot rid ourselves of an apprehension, which for the sake of British agriculture we trust will turn out to be unfounded, that there is a disposition manifesting itself at the present moment to form Agricultural Associations, not for the sole purpose of protecting agriculture, but also for political purposes. We are the more encouraged in this belief by the expressions of some of the Conservative Journals, one of which has very recently put forth the following observation. "No triumphs of the Conservative party have been more signal than those achieved in South Lancashire, Buckinghamshire, and Northamptonshire. In each of these districts CONSERVATIVE, or, still better, AGRICULTURAL - ASSOCIATIONS were early organized, and have been conducted with diligence and spirit. We give the preference to the designation of Agricultural Associations, because while these afford the opportunity of carrying into effect any desirable object, they are not characterized by any title which can by the perversity of faction be construed into a party or offensive signification." Here, then, as it seems to us, is an open acknowledgement that the term AGRICULTURAL is only used as being more likely to be palatable than CONSERVATIVE, and that to these so styled AGRICULTURAL SOCIETIES, the success of a certain political party is ascribed, and which party most assuredly can not monopolize to itself the character of protectors of agriculture, there having been a greater number of Reformers than Conservatives who voted in favour of a repeal of the Malt Tax when last brought under the notice of the House of Commons.—*Mark Lane Express.*

**PLOUGHED STREETS.**—At Savannah, one of the eastern cities of the United States, after heavy rains, it is customary to plough the roads, as in a field, in order to render them sooner dry. This method of drying streets appears new to a stranger; but certain it is that the object is accomplished with extraordinary rapidity, the depth of the furrows enabling the sandy soil to imbibe the water much sooner than if it were left to drain away of itself.

**HIGHLAND SOCIETY.**—The first part of the Highland Society's premiums for the present year has been made public. No institution has laboured so much for the improvement of every branch of art and industry connected with the agriculture of Scotland; and from the scheme of rewards for essays, inventions, manufactures, and experiments, it will be seen that their zeal continues unabated in every department of useful practical knowledge.

# AN EXPLANATION OF A PREVIOUS LETTER; AND ON GAME DEPREDATIONS, &c.

TO THE EDITOR OF "THE MARK LANE EXPRESS."

Sir,—Contrary to my intention, I am almost compelled, once more, to take up the pen in consequence of a very remarkable error, or misprint, which appears in my last letter "On Spade Husbandry," in the *Agricultural Reporter*, of Feb. 2, p. 51. It is there stated that half an acre of land will employ a man about six weeks per annum; and that if to this be added about 20s. for clear profit, a labourer, so supplied, may be considered as taken out of the labour market nine weeks in a year. Applying this to a particular parish,—containing 116 heads of agricultural families—we find that 58 acres of land will supply in work, and profit, about 20 men; which of course would still leave 30 superfluous hands out of 50, the number assumed. In the printed letter it will be seen, that out of 50 surplus men, 110 would remain, which of course is absurd and impossible.

Whether the error belongs to the writer or the printer, I have no means of ascertaining, but in the course of my correspondence I have certainly met with a considerable number of misprints, which I have never taken the trouble to point out, hoping that the good sense of most readers might in general be sufficient for their correction. Thus, in some of my letters, *gad* has been printed instead of *gaol*, *magistrates* for *magnates*, *perpetrated* for *perpetuated*, and, in the letter on tithes, *advantages* for *disadvantages*, &c. &c.

I shall take this opportunity of adding a few words on the important question of *game depredations*; a subject on which I believe I have written but little, but which is alone sufficient to show the intolerable despotism of the present relations of landlord and tenant.

My own proposal for limiting the powers of the lords of manors, &c., published nearly sixteen years ago, was to allow an average injury of 6d. an acre, and to compel the owners of game to pay for *all further damages* by arbitration, unless the landlord, in his leases or agreements, made a specific claim to any larger amount of what may be termed game agistment, in which case valuation and remuneration to be made for any further loss.

Such was the substance of what related to game in a sketch of a new act for the general protection of the tenantry from the arbitrary power of the owners of land and tithes; and had not the farmers of Scotland (as well as those of South Britain) treated the subject with their characteristic apathy, I have no doubt they might have escaped a large portion of the various evils which have ruined their thousands, and distressed their tens of thousands.

The meeting of the game deputation of the tenantry (of Perthshire) with Sir G. Murray (*Agricultural Reporter*, Nov. 3, 1834, p. 29), shows that certain Scottish farmers have suffered a damage of 1,491l. on the corn crops alone of ten farms, the rental of which is 2,962l. Sir G. Murray "felt the hardship of the tenant's case," yet saw little prospect of getting over the difficulties; because, "no measure could interfere with the stipulations of *existing* leases, or hinder proprietors from letting their lands in *future* on such conditions as *they pleased*." My opinion, I beg leave to say, is, that in this (and nearly all the other matters of which I have written) there is but *one substantial difficulty*, which is, that the *landlords* and not the

*tenants make the laws!* These tenants of Perthshire of course complain of what they deem a manifest injustice. Now, if the British legislature will not check injustice, because it is inflicted by the great and powerful, of what use is the legislature at all? Reformed or unreformed, if the farmers alone, of all classes of society, are to be subject to *unrestricted arbitrary power*, the parliament is, at all events, *of no use to them*; and they might possibly, and indeed probably, fare better if dependent on the will of his Majesty alone.

"May I not do as I will with my own?" said one, in former days, who had paid a part of his labourers *more than their due*. But his modern imitators use the same phrase for nearly an opposite purpose, viz., to claim *more than their due*, in the profit of all improvements in land and buildings; and the right, after having let a farm, to consume the tenant's crop with stock of their own. I have noted from the old *Farmer's Journal*, June 29, 1829, a game trial,—*Richmond v. the Earl of Kinnoul*. The Earl of Kinnoul, it appears, opposed the case in various ways; but at last, *some clause in a late judicature act* appeared to *authorise* the process being brought before the Sheriff of Perth. But before trial, in the Jury Court, the landlord is understood to have come forward, and *allowed three years rent*, and paid tenant's expenses!!!

A year or two ago a petition from Perthshire, respecting depredations of game, was presented to the House of Lords, when (if I recollect aright) the above-named nobleman arose, and said that "the farmers of Perthshire had very little reason to complain of game." Now we find they are complaining again, still more loudly,—one of them of a loss exceeding the rental—so that it may safely be left to the common sense of the reader, whether the valuation of *impartial persons* ought to be allowed by law or not? and whether any one—seeing how the philo-pheasant rage has spread all over Britain for many years—can expect to find such impartial persons in either landlord or agent?

My own opinion is, most decidedly, that whatever apparent independence a land agent may assume, he cannot with impunity allow more for game depredations than he sees his principal is willing to grant: and of course if the former allows *half the rent* where the latter says, "there is little reason to complain," &c., his own salary comes to a full stop, and the farmers' complaints (*à la Perthensis*), remain *in statu quo*. The *County Chronicle*, March 19, 1833, contained a letter, from an Essex farmer, on game depredations, signed Z. He says he is under a lease of ten years to come—suffers damage by game 100l. a year—game-keepers bagged 1000 rabbits on his farm in a few months—landlord and law-agent laugh at him and tell him he has no remedy. He adds that if the sale of game is allowed, the landlord's game may eat up his whole crops.

What honourable or honest man can read such statements without feeling disgusted? and still more so when reforming members of a reformed parliament are found to hint that—so sacred is the landlord's claim to despotic authority—the case is *almost beyond remedy*? Yet I believe almost every farmer has heard, or seen, similar cases,—valuations of damages carried to the proprietors—payment refused—afterwards allowed in part—regular allowances made, in extreme cases—farmers asserting such allowances to bear little proportion to the loss, &c., &c. I have no doubt that many of the game lovers have meant to be just, where the sufferers have been very far from allowing that justice was done; and they would sometimes

have seen with astonishment, the difference between the valuations of their own agents, and those of a jury of two or three impartial arbitrators.

My writings—relating principally to the sufferings inflicted on tenants by the arbitrary power intrusted to landlords—it has been said, often shew an impolitic, if not unjustifiable, severity of remark. To this I would beg leave to reply that my object has been to point out in a variety of points of view, the enormous evils which despotism has inflicted on the agricultural tenantry; together with a safe and easy remedy, beneficial to almost all classes, and injurious to none. Now, if peers, or princes, together with a host of inferior landed gentry, set their faces against this great national measure of reform, to flatter what I esteem to be palpable errors or prejudices, would be to betray and give up the cause of the tenantry: and, on the other hand, if truth, if plain unvarnished facts, be offensive to the lovers of arbitrary power, it is but the common consequence and fate of all reforms and all reformers, to gain the reproach and ill-will of those who love neither truth nor justice.

Ambition (which is generally only another name for despotism), has been described as “the glorious fault of angels and of gods.” In my humble opinion, however, the love of unbounded rule is productive of more mischief, more misery to mankind, than any other of the wayward passions of frail humanity. “The glorious fault” of Bonaparte, the wish to have rule over all Europe, is said to have cost the lives of five millions of our species. “One murder makes a villain, millions a hero.” But some are born the unlimited potentates of kingdoms; and such are equally unwilling to give up the power of fleecing their subjects, as the owners of a few hundred acres of land are of resigning what they seem to esteem as *their right*, that of plundering an improving tenant of the fruits of his labour, or consuming as much as they please of his crops by game, rabbits, &c. I believe the reasons alleged are equally good in the prince, the peer, or the peasant,—that is good for nothing: they all want power for the same purpose only, namely, to do mischief; for the power to do good no one would wish to deprive them of. A writer who signs his letter Lincoln (in the *Old Farmer's Journal*, No. 1226), says, “there is one evil of still greater magnitude, and which oppresses the tenantry more than the tithe, and injures them ultimately still more than taxation; this is the *diabolical law of landlord and tenant*, which enables the artful and avaricious landlord under its sanction, to plunder the ignorant, unsuspecting, confiding tenant of his property.” I quote this to shew that there are who have condemned existing laws in stronger terms than I have made use of. On the other hand Mr. W. Bennet (in *Old Farmer's Journal*, No. 1218), says, “this evil has long been insisted on, and the remedy pointed out, in a very forcible manner, by ‘The Author of the Rights of the Farmer,’ whose work, had not the author been nameless, would have entitled him to great celebrity.” On this compliment—however gratifying to one who has had so few coadjutors—I may be permitted to observe that I have very little faith that the author's name could have had any influence—where the arguments had none; which seems to have been nearly the case in quarters where the writer was not anonymous.

In conclusion I may add, that the principle of remuneration for improvements of estates, is far from being unknown among lawyers and judges,

as appears from a case in the Roll's Court, *Chenel v. Martin*, respecting property held in possession (unlawfully as it appeared) for 40 years, (*Vide Farmer's Journal*, No. 1234). The counsel contended for remuneration; the judge, after making several objections, at last said, “but acting on equity, beyond the law, he should refer it to the Master, to what extent the estate was improved by Martin the defendant.” Lord Wynford mentioned also (in a conversation with Lord Brougham, in 1830), that such remuneration was allowed—to such as had been the *supposed* landowners—by the laws of every country in Europe, and likewise (I think, he added) in the civil and the Roman law. Let the farmers enquire of their new friends whether an “equity beyond the present law” is not at least as necessary for tenants as landlords, and judge of their sincerity by the result of their conduct in parliament.

I remain, Sir, yours, &c.,

THE AUTHOR OF THE RIGHTS OF THE FARMER.

### LINES.

On a Grave-stone in the Church-yard of —, (placed to commemorate the death of —, who died in her fifteenth year), is the following inscription:—‘Affection Weeps.’

“Affection weeps,”—ah, these are words

That should not pass away;

We fain would chain them in a spell,

To save them from decay,

That time would spare and not erase

The sweet line from its simple place.

What more could labour'd verse express

For those who mourn on earth,

What better record could it give

Of the departed's worth?—

There needs no marble image here

In memory of the early bier.

“Affection weeps,”—a magic pow'r

The sentence hath for all—

E'n for the gazing stranger's eye,

For what does it recall?

Two mighty streams that rush in part,

And find a home in every heart.

It tells of love, too strong for death,

Unfading, deep, and pure,

Binding the living, as a chain,

For ever to endure;

Though now it hovers o'er the tomb,

It must not have—it *hath* no gloom.

It tells of woe—the sighs, the tears

That o'er her rest were shed,—

Of treasure'd hopes, once bright and fair,

All buried with the dead.

Though sorrow has its darken'd share,

It is not wildness and despair.

“Affection weeps,”—enough is writ,

Young spirit, on thy grave;

'Tis better than the sculptor's art,

Or the proud banner's wave;

They both would crumble into dust,

But love and grief in Heav'n may trust.

Kimbolton.

B. B. B.

In answer to an application made by a member of the Select Vestry at Taunton, the Poor Law Commissioners have decided “that where it is possible for the Parish Officers to set able-bodied paupers to work, it is *illegal* for them to give relief to such paupers without work.”

## THE HORSE.

The following extract is from a cheap and useful little work, published by Simpkin and Marshall, London.

The chief requisite for becoming a good horseman is confidence; and this once obtained, a good seat, as it is commonly called, is not very difficult of attainment. It is undoubtedly the chief, though not the only point in riding, to be able to sit a horse without danger of being thrown. It is a common custom in military equitation, to ride with very long stirrups, to sit perfectly erect, and to move but little in the saddle; that is to say, the motion of rising in the stirrups when trotting, is, as much as possible, avoided. The seat is to be placed well down on the saddle; that is, not projecting back towards the cantle, but, in riding-masters' phrase, kept "well under the rider." To effect this, the body must be thrown back, and the legs and arms kept steady. The best mode of learning to ride is to begin without any stirrups, so as not to acquire a habit of placing too much reliance upon them, for the firmness of a man's seat on horseback mainly depends upon the knees and thighs, although in some cases, as in leaping, the calf of the leg is of great service. The leg should be placed, as near as possible, so that a line dropped from the knee may touch the toe; the ball of the foot should rest in the stirrup, and the heel be inclined downwards and turned out, but not too much so, by which means the knee has a firmer hold of the saddle. The right hand, when not used, is, by soldiers, allowed to drop rather behind the corresponding thigh. On putting a horse into a trot, both legs should be equally pressed to his body; but, for the purpose of making him canter, the heel of the rider opposite to the leg which the horse is required to strike or lead with, should be applied to his side smartly and farther back than the other heel: thus, to make a horse lead with the right leg, close both legs upon him at the same time, but press firmest and farthest back with the left, at the same time shortening the left rein, so as to incline his head to that side, and throw his hind quarters the other way; *et vice versa*. Some horses require lifting with the hand to make them canter; but though, at this pace, it is well to raise the horse in a slight degree at every stroke, yet it has a very ugly appearance to see a man jerking his horse's head previously to putting him into a canter, and resembles that elegant trick, which several old gentlemen practice, of tugging three or four times at the rein when driving, in order to accelerate the pace of their beast. The use of the hand is of the very greatest importance in riding. The general mode of holding the reins taught in military schools, is as follows: To take up a single snaffle bridle, place the little finger between the two reins, then draw them through the palm of the hand, turn the ends over the forefinger, and close the thumb upon it, at the same time shutting the hand. If a double bridle, after taking up the snaffle as before described, and before shutting the hand, draw the curb rein on one side through the palm, until of the same length as the snaffle, and then take up the loose part with the right hand, passing it between the fourth and ring-finger, and the first finger and thumb; or if both bridles be held in one hand, the third finger may be passed between the snaffle rein, and the fourth between the curb, after which both are to be brought over the forefinger, and held fast by the thumb. In riding on the road, the stirrups are generally shortened so as to permit a slight rise from the saddle while the horse is

trotting; a motion both pleasanter to the rider and easier to the animal than the jog-jog pace at which soldiers are taught to ride. In hunting, crossing the country, and racing, the stirrups are still more shortened by a hole or two than when on the road; by which means the horseman is enabled to stand in his stirrups, and avoid touching the saddle; a position less wearisome to a horse than the former, but only practicable at a gallop. The expression of "*standing in the stirrups*," is very common, although, were this to be actually practised, it is questionable whether it would be so easy to a horse as when the rider sits firm on the saddle; but the fact is that, instead of bearing the whole weight on the stirrups, the body should be mainly supported by gripping the saddle firmly with the knee, both in this position and every other. In leaping, the knee and thigh are chiefly to be depended on; some people, indeed, quit their stirrups previous to taking a high leap, for fear of the foot being entangled in case the horse should fall. The body should be slightly inclined forward when the horse rises to leap, and thrown backwards as he falls; the thigh and knee should keep a firm hold of the saddle, and the leg, thrown rather backwards, should be tightly pressed against the horse's belly, taking care, however, not to hold on by the spurs. Many horses are thrown down in leaping, by the awkwardness and indecision of their riders, who first run them at a fence, and, when near it, and too late to retract, wish they had not done so, endeavour to pull up, and thus check their horse while in the act of making his spring. When coming to a leap, therefore, make up your mind whether you will ride at it or not; and if you decide in favour of the former, go at it resolutely, and let no after-thought baulk your determination. In riding, whether on the road, or elsewhere, keep your arms and legs steady, for nothing looks worse than to see a man with out-stretched arms, as though he were going to leap out of his saddle, and working his legs to and fro, so as to merit the accusation of going faster than his horse. In racing, a horse should be kept well in hand, and, when spurred, the heels should be drawn back to his flanks with as little motion as possible, and not, as is frequently the case, kicked into him, when at the last rush, in such a manner as to expel the little wind he has left in him.

## TO THE EDITOR OF "THE MARK LANE EXPRESS."

Sir,—I wish you to make mention, from the immense advantage they have been to me, of Courtney's Cattle Medicines, which I think are superior in effect to any I have ever used. It is for public good I state it. I speak particularly of the two medicines adopted for the present season, the Animal Restorative and Scour Balls. It is not only from my own testimony that I consider them entitled to publicity, but from the patronage and recommendation given to them by many practical farmers of Hampshire to them.

I am, Sir, yours,

A HAMPSHIRE FARMER AND BREEDER OF STOCK.

A GOOD LEAP.—A few days ago a fat drove of fat oxen were passing the Durham new line of road, and when near the Gateshead Arms public house, Low Fell, one of them, a fine looking animal, supposed to be nearly 70 stone weight, very deliberately walked up to a stone wall about seven feet high, and making a sudden spring, leaped completely over it, and very quietly joined some cows that were grazing in an adjoining part of the field.

## DRUMMOND'S AGRICULTURAL MUSEUM.

We are glad to see by the third report of this institution, established at Stirling by Messrs. Drummond and Sons, that it has been productive of the most beneficial effects in that district, by giving rise to a spirit of enterprise among Agriculturists, which cannot fail to lead to great ultimate improvements. The report enumerates the specimens of soils, plants, implements, and seeds, which have been placed in the Museum; and describes their peculiar characteristics, properties, or peculiarities, as guides for others in making experiments. As a whole the report is well worthy the attention of Agriculturists; and we hope the Museum will meet with increasing encouragement. We would, however, suggest to the writer of the report the propriety of bestowing a little more care on his composition, a want of attention to which is exhibited in several places. In some cases we think the amount of produce far overrated; and in particular we are surprised at the writer's adoption of the Scottish acre, instead of the imperial, at a time too when every one ought to use their best endeavours to influence the farmers to conform to the Act of Parliament. These are, however, blemishes only in the execution, and will no doubt be hereafter avoided. We quote a few extracts:—

**BONE DUST.**—The merits of this manure appear to be decidedly established in this quarter; it is particularly effective in light soils where it soon decomposes; in the heavier soils it is advisable to mix more or less dung with it. Mr. Morrison, factor at Clangregor, who has used this manure very extensively for turnip, applies at the rate of 25 bushels per acre; and in his Communication, published in our Report of 1833, he recommends depositing the bones at 3 inches deep, and the seed along with them, as “much of the success of a turnip crop depends upon the seed being put pretty deep, and immediately among the fructifying matter, particularly in dry weather.”

In gravels so small a quantity as 14 bushels per acre, dibbled in, has produced a good crop of turnip, which afterwards eaten off with sheep, has ensured excellent grain crops; this practice, it is considered, may be accomplished to a great extent and very profitably. When bones are left of the size of half an inch to an inch, they are called drill bones.

It appears from the Report of the Doncaster Agricultural Association, that one gallon whale oil has been proved equal to one bushel bones in raising turnip. It should be mixed with screened soil at least one month before using, in the proportion of a gallon to three bushels of soil. Should succeeding trials be favourable, it will be of greater importance than even bone dust. Unrefined whale oil averages about 1s 3d per gallon.

**SALT.**—The Legislature having, by taking off the duty, placed this substance more within the reach of the farmer, it becomes of importance to direct attention, at least to experiment, on the many advantages which are mentioned as resulting from its moderate and judicious use. The following among many others are adverted to, viz.:—

1. As manure sowing 10 to 16 bushels per acre, after the grain is harrowed in, or the potatoes covered; the same quantity as a top-dressing for grass, which also destroys the moss in old pasture;

2. Layers of it in compost with coarse herbage or weeds and with peat; 3. Mixed with oats, 1-20th part preserves from grub; 4. With flaxseed, weight for weight, improves quantity and quality; 5. Improves hay, 15 to 20lbs. for a ton, in stacking; 6. Found excellent for horses, cattle, and sheep; and by many who give it regularly, is looked upon as a condiment essential to their health and strength, and almost as necessary as food.

**POTATOES.**—Taylor's Fortyfold and Ross's American Early, from Messrs. Drummond. A comparative trial on the same lot, and under the same treatment, planted 2d May, raised 20th August; one fall of Fortyfold produced 270lbs.; one fall of Ross's early produced 212lbs. The kinds equally early, and equally dry and mealy, but the former is fully the best flavour, is well adapted for the market.

Red, a variety from Blairdrummond. 36 sets, 2lbs.; one shaw produced 8lbs. 6 oz.; very mealy, flavour excellent, one of the earliest of the late class of potatoes. In so far as it has been proved, appears to possess the best qualities of productiveness, excellent flavour, and long keeping, being what may be called a medium early, would be suitable where wheat was intended to follow.

Garnock Seedling, from ditto. Is well recommended.

Potatoes without having been earthed up, from Messrs. Drummond. Produce fully equal to those earthed up under the same circumstances; there did not appear to be more of the tubers exposed above ground than usual. This following year (1834) one of the lots on trial has been taken up, August 21st, and proved 20 per cent. to the advantage of those not earthed up, which may be attributed in a great measure to the ground having been kept more moist, the furrows operating in the other case as so many small surface drains. The plan has been tried in England, it is said, with success. We intend to prosecute the experiment respecting it further.

## TO THE EDITOR OF THE HEREFORD TIMES.

Downton, Feb. 9, 1835.

SIR—You have stated in your last paper, that, at the last meeting of the Agricultural Society of Herefordshire, I recommended that less wheat should be sown; which I did, inadvertently, by pointing out the obvious circumstance, that the increased, and rapidly increasing, consumption of potatoes and animal matter (much more palatable and wholesome species of food than bread), had necessarily diminished the consumption of wheat, and that the supply of that article had, in consequence, exceeded the demand for it. I stated that I had foreseen this, and that my tenantry in this vicinity, under the influence of my advice, had raised a much greater breadth of turnips, and artificial grasses of different kinds, and less breadth of wheat; and that, by cultivating highly and expensively, they had employed much labour, and sent much to market; and that I had the satisfaction to say, that I believed that they were contented and doing well. They now sow much less breadth of wheat than formerly; but they sow upon ground in much better condition, and, therefore, the diminished produce of wheat is not nearly proportionate to the increased produce of animal food, and of other articles.

The labouring classes are apt to think, erroneously, that the price of wheat, and other agricultural

produce, can never sink too low relatively to their benefit; but experience has proved, that excessive depressions in the value of agricultural produce, have invariably been, within very short periods, highly injurious to them. The farmer cannot, and the freeholder will not, expend a shilling in raising that which can be sold for tenpence only in the market; and the labourer cannot, consequently, find employment, except at very low wages; and the tradesman becomes without customers, and, therefore, without the means of giving employment. This occurred in the latter part of the first twenty years of the present century; and the greatest amount of distress which this country ever felt, was about the year 1743, when the price of wheat did not exceed twopence a gallon. A tenant of mine, in the parish of Wormsley, who died about twenty years ago, told me that, at that period, he conveyed, on the backs of horses, twelve ten-gallon bushels of wheat to Kyneton (Kington), the best market in the county, for which he asked a guinea only, but could not obtain it, and he was obliged to convey his wheat back to Wormsley. The agricultural labourers were then wholly without employment, and consequently without the means of procuring means of subsisting.

The severe and destructive winter of '39-'40 had caused the price of wheat, in the following year, to be excessively high; and the attention and capital of every farmer were directed to the produce of that article. The supply in consequence exceeded the demand, as it now does to a more limited extent, and owing to other causes. A reduction both of rents and tithes must take place, if the markets remain in, or nearly in, their present state; and by this the farmer, but the farmer only, can be relieved. The demand for labour must sink with the price of the produce of labour; and the tradesman, and those whom he employs, if taxation continues as it now is, will and must bear their share of privation. A proper and equitable commutation of tithes would be productive of benefit to every class of society; and I am quite certain that, in a pamphlet which you have noticed in your paper, I have pointed out a plan which is perfectly practicable. But I despair of seeing any such brought forward. Nothing can be done without an Act declaratory of what is, and what is not, the property of the tithe owner; and great difficulties will, I suspect, occur in the passing of such an Act: one party will not feel disposed to relinquish the enormous amount of property which the judges, appointed during the reign of George III., awarded them; and with this party the present Ministry dare not quarrel; and the opposite party, including a large majority of the House of Commons, are probably not prepared to concede that which was never due, nor ever *legally*, though *judicially*, given. From another—and a most oppressive and unjust—tax, the farmer has a just claim to be relieved—that of repairing any parochial roads, except those used exclusively as husbandry roads. Those who use the public roads, ought to pay for the repair of them. I have understood that it was the intention of the late Ministry to have relieved the farmer from the oppression of this tax; and if the present House of Commons do their duty, this most iniquitous tax upon the farmer must cease to oppress him.

I am, Sir, your obedient servant,

T. A. KNIGHT.

**TOLLS.**—It is now the law that no toll shall be paid for cattle and other beasts going to or from water or pasture, or to or from being shod or farried, or passing on any turnpike road, provided they

do not pass more than two miles on such turnpike road. All horses and beasts drawing carts for materials for the repairs of roads, although the wheels of such carts shall be less than four inches and a half, are also to be exempt from toll. Lastly, all horses or carriages, cattle or other beasts, crossing any turnpike road, or not going above one hundred yards thereon, are exempt.

## TO THE EDITOR OF THE MORNING HERALD.

SIR,—In a former letter, which I addressed to you on the very important subject of the preservation of the potatoe crop, I stated my conviction that many of the alleged cases of failure had originated in a defect of the seed tubers, caused by slight frosts in the preceding autumn, by which the cuticle became abraded, and many of the eyes rendered inert. Decay, as a natural consequence, would take place, and wherever such defective eyes were planted, there *could* be no vegetation.

I have subsequently perceived that my opinion has been combatted, not theoretically, as founded in error, but on the ground that similar frosts must have occurred in previous seasons of potato-digging, which had not, however, been succeeded by decay and failure. The great evil, it is observed, has occurred during the present and the last years; and therefore it must have had a specific actuating cause. I am not prepared positively to assert that no such cause could have existed in Lancashire, and other remote northern counties, nor in Ireland; but the facts I stated were certain, and the results assured. I saw my frosted tubers at the moment when the phenomenon occurred; and subsequently I ascertained the consequences by direct inspection. The other causes assigned are merely so many conjectures. However, I indited my last letter, as I now indite this, not to cavil or to raise disputes, but candidly and simply to state facts and induce cautionary care. I also pointed out an effectual remedy, namely, that of cropping with fine, moderate-sized, entire potatoes; for it is certain that if a tuber be somewhat frosted, there may remain one or more sound eyes, which will break and produce a crop, and thus obviate the vexatious disappointment which must always result from completely bad seed. Sowing with whole potatoes, it is true, requires a considerable supply of roots in the first instance; it also may not yield so bulky a return as the same quantity would produce were the tubers divided into sets with two eyes each, that is, provided those eyes were in perfect condition; but then it secures a good and regular crop; and this advantage is, in my opinion, nearly paramount. I have had the great satisfaction to observe, that comparative experiments upon a large scale have been undertaken by gentlemen and farmers in different parts of the kingdom, not excepting those wherein the disease has been said to be peculiarly prevalent, and these have furnished a mass of evidence, conclusive of the great superiority of planting fine whole tubers. The public prints have recorded these experiments, stating the names of the parties who instituted them, and their places of residence. It is to the honor of the venerable President of the Horticultural Society that he led the way to this most advantageous practice, by his articles published in the Transactions of that Institution. To me also he communicated, in several letters, his peculiar method of practice, and the comparative yield of several varieties. I adopted the plan suggested, have practised it for several years, and have never witnessed a failure. I will add one more corroborative fact. My crop of pota-

toes, including at least 20 sorts, are safely housed: no frost in any way corresponding in character with that of Nov. 14, 1833, has occurred. Among these numerous varieties, three four-yard rows of a rough Cornish red, planted whole, yielded two bushels, good measure; three similar rows in the same plot of ground, of the very same potato, cut into two-eyed sets, produced one bushel only, and some sets failed in the rows. It is Mr. Knight's practice, confirmed by experiments at Chiswick, superintended, I believe, by Dr. Lindley, to plant the rows in a direction pointing north and south. The rationale of this practice may, I conceive, be thus interpreted. From the day of planting, say the 1st of April, to that of the termination of visible growth, the sun's altitude is on the increase, or his power is at its maximum. The foliage acts as the laboratory of light, and a greater breadth of that foliage is presented to the solar ray, by the position of plants so exposed. The light acts also more equably, since, at noon, the whole length of every row is exposed to its energy alike, on each side. Hence the haulm becomes more erect, is less liable to fall over, and, therefore, is retained in full health and vigour. The tubers consequently are formed at an early period, become mature in good time, and unless the season be very unpropitious, may be secured before there can be a possibility of severe and injurious frosts.

THE AUTHOR OF "THE  
Nov. 1854. DOMESTIC GARDENER'S MANUAL."

### CULTURE OF THE ONION.

MR. EDITOR,—It is very gratifying that this salubrious bulb, which is in such general estimation, and so extensively employed, can be raised to the utmost perfection, so as not merely to equal, but to surpass the onions of the growth of Spain and Portugal. I do not at all allude to the common processes of garden culture; they, with some slight shades of difference, are known to every gardener. But the one, and I believe one only, by which bulbs of extraordinary beauty, size, and mildness of flavour may be procured, has been communicated by the venerable President of the Horticultural Society. Few persons have the Transactions of that institution at command, and, therefore, as I have been favoured with two direct communications from Mr. Knight upon the subject, and am perfectly aware that it is his wish to disseminate knowledge, I embrace the present opportunity, through the medium of your influential columns, to communicate a few particulars which may greatly improve the practice of those who are desirous to ascertain what can be effected in England. It is rather late in the season now to commence the experiment, but the time is not passed; and if the process be immediately commenced it may succeed perfectly.

Let a gentle hot-bed be prepared—every man acquainted with "forcing," will understand what this means; to others it may be proper to observe, that about two good barrows of horse dung that has lain in a heap for two or three weeks, mixed with half the quantity of oak or beech leaves, and turned twice, so as to blend the materials; these materials employed in the proportions named, and to any required extent, will form a bed that will yield a gentle and permanent heat.

Late in January or during the first fortnight of February, this bed should be in action. Place on it a stratum of light sandy garden soil, three or four inches thick. It will be all the better that this bed be

covered with a frame and light, but Mr. Knight observes that mats will do. The plants will soon appear, bearing the little black covering of the seed of each (testa) upon its point. At the beginning of April the young onions are to be planted out in distances, six inches by twelve, in rows. These rows and spaces are best formed by stretching two garden lines at right angles one with the other, and moving each, as needful, to the required distance, drawing merely lines, not drills, to indicate the points of intersection where the onions are to be placed. These are to be "*laid flat upon the ground with the leaves pointing north*, lightly covering the roots with soil. They very soon erect themselves, and by the great extent of foliage outgrow immensely all sowed and not removed plants. A little quick lime is, after planting, and occasionally afterwards, sprinkled over the beds." This precaution is taken to prevent attacks of worms, which, in fact, are the grand enemies of the work, by mining the soil, and drawing in the points of the leaves while they thus deracinate the bulb. To obviate this inconvenience, I would recommend that a flat tile be laid under the leaf of each onion, and extended beyond its point, for when the leaves become erect, and not till then, will the plant be in security. If the soil be good and the season propitious, the results will be most gratifying. "I had many onions last year" (1834) observes Mr. Knight, "which exceed two pound ten ounces, and one which weighed three pounds."

To prepare the bed, I would select a plot exposed well to the south; the soil light, filled with perfectly fermented and black manure (forked in to the depth of six or eight inches,) and then *beaten hard* with a turf-beater. Upon such a surface the lines may be drawn, or rather scratched, without making it rough. The hardness of the soil renders the onion a perfect *surface bulb*, its fibrous, or true roots, only penetrating the ground. Two sources of failure may be mentioned. The first, and most obvious, is a bad soil and exposure; the second is the season. If April and May prove arid and scorching, the young roots will find some difficulty to establish themselves, and time will thus be lost. The onion, to mature it perfectly, requires the operation of the most powerful sun which our climate will afford; yet the plant loves moisture, hence it may be prudent to press a round pole forcibly upon the soil, so as to form a groove or channel in the centre of the spaces between the rows, and to pass a sharp pointed stick, diagonally, in a direction towards the roots underground in different parts of the grooves. Then, by pouring a volume of water along the channels, it will flow along them, and down the oblique holes, so as to supply the lower soil, without flooding the surface. But rain, in due time, is the best; all the irrigating processes of man are succeeded only.

Botanically, the onion belongs to the 1st order of the 6th Linnæan class—*Hexandria Monogynia*. In the natural system it is referred to the great class *Monocotyledones*, and to the order *Asphodelæ*. Its natural character is clearly and beautifully described by D. Lindley, in "*Ladies' Botany*," p. 231.—Feb. 6.

By advices from Leghorn to the 5th inst, we learn that the imports of grain during the past year were—693,177 sacks of wheat, 75,830 of barley, 111,794 of oats, and 225,988 of various other kinds of grain, amounting in all to 1,106,789 sacks. It was expected that the admission of grain into Spain would be allowed in the course of the present year.

## TO THE EDITOR OF THE 'FARMER'S MAGAZINE.'

Sir,—Allow me a small space in your columns in answer to Mr. J. Richardson, Heydon, respecting the prospects of the farmer, under the present administration, and I will do what he has omitted to do, institute a comparison betwixt the advantages derived to the farmer from the Liberals and the Tories. Mr. Richardson dates the first injury the farmer received from Peel's bill of 1819, and certainly proves his statement by showing that two years before, the average of Wheat was 94s and 83s per qr, and that of 1820, only 65s 10d. Now I will ask any reasonable man whether he thinks at this period, when the country had been in a state of peace for four years, and a prospect of its continuing, whether it would not have been madness in any ministry to endeavour to perpetuate the high rate of profit accruing to the farmer during the war, and to hold up the price of wheat at either 94s or 83s per qr? and whether he does not think that such an attempt to hold up prices to that amount, must have brought on dreadful riots, if not a bloody revolution? I do not understand the question of the currency sufficiently to give a decided opinion; but, I should rather incline to Sir R. Peel's opinion with all his selfishness than to Mr. R's. I will therefore admit that it had a considerable effect upon the price of corn, and had it reduced the average no lower than in 1820, viz., 65s 10d per qr, by permanently settling the monetary system, and affording something like that price to the farmer, it would have been a great national benefit; but it appears that in 1822, the average was reduced to 43s 5d, and from 1820 to 1827, the average was 57s 2d; though from the mode of taking the averages, it is well known the farmer did not receive so much perhaps within 3s or 4s per qr, and this was considered by these vile Tories not a sufficiently remunerating price; they, therefore, revised the corn laws, and gave us a system of progressive duties varying from a high rate to 1s per qr, which minimum duty would have stopped at 5s if the Liberals had not prevented it. This Act was passed in 1827. The Tories went out of office in 1831, and for the four years this bill was administered by the framers of it, with a minimum duty of 1s instead of 5s, it did yield, according to Mr. Richardson's own showing, an average of 65s 4d, and for these four years the average only varied 2s per qr. Mr. Richardson may theorize and speculate as he pleases as to the effect of Peel's bill; he may institute comparisons as to the price of wheat and that of stocks, but the fact is that for the four last years of Toryism, their measures did yield an average of 65s 4d. Then comes political agitation; then Reform is all the order of the day. Reform which was to bring security and prosperity to our country, comforts to our firesides, and to render our gardens and our fields an universal *el dorado*! But somehow or other all men are not conjurors, and what impudent quacks will boldly prognosticate, subsequent events will sometimes maliciously contradict; and thus Sir, from Mr. Richardson's own showing on the first year of the Liberal Administration, the average was reduced 7s 4d less than the last year of vile Toryism. But it does not stop here, another year of Liberalism passes over, and the average is reduced to 52s 11d, making a difference of 13s 5d. Then comes a third year of Liberalism: and it might be said that for the first two years the ministers had so much to do that they could not attend to every thing, but one would suppose that in three years a body of talented men might embrace in their views the most important points on which their country's welfare rested; what is the result? the average is re-

duced to 45s, making a comparison against Liberalism of 21s 4d! Few people will forget the bright anticipations they indulged when the Liberals introduced into the King's speech their commiseration with his suffering farmers, and what did these liberal *puffers* and their tail do when the average was reduced 21s 4d per qr? why, they took off the duty on shepherd's dogs, amounting to the enormous sum of 8s per annum, when those farmers who most wanted relief, did not keep a shepherd dog because their land was unfit to keep sheep! Then Sir, comes the close to the blessings of Liberalism, so far as the farmers are concerned. In October 1834, the ministers are turned out, and the average price of wheat is 42s per qr, and look at this *ye sticklers for Whigish liberal rule and misrule*, 24s 4d less than the last year of Toryism, and giving for the four years the Whigs were in office, an average of 49s 5d,—16s 5d less than the last four years, and 7s 9d less than the eight worst years of Toryism,—enough to make a man *turn his coat* and wear it threadbare also. I should be ashamed of myself, if like Mr. Richardson I ascribed all this declension entirely to political causes, to one set of ministers; but I am satisfied that the first considerable impulse downward, was given by political agitation, and that accelerated during the last two years by an abundant crop. Some party in the country must have rule, the Whigs were driven from power because they satisfied no one, not even those who are now loudest in wishing them back again. I think the country will not admit a radical government. Mr. Richardson will not allow the Tories to remain whom I have proved are the best friends to the farmer, but I trust the thinking part of the community will not be led away by Mr R. or any other vapid declaimer, but will judge of the present ministers by their conduct, and while that conduct is any thing like what it ought to be, will unite in putting down political agitation, which is as great a curse as a country can well be subjected to. As this is a first attempt in your Magazine, I sign myself

A FARMER.

## THE AGRICULTURALISTS.

The very limited number of publications on Agriculture which have been produced by practical farmers, increases in a wonderful degree the pleasure which we experience on the perusal of any work emanating from such a source. The work to which we are about to allude, although by no means strictly agricultural, contains so much useful information on the subject, and displays so much sound judgment and solid discrimination, that we trust it will be perused by all those who can afford to obtain it. A younger brother of Mr. Patrick Shireff, of Mungoswells, in the county of East Lothian, having expressed an earnest desire to emigrate to some part of North America, Mr. Shireff, with a fraternal feeling which does him infinite credit, determined to make a transatlantic excursion for the purpose of forming an opinion on the propriety of such a step. He set out on the 20th of April, 1833, and having completed his tour and returned home, we rejoice much that "solicitations of his friends have induced him to give his opinion to the public," and we predict with confidence, that "the result will not prove their partiality to have been greater than their discernment." Our limits

will not permit us to take so extensive a notice of this publication as we could wish, we shall therefore simply call the attention of our readers to a part of it which refers to a subject the opinions upon which, as expressed by our transatlantic brethren, are equally applicable to our own situation.

Mr. Shireff having traversed a part of the state of New York, arrives at Bucl farm, the property of a Mr. Bucl, who is esteemed an eminent farmer in that part of the country, although as Mr. S. observes, his farm "presents few attractions to any one conversant with British Agriculture." He is described as a man of enlarged mind, and enthusiastically devoted to agriculture. On the departure of our author, Mr. Bucl presented him with the printed proceedings of the New York State Agricultural Society. This Society was incorporated by an act of the Legislature, on the 26th of April, 1832, a report recommending a Legislative grant, was approved in Feb. 1833, and without doubt has ere this time been obtained. The report of the select Committee on the memorial of the New York State Agricultural Society, is given in Mr. Shireff's work, and contains such an estimate of the importance of the farming interest, as we could wish to see more generally entertained in this country. After adverting to the peculiarly patriotic feelings of the farmers of the state of New York, the report goes on to say, "When a storm arises in the horizon, and danger awaits us from abroad, or when crazed ambition at home drives the frenzied passions of men to madness and all its excesses, it is in the farming interest of the country that you find the steady hand which holds the balance of political power, and by its strong arm repels the foe, or by its electoral voice annihilates the unjust hopes of the aspiring ambition of profligate politicians." The high rank which the state of New York holds among the states of the Union, and the attention devoted to the education of every other class of society are next alluded to, and the following pointed question relating to the farmers is put, "Is it then unfair to ask what has been done by the legislature for a class of its citizens so numerous, virtuous, and meritorious? The stranger when he sojourns in your land, and views all that has been done for the cause of science, for education in the higher branches of literature for your various schools, for the reformation and punishment of crimes on a scale superior to any state in Europe, naturally enquires, Show me your agricultural school? You are essentially an agricultural people, a class of society who have aided so liberally to the institutions of your state, must have received the constant and peculiar care of legislative protection and patronage." Now who is there can read the above passage, and not be forcibly struck with its literal application to the condition of the farming interest in this country. During the palmy days of agricultural prosperity in England, Agricul-

tural Societies were promoted and flourished, but if the details were strictly analyzed, it would be found that their success was mainly owing to the exertions of the tenantry themselves. Not one single step has been taken by the Government to advance the science of agriculture. The report continues by enforcing the advantages which would be derived from founding Agricultural Schools, in which education in the theory and practice of agriculture should be combined. In the report of the State Agricultural Society, Albany, made in 1833, and which in Mr. Shireff's book follows that to which we have alluded above, we find the following remark. "It should be the policy of Government, therefore, which watches over the interest of all, to infuse into the labour of husbandry all the lights of science and knowledge—to take care to expand and elevate the minds of those who are to give it efficiency and character, and to call forth skill and industry by proffered rewards." Thus in a new country like America, possessing all those natural advantages which give to the pursuit of agriculture a superiority which enables it to rival the older and better cultivated countries, it is deemed of importance to lay down a system for the education of those whose future labours are to be dedicated to the culture of the soil, whilst in this country an object so deeply important in its consequences, is left to the accidental means which may fall within the reach of the parents. What a picture does our author draw between the farmers of Great Britain and those of New York. "How different," says he, "is Britain and Ireland from the state of New York, where the 'tillers of the soil' are regarded as the most patriotic class, hold the balance of political power, and alike ready in repelling foes and restraining profligate politicians. In former ages the cultivators of the British soil were considered mere vassals and termed villains. At present they are lightly esteemed by those who chiefly reap the benefit of their exertions, and although this is the age when the schoolmaster is said to be abroad, judicious steps have not been taken to improve their condition." We shall embrace an early opportunity of offering some suggestions for promoting the science of Agriculture, and by an improved system of education, enlarging the mental faculties of those who contemplate devoting their energies to the cultivation of the soil.—*Mark Lane Express.*

A SURE SERVANT.—"Man Jack," said a farmer in the neighbourhood of Glasgow, the other day, to his ploughman, "but you're an unco slow feeder." "Vera true, maister," said Jack, flourishing the spoon, "but I am a real sure one."

The weather has been extremely bleak and stormy within the last day or two, which has given a salutary check to overforward vegetation. We have had frequent showers of hail and snow, and the hills around us are all clad in white.—*Carlisle Patriot.*

## AGRICULTURAL REPORTS.

## DEVONSHIRE.

Few winters have been altogether more favourable to farming operations than the present. Frost, without being severe, has been sufficient to chasten the fallows, and those which have been already cross ploughed, are in fine condition for receiving spring corn. In some places inconvenience has arisen from the want of water; but the rains, within a few days, have removed all apprehensions for the future.

Wheat and vetches look superb at a distance; on a nearer inspection, however, a great quantity of weed is discovered. To the wet and retentive soils the season has been peculiarly propitious. Stock of all kinds has been kept out, without the usual injury from treading pastures saturated with water, and at very little expense of hay; while turnips have been consumed with the least possible waste. The markets have been abundantly supplied with grain, which has been sold since the last harvest for less than it cost those who had no rent to pay. It may indeed be fearlessly averred, that the present prices leave nothing for rent on nine-tenths of the arable land of this extensive county. Corn has sunk to about one half of what twenty years ago was considered its legitimate price, but the cost of production has not been lowered more than a fifth, or at the most a fourth, without one single cheering ray to brighten the gloomy prospect. The burden of the poor-rates had become so severe, that we hailed with pleasure a plan that promised to mitigate their severity; but after waiting many months in vain for instructions from the Poor Law Commissioners, we begin to suspect that this costly apparatus was, like most of the jobs of the Whig ministry, intended to increase their influence by patronage. Before this time we expected a complete uniformity in the mode of administering relief to paupers, and such official regulations for the diet, clothing, and discipline of all inmates in workhouses, as might be suggested by a board composed of men of great research, intelligence, experience, and energy. In these hopes we have hitherto been sadly disappointed, yet we are willing to believe that much good might arise from the late act, particularly if some of its clauses were amended.—Feb. 17.

## KENT.

We still continue without rain, except a few slight showers, so that the land is in a fine working condition; great numbers are taking advantage of it, and are very busy getting in their spring crops—indeed, the extent already sown is greater than has been known at so early a period for a number of years. There are at the present time some fields of oats and barley looking quite green and promising, and if we should have a fine March they will no doubt produce a heavy crop. The want of rain is greater than has been known at this season of the year for several years, and owing to it farmers are put to much inconvenience, having to drive their cattle some distance for water, and at the same time to fetch it for household purposes.

The wheats in general are looking well, but in a number of instances there is a want of plants, which may be accounted for by there not being sufficient moisture in the earth to make it vegetate.

Our corn markets still continue in a very heavy state, and little spirit in the millers to buy, except

at their own prices, and that for the best sorts; others are quite unsaleable.

The cattle markets have a full supply of beef, with a decline in price for even the prime ones. The want of money has been much complained of both with buyers and sellers.

Sheep in general have been doing well, and the numbers which have been at grass at so late a season of the year is unusually large, and has greatly helped to lengthen out the turnips, which are now nearly gone in a number of instances, but we may look for a full supply at the markets if we should have severe weather, as the keep will then be very short.

There has been more doing in wool of late, with a firm market as respects price.—Feb. 18.

## WILTS.

The weather continues warm and spring-like, as it has been indeed through the winter with very little exception, so much so that there have been very few days of rain or frost sufficient to prevent the ploughs from working.

Sheep have done well on the downs, and are in better condition than they usually are at this season. They are just beginning to lamb, and though the crop of hay was very short, the peculiarity of the season will nearly make up the deficiency.

An unusually small quantity of rain has fallen since last August, and in some situations sheep and cattle have suffered from want of water. The winter streams on Salisbury-plain do not exist this year. There is perhaps reason to fear that we shall now have more wet than will be convenient during the spring sowing season, when a great loss accrues from the working cattle not being able to move.

The present year will nearly ruin many Wiltshire farmers, particularly from the failure of the barley and most other spring corn crops, and those who think the deficiency will be made up by the comparatively high price of sheep and wool are much in error. The gradual fall in the price of wheat, from 1830 to the present time, will put all contracts and money payments out of place and still injure the tenant. The poor-rate too, will probably turn out to be still on the increase, and where the tenant pays the rate on the tithes (as is mostly the case in this county) it has the effect of increasing that burden.

The alteration in the poor-laws, and the very judicious circular instructions have as yet had little or no effect on the amount of monthly payments to the poor, but it is generally agreed among practical men, that the consequence has been wonderful on the conduct of the respectable labourers. They know now that if they are indolent or impertinent and go to the magistrate, that he does not order them to be put on the same footing as the worthy and industrious. The administration of this part of the unamended poor-law was most mischievous. Still there are too many able labourers for whom no profitable work can be found.

Wishing our friend and fellow-labourer, Mr. Ellman, every success with the malt-tax, I cannot help thinking he is too sanguine, or, in other words, that the taking off the tax will not do all the good he anticipates.

Our crops of barley have suffered of late from smutty or black ears, and if any of your correspondents should know any remedy and will communicate the same (liming and brining or otherwise) through your magazine, they will oblige, &c.

## THE AGRICULTURAL INTEREST.

## PETITION TO PARLIAMENT.

TO THE EDITOR OF THE NORTHAMPTON MERCURY.

Millbrook, Jan. 28, 1835.

Sir,—Will you again allow me, through the medium of your ancient and valuable journal, to call the attention of my brother farmers to the necessity of bestirring themselves on the subject of our fallen interest? It is vain to ruminate over the burdens which are weighing us down, if we never take upon ourselves the trouble to act with the determination of pointing out the means by which those burdens may be taken from our shoulders. I have twice before endeavoured to arouse their thoughts to this subject, and it has not been a vain endeavour, as far as I can speak of the determination of my neighbours. It is my wish, however, that it may be no partial effort, confined to a single district in Bedfordshire; but that a general, widely-extended appeal may be made from all parts of the country to Parliament, praying them to place the burden of the poor fairly upon all classes, by taking the necessary relief for the poor from the public revenue, and thereby enable us to say, "Now is the winter of our discontent made glorious summer." Hence, as the vernal sun restores and fructifies the soil we till, so shall we again behold a bright and cheering prospect opening to our view. I have enclosed the copy of a letter which I addressed to Sir Robert Peel, with the reply thereto; and it is gratifying to be assured that this great statesman is not indifferent to the subject. Let me then, I beseech you, my brother farmers, again impress upon you the necessity of urging this important subject forward, as the accomplishment of this grand object would prove the greatest blessing which the government could possibly confer upon us, a blessing which would extend itself to every other interest in Britain.

I am, Sir, your's, &amp;c.

GEORGE GREEN.

TO THE RIGHT HON. SIR ROBERT PEEL, BART.,  
FIRST LORD OF HIS MAJESTY'S TREASURY.

Millbrook, Beds, Jan. 19, 1835.

Sir,—It is incumbent upon me and every other farmer to think seriously of our present distressed state, and to endeavour to suggest the means by which relief may be extended to us. I hope this will be received as an apology for the presumption of so obscure an individual taking upon himself to address a letter to such a distinguished and enlightened statesman as Sir Robert Peel. It has been said that the late administration took off taxes to the annual amount of five millions; it may be true they did do so, but the agricultural interest is more distressed at the present moment than at any time in my remembrance. It therefore appears useless to call upon government to take off taxes in order to relieve the distress of the occupiers of the soil. What then can be done to relieve the agricultural interest? It is my present object to suggest an answer to this important question; and it is my firm conviction, if you can render my suggestions practicable, they will lead to the happiest results. The arm of the farmer is almost paralyzed; and unless he can meet with timely relief, he will be unable either to hold or drive the plough much longer. The great and insupportable burden which he has to sustain is the poor. The idea of taking

this burden from the shoulders of the occupiers of the soil may at first sight appear startling; but, to a mind so enlightened and comprehensive as yours, Sir, I entertain a lively hope that the means will present themselves for effecting this grand object. The operation of the amended Poor Law would assist government greatly in their endeavour to do so; for as soon as the workhouse system of managing the poor can be rigidly adopted, it will set the poor upon a new footing, and the management will be comparatively easy. I make this assertion from my own knowledge; and, if government were to take the management of the poor it would be found easy to point out to the surplus labourers such parts of the country where employment might be found. But how are the means to be raised to enable government to bear the burden of the Poor? If it be possible to apply the Malt Tax to such a purpose, that would be a great means, or any other tax now in existence: but if additional taxes are found necessary, could not a Property Tax, be fairly assessed for the purpose? And, if other taxes are found necessary to raise a revenue commensurate to the additional expenditure which the entire management and relief of the poor would cause to the government, then I should humbly suggest that as many of the taxes as are wanted for the purpose, which the late government have taken off, and which do not affect the common necessities of life, be put on again, in order to raise a sufficient revenue. Hence would arise the prosperity of the agricultural interest, upon which hangs in a great measure the prosperity of every other interest in Britain. By taking the relief for the poor out of the public revenue, it will be placing the burden fairly upon all classes; and it is firmly impressed upon my mind, that the prosperity of the country depends upon this grand object being carried into effect, more than upon any other measure which can possibly be brought under the consideration of Parliament.

This subject has been gaining popularity in our neighbourhood in consequence of a letter which I sent to the *Northampton Mercury* a few weeks ago, and it is now in contemplation to petition Parliament; but as great confidence is inspired in the public mind, that the present administration will in their wisdom direct some means for the relief of the farmer, it has been thought advisable that a letter should be addressed to you before the petition is got up, praying you to condescend to favour me with a reply, if it be possible consistently with the high office which you adorn in his Majesty's government, to offer a word of advice to so obscure an individual as myself.

I am, Sir,

Your most obedient, humble servant,

GEORGE GREEN.

TO MR. GEORGE GREEN.

Whitehall, Jan. 21, 1835.

Sir,—I beg leave to acknowledge the receipt of your letter of the 19th instant, and to express a wish that the parties, on whose behalf you write to me, should take their own course in respect to their petition to Parliament, unfettered by any opinion of mine. I trust that they will neither attribute *that wish* to disrespect towards them, or to indifference to the subject on which you have addressed me.

I am, Sir, your obedient servant,

ROBERT PEEL.

N

THE COLONIES.

At the present period, when the public interest in our vast Colonial possessions is evidently gaining ground, we deem that the following statistical abstract of the resources of our British colonies in North America alone will be interesting to many of our readers. We take them from Mr. Montgomery Martin's able work on the colonies, and considering the imperfect state of the census system in all our settlements, they bear the stamp of great correctness. This table strongly and readily illustrates the vast capabilities of our North American possessions, which have ample resources for the reception of the redundant population of the mother country, securing at once a truly reciprocal trade between both countries, and affording increased strength against foreign aggression by the means which the carrying trade possesses in fostering and extending the naval power of Great Britain, all which are circumstances that forcibly press upon Government the policy of ruling them correctly, and of encouraging the mutual interchange of benefits which this kind of commerce peculiarly possesses over foreign trade. So long as our colonies are viewed as integral parts of the British empire, so long will the empire exist.

\* It is unnecessary to give the area also in acres, as the multiplication of the square miles by 640 will give the amount.

† The organized militia of each settlement are in

numbers as follow :—Lower Canada, 100,000; Upper Canada, 60,000; New Brunswick, 12,000; Nova Scotia and Cape Breton, 20,000; Prince Edward's Isle, 6,000; Newfoundland, 2,000. Total, 200,000.

## ON SPADE HUSBANDRY, &amp;c.

TO THE EDITOR OF THE 'FARMER'S MAGAZINE.'

Sir,—There are few questions of more importance, in rural economy, than that relative to the eventual benefit, or loss, resulting from spade husbandry, to the landlords, the farmers, the poor, and the public. The following calculation is the result of some observation and inquiry among spade husbandmen.

The prices assumed are low, but not quite so low as the actual prices, on the supposition that these are now depressed below the average, by a rather abundant produce.

## ESTIMATE OF EXPENSES AND AVERAGE PRODUCE.

| 1st Year, POTATOES.                                                                                                             | Per rood.            | Per acre. |
|---------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------|

| Total average profit, per acre, 1l. 19s. 1 $\frac{1}{4}$ d.                                                                     |                      |           |

I shall now add a few remarks on the causes which must lead to the success, or the failure, of spade husbandry. It is very evident that success must depend upon care, skill, and industry, a soil easily dug, and either fertile enough to bear such moderate crops, as

above stated, or capable of being made so by marl, lime, drainage, &c.; a situation near home, so as to render the expense of carriage, &c., very moderate; a temporary loan of capital so as to render it not necessary to sell much of the produce; a pig to consume the inferior potatoes, and to make manure; and lastly, a rent not exceeding the value to the ordinary farmer. A temporary addition, however, may be made, as a re-payment by instalments of money advanced for seed, labour, &c. It has been objected that cultivation by the spade is much more expensive than by the plough, and that potatoes and wheat are very exhausting crops. The greater expense is of course to be compensated, in part, by more valuable crops constantly repeated, the superior care and attention which belongs to working for one's own profit, and the opportunity ever occurring of preventing any accumulation of root-weeds, which renders the expensive process of summer fallows indispensable to the common farmer. And, with respect to the supposed process of exhaustion, a cottager with his family is always consuming at home, wood, coal, bread, meat, &c., which being the produce of other soils, exhaust them to enrich his. He has therefore, I believe, in general, either in bulk or value, about two loads of manure to spare annually from his small garden at home. Then, if the occupier of two acres has 16 loads of manure for his acre of potatoes, the two loads of what may be termed extra manure, will evidently add one-eighth to the fund of fertility; and if the allotment be only half an acre, the additional manure will be one-third, and the land must continually improve.

It may, however, be prudent and useful for the occupiers of an acre or more to vary their crops occasionally with barley, turnips, carrots, &c., though either of these crops must lessen the immediate, if not the ultimate profit.

But the whole course of agriculture shews that if the straw, &c., is properly made into manure, much of the corn, meat, butter, &c., may be annually sold, without producing any perceptible exhaustion of a fertile soil.

Amidst all these signs of prosperity for the English cottager, who is allowed land to cultivate with the spade, the opponents of this system triumphantly allege that it has been extensively tried in Ireland, and found to produce nothing but misery, beggary, and indolence. These evils, of course, have their origin, in a great measure, in the surplus population; but the immediate and main cause, is evidently the extortionate rents the poor cottiers are called upon to pay, such as 3, 4, 5, and £6 for an English acre of land, rents which almost any English landlord would be ashamed to ask, and which ought therefore (together with its main source, the system of under-letting) to be abolished at once, by the strong arm of the law.

A reference to the preceding calculations, will make the evils resulting from extortionate rents abundantly manifest.

Suppose, first, the principal tenant gives 30s per acre; he underlets an acre at 70s, and thus takes to himself the whole clear profit (40s), leaving the cottier merely his wages (15d a day), but nothing at all for his skill, care, and attention.

The hand-labour on an acre of land cultivated by the spade, seems to be about 72 days' work, value 4l 10s 8d.

Now, secondly, let a more severe master add 30s more to the rent of the con-acre (as it is termed in Ireland), which will make it 5l. The result is that the sub-tenant, deprived before of his whole expected

profit, now loses one-third of his wages, or works for 10d a day instead of 15d.

Thirdly, make the rent 6*l*, and this will reduce the reward of labour one-third farther; and of course his immediate superior can at any time expect or command his labour, in part payment of rent, at 6d or 7d a day.

This last supposition seems to form a correct picture of a large portion of the ill-fated Irish peasantry; where the pork, the wheat, &c., is nearly all sold, and much of it sent to England, to pay the rents of Irish absentees, and at the same time to impoverish the English farmers. A general tax on all Irish produce imported into Great Britain, of about 3 per cent. *ad valorem*, would amount to about 200,000*l*, and would tend much to diminish the consequent evils to both countries, especially if devoted to the sole purpose of enabling the Irish to consume more of their produce at home, by the cultivation of their immense bogs, and by other public works.

Perhaps the principal objection which political economists have made to Irish farms in their diminutive size, often not exceeding from one to two English acres. This objection is not without weight, provided no other employment can be found to occupy their spare time, since by the preceding calculations it will appear that about four acres are necessary to employ one man 48 weeks in the year. Let a portion of the surplus labourers in either country occupy such a portion of ground, of a convertible kind, at a moderate rent, and near their homes, and I am fully persuaded that they might go on and prosper, and the country be so far relieved of all the miseries caused by able-bodied men supported in vice and indolence.

As a general, and more immediately practical, system, I should think garden allotments of half an acre each, would be more advisable in England. These might be about nine poles square, and thus furnish no temptation to horse labour, nor any great outlay in pig-sties, or other buildings. If such tenants be allowed about 20*s*. profit, in addition to their annual six weeks' work, bestowed in cultivating their allotments, with that additional attention which self-interest is sure to inspire, they may fairly be considered to be taken out of the market for labour at least nine weeks per annum. If a parish of 2,500 acres contains 50 surplus labourers, (like the one where this is written,) and half an acre be allotted to every labourer, more than 116 of the parochial labourers would thus be supplied, and about 110 would still remain for the land-owners to employ in improving their estates, and for public works or emigration. With respect to the cultivation of the Irish bogs, I presume this is at present impracticable, on account of the intermixture of properties, the necessity of extensive drainage, the claims of heirs of entailed estates, &c.

These knots, if they cannot be untied, ought to be cut at once by an Act of Parliament, authorising enclosure, valuation, and public sale to individuals, companies, or the Government itself, for the employment and location of the surplus peasantry. To render effectual the various means of employment I have pointed out, nothing is, or has been, wanting for the last twenty years but an Act of Parliament, laying the support of unnecessary, or superfluous, labourers on the landlords, instead of the tenants; for that would have been quickly followed by another Act (first recommended by me, and probably me alone, about 28 years ago,) to secure mutual justice between landlords and tenants, by equitable arbitration in respect to all permanent improvements, injuries from game, &c. Cottagers, as well as farmers, have always had an equitable claim to such protection,

which, had it been granted, would have given constant employment to many thousands, and tens of thousands, in Great Britain and Ireland, and would have saved millions, if not tens of millions of money, which have been altogether thrown away.

I consider that modern incendiarism, and other acts of violence, have been caused entirely by the system,—equally unjust and impolitic,—of sending surplus hands to the farmers for support; and to have already cost the country little short of two millions sterling. Altogether, the cost of maintaining the semi-feudal thralldom under which the cultivators of the British Isles have been held *during the last 20 years*, I believe have not cost less, probably much more, than has been given to liberate the West Indian negroes.

In maintaining this long, and hitherto fruitless, contest with arbitrary power, which, in many despotic countries, would have subjected the author to fines, imprisonment, expatriation, and even death,—it may be judged no small sacrifice has been made. Whatever of merit or demerit may belong to it must be left with futurity, or to oblivion, since the ultimate benefit of any extensive measure of reform is invariably questioned or neglected by contemporaries, and often only becomes evident, and acknowledged when the originator has long slept in the earth.

I have thought it might be useful to the farmer's cause, if a cheap edition of my papers, or such as might be thought useful, were printed and distributed among the principal public writers, but have ascertained, some years ago, that a complete apathy pervades the tenantry on this, and almost all other, points. They seem, in fact, to have made up their opinion, that their superiors in Parliament will do nothing for their good until they clearly perceive it is also for their own.

In the hope that some efficient advocate of the tenants' cause may yet arise in the next Parliament, I remain, Sir, yours, &c.

THE AUTHOR OF THE "RIGHTS OF THE FARMER."

EARLY STRAWBERRIES.—The season of forcing this delicious fruit approaches, and to effect the process it is customary to prepare the early runners of the last summer, or cuttings of the roots of old established plants, by potting one or other of them, two or three in a pot, of the size termed the "broad thirty-two," at almost any period, between June and the end of September. These pots, so prepared, are finally placed near the glass of a vinery, or some other forcing-house that will admit of free ventilation, about January or February. By a gradual and due increase of heat the plants blossom, and bear fruit during March, April, and May, according to circumstances, to the extent, on an average, of ten, fifteen, or twenty berries each pot. We could much enlarge on this subject; but as it is not our intention to enter upon the description of pot-culture, we only advance the foregoing observations to serve as a foil or set-off to a method of forcing strawberries, by which, perhaps, three or four times the above crop may be obtained; not indeed quite so early, but with much more certainty and precision. We will suppose, then, that some of our readers have, or may choose to prepare, a brick pit of three lights, each being a yard, or three feet six inches wide, by six or seven feet long, sloping to the south, or south by east, at an angle of 15 or 16 degrees. The brick-work might be of sufficient depth to admit of an internal bed of oak or beech leaves, of two feet, to afford a gentle bottom heat to a stratum of mould of at least 12 inches in the front, sloping at an angle corresponding nearly with that of the lights towards

the back. The slope might be regulated by the bed of leaves underneath; and this, if leaves were scarce, might be of stable or farm-yard manure. Four-inch work would be sufficient, and would admit the heat of a back lining of dung, or leaves, to act upon the atmosphere of the pit. The soil should be prepared some months before it is wanted, of good garden soil, or the loam of a pasture, enriched with one-third of well-fomented manure, or good leaf mould. In fact, we know that in pure leaf mould, two or three years old, strawberries, cucumbers, and even melons, will grow well, and yield fine crops. When the bed is settled, so as to admit a clear space of from 14 to 18 inches between the surface and the grass, the plants may be put into it, in rows nine inches apart, in a direction from front to back, and four inches asunder, plant from plant. If these have been prepared by letting the strong, st first runners establish themselves in pots during the preceding autumn, the bed may be planted in January; but if the plants have rooted in the ground, the transplanting ought to be made not later than October, and in that case the lights should not be put on till the period of forcing. The best crops will be obtained by remitting this operation till February, or even March, as it will then be powerfully assisted by the decided increase of solar lights; but early fruit may be obtained by putting on the lights after the turn of day, and by assisting the plants with hot linings, &c. A small hot water apparatus, with a single advance and return pipe in front, within the pit, would perfect the machinery. However, by anticipating the natural fruiting season for a month or six weeks only, excellent fruit may be obtained without the aid of bottom heat, linings, or fire-aid, in any form, provided a moderate supply of air and water be regularly given. The crops we have seen, under such circumstances, are astonishing; and we venture to believe that no one who shall have once ascertained what *may* be thus effected, will, in future, rely entirely upon the product of plants in pots. We regret that our limits will not permit us to dwell further upon minute, but we must add, that to secure cleanliness, it would be a good practice, when the plants come into bloom, to lay a row of well washed flint stones, or a line of moss, between every two ranks of plants. These will not only protect the fruit, but tend to retain the regular moisture of the bed of earth. Gardeners are perfectly aware that the heat required at any season, to force the strawberry, independently of that of the solar ray, should average between 50 and 65 deg.

### PRESERVATION OF DUNG.

Practice differs in the modes adopted respecting the *care of farm-yard dung*. Most farmers allow it to accumulate for a long time in the yard, adding fresh straw regularly to the heap, from an impression that the bottom, if unremoved, will become the richest part and that its accumulation imparts a certain degree of warmth to the cattle; while some recommend "that it should be cleaned out once a month at least, not only to sweeten the yard, and thereby to increase the health and vigour of the animals, but in order that its contents may be properly mixed in some other place, to induce and bring on a regular fermentation."

Now, on this it may be observed, that the fears which are entertained by some persons of the vapour arising from dung which is contained in the open air of the yards becoming prejudicial to the health of the cattle are proved by experience to be completely visionary. No really bad odour prevails there; for, although it may be offensive

to delicate nostrils, the air is always respirable, and when not confined in close stalls, by which the circulation is prevented, no ill effects are ever known to arise from it. But when the cattle are either fed upon turnips or other green food, the quantity of urine which they discharge drenches such a quantity of straw, that the beasts cannot be easily kept dry; or if they be crowded in badly-arranged yards, and immersed in the filth proceeding from a scanty covering of straw, and the want of proper drains to carry off the superfluous moisture, they may then indeed be exposed to injury from the wet, and the dung should be removed, though in almost any case "once a month" would be found too often. In many instances the yards are never cleared until the cattle are turned out after the close of the winter; and, unless in a very plentiful season for straw, it is seldom done more frequently, after they are shut up, than perhaps once more in the early part of the spring; except they be soiled during the summer, in which case it becomes frequently necessary. When proper care has been used to prevent an excess of rain-water, the manure thus obtained from the bottom layer will doubtless be found of superior quality; but the whole heap ought to be well mixed, in order to render it of equal value.

An eminent agricultural author, complains that he has not, in any one instance, been able to find anything like system in the mechanical arrangement of the component parts of farm-yard mixens, which he generally found put together as they arise, according to circumstances, and without any regard to rule. Hence it follows that their real value as manure can never be distinctly known to the farmer, nor can he apply that proportion which a more accurate knowledge of the contents would enable him to apportion to different kinds of grain, or to the particular soils and seasons in which they can be most advantageously applied. A heap, for instance, composed entirely of dung from stables where horses have been plentifully fed with corn, must be far superior to one produced by cattle in the straw-yard; yet so little is this very material point adverted to, that nothing is more common than to hear of "so many loads per acre" being laid upon the land, without regard to the ingredients which it contains, though nothing is more certain than that its power over the crops will be in exact proportion to the qualities of the materials of which it is composed.

This writer advocates the separation of the various species of manure, in order that the properties of each may be distinctly ascertained; yet another author, of equal experience, says, in treating of Norfolk, "that the principal error in the common method of manufacturing farm-yard dung originates in the prevailing custom of keeping the dung arising from different descriptions of animals in separate heaps or departments, and applying the same to the land without intermixture, and consequently in an improper state." He then alludes to the difference arising in the manure from the modes of keeping, fating and storing cattle in yards by themselves, "while horse-dung is also usually thrown out at the stable-doors, and there accumulates in large heaps, which very soon ferment and heat to excess;" he therefore recommends that litter to be spread over the straw-yard, and the whole of the dung from the different yards and the hogstyes to be mixed together.

On these opposite opinions we have to remark, that, when either the soil or the intended crop is essentially different, it may be very desirable that

the manure to be employed should possess distinct properties, and therefore, in such cases, a portion of it should be separately kept, as well as differently prepared. Thus warm and cold soils require manures of a contrary nature; an advanced stage of their fermentation is in some cases less favourable to vegetation than in others; and, in the instance of potatoes, it is well known that stabling is employed with more effect alone than when mixed. It may, therefore, be advisable that horse-litter in particular should be separately kept in the yards, not merely for the purpose just mentioned, but that, as being of a hotter nature than any common dung, it may be mixed with that of other cattle in such proportions as may be thought best adapted to the purposes for which the compost may be required. If no better arrangement can be made, the litter should be placed within some dry ditch, which will answer the purpose of a more regularly constructed pit, where its moisture may be maintained without too greatly heating it, and without exposing it to the evaporating action of the air. Thus, if care be at the same time taken to prevent it from becoming dry, the fermentation will be checked; and should it be thought expedient to still further retard that operation, it may be effected by a mixture of hog's-dung, which, though rich, yet being of a colder nature, is less fermentable. By this union the dung becomes decomposed into a soft and pulpy mass, which forms a very powerful manure, and, by a little judicious management, can be either promptly got ready or be kept back at pleasure.

Under other circumstances, however, and especially on small farms, where the quantity of materials may not be sufficient to allow of their being separated without incurring the risk of loss by the excess of evaporation, or by the want of due fermentation, it is found more generally expedient to spread together all the different sorts of the dung of the larger animals in different layers, so that each may be regularly mixed and partake equally of the common properties of all, by which means the faults of one species are corrected by another; the too rapid fermentation of the dung of horses is checked, while that of hogs and horned cattle is accelerated, and thus the whole mass acquires the enriching properties of the most fertilising compost.—*Hereford Times*.

#### THE MALT TAX.

Sir,—At the present period of Agricultural distress, and at a moment of strong political excitement, allow me, through your widely circulated paper, to ask my brother Farmers, whether they have seriously reflected upon the evils arising to us as a body, by the payment of that most obnoxious impost, the Malt Tax? To the continuance of this Tax may be attributed many of the difficulties under which we at present labour, in confirmation of which, allow me ask—What is the Malt Tax? Neither more or less than a heavy tax upon the produce of our own soil. The Malt Tax adds to the price of that article (Malt) 40 per cent. The Malt Tax increases the price of Beer quite 40 per cent. From the Malt Tax, the productive Labourer is unable to procure a sufficient quantity of Beer, which is a beverage he so much needs in the discharge of his daily labour. Take off the Malt Tax, and you remove the main spring which clogs our national industry—this done, we shall give important relief to the Agriculturist—relieve the poor man, and finally benefit all classes.

FARMER JOHN.

Tending Hundred, Jan. 1835.

#### WHICHNOR BACON.

On the regular mail-road from Sheffield to Birmingham, half-way betwixt Burton-on-Trent and the city of Lichfield, stands, on the left hand, a very well-built and commodious inn, bearing the sign of a large fitch of bacon, with the motto "Win it and wear it." It forms part of the village of Whichnor, the small church of which is seen to the right hand, apparently in the open field, at the distance of about a mile; and but for the few trees around it, and the small glimpse of the Trent, which runs near it, would be passed almost unnoticed. Whichnor possesses no peculiar object to interest the traveller except the long bridge, or rather succession of bridges, over the river Trent, which here, as in many other parts of its course, is in the habit of frequently overflowing the low lands in its neighbourhood to a very great extent, and the sign, or "Fitch of Bacon," before mentioned. The latter is a memento of a singular tenure, like that at Dunmow, of which the following is the history and ceremony.

The manor of Whichnor with that of Sirescote were granted by William I. to one of his Norman followers, of the name of De Somerville, by the tenure of a knight's fee and three-fourths; and, like other military services, the rendering of aids and reliefs to the superior lord of the fee, which superior lord was the possessor of the Honour of Tutbury. Sir Philip de Somerville, a descendant from the original possessor, was a great friend and favourite of his superior lord, John of Gaunt; and his companionable qualities made him a frequent and welcome visitor to Tutbury Castle. The Duke of Lancaster, who was very remarkable for singular, and, in many cases, jocular institutions, wishing to free his companion from the liability of being called upon for his aid at times inconvenient to himself, established the following commutation for the moiety of his claims; that is, in all probability, for the manor of Whichnor.

"That he," Sir Philip de Somerville, "should find, maintain, and sustain one bacon-flyke, hanging in his hall at Whichnor, ready arrayed at all times of the year but in Lent, to be given to every man or woman married, after the day and year of their marriage be passed; and to be given to every man of religion, archbishop, bishop, prior, or other religious; and to every priest after the year and day of their profession finished, or of their dignity received, in form following.—Whosoever that any such before-named will come for to inquire for the bacon in their own person, or by any other for them, they shall come to the bailiff, or to the porter of the lordship of Whichnor, and shall say to them in the manner as ensueth;—'Bailiff, or Porter, I do you to know, that I come for myself, (or, if he be come for another, showing for whom he demands), to demand one bacon-flyke hanging in the hall of the Lord of Whichnor, after the form thereunto belonging.'"

Application being thus made, the bailiff or porter shall appoint a time for the applicant to come again, bringing with him two of his neighbours. "In the mean time the said bailiff shall take with him twain of the freeholders of the lordship of Whichnor, and they then shall go to the manor of Rudlow belonging to Robert Knyghtley, and then shall summon the aforesaid Knyghtley, or his bailiff, commanding him to be ready at Whichnor the day appointed, at prime of day, with his carriage, that is to say, a horse and a saddle, a sack and a pryke (*basket*), for to convey and carry the said bacon, and come a journey out of the county

of Stafford at his cost. And thus the said bailiff shall, with the said freeholders, summon all the tenants of the said manor to be ready at the day appointed at Whichnor, for to do and perform the services which they owe to the baron. And at the day assigned all such as owe services to the baron shall be ready at the gate of the manor of Whichnor, from the rising of the sun to noon, attending and awaiting for the coming of him that fetcheth the bacon. And when he is come there shall be delivered to him and his fellows chaplets, and to all those who shall be there to do their services due to the baron. And they shall lead the said demandant, with trumpets and tabour, and other manner of minstrelsy, to the hall door, where he shall find the Lord of Whichnor or his steward, ready to deliver the bacon in this manner.

"He shall inquire of him who demandeth the bacon, if he has brought twain of his neighbours with him, and he must answer, 'They be here ready.' And then the steward shall cause these two neighbours to swear, if the said demandant be a wedded man, and if, since his marriage, one year and one day be passed, and if he be a free-man, or a villain. And if his neighbours make oath that he hath for him all these three points rehearsed, then shall the bacon be taken down, and brought to the hall-door, and shall there be laid upon half a quarter of wheat, and upon one other of rye. And he that demandeth the bacon shall kneel upon his knee, and shall hold his right hand upon a book, which book shall be laid above the bacon and the corn, and shall make oath in this manner:—

"Hear ye, Sir Philip de Somerville, Lord of Whichnoore, mayntener and gyver of this bacohne, that I, A., sithe I wedded B. my wyfe, and sythe I hadd hyr in my kepyng, and at my wylle, by a yere and a day after our marriage, I wold not have chaunged for none other farer ne fowler, rycher ne pourer, ne for none other descended of greater lyneage, slepyng ne wakyng, at noo tyme. And yf the said B. were sole, and I sole, I wolde take hyr to be my wyfe, before all the wymen in the worlde, of what condicions soever they be, good or evylle; so help me God, and hys sayntis, and thys fleshe, and all fleshes."

"And his neighbours shall make oath that they trust verily he hath said truly. And if it be found by his neighbours before-named, that he be a free-man, there shall be delivered to him half a quarter of wheat, and a cheese; and if he be a villain, he shall have half a quarter of rye without cheese. And then shall Knyghtley, the Lord of Rudlow, be called, for to carry all these things before rehearsed; and the said corn shall be laid upon horse, and the bacon above it; and he to whom the bacon appertaineth shall ascend upon his horse, and shall take the cheese before him, if he have a horse; and if he have none, the Lord of Whichnor shall cause him to have one, and a saddle, until such time as he has passed his lordship; and so shall they depart the manor of Whichnor, with the corn and the bacon before him that hath won it, with trumpets, tabrets, and other manner of minstrelsy; and all the free tenants of Whichnor shall conduct him past the lordship of Whichnor; and then all shall return, except him to whom appertaineth to make the carriage and journey out of the county of Stafford, at the costs of his Lord of Whichnor. And if the said Robert Knyghtley do not cause the bacon and corn to be conveyed as is rehearsed, the Lord of Whichnor shall cause it to be carried, and shall distrain the said Robert

Knyghtley, for his default, for one hundred shillings, in his manor of Rudlow, and shall keep the distress so taken irrevocable."

Sir Oswald Mosley (from whose recently-published 'History of Tutbury' part of the foregoing account has been extracted) observes,—"The merry Sir Philip continued to treat his bacon with due respect, for we find him granting to Hugh, son of Walter de Newbold, and Agnes his wife, by deed in the 16th of Edward I., several small pieces of land in Dunstall, upon condition that they should render to him and his heirs annually eight hens at Christmas, and one chaplet or nosegay of white and red roses, to decorate the bacon at Whichnor every year, on the feast of St. John the Baptist; they were also under an obligation to dress the said bacon, with flowers prepared for them, ten times a year, viz., to begin on Easter Eve, and continue the same monthly until the feast of St. Michael, and upon the vigil of All Saints and Christmas Eve they were to decorate the same with ivy."

The manor of Whichnor no longer remains in the family of the Somervilles; it has had various possessors, and the hall in which the flitch originally hung has been long since destroyed. Leland says, that "Whichnor was the site of a very ancient mansion which was then in ruins, and that the spot on which it stood was subject to inundations from the Trent. Traces of this mansion are still visible in the meadows at a small distance south-west of the church. The moat is square, encompassing an acre of ground." A new building, however, has been erected, and bears the name of the lodge; in the hall of which a piece of wood in the form of a flitch of bacon hangs near the chimney, as a remembrance of the obsolete tenure.

## OCCUPATIONS OF THE PEOPLE.

(From the 'Companion to the Almanac.')

### YORK (EAST RIDING.)

|                                                 |        |
|-------------------------------------------------|--------|
| Occupiers of land employing labourers . . .     | 3,331  |
| Occupiers of land not employing labourers . . . | 1,661  |
| Labourers employed in agriculture . . .         | 12,727 |
| Employed in manufacture . . .                   | 175    |
| Employed in retail trade or handicraft . . .    | 12,917 |
| Capitalists, bankers, &c. . . . .               | 2,398  |
| Labourers not agricultural . . . . .            | 4,663  |
| Other males twenty years of age . . . . .       | 2,627  |
| Male servants . . . . .                         | 939    |
| Female servants . . . . .                       | 8,235  |

The East Riding of Yorkshire would be entirely agricultural, did not the town of Kingston-upon-Hull (with its suburb Sculcoates) contain the manufactures indispensable at an active seaport, about 100 men being there employed in making ropes, sail-cloth, and sacking, and in preparing colours. Boilers for steam-engines are also made at Hull, but this manufactory is on a very limited scale.

### CITY AND AINSTY OF THE CITY OF YORK.

|                                                 |       |
|-------------------------------------------------|-------|
| Occupiers of land employing labourers . . .     | 340   |
| Occupiers of land not employing labourers . . . | 253   |
| Labourers employed in agriculture . . .         | 1,184 |
| Employed in manufacture . . . . .               | 211   |
| Employed in retail trade or handicraft . . .    | 4,069 |
| Capitalists, bankers, &c. . . . .               | 589   |
| Labourers not agricultural . . . . .            | 1,212 |
| Other males twenty years of age . . . . .       | 650   |
| Male servants . . . . .                         | 298   |
| Female servants . . . . .                       | 2,161 |

The City of York contains nearly 200 men em-

ployed in linen manufacture, and 18 comb-makers; the brush-makers are entered above as handicrafts.

#### YORK (NORTH RIDING.)

|                                                 |        |
|-------------------------------------------------|--------|
| Occupiers of land employing labourers . . .     | 4,950  |
| Occupiers of land not employing labourers . . . | 4,334  |
| Labourers employed in agriculture . . .         | 14,646 |
| Employed in manufacture . . .                   | 1,005  |
| Employed in retail trade or handicraft . . .    | 12,749 |
| Capitalists, bankers, &c. . . . .               | 1,870  |
| Labourers not agricultural . . . . .            | 4,391  |
| Other males twenty years of age . . . . .       | 2,836  |
| Male servants . . . . .                         | 844    |
| Female servants . . . . .                       | 9,251  |

The North Riding of the County of York may be deemed entirely agricultural, the manufacturers inserted in the list being weavers of linen-yarn, which seems to be entirely the product of domestic industry. These weavers are much scattered, 123 at Hutton, 73 at Appleton-upon-Wiske, 62 at Osmotherly, 48 at Northallerton, 27 at Thornaby, 25 at Barrowby, 22 at Sowerby, 21 at Burton-upon-Yare, and 20 at Broughton. At Startforth is a very limited manufacture of carpeting; at Whitby and Whitby-Strand about 90 men are employed in making sail-cloth and sack-cloth, and 17 in the delicate manufacture of jet ornaments.

#### YORK (WEST RIDING.)

|                                                 |        |

| Employed in retail trade or handicraft . . .    | 40,109 |
| Capitalists, bankers, &c. . . . .               | 8,354  |
| Labourers not agricultural . . . . .            | 33,685 |
| Other males twenty years of age . . . . .       | 10,336 |
| Male servants . . . . .                         | 3,274  |
| Female servants . . . . .                       | 22,167 |

In the three wapenstakes of Agbrigg, Morley, and Sky-rack respectively, are found 17,000, 22,000, and 29,000 men employed in the manufacture of woollen cloth. The places most eminent in woollen fabrics and worsteds are—the parish of Halifax, containing nearly 12,000 men so employed; Leeds, 9,400 in the town and liberty; Bradford, 7,900; Almondbury parish, 4,500, and (adjacent to it) Huddersfield, (worsted and silks) 3,700; Kirk-Burton, 2,400; Calverley, 2,100; Dewsbury parish, 1,800; Birstal, 1,700; Batley, 1,400; Kirk-Heaton, 1,200; and Saddleworth, about 1,300, besides the same number employed in cotton factories. In the manufacture of thread and linen goods, Leeds employs upwards of 500 men; Barnsley, 1,300; the wapentake of Claro, about 1,000, many of whom are at Knaresborough. In the wapentake of Staincliffe and Ewcross, about 2,300 men are employed in linen and cotton fabrics; in Staincross wapentake, about 1,000 in woollen and linen promiscuously; in Ripon liberty are about 100 linen weavers. The manufacture of iron and hardware is mostly confined to the wapentake of Strafford and Tickhill,—Rotherham being mostly occupied in the foundry and heavy goods, and Sheffield in edge-tools, to which it now adds silver-plated furniture for the table, and a variety of articles in such profusion that the entire parish of Sheffield, or Hallamshire, contains as many men so employed as Birmingham itself, nor is the catalogue of articles very dissimilar. In the other townships workmen are distinguished as brass-founders, button-makers, die-sinkers, makers of edge-tools, and grindery in large proportion, makers of files, fire-irons, fenders, forks, table

knives, haft-pressers, knife-blades, moulders, razor-smiths, razor-case makers, ring-makers, saw-smiths, scale-cutters, makers of scissors and screws, scythe-grinders, sheer-steel and sheer-makers, silver smiths, silver-platers, spade-makers, spring-knife grinders, steel-casters, steel-forgers, steel-burners, rollers and drawers of steel, stove-grate makers, tilters, turners in wood and ivory, type-founders, and white-metal smiths—in all 11,600; and at Bradfield and Ecclesfield are about 1000 men employed in similar occupations. Carpets are made at Dewsbury; glass and earthenware at Witchwood and other places; and about 200 nailors find employment at Darton, and its vicinity.

#### FEEDING.

Turnips are chiefly grown upon flock-farms for the support of sheep, but in many parts of the country it is the practice to draw some of the largest for bullocks. The drawing of turnips for the supply of working cattle upon open ground, is, however, but seldom practised, as it is in many respects more convenient to confine them within the interior of the yard; though, when this mode of feeding is adopted, they are not permitted to be in the same enclosure with the fattening stock, which get the choice of the food, leaving the surplus for followers who come after; and in this manner the ground is often divided into three shifts, the food in the latter being cleared off by lean stock only, or by store sheep.

When cattle are either housed, or fed in yards, upon turnips, this is better done by laying in a small stock for their use, whenever the weather is favourable, instead of going every day to the field, when the land is perhaps wet, and is soon poached, and the horses employed in drawing them are strained by the labour. At the proper season, when the turnips are completely grown, and the cattle are taken into the yards, these roots are gathered in quantities from the field, and either piled in stacks placed upon the ground, or else carted to the feeding-house, which is made with a door wide enough to allow the carts to back in and throw them down. The turnips, while fresh and palatable, are then given whole—or else the tops and tap-roots are cut off and given to store cattle—in bins or small cribs, under the sheds or about the yard, and straw is scattered in the course of the day, both fresh and from the horses' litter; for it is remarkable that oxen will often browse upon the litter in preference to sweet straw, and will toss it about with their horns to pick out even that which may have been wetted by urine. When turnips, however, are intended for stall-feeding, the whole of the green tops, or shaws, and tap-roots, are cut off and given to the lean and working stock, and the bulbs, if not stacked, are piled up in one end of the barn or feeding-house, and dry straw laid over them, which will effectually guard them for a long time from being injured by frost. They are then sliced, either by means of coarse turnip-knives or instruments commonly used for that purpose, or else cut into quarters by small choppers upon a narrow bench or stool, under which there is a basket for catching the pieces. The ploughman, or feeder, holding the turnip by the root, disengages it, by one stroke, from the top, which is then thrown aside with the root, and the sliced bulbs are alone given to the fattening cattle, which always have a preference over the young and working stock. The advantages thus arising are, that the green tops, being cut off when fresh, are immediately consumed; that a large quan-

tity of the best turnips, if allowed to remain on the field during winter, are very commonly spoiled by the effects of the weather, when, if stacked or housed, they may be secured against the most pinching time of the spring; and though they will shrink in weight, yet Swedes, in particular, not only lose no portion of their nutritive quality, until well advanced in the season, but are improved, by allowing their watery particles to evaporate; provided, however, that this drying system be not carried too far, for it has been proved that bulbous roots may become exhausted of their nutritive properties, when too much exposed to the sharp winds of the spring months. By having a month's supply ready drawn, a farmer need never be deprived of the use of them by severe frost, which frequently so completely locks them in the ground, as to prevent their being got up; or, should he not find it convenient to lay in so large a quantity at once, he can still take the opportunity of a fine day, as it occurs, to add to his stock in the house.

This, however, applies chiefly to Swedes; for, with whatever care the common turnips may be stored, they will show indications of decay in about three weeks, according to the state of the weather, and after that period they become unpalatable. This has been satisfactorily proved by an experiment on feeding with the same turnips—one parcel taken fresh from the field, and the other from a sound store-heap, the leaves and roots of which had been carefully topped and tailed; for several cows were turned out successively in order to prove them, and, after smelling at both, each began to eat those taken from the ground, and did not taste the other parcel until they were finished. It is also impossible to keep a large quantity of turnips of any kind for more than a short space of time under the same roof with cattle, as they soon become tainted by the effects of the breath and perspiration of the beasts, together with the effluvia arising from their dung, and are no longer eaten with any degree of relish. When turnips are overtaken by frost, it is well known that cattle not only find great difficulty in making an impression with their teeth, but that, when pressed by hunger to swallow them, they afterwards discover symptoms of uneasiness—raising up their backs and drawing in their feet, as if seized with a fit of the cramp. But this may be obviated, if the turnips, whilst frozen, be placed under cold water, and allowed to remain there for three or four hours, after which they will be found, on taking them out, to be perfectly fresh and sound.

The quantity of turnips that a working bullock may be supposed to consume daily must necessarily depend upon his size, as well as upon the extent of his labour, and upon his constitution, in which cattle differ so materially, that no calculation can be formed that may not be contradicted by other experiments. The quality of the roots also differs essentially, not only according to the particular species, but to the state of culture, the season, and the soil; thus the Swedish turnip contains in the proportion of about three to two more nutriment than any other kind, and although a difference to that extent is not apparent in the other sorts, yet the common white turnip, though the most generally cultivated, and the most abundant in produce, is known to afford less nourishment than any other. They cannot, however, be exclusively preferred, for they require a considerable difference in soil and culture: the tankard, globe, and common white, are the earliest species, then the red and green tops; after them the yellow Aberdeen, and, lastly, the Swedes, which, retaining their sap the longest,

are preferable for Spring feed. Thus nature supplies a variety according to the season, and animals are found to delight in a change of food.

It has been judiciously observed by Mr. Sinclair, that those who have made experiments to prove the comparative degree of nourishment contained in the different species of food, by means of feeding and weighing, have found the results of such experiments quite in conclusive, for—

Firstly, The quality of some species of food will often vary from 1 to 20 per cent. in the course of the experiment.

Secondly, Different breeds acquire various proportions of flesh from equal quantities of the same food consumed by them. And,

Lastly, Scarcely two individuals of the same breed can be found that will gain equal weights of flesh from equal quantities of the same kind of food. He justly remarks that, although a certain quantity of food will maintain an animal for a certain length of time, without sensibly increasing or diminishing its weight or strength, yet, if the food which it can consume be augmented, its flesh and power will be increased. But we have no means of accurately ascertaining the exact proportion required for those two purposes, distinctly, for it depends not on the quantity and qualities of the food alone: the age of the animal, its breed, and its exposure to heat or cold, are also to be considered; the nutritive powers of the food cannot, therefore, be absolutely determined by those means, though the comparative merits and value of the different breeds are thereby fully ascertained: for it is manifest that it is not occasioned by the deficiency of nutritive matter in the food, but by the want of power in the animal to profit by it.

Thus no rule can be drawn from the quantity of food which a bullock may require daily, and still less for the power with which he may be able to sustain his labour; but it may be assumed, as a common average of the usual breeds of working oxen, that, if allowed the run of the straw-yard, with about 12 stone of Swedish turnips, to 18 or 20 of the common sorts, they may be maintained in good order; and there can be no doubt that, if allowed that quantity, with plenty of good straw, they will be in a better condition than if fed with a limited quantity of even the best hay alone. Care must, however, be taken to supply them with a sufficiency of palatable solid food, or they will scour. The dry fibre of hay or straw, if combined with turnips, assists materially in correcting the watery nature of the latter; and it has been stated, in numerous instances, that oxen thus fed will go through their usual winter work without any diminution of flesh or strength. In the course of the winter, however, the straw loses a portion of its sap, and the increased exertion of Spring sowing requires at least 10 or 12 lbs. daily of meadow or clover hay, but still with the free use of the straw; and if Swedish turnips be allowed, there can be no occasion for the use of corn, which when given to working oxen, will ever be found a losing concern.

If parsimoniously fed upon indifferent hay and straw, it then becomes necessary to cut it into chaff, for otherwise the oxen will reject that which is bad; but, if mixed, they will eat the good along with it. When, however, they have a plenty of good food, that precaution becomes unnecessary, for the animals prefer it in its natural state; the cutting of it can therefore only occasion waste of time, and even if given with hay, they will select enough of the best parts of the

straw to satisfy their appetites, and the remainder may be used for litter.

There can thus be no doubt that oxen can be well maintained during the winter months upon straw and turnips, if the straw be good; and will support their strength better upon a full allowance of that food than with a small quantity of hay instead of the straw. It should, however, be given as fresh as possible from the flail; for the thrashing exposes it so much to the air, that, if kept too long, it becomes deprived of what little nutriment it possesses, and cattle do not thrive upon it. There can, indeed, be no question that the air has an injurious effect upon all kinds of fodder, and that the more it is guarded from the influence of the atmosphere, without suffering it to grow mouldy, the better it will be. When the farmer's necessities do not compel him to thrash out his grain in large quantities, it should therefore be kept in stack, and the straw be gradually used during the winter; nor should it be employed in any other way than as litter after the month of March, for it loses much of its value as fodder during the sharp winds of that month, and the working stock at that time require the additional nourishment of hay. The allowance, too, should then be full, for if oxen be not well fed when hard worked, they will assuredly fall off; or, if maintained in condition with inferior food, it can only also be with proportionately light labour, which will be found the very reverse of judicious economy.

Although the straw of oats is usually preferred for cattle, as being more palatable, yet that of wheat has been considered by many persons as more nutritious. It is, indeed, coarser, but, so far as we have the means of judging, it appears to contain more saccharine matter, and if used with a small addition of turnips, cattle are found to thrive on it. Two winters ago, eighteen young stock—consisting of eight rising three years old, five rising two, and five yearlings—were fed from the beginning of November till the middle of May. They had two acres of yellow turnips—a middling crop—of which the oldest two lots got scarcely any, the largest proportion being given to the youngest. They were therefore kept almost entirely on wheat-straw alone, and got nothing else for six weeks previous to their being turned to grass; yet they all grew well and retained their condition, no falling off being perceptible during the last six weeks. We do not, however, mean this as an inducement to the feeding of working cattle on straw alone, but merely as stating a fact illustrative of the nutriment contained in the straw of wheat.

When cattle are turned into a straw-yard, they are allowed to eat as much as they please; no saving is there requisite, because the largest proportion is generally consumed in litter. But in some instances economy becomes necessary in the consumption of that, as well as of every other species of fodder; and, to effect it, no means appear so practicable as—first, to cut it small; or, secondly, to steam it.

Experience teaches us that almost all vegetable substances are capable of certain modes of preparation which develop nutritious qualities that, without such management, exist only in a feeble degree. Thus, bruised or pounded grain has been found more nourishing than when left whole; and bread still more so than flour. We have also seen that boiled or steamed roots afford more of sustenance than when raw; and there are many other vegetables which, though apparently worthless, yet are capable of being converted into food. It is well known that, in times of scarcity, the leaves of trees, and of various plants not

commonly used, are made to yield very tolerable fodder, when mixed with chopped straw; and bran, which contains but little alimentary substance, may yet have that property improved by steeping it in water, and allowing it to ferment until it sours. In like manner, we learn that the peasantry in some of the German provinces provide winter food for their cattle by a peculiar method of preparation; and there can be no doubt that, were attention turned to every vegetable substance, our own stock could be materially increased.

Salt, however, always enters into these preparations. The liking evidence for it by all animals proves how much it adds to the energy of their digestive powers, and consequently how useful it must have been to their health. They are frequently observed to forsake the best provender, and to eat the litter from the horse's stables: this being probably occasioned by the state of their stomachs, which seems to require the stimulus of the volatile alkali contained in the urine of the horses, and absorbed by the straw.

We have omitted the mention of *potatoes* and of *carrots* in the feeding of working oxen, because we have been convinced, by calculations upon the subject, that, unless by the partial use of chafs, and of carrots unsaleable in the markets, no profit can be derived from the support of bullocks upon those roots; though the growers affirm that an acre of either will feed as many cattle as three of turnips, which exactly agrees with the comparative weight of nutritive matter afforded by carrots—which is three to one—and still more in the potatoe.

But we think otherwise of *mangel-wurzel*; for there can be little doubt that, according to a series of experiments made under the direction of the Doncaster Agricultural Association, they can be grown on light land as well as upon land stronger than is fit for Swedish turnips, that they produce more weight; and that, although there are some difference of opinion upon the subject of their nutritive qualities, there can be no doubt that they will be found a most profitable root in the feeding of all cattle.—*Hereford Times*.

## ON THE RECENT FAILURES OF THE POTATO CROP.

(FROM THE QUARTERLY JOURNAL OF AGRICULTURE.)

As the rotting of the potato-set in the ground after planting has occasioned a very serious loss in this country (Ireland,) both last year and this, I have been induced to pay particular attention to it, with a view to find out its cause, and I flatter myself I have succeeded.

I had about half an acre of ground belonging to Mr. Richardson, at Ingram Cottage, near Lisburn, trenched, and duly prepared for planting potatoes; and I carefully superintended all the operations myself. The first ridge of ground was mostly planted with yams, and I believe ninety-nine out of the hundred have done well. The next ridge was planted with the small American, without being cut, few of them being larger than a very small walnut, and I may say there is not a plant wanting. About half of the next ridge was planted with a fine large purple coloured potato, brought from England some time ago by Mr. Richardson. A fourth ridge was planted with another kind of potato, and it is doing well. On looking over the ridges, as the plants were coming above ground, I observed the purple kind very blanky. I examined the sets, to find out the cause of the fail-

ure, and found fully half their number quite rotten; and, what is remarkable, every rotten set had been placed with its cut surface on the dung, and the dung had become as it were glued to it. These circumstances led me to think that the rotting of the sets had been somehow or other caused by the dung; but still I could not satisfy myself in regard to the cause. After I had observed all this, I had five drills of them put in with the same dung as the others; but, in order to guard against the rotting causing a loss of the whole crop, as this same kind of potato had rotted the year before, I caused a parcel of the sets to be put into the head ridge of the five drills, *without any dung*; my intention being to take up these sets on the head ridge after they had sprung, and, with them, to fill up any blanks that might occur in the five drills.

The ridge of the purple potato presenting so many blanks, I resolved on taking up all the plants that had sprung above ground, when I found all the sets quite sound, and putting out vigorous shoots, and their skinny surface next the dung. Some days after this operation, I examined the five drills, and found many of the sets rotten; but only those whose cut surfaces had been placed in contact with the dung, which was again glued to them. The sets were never affected when the round or skinny surface was placed next the dung. These facts convinced me that the dung was the cause of rottenness in the sets. I presume the dung put into the ground in warm weather, continues to ferment, and that this fermentation is communicated to the cut surface of the set. The rotten set feels like a piece of boiled turnip, and has a most offensive smell. In some cases, about one-sixteenth of the substance of the potato was found adhering to the skin, and a puny shoot proceeding from it.

As a corroboration of what I have stated, I may mention, that a neighbour, Mr. Seeds, has three fields of potatoes, one-half of which has failed. He mentioned his loss to me, and on examining the crop, we found all the sets which had been placed with their cut surfaces on the dung, rotten, while the most forward and vigorous plants had the round uncut side next the dung.

From all these circumstances, I am quite satisfied, that were a little earth put over the dung, before planting, or the uncut side put undermost, or, what is still better than either, the potato planted whole, no failure, such as has affected the potato crop for the last two years, in this country, would happen.

No one need fear to plant small uncut potatoes, for, in a piece of ground that unintentionally grew potatoes last year, I found many very vigorous plants, three inches above the ground, in the end of April, and on taking some of them up, several of the whole potatoes which had formed the seed were not larger than the eye of a large haddock. The coarse kind of potato, called cups, never fail, which I suppose is owing to their containing little saccharine matter, and that they are thus not easily acted on by the fermentation of dung. A. A.

**CHENOPodium QUINOA.**—Humboldt says this plant, in Mexico, ranks in utility with the potato, the maize, and the wheat. The leaves are used as spinach or sorrel, or as greens; and the seeds in soups and broths, or as rice. Throughout great part of South America, and especially in Peru, the seeds are in as common use as rice is in Hindostan. The seeds are considered more heating than rice, and on that account they are frequently given to domestic poultry to make them lay early. The plant is an annual, and in general appearance resembles the

*Atriplex hortensis*, or French spinach; and, under the same circumstances of soil, climate, &c., will grow to about the same height as that plant. The seeds are small, yellowish white, round, somewhat flattened, about a line in diameter, and, on a cursory glance, might be mistaken for those of millet. Mixed with the latter seeds, and fermented, a pleasant kind of beer is said to be produced. They are contained in a single envelope, from which they are very easily separated. The quinoa was first introduced into England in 1822, and it has ripened seeds at Kew. No particular notice, however, appears to have been taken of the plant till this season, when it has been grown by A. B. Lambert, Esq., V. P. L. S., at Boynton, where it has ripened abundance of seeds on plants varying from three feet to seven feet in height. These seeds Mr. Lambert will, no doubt, distribute all over Europe; and, we trust, the plant will now have a fair trial both in gardens and fields. To do any good in producing nutritious seeds, the plant should be subjected to field culture, in which we see not the slightest difficulty. It might be sown very thinly in drills, three feet apart, at about the same season as barley, and the plants afterwards thinned to the distance of one foot apart. There appears, at present, no reason whatever why it should not become as common in the fields of Europe as barley, wherever that grain can be cultivated. In the mean time, we hope it will be tried first in gardens, in order to raise abundance of seed for future experiments in the field. Dombey, the botanical traveller, on his return from Peru, was lavish in praise of the quinoa as a valuable esculent, and took great pains to naturalize it in France; but the seeds which he brought with him failed, and it is uncertain, at this moment, whether the plant is any where on the Continent of Europe, unless, perhaps, in Spain. Great credit is due to Mr. Lambert for having been the first to prove that it may be grown in England as well, in all respects, as it can in Mexico and Peru; and for directing public attention to it (at a meeting of the Linnæan Society, Nov. 4, 1834) as a plant calculated to rank with the potato in its copious supply of human food. The circumstance of its having been in the country since 1822 (see *Hort. Brit.*, p. 99, in which a green and a red variety are mentioned), shows that it is not sufficient to bring useful plants into the country, but that, to make them truly serviceable to society, they must be properly introduced as such, by forcibly pointing out the purposes to which they are applied in their native country.—*Gardener's Magazine.*

**FARMING IN NOVA SCOTIA.**—Some farms consist of six acres, some of twenty, and seldom more than thirty. Each farmer generally has five, or six, or seven acres cultivated, and chiefly planted with grain and potatoes. They keep a pair of oxen for ploughing, drawing wood, &c. They also keep three or four cows, two or three pigs, also some keep a few geese and sheep. They always endeavour to raise enough in a summer to last the year out, until the summer returns again. In the winter but little can be done, owing to snow and other storms; in which time the women are spinning, weaving, and making clothes, and not many can afford to wear shoes and stockings. The men in the winter wear mocgasins. Fresh food is seldom to be got, unless by shooting game, or by fishing. The natives often exchange work with each other, and, if the winter be open, the men weave shingles for houses, make clapboards, staves, &c.; by which they add a little to their living; and, in a word, every family endeavours to depend altogether on itself.

## WHO ARE THE FARMERS' FRIENDS?

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

Sir,—As the meeting of a new parliament is at hand, the party now uppermost are putting forth their electioneering claim to be esteemed "the best friends of the agricultural interest." This may perhaps be true, since it means literally "their own interest;" the Tories claiming as their partisans a great majority of the benefited clergy, and the titled owners of a large portion of the soil of the United Kingdom. I shall make no objections to the exertions of every one to preserve his own property—the only question being, whether such property was honestly acquired? And where the present value of land and tithes rests on the unrequited exertions of the tenantry for a series of years, I make no scruple in asserting that such portion of the property is not honestly acquired! Here is indeed a *legal right* where the claim is decidedly *immoral*; the clergyman and landlord claim a profit where the tenant suffers a loss. Such is at this moment the law of our land, and I lament to have occasion to say, that the reign of the *Reformers* has, at present, passed away, without any indication of a wish to reform the laws of *landlord and tenant*, so as to secure to the latter the fruits of his labour. Whigs, Tories, Radicals, with all their various shades of distinction, are unanimous in one thing—not in friendship, nor enmity, but simply in neglect of the interests of the tenant-farmers! As to the professions of the Tories, one of their own party shall pass sentence on them:—Mr. Rolfe (at the Buckinghamshire Agricultural Dinner,) said, "he was sorry to see that unless agricultural distress intervened, the generality of landlords were guilty of apparent apathy. Nothing but absolute necessity—nothing but seeing that the farms lay a dead weight upon their hands, made them come forward and open their eyes." The Duke of Buckingham, in reply, is stated to have asked—"Was there a single landlord in the county blind to the distresses of their tenantry, or of their fellow men? (*Cheering.*) The interest of the landlord and the tenant were inseparable, because if the tenant failed, the landlord became a beggar. (*Hear, hear.*) It was the landlord's interest, therefore, that the tenant should prosper." The *hear, hears*, above mentioned must have proceeded, I imagine, from the landlords, for the tenantry for many years past have heard enough, and too much of these "inseparable interests," and "landlords and tenants standing and falling together." The Bucks farmers must be staunch Tories to the backbone, if they could swallow so bitter a draught at one gulp without disturbing the digestion of their dinner. Neither Mr. Rolfe, nor any one else, could suppose that landlords could not see the distresses of their tenantry—what they could not see was an adequate disposition to relieve those distresses! The noble duke must surely be vexed that his Tory friends should put so illogical a speech into his mouth, for when, "the tenant fails," it is himself, and not his landlord that becomes a beggar: and, many landlords, or their stewards, in such cases, have been known to degrade themselves by making an abatement of thirty per cent., to a new tenant, where they had refused ten per cent. to him their extortion had made a beggar, or a pauper. Mr. Rolfe, if I understand him distinctly, says, it is their estates rather than their tenantry, these agricultural "gatherings" are intended to save. This was also the all-subduing argument, addressed by Lord Brougham to the Toryism of the House of Lords, on his introduction of the New Poor Law Bill. Mr. Hutton, who spoke after Mr. Rolfe, although a

Peelite, could not forget that Sir Robert's Currency Bill "had depressed, in the most grievous way, the agricultural interests." What farmer can ever forget that bill, which destroyed at one blow one-third of every farmer's property, and left the landlord's claim to rent entire, so long as the remnant of the farmer's property remained unconsumed? Had the landlords' and tenants' interests been "inseparable," or in other words had the tenants been co-lawmakers with their landlords, the tenants would have insisted that all rents, and debts, including the funds, should have been cut down at once thirty-three per cent. by law, in common with all other property. So, with respect to the last sentence quoted from the noble chairman, it is the moral duty rather than the interest of landlords, that their tenants should prosper. On the difference between duty and interest, what a lucid comment is offered by the condition of the ragged, dirty, potatoe-fed, penny-less, and friendless wretches who form the lower class of agricultural tenantry in Ireland. This, I presume, is mostly the deplorable result of the vile under-letting system—not of the smallness of the farms, but of the extortionate rents; at least double as much as any English landlord would have the conscience to ask. Hence, it happens, that the English markets are depressed by the annual influx of cattle, sheep, pork, butter, &c., from Ireland, to the amount of seven and a-half millions sterling; half of which, at least, could and ought to be consumed by the cottiers at home, whose sufferings (as quoted in the *Courier*, from Mr. Inglis,) "far exceed the worst of those endured by the American Indians, or the savages of New Holland."

The following quotations from my notes will further illustrate the "inseparable interests," &c.—At the Smithfield Club, Dec. 1810, Sir J. S. Sebright, after drinking "long leases to good tenants," said, "I attribute the superiority of British farming over that of other countries, more to the prevalence of leases in this country than to any other circumstance, and consequently to the improvement being effected by *sensible men*, whom they certainly cannot be who will place their property, their family, and their all, at the will and caprice of any man, or the agent of any man." The applause that followed this speech was long and ardent. At the same club, at another meeting, Sir J. S. S. gave the toast, "long leases to good tenants, and let no man's industry depend on the will or caprice of another." This was drank with three times three and loud plaudits. Again, Dec. 1824, (I find it recorded in my notes,) Sir J. S. S., at the same club, observed, "that landlords most truly forwarded their own interests by encouraging the exertions of their tenants," and "that it could not be expected for men to embark their capital upon land without the security of *adequate leases*. No man who had a regard for his family should do so, but it was frequently the case."

My next quotation shall be from a speech made by the Duke of Buckingham, at a dinner given to his Grace's tenantry, at Stowe, Feb. 2, 1822,—*"Every tenant of mine knows that he shall remain in his farm as long as he can live on it; he has the full benefit of his improvements if he remain upon it, and if he is obliged to leave it, he appoints one referee and I another, and an equivalent for what he loses by leaving his farm before his improvements are fairly worn out, is thrown back to him in his rent. What can the admirers of long leases want more?"*

Partly to the same purpose is the following statement by Mr. Cann, steward to Earl Stanhope, (*Old Farmer's Journal*, No. 1248, p. 260,) "Lord Stan-

hope tells his tenants, if they will give six months warning they may leave; and if a tenant leaves any thing on his farm which he claims to be allowed for, submit it to two farmers, his neighbours, one to be chosen on each side, and pay him for what he leaves on the farm. Is this oppression, gentlemen?" &c.

The *Evening Mail*, June 19, 1822, writes on the Irish tenantry, as follows: "When we see that the occupier of the soil derives no final benefit from his own exertions, but builds, and drains, and fences, and repairs, and leaves all to be enjoyed by the proprietor of the land, can it be altogether preposterous to imagine that some law might be made to secure the tenant, on going out, as (also) in this country, an estimated proportion of the increased value which his own toil has added to another's estate, thus animating him to the improvement of his wretched habitation, and to a more exact and diligent care of the property which he undertakes to cultivate."

In the *Old Farmer's Journal*, No. 1235, I find the following: "The King of Denmark has established a Court of Equity, or Arbitration, the members of which are paid entirely by the Government, and no expense incurred by the parties applying for its decision. No suit can be instituted in any court without a certificate to state that the parties have ineffectually attempted to have it settled by arbitration."

I hope some of the eight hundred Buckinghamshire farmers are your readers, and if they are not yet quite satisfied of the purport of their Lord Lieutenant's "inseparable interests," let them read the letter signed R in the last *Agricultural Reporter*, p. 44. Among other things, relative to the arbitrary power of distraint, &c., the writer says, "I have known a few landlords so ashamed of the right they possessed, that they have relinquished their claim upon another (person's) cattle after they have been distrainted." "If I am not mistaken, the greatest portion of the soil is let to the tenant farmer considerably above its value." "The landlords ought to employ the surplus labourers in permanent improvements, such as underdraining, &c., and charge the interest, &c." "It is not reasonable that the tenants should be obliged to employ them, and pay their wages out of his own capital." "As to real improvements made by farmers, landlord often take a most unfair advantage of them by raising rents immediately they are made," &c. "The hardships often experienced by outgoing tenants in not being allowed for permanent improvements made at their expense," &c. "The landlord before he lets his farm should insist on the incoming tenant making a fair allowance for the same; which would be in some measure tantamount to leases," &c.

Such as have read any of my former writings will be aware, that nearly all of the preceding extracts are sufficiently confirmatory of my views as to the lamentable oppressions—authorised by law—which have fallen on the British and Irish farmers within the last twenty years. These liberal speeches, &c., are like oases in a desert; or "like angel visits, few and far between." Every farmer, at the time, praised the liberal declaration of the Duke of Buckingham, and well they might, considering that in such public declaration his Grace then stood, and even now almost stands, alone; I have formerly adverted to this speech, but not, I think to the fatal clause by which its efficacy seems almost nullified; viz., that the tenant is not to have any claim for permanent improvements till he has probably long ceased to make any—till he is become unable longer "to live on the farm, and is obliged to leave it." In Lord Stanhope's case, we see the tenants were to remain one year after they had begun to complain of "oppression."

I would beg to ask any impartial person, whether it is possible to secure to the tenant the benefit of improvements, unless he is able to make the claim in a legal way, whenever he is obliged to leave for any cause whatever; and especially whenever the rent is altered, or ought to be altered? With respect to leases—in modern declining times, and at fixed rents—I must allow that the Duke of Buckingham was right, and Sir J. S. Sebright in a very great error, if he thought such leases could prevent a farmer's industry from depending "on the will and caprice of another."

This could only be done by the original arbitration law between landlord and tenant, proposed by myself in "The Rights, &c.," in 1819, and (as will be seen by the above extract from the *Times*) advocated, as to its principles, three years afterwards in the leading journal.

To prevent the sufferings of the farmers from the caprice and extortion alluded to (as has been seen) by Sir J. S. Sebright, three times over at the Smithfield Club, has been the main, and almost sole design of my exertions, since 1819, in the *Old and New Farmer's Journal*, and the *Mark Lane Express*. About forty-eight letters have been written on this subject, almost any one of which I think ought to have convinced every person that the interests of landlords and tenants in some main points, instead of being "inseparable," were indeed nearly opposite; and that the tenure of farms, under the present laws, particularly as respects the surplus population, is a base and slavish one; more especially unworthy of a country which professes to amend and reform its institutions.

What have been the results? Has any party in the state, Whig, Tory, or Radical, or any influential individual in either party, taken up the question? No, not one! Neither has any newspaper (so far as I can learn,) advocated the cause of the tenants against the extortion of their superiors. These, and other reasons still more cogent, admonish me to surrender the cause into abler hands, and to desist from further advocating their cause, who have never presented a single petition to the Government in aid of reasonings which no one has seriously attempted to controvert. If the farmers do not allow themselves to be fit only for slavery, let them petition, protest, and remonstrate, in every possible way, against the present laws of landlord and tenant, which can scarcely be said to regard or respect the interests of the latter at all.

With respect to the question, Who are the farmer's friends? I would answer, that they are such as use their best endeavours to make the interests of landlord and tenant truly mutual and inseparable, which is now, in many points, far enough from being the case. My long, cherished project for effecting this purpose, though apparently equally neglected, or despised by all parties in the state, is certainly not founded on Tory principles, yet it deserves the name of *Conservative*, for I believe it is the only thing that can preserve what yet remains of affection, esteem, and respectful attachment between the rural classes, and the lay and clerical aristocracy. Other reforms, it is feared by some, might lead to revolution, but the only tendency of this is to prevent revolution. The high, the polished, the magnificent, "the Corinthian pillars of society," should, above all others, preserve the perpendicular line of rectitude; if these deviate far from their uprightness, the civic temple is evidently "nodding to its fall."

I remain, Sir, yours, &c.,

THE AUTHOR OF THE RIGHTS OF THE FARMER.

## ACCOUNT OF THE FAIRS IN SCOTLAND—ROXBURGHSHIRE.

(From the Quarterly Journal of Agriculture.)

**I. KIRKYETHOLM FAIRS.**—Kirkyetholm is a small village, situate in the valley of Beaumont Water, in the parish of Yetholm. It lies equidistant from Kelso and Jedburgh, to the eastward of both, not far to the south of the *direct* road from Kelso to Wooler. Kirkyetholm has long been famed as the head-quarters of a race of gypsies, which wander to and fro during the summer, through the Border counties. There are three fairs held at this place.

**1. KIRKYETHOLM FAIR.**—This is held on the 27th of June. The number of cattle shown seldom exceeds 200 to 300, a small proportion of which are fat, and generally bought by the Morpeth dealers. The great proportion are half-fat and lean short-horn steers and heifers for grazing, milch cows, &c. The grazing cattle are principally bought by the York-shire dealers; the milch cows, newly calved, and to calve, by the Edinburgh cow-dealers; and the younger cattle for country use. But this is principally a sheep fair, from 8,000 to 10,000 of which being generally shown, principally lean and rough Cheviot hogs and wethers for grazing. All the hogs are shown rough, but of late some lots of the wethers are clipt. The remainder are Leicester and half-bred hogs, partly clipt and partly rough. Some of the sheep are bought by south country dealers; but the greatest number pass into the hands of farmers, such as the Cheviot hogs, dinmonts, and wethers, which are laid on the high lands for a year or two; and into that of graziers, who feed them for the fat market. The ewe hogs are mostly bought for breeding. The Leicester and half-bred hogs are bought by the graziers in Roxburghshire and adjoining counties, except such as are fat, which are picked up by the dealers, for the Morpeth and Edinburgh markets. There is a very poor show of horses at this fair.

**2. TOWN YETHOLM LAMB AND WOOL FAIR** is held on the 5th of July. There are generally about 10,000 lambs shown here, about one-half of which are Leicesters, the remainder Cheviot, and half-bred between the Leicester and Cheviot. This is allowed to be the best fair for lambs, in point of quality, in the south of Scotland. All the arable farmers now feed a number of sheep in winter on turnips; all, however, do not breed sheep. Many in Roxburghshire, Berwickshire, Northumberland, and East Lothian, keep only a flying stock, to maintain which this fair affords a supply of lambs, which are fed off the following year. The price of lambs at this fair is generally regulated by the price of hogs and wool; and this being the first lamb market of the season, it generally regulates the prices of all others. In some seasons, the top price of Leicester wether lambs has been as high as 28s; in others not above 15s; the average price may be quoted at 20s. The price of half-bred and Cheviot lambs is in proportion.

This has also been a great wool fair for many years; the greater bulk of the wool grown in Roxburghshire, Berwickshire, and Northumberland, having been here bought up by the principal wool-staplers from Wakefield, Leeds, Huddersfield, Bradford, &c. But, since the establishment of wool markets at Dunse, Kelso, and Berwick, comparatively little is now sold here. It has now more of the character of a place of meeting, at which buyers and sellers give and receive information regarding the quality, quantity, and price of wool, than as a market of sale and purchase. In seasons of briskness, such as the present and last year, several lots may exchange hands, and even much may be disposed of before the fair day. From

the great number of the buyers and sellers of wool assembling at this fair, being the earliest one for that purpose, it is always an animated scene.

**3. YETHOLM AUTUMN FAIR** is held on the 31st of October, when about 2,000 sheep are shown, principally Cheviot ewes and wethers, which are mostly bought by farmers and graziers in the neighbourhood, and adjoining counties. Very few sheep go to the south from this market, the wethers being bought to feed on turnip, and the ewes to produce lambs.

**II. KELSO MARKETS.**—Kelso is a considerable town, beautifully situate on the north bank of the Tweed, near to the spot where it receives the Teviot. It contains 4939 inhabitants. It is forty-two miles south from Edinburgh, on the great road from Newcastle to Edinburgh by Wooler and Coldstream. It is a market town for the sale of corn, and corn-dealers from Berwick-upon-Tweed and Dalkeith attend the market every Friday. The delivery of Corn at Berwick and Dalkeith, however, is a serious drawback on the farms in this part of the country. It is remarkable that in so populous and highly cultivated a district as this is, so great an inconvenience has never yet been obviated, for in no part of Scotland could a railway be more easily constructed, than along the bank of the Tweed from Kelso to Berwick, its natural sea-port.

**1. KELSO MONTHLY MARKETS.**—These are now the most important markets in Kelso, and are now held on the second Friday of every month throughout the year. They were instituted by the Border Union Agricultural Society; and when first instituted, they were held on the last Friday of the month from December to June, which caused them to follow the day after the Coldstream monthly markets on Thursday. This was felt to be an inconvenience. Since then it was arranged that these monthly markets should be held at Kelso and Coldstream alternately every fortnight. As the same kind of stock and purchasers generally attend these markets, as at the monthly markets at Coldstream, which have been already described in the last Number of the Journal, or in this same volume at page 291, it appears unnecessary to repeat the observations which have been there made. One observation only seems requisite—the quantity of stock shown is generally greater than at Coldstream; but the latter place has the advantage in regard to quality and weight, though much fine stock may be occasionally seen throughout the year at Kelso, and it is pleasing to reflect that they are improving every year.

**2. KELSO ST. JAMES'S FAIR** is held on the 5th of August, about two miles on the south side of Kelso, on a beautiful flat piece of ground called Fleurs' Haugh. Some years ago a large quantity of cattle was shown at this fair, but in consequence of the influence of the monthly markets, the show has of late years dwindled away very much. There is now not more than 300 to 400 cattle shown, very few of which are fat, the largest proportion consisting of half-fat and lean short-horn steers and heifers, half-fat north country cattle, milch cows, &c. Any thing approaching to fatness is generally bought by the Morpeth and Edinburgh dealers, very few of the south country dealers attending this market; and the half-fat and lean stock are bought by the graziers in Roxburghshire and adjoining counties. The milch cows are picked up by the Edinburgh cow-dealers. There is still a large show of horses at this fair, some of which are of a superior order for the field, road, and draught. A large number of Cumberland and other south country horse-dealers attend this fair. The old Fair of Kelso and the draft ewe fair established about twelve

years ago, are now entirely superseded by the monthly markets.

3. **KELSO HORSE MARKETS.**—These are held on every Friday in March, but the first and second are the principal, and constitute, particularly the second one, the largest horse fairs in the south of Scotland. Horse-dealers from a great distance, both from the north and south, attend these markets. Many first-rate horses for the field, the road, and the draught, are exhibited here, and frequently fetch high prices. As may be expected in such markets, horses of the meanest as well as the highest description may be seen; indeed every species of customer, from the nobleman to the tinker, may gratify his taste at these fairs.

III. **ST. BOSWELL'S FAIR.**—St. Boswell's Green is near the small village of Lesudden, in the parish of the same name, and is situate ten miles west from Kelso, and four miles east of Melrose. The only fair at St. Boswell's is a large and important one, and is held on the 18th of July. Ten or twelve years ago this was the largest lamb and sheep fair in the south of Scotland, generally about 30,000 being shown, but of late it has fallen off very much in point of numbers. The greater part of the Cheviot lambs that used to be brought to St. Boswell's is now shown at Melrose Fair on the 12th of August. The Selkirk and Peeblesshire farmers find it their interest to retain their lambs on the pasture of the high lands till the middle of August, because by that time vegetation is there in full vigour, and the lambs make a great improvement in size and condition during that time. The number may now be stated under 20,000, one-third of which are Leicester, and one-third half-bred lambs; the other third consists of Cheviot lambs, Cheviot and black-faced wethers, Cheviot and black-faced ewe and wether hogs, partly rough and partly clipped. The great part of the stock is bought by Berwickshire and East Lothian farmers and graziers, who keep no breeding flocks; a small proportion by farmers and graziers in Roxburghshire, Northumberland, and Durham; and a few go to the western and northern counties of Scotland. The Leicester and half-bred sheep get full feeding in winter, and are fed off in summer, and seldom receive a second winter feed on turnips, as they come sooner to maturity than the Cheviots. The Leicesters are even frequently sent to the fat market immediately after being clipped, their great adaptation to fatten bringing them to maturity at fourteen months old. The crosses are next ready for the fat market, when they get the same good keeping as the Leicesters.

Although this market has fallen off in numbers, it has decidedly improved in quality, the greatest proportion of the lambs shown now being Leicester and crosses. The remarks which have been made on the lambs at Yetholm, may be made on those in St. Boswell's in respect to quality and variation of prices. The older sheep at this fair have fallen off both in quantity and quality, although this year the quantity shown was greater than for some years past; but the quality generally is very inferior. Some very superior lots of wethers used to be shown here, but the best sheep are now sold at the early markets and at the homesteads. Not nearly so many wethers are kept in this district as formerly, because the upland farmers find the ewe stock pay them better, especially since the system of crossing them with the Leicester type prevailed. The wethers are now only kept on very inferior high lands unsuitable to the ewe stock, which circumstance may perhaps account for the present inferiority of the wether sheep. This year Cheviots, and black-faced ewe and wether hogs of

inferior description, which had been unsold at Yetholm and other markets, were shown. Although very few Cheviot lambs are presented at St. Boswell's, a great number are sold to dealers who know or have seen the flocks. These dealers buy so as to lift them a few days before Melrose and Lockerby fairs, where they generally show very large lots, particularly at Melrose. At times, nearly the half of the lambs shown at these places are in the hands of dealers, who make a good or a bad speculation of their purchases, according as the prices between St. Boswell's and Melrose fairs are for or against them.

The show of cattle at this fair is very inferior to most of the cattle markets in the surrounding country, and has fallen off in numbers very much of late; indeed, all the midsummer markets in the south of Scotland are now small, and any good cattle are only to be got at the markets in winter, spring, and beginning of summer. The number shown this year did not exceed 300, and nothing like a fat beast was to be seen. One-third consisted of half-fat and lean one and two year old short-horn steers and heifers for feeding, which were bought by graziers from East Lothian, Berwickshire, &c.; one-third half-fat and lean north country cattle, bought for the same purpose; and the other third of calving and other cows. The calving cows were bought by the Edinburgh cow-dealers. The old carved and farrow cows were bought to feed, and for country use to give milk at the harvest. Very few English cattle-dealers attend this market. The stock mostly changes owners from one class of farmers to another, and from breeders to graziers. The horse-market bears a different character, as horses from a distance of fifty miles round are brought to it, and dealers from all parts of the north of England and south of Scotland attend this fair. It ranks among the largest in the south of Scotland. Many superior horses for the road and draught, and occasionally some good field horses, are to be picked up here, such as are rarely to be found in the horse-markets in this district. As might be expected, the middling and inferior sorts prevail. The Cumberland horse-dealers buy largely at this market.

This is among the last of the wool fairs; and it generally winds up the wool trade for the season. This year several clips remained unsold, particularly laid wools, in consequence of the high prices obtained at Yetholm and other wool markets raising the ideas of the wool growers, and depressing the activity of the wool staplers and manufacturers. The staplers generally make large payments at this market for wool they had previously bought. The principal buyers seldom appear in the wool market after St. Boswell's fair, commissions being entrusted to persons residing in the country to purchase unsold lots. This fair is generally of great importance in the south of Scotland, especially for the sale of lambs and horses; and it is more fully attended by sellers and buyers than almost any other market in the same district of the country.

IV. **PENNYMOOR TRYSTS.**—These markets were only established about four years ago, for the sale of lambs and wool. They are held on the ground formerly called Milesend, in the parish of Hownam, eleven miles south-east of Jedburgh, and four from Rink, on the property of the Duke of Roxburghe. The establishment of these markets has affected those at Rink, and perhaps double the number of stock is shown here to what is now collected at the latter place.

1. **PENNYMOOR FIRST BORDER TRYST.**—This market is held on the 31st of July, principally for the sale of Cheviot lambs, and partly for wool, 6,000 or 7,000 being generally brought forward. Two-thirds of the number are half-bred, and the remainder Che-

viot lambs, and some fine lots of Cheviot wether hogs. The Cheviot sheep at this fair are of the very best description, having been bred in the finest parts of the Cheviot Hills, where very great attention is paid to this species of stock. The Cheviot lambs bought here generally make excellent sheep, and the crosses with them and the highest bred Leicester tups make very superior sheep. But should the tup be impurely bred, the pure Cheviot sheep are much better worth the cultivation than the impure cross.

The lambs are bought by farmers and graziers in Roxburgh and the adjoining counties. If there is a briskness in the wool trade, many of the Yorkshire wool-staplers attend this market, and a good deal of business is sometimes done in the wool that has been left unsold from the Kelso and St. Boswell's fairs.

2. PENNYMOOR SECOND BORDER TRYST is held on the 15th of October, for the sale of Cheviot ewes and young and old wethers, the numbers of which may be from 3,000 to 4,000. They are bought by farmers and graziers in Roxburgh and the adjoining counties, the ewes to take a lamb from and feed off the following year, and the wethers for feeding off on turnips. The age of the ewes is generally four years, and some may be five. The wethers are from two to three years old, most of the lots of which are excellent: the same character may be given to the ewes.

(To be continued.)

## THE BARKING FISHERMEN'S APPRENTICE AND THE POOR LAW BILL.

Some weeks ago we gave, under the head of Ilford (Essex) Petty Sessions, the particulars of several applications made to the magistrates composing that bench, for an order for the removal of a pauper, named James Wheeler, from the parish of Barking to that of Layton, to which latter parish it was contended he legally belonged. The brief circumstances of the case were these — The pauper had been bound by the parish officers of Layton to a fisherman at Barking, but after being for some time in the service of his master he, the master, through misfortune, was obliged to sell off his smacks, and become the servant of another himself. The apprentice through this was thrown on the parish of Barking, owing to his settlement as an apprentice, but the term of his apprenticeship not having terminated at the time the time the Poor Law Bill passed, the parish officers of Barking conceived that under the 67th clause of that enactment they were relieved from the future burden of the pauper, and they therefore instructed their vestry-clerk (Mr. Griffin) to make an application to the bench of magistrates at Ilford for an order for his removal to the parish of Layton, from which he had been apprenticed. The clause under which the order was sought is as follows:—"And be it further enacted, that from and after the passing of this act no settlement shall be acquired by being apprenticed in the sea service, &c., nor by any person now being such an apprentice, in respect of such apprenticeship."

The magistrates on the first application would have granted the required order, believing that they were bound to do so, but for their clerk, Mr. Sterry, who gave it as his opinion that the Poor Law Amendment Act did not apply to the case, as the pauper, Wheeler, had gained a settlement in the parish of Barking previously to its passing, by having resided there for upwards of 40 days, and that therefore he could not be legally sent to the parish of Layton. The magistrates, or at least a

majority of them, bowed to this opinion, and refused the order, but the question being one of considerable importance to the parish of Barking as well as other sea ports and fishing places throughout the country, they recommended that the opinion of some high legal authority should be taken on the point. In consequence of this recommendation a case was drawn up, and submitted for the opinion of Sir John Campbell, the then Attorney-General, and it perfectly agreed with that previously given by Mr. Sterry, the magistrate's clerk, and stated that the clause applied to such apprentices only where the binding took place subsequent to the passing of the new act. The parish officers, notwithstanding this, renewed their application for the order, and at the same time, as the question was of the utmost importance to the parish, there being some hundreds of apprentices then bound who might become chargeable to it, and as they would be debarred from trying it any other shape than that of an appeal, prayed that an order might be granted. Under these circumstances the Rev. Mr. Fanshawe and Major Anderson signed the order, and on the officers of Layton being made acquainted with the fact, they at once served the churchwardens and overseers of Barking with a notice of appeal. At the late Quarter Sessions for the county, at Chelmsford, the case came on for argument before J. M. Leake, Esq., Chairman, and a bench of magistrates. The question at issue then was, whether the latter words of the clause, "nor by any person now being such an apprentice in respect to such apprenticeship," applied to cases wherein a settlement had been completed when the act passed, or to those only which at the period had not gained a legal settlement, or were to be bound after its passing. The case was argued at great length by Messrs. Knox and Turner, on the part of the parish of Barking, and by Mr. Jessop and Mr. Bosanquet on behalf of that of Layton; and after much discussion *pro* and *con*. the Court decided in favour of the parish of Barking, holding that the words of the latter part of the clause had a retrospective effect, but granted a case for the opinion of the Court of King's Bench. The decision has given the greatest satisfaction to the parishioners of Barking, who have been for years subjected to an enormous tax for the support of the outscourings of the metropolitan poor houses who had obtained legal settlements there through being apprenticed to fishermen, who took them merely for the premiums which they got with them, and which was willingly paid by the different parishes and charities for the mere purpose of getting rid of them.

## IMPROVEMENT OF WASTE LAND IN IRELAND.—

The great extent of mountain heath, marsh and rocky land, and of low-land bog, which is annually added to the arable land of this country, is truly astonishing. Districts, which a dozen years since presented an interminable waste of apparently useless land, have been broken in, and are now either reclaimed to the utmost limit, where the black oat and cup potatoe will thrive, or chequered with interspersed fields—a sure prognostic that the whole, as far as the most persevering industry and an utter disregard of toil can accomplish it, will speedily be reclaimed. We some time since walked over the great Sugar loaf Mountain in the county of Wicklow, in order to ascertain whether the cultivated fields, near its summit, and which are fully twelve hundred feet above the sea, and exposed to every wind except

that from the sea, could by any possibility yield a crop sufficient to repay the trouble of reclaiming the lands and cultivating them. The land, we were informed by one of the occupants, is let to him on terms which induce him to bestow upon it the labour necessary for rendering it productive; and what was the consequence? A pile of rocks and stones, with which the surface was almost completely covered, has been collected into a broad wall round the holding; and in this occupation, the man, his wife, and two healthful and not half-clothed children, were engaged on the day we first observed their farm. To undermine some of the rocks, it was necessary to descend five or six feet into the yellow clay; yet every difficulty was surmounted; and we had the satisfaction to observe a crop of oats and potatoes growing on this ground, last summer, which bids fair to render its possessor as independent as he could desire to be. We particularize this instance, because it is within a morning's drive of the metropolis. But similar instances occur wherever the tenant has an interest sufficiently encouraging. How many thousand acres there are in the same county, (Wicklow,) which might and would be reclaimed at no other expense to the proprietors, than the trouble of directing the proper steps to be taken. A very remarkable instance of this improvement recently came before us, on the estate of an indulgent landlord, on the shore of Long Derg, in the county of Clare. An extent of some thousand acres of mountain land has, by allowing the occupants a sufficient interest, been brought into cultivation, and in some instances at an expense of labour fully equal to that in the county Wicklow. An excellent road is now forming through this highly improved property, by which the produce can with facility be delivered to the steam boats at Killaloe, and through them to the British market.—*Irish Farmer's Magazine*.

### TO THE EDITOR OF THE "FARMER'S MAGAZINE"

Sir,—I have read with great satisfaction, the statement in your last (taken from the "Law Commercial Daily Remembrancer,") respecting the vital question of a repeal of the Corn Laws; particularly as affecting the mutual interests of agriculturists and manufacturers. If ever there was a question which, in a greater degree than another, called for the deepest consideration, and claimed, at the hands of the legislature, the most deliberate caution, before rashly innovating, or blindly yielding, by uncalled for concession to the mercenary rapacity of the sordid and designing, or the ignorant and infatuated clamour of the shallow and visionary theorists of the "free trade school of philosophers," this, Sir, is the question.

The motive I have in view in trespassing on your valuable space, is to urge the attention of your readers to the plain and unanswerable facts to which the publication referred to very properly alludes; and not the least important fact is, the crafty and wary caution with which the self-dubbed "friends of the working classes" uniformly avoid all allusion to the certain result which must instantly follow the removal of the restriction on the importation of foreign corn (in addition to making food cheaper) by a *general, sweeping, and universal fall in wages*. This important circumstance, so clearly inevitable, is, for very obvious reasons, carefully and cautiously concealed from the view of the credulous multitude, by the designing advo-

cates for a repeal of the Corn Laws; and for what reason, but because the avowal of such an unanswerable truth would at once open the eyes of their deluded followers, who would instantly nauseate and reject both the quacks and their nostrums. Equalize the price of corn in England with the price of corn on the Continent, by allowing the importation, duty free, or at a low rate of duty, and you also equalize wages and the rate of remuneration given for labour. This is the real, though concealed motive of nine-tenths of the educated advocates for the free admission of foreign corn into Great Britain, thinking thereby to benefit their own interests and not those of the working-classes, whose wages, from competition with foreign workmen, would speedily sink to that level which must make any advantage gained by obtaining food at a lower rate, though a nominal advantage, a real loss. To illustrate this, it must be well considered by the manufacturers and mechanics, that the landlord farmer and agricultural labourer will, in the event of a repeal of the Corn Laws, be no longer either able or willing to pay a monopoly price for any manufactured article they require, caused by the heavy restrictions placed upon foreign commodities. The shoemaker must prepare to resign his monopoly duty of 3s. and 2s. 6d. a-pair on womens' boots; of 1s. 6d. a-pair on infants' shoes; of 4s. 6d. a-pair on mens' boots. The agriculturists will not suffer the cooper to enjoy, at their cost, the monopoly of cask-making, by a tax of 50 per cent. levied on foreign casks, but may choose to purchase them from those parts of Europe where men buy a four-pound loaf for 4d., but work for 5s. or 7s. a-week, instead of that amount per diem, which it appears the coopers' journeymen \* now obtain in England. The agriculturists can likewise no longer be expected to submit to the glove-maker's monopoly, in the shape of a duty of 5s. on each dozen pair of gloves, and 7s. on each dozen pair of womens' gloves imported into England. The latter will be called upon to give up the protecting duty of 11s. 4d. on each straw hat of 22 inches in diameter, and 10s. 6d. on each beaver hat; and the paper-maker the protection he enjoys of 9d. a-pound on foreign paper—a duty tantamount to a prohibition. The landed interest may wish to see the 40 per cent. tax levied on foreign linens repealed, and may prefer silks manufactured at Lyons, Grenoble, or in Switzerland, to those of Spitalfields, Coventry, or Norwich: they may also require the extortionate monopoly of the Sheffield cutlers to be thrown open to competition with the cutlers of Germany, where men work 15 hours a-day for 7s. a-week; in fact, in every branch of the manufactures of this country, a protecting duty against foreign competition has been called for and granted. Even in the necessary commodity of soap I find the very modest sum of 90s. on each 112lbs. of foreign soap imported into Great Britain has been acceded to, to protect the manufacturer of soap.

The agricultural interest have not been the men to say nay to the claims for protection urged by any body or description of manufacturers; they have not been the men to clamour for the overthrow of monopolies which enhance the price of all they require and consume; neither are they the men to bring forward measures for their own gain, calculated to cause ruin and destruction to large masses of their fellow-countrymen: but if the merchants, manufacturers, and artisans, will call

\* Vide Speech of Sir James Graham on the Corn Laws, the last Session of Parliament.

for a repeal of those laws which protect the agricultural interest from destructive competition with the pauper peasantry of France, Germany, Prussia, Poland, &c., why, then, the landed interest will, in self-defence, demand the repeal of all protecting duties which give to British manufacturers the monopoly of the home market—that market in which the great outlay of the farmer lies. This subject was slightly alluded to by Sir Robert Peel during the last session, and the awkward attempts of the “free trade philosophers” to throw sneers and ridicule on the protecting duty “on walking-sticks and canes,” plainly displayed their anxiety to attract attention from a mode of argument they were well aware would destroy their hollow and visionary theories.

This, however, I believe, must be the field on which the agriculturalists will meet the preposterous and absurd demands of those who are anxious to destroy the monopolies of others *but retain their own*. Can it be possible that the working classes of the United Kingdom fail in seeing through the flimsy veil which conceals the ultimate object of these rapacious theorists? What means the jargon of, “we shall, by making food cheaper, be able better to compete with foreigners?” Can there be but one interpretation, one meaning, and that meaning this—*by lowering British wages to the foreign standard?* This is the sum total of the tender mercies of the “philosophers” for the working classes,—these are the means by which they wish to work out their theories. They crave permission to reduce the workman’s wages one half, or to one-third of their present rate, and console with the saving of twopence a-day in the cost of their provisions. In grasping at the shadow of reciprocity in trade with foreign kingdoms, the philosophers would, in their blind folly, drop the reality, now mutually enjoyed, for the reciprocal benefit of both, by the British manufacturer and British agriculturist, against the overwhelming pressure of the mendicant poverty of an entire Continent. I am, Sir, &c.,

OBSERVER.

LONDON AND SOUTHAMPTON RAIL-WAY.—It appears that the London and Southampton Railway Company have completed their capital, and therefore obtained the magistrates’ certificate to enable them to take up all the lands on the line, and thus to proceed in the execution of this great national work, which has already been commenced on three or four different points between London and Basingstoke. We are authorized to state, that the Company has already made contracts for a large quantity of rails and locomotive engines, as it is their intention to remove the earth by locomotive power, upon the same plan as that which is now adopted with so much economy and effect in the north of England; and, from the arrangements now in progress, there can be no doubt that great activity will be shown in carrying on these works. The Directors and parties to this rail-way, contemplate a junction with that which is projected from Basingstoke to Bath, thus uniting the British and Bristol Channels, with each other, and with the metropolis. This combination of interests must necessarily produce a very powerful competition with the Company called the Great Western, with the obvious advantages in favour of the London and Southampton Company, of having obtained their Act, and completed their capital.

## NORTHAMPTON NEW AGRICULTURAL SOCIETY.

TO THE EDITOR OF THE “FARMER’S MAGAZINE.”

SIR,—As I perceive that you have devoted the leading article in the last number of your valuable and well conducted Journal, to the consideration and examination of the merits, and demerits of Agricultural Associations generally; and more particularly to that of Northamptonshire, recently formed, I presume you will deem the subject of sufficient importance to be again adverted to in your columns, and more especially as it appears to me that you have misrepresented, or very insufficiently explained some important facts relative to the Infant Agricultural Association of Northamptonshire, which are calculated to prove highly injurious to the *Bantling* in the estimation of the Agricultural community, if suffered to pass uncontradicted in your widely circulated paper:—and as I conclude you have been in some degree misled by taking the report of the meeting from the “Northampton Mercury,” and from the account of your partial correspondent, whom I think I should have but little difficulty in pointing out, as one of the principal seceders and political opponents of the society, (and presuming such to be the case), it is therefore no matter of surprise that your opinions may have been influenced by such a one-sided and partial view of the question. And in order in some degree to counterbalance this influence I shall take the liberty of sending you also a copy of the “Northampton Herald,” containing a very different view of the matter; and giving it a different complexion; and if you steer the middle course between these two extremes, you will be more likely to arrive at the real, impartial, and true state of the case. Without further preface I will now as briefly as possible advert to the points to which I wish to direct your attention; and in the first place I would unhesitatingly, and in the most positive and unequivocal terms deny the charge conveyed in your remarks, “that the Northamptonshire Agricultural Association is formed for any party or political purpose whatever,” or for any other purpose than that expressed in their declaration, that of the “protection of agriculture,” and to which fundamental principle the society is determined strictly to adhere, notwithstanding the “untoward event” caused by a few individuals at the first annual meeting, and I assure you the members are too independent to be under the influence of any person or party, as you would seem to insinuate, may be the case with other societies of a similar nature, to which you allude.

In the next place, one word as to the rejection of Lord Milton as a member, and Vice-President of the Association, which you so strongly deprecate; and I most distinctly and positively deny that this exclusion was the consequence of any political nature, (as you would infer)!—or that it was “a direct violation of the rules and declaration of the society itself,” (as you so uncerimoniously assert) but strictly in accordance with both; and had you perused Lord Milton’s letter, (which you will find in the “Northampton Herald,”) you would probably have formed a different conclusion. Lord Milton certainly was invited to become a member and vice-president of the association by the provisional committee, in common with every other nobleman and large landed proprietor in the neighbourhood; and the committee would no doubt have been immediately charged with po-

litical bias, and making invidious distinctions if they had omitted his lordship's name in the general list of names to whom the secretary was directed to send circular invitations. These invitations were sent, *however*, (he it observed) presuming that no gentleman would accept the invitation who was not prepared at the same time, to adopt the *declarations* of the society, (a copy of which was sent with each letter) as the fundamental principle and creed of the society; that Lord Milton could not conscientiously do this, is evident from his letter, wherein, instead of accepting or declining the invitations positively, he says, "my opinions on the present corn-laws (which I sincerely believe to produce no effect for the benefit of the farmer) are no doubt, known to those who will compose the association; if they can admit me as a member, knowing me to entertain such opinions, I shall be most happy to become one." Now you will observe from the terms of this letter, it became necessary, in common courtesy, that it should be brought specially before the notice of the society, in order that the sense of the meeting should be taken upon it, and an answer returned to his lordship accordingly; and in accordance to the rules of the society, which require "that every member should be proposed and seconded by two members," &c. &c.,—leaving the society at liberty, and giving them the opportunity of accepting or rejecting the proposed member according to their opinion of the eligibility of the person proposed, this course was of necessity adopted with Lord Milton, as with every other member, and his lordship was rejected by a *very large majority*. Not however, most certainly (as has been stated) for the purpose of casting a vote of censure upon his lordship, or from political motives; but simply because the great majority of the meeting were decidedly of opinion that his lordship's sentiments on the corn laws were directly opposed to their best interests, and they therefore did not consider him a fit person to join a society with objects so diametrically opposed to those professed by his lordship; whose opinions it must be particularly observed are not merely for a change of the present corn laws for a fixed and sufficient protecting duty, (in which myself and many would unite) but his lordship advocates the removal of the present inadequate protection for a duty "*for the purposes of revenue only*," or in other words, for a free trade in corn without any protection to the British farmer! Could any society formed "*for the protection of agriculture*" admit any person holding such opinions as one of their members??? For if you admit the principle by admitting one such individual, you open the door to any number advocating the same doctrines, and thereby virtually destroy the association! Is it not directly contrary to the practice and policy of any established society, association, sect or body of men, to admit persons as members of their community known to hold opinions diametrically opposed to those they profess and practice?? The maxim that, "A house divided against itself cannot stand" is not easily to be controverted; and on these grounds the society are justified in rejecting such members. I will not trespass further on your time or valuable space, but conclude with a few observations on the "*untoward event*" which is much to be regretted; and which has induced some few persons to secede, from the mistaken notion that the society would assume a political and party position. If you should think it worth your while to make some further and more impartial inquiries, you will probably find that the three or four gentlemen

who took so prominent a part in the discussion (and whose cause you so ably advocate) were not altogether free from the charge of "having sown the seeds of dissension in this infant association," as they first plainly and distinctly charged those who differed from them in opinion as to the admission of Lord Milton, with a *political bias*; which as a matter of course aroused the indignation of the parties accused, who naturally refuted the charge with some warmth. It was also assumed by one of those gentlemen, "that the association was not formed, and therefore not competent to act," although he had himself taken a most active part in the business of the provisional committee; but the meeting being appealed to, and the resolution of the former meeting read, whereby the association *was formed*, the question was immediately decided in the affirmative. The Rev. Sir G. Robinson then proceeded in no very friendly or courteous terms to criticise a sentence in the declaration, which he said, "that neither Lord Milton or himself considered to be either English or common sense," the words (alluding to anti-corn law societies, &c.) were therefore slightly altered from "*untried theories necessarily involving, &c.*" to "*untried theories involving it is to be feared*" making a distinction without a difference to satisfy their fastidious taste. The original sentence however seemed to be perfectly understood, and considered as "*common sense*" by every person to whom it was addressed, not disposed to cavil and "*strain at a gnat*," with the exception of these two very learned and critical gentlemen, though not perhaps strictly grammatical or literally correct, but in being so far enlightened on the subject, as to be informed by these too learned and talented gentlemen, that untried theories could not necessarily involve consequences, it appeared that the committee of farmers who prepared the declaration, did not expect to be so nicely criticised; and had read the sentence, and universally considered it in its obvious meaning and intention, that these untried theories (if reduced to practice) would necessarily involve the utter destruction of British agriculture, &c. I had no intention of addressing you at such length, and will conclude with apologizing for so far intruding on your attention, but the interest I feel in the subject must plead my excuse.

I am Sir, your constant reader,  
A MEMBER OF THE NORTHAMPTONSHIRE AGRICULTURAL ASSOCIATION.  
Northampton, Feb. 5.

IMPORTANT TITHE CASE.—Mr. Edward Parkins of Chesfield, appeared before the magistrates assembled in petty sessions, at Stevenage, on Monday, the 26th ult., to answer a complaint of the Rev. T. F. Green, rector of Graveley, for the non-payment of the tithe arising from a certain fir plantation in the parish. Mr. Hawkins, of Hitchin, who appeared for the complainant, observed, that the only question for the decision of the magistrates was, whether the firs in the plantation were titheable or not. The Chairman asked if they claimed a tithe in composition or in kind? Mr. Hawkins said a tithe in kind; for if a composition had existed no question could arise as to liability. Mr. Hawkins then proceeded to state, that by an old statute, so early as Edward the Third, woods were divided into three sorts, which were distinguished by the old Anglo-Norman name of Gros-bois, that which can be properly be called timber; Haut-bois, or great or high

wood; and Sub-bois, underwood. There were several cases bearing on the point. Lord Ellenborough, in p. 446, vol. 10, East's Reports, in the case of *Aubrey v. Fisher*, said nothing could be considered as timber but oak, elm, and ash; but by the custom in particular localities other woods might be considered timber. If it was timber, it was not titheable; therefore it would be important to know whether the firs were assessed to the poor rate. In Buckinghamshire, by the custom of the county, beech is held to be timber, and exempt from tithe; it was, however, not timber in any other part of England. Lord Coke was quoted as the authority in that case, and being a Buckinghamshire man may be considered as a good authority, as being the more likely to know the custom of the county. Mr. Justice Bayley, in *The King v. Ferrybridge*, observed, "that if all wood which is not timber be underwood, it would follow that horse chesnuts, limes, plane trees, and aspens would come within that description, yet surely it would be a perversion of language to call such trees underwood." The Rev. J. Pollard said, that from the books he had read on the subject, he had no doubt that fir plantations were titheable when cut, and he was prepared to make an order in this case, with the sanction of his brother magistrate. An order was then made, not to be executed until the next bench meeting. J. Green, Esq., declined acting in the case, as the Rev. T. F. Green is his son, and he is the patron of the living.—*Essex Mercury*.

## COURT OF KING'S BENCH.

### HORSE WARRANTY.

#### DOYLEY v. THE EARL OF LIVERPOOL.

Mr. PLATT (with whom was Mr. BUSBY) stated, that this was an action to recover damages for the sale of a mare warranted sound, and which afterwards proved not to be so. The plaintiff was an attorney residing at Morton, in Worcestershire. In the month of May, 1834, the defendant disposed of the mare in question by sale at the Horse-bazaar in Oxford-street, and on that occasion the plaintiff became the purchaser of the mare for the sum of 50*l*, and paid the money for her, and had her sent to the Red Lion stables, in Water-lane, Fleet-street. The mare was warranted sound, and quiet to ride. On the very evening on which she was brought there, she was observed to cough, and on the following morning the coughing was continued. The plaintiff, however, liked the mare, and did not wish to get rid of his bargain; he therefore had her bled, and administered some warm mashes to her, in the hope that she would get better. In a few days afterwards, he set out with her to return home, and proceeded at a slow pace with her to Henley, and thence to Nettlebed. While on his journey, the pace at which he travelled did not exceed four miles per hour; but on his arrival at Nettlebed, he was obliged to leave her, and she was taken on in the most careful manner to Oxford, where she had the benefit of the assistance of Mr. Wild, an eminent veterinary surgeon of that city. She was put under his care on the Sunday evening, and was removed from Oxford on the Wednesday following. During this period she was bled, and again had hot mashes, but did not recover. The cough, a dry husky cough, that had affected her from the beginning, still continued; and when by easy journeys she got down to the plaintiff's stables, and was taken every possible care of, it was discovered that the cough was so bad that it never could be cured. On the 18th of

June the plaintiff wrote to the auctioneer at the Horse-bazaar, stating that the mare had been very ill, but saying, that if her cough got well he should wish to keep her, and he should therefore wait another week to see the result of his treatment of her. The mare did not get well, and the plaintiff was finally obliged to sell her for 20*l*, and then sent to the Earl of Liverpool demanding to have the loss he had suffered compensated to him. When after being told in his Lordship's letter, written in answer, that the time for returning the mare had, by the rules of the bazaar, elapsed, he was assured that the mare had been bred by his lordship, and had been in his stable up to the time of the sale, and had no cough at all, or at least "no cough to signify." It was true that the time for returning the mare had been suffered by the plaintiff to elapse, because from the first he had hoped to be able to conquer her cough, but when he found himself deceived in that hope, he was not prevented from claiming in damages so much money as he had lost by the purchase, namely, the difference in price and the sum he had expended in medicine upon her.

James Tiley: I was ostler at the Black Lion, Water-lane, Fleet-street, in May last; a grey mare was brought there; it was some time in the evening of the 26th of May; a young man from the Horse-bazaar brought her; I observed nothing further than her coughing, and that she had the string-halt; I put her in the stables; she continued coughing what time she was with us; Mr. Doyley was at that time staying at the Sussex Hotel, Bouverie-street; I told him that she had a very bad cough; it was a dry kind of husky cough; I recollect Harvey, a farrier, being sent for; he bled her; she continued two nights at the stables, went away for one night, and then returned for two nights more; I took the greatest care of her; all disorders in a horse come from a cough; if it is not stopped in time it will prove fatal.

Cross-examined: On the Monday evening, the day he bought her, the plaintiff heard the mare cough; and on the Tuesday morning, before he took her to the bazaar, it was evident to every one that she then had a violent cough; he brought her back about one o'clock, and she coughed in his hearing; cannot say where he went with her on Wednesday; the cough never left her; she left on Saturday afternoon; she got no better while she stayed with us; plaintiff rode her away on Saturday morning; he told us the night before to take great care of her, because he was going to take her a long journey; I do not think that she was in a state to be ridden ten miles, nor even five miles, without distressing her; she had two flannel horse-cloths on at night while in our stables; I dressed her in the open air; she was entirely under my care.

Re-examined: The weather was then very warm; I know the Horse-bazaar; there is room to gallop a horse there for about 100 yards; I know what a roarer is; you may gallop a horse from some stables for a mile and not find out that he is a roarer, but the next day you cannot ride him for 20 yards without knowing it.

The under-ostler corroborated this evidence.

Harvey, a farrier: I saw this mare; I bled her on the Tuesday morning; I heard her cough before I bled her; she had a husky cough; not a running cough; after her bleeding she had a good hot mash or two; she was not sound at that time.

Cross-examined: I was a farrier in the 4th Light Dragoons for many years; I understand horses as well as many men in London (*a laugh*); I am fre-

quently called in to see horses when they are ill; on this occasion I was sent for to bleed a mare; that was the message; I brought my instrument with me; I desired afterwards that she might have some hot mashes; I saw her the next day, and bled the mare with a *fleam*; that is a safer way than by a lancet; I did so by desire of the plaintiff.

James Inwood, the landlord of the Red Lion, at Nettlebed: Saw the plaintiff on his mare when on his way to Oxford; plaintiff was going at a foot pace with the mare; when she got into the stables she was quite cool.

Mr. Wilde: I am a veterinary surgeon; I reside at Oxford; I first saw the mare on the 21st June; the animal was at the time quite cool; the breathing was much increased; it was what was called a short breath; I was told that she had been bled in London; that was the proper way to treat her; I bled her on the Sunday; she did not cough the first time that I saw her, nor the second, which was within ten minutes afterwards, and she did not cough then; I saw her a third time, in the evening; she had a peculiar grunt and roar at the end of the cough, that made me suspect her to be a roarer; I desired her to have a light diet and mashes; the bleeding relieved her, but the cough still was there; she remained under my care till Wednesday; I saw her frequently during the time, and she coughed repeatedly; I could not move her across the stall without her coughing.

Cross-examined: Plaintiff is an attorney; I do not know whether he is a good judge of a horse.

John Ryman, groom to the plaintiff, went to fetch the mare away from Oxford on the Sunday morning; but by the direction of Mr. Wilde, he did not remove her till Wednesday; witness was directed by Mr. Wilde to take her gently; he did so; he was seven hours going twenty-seven miles; and she had the physic prescribed by Mr. Wilde; when she got to plaintiff's stables she was treated with the greatest care.

Cross-examined: Plaintiff kept three hunters, and some horses for running; plaintiff rode the mare while she was in his stables.

Mr. Hicks, a farmer, near Worcester, saw the mare, and rode her, and thought she was a roarer; witness bought her as a brood-mare, for 20*l*; he kept her till August, and sold her for 23*l*.

The letters of Mr. Allen to the plaintiff, and of the plaintiff to Lord Liverpool, and of Lord Liverpool in answer, were read. This closed the plaintiff's case.

Sir J. CAMPBELL (with whom was Mr. R. V. RICHARDS) addressed the jury for the defendant. Unfortunate was the party who sold a horse to a man who was at once a jockey and an attorney. The plaintiff here was both. He knew how to take advantage of the circumstances in which he was placed, and therefore, when the time for returning the mare had gone by, he wrote to Lord Liverpool, telling him what the law was with regard to a horse that was unsound. The plaintiff clearly had no right to return the mare. When he was at the bazaar a day or two after the sale, he had the tail of the mare cut, and he spoke about the improvement that the cutting of the tail would produce in the appearance of the mare; but he said nothing of her having a cough; yet, in one of his letters he stated that he had mentioned this matter to the people at the bazaar, who had admitted that the mare had a cough the day previous to the sale. The plaintiff wrote to the defendant, claiming compensation for the loss which he alleged he had sustained from the purchase of this mare, and said

in the letter, "It behoves your Lordship to ascertain whether a cough constitutes an unsoundness, and for that purpose, I beg to refer your Lordship to,"—and then the letter went on to state various cases from law books, in which Judges had held doctrines favourable to the rights of the plaintiff. He should show the fact, that the mare had no cough at the time of the sale, and that the plaintiff had not complained of her having one when he went to the bazaar a day or two afterwards. Was it possible for the jury to believe that the mare had been ridden with all the gentleness that had been described? or, was it not more probable, that when she was at the plaintiff's, and he rode her out for two or three hours, that, hunter as he was, he amused himself with following the hounds upon her? He should prove that the mare was not unsound when in the defendant's stables; and it would then be for the jury to say, whether the defendant was properly called on for damages in the present case.

George Langham: I am one of the grooms at the Horse-bazaar; I have been there for two years; I remember the grey mare; she was under my care for two days when she came to the bazaar; I exercised her in the usual way; I never heard her cough; she did blow a little, that was from fright or freshness.

Cross-examined: Fright from the omnibuses made her blow; I think that was from freshness; it was snorting.

Mr. Houghton, the auctioneer at the bazaar, remembered the grey mare; he saw her every day she was at the bazaar; I saw her on the day she was sold; I remember her being sold; on the next day or next day but one, Mr. Doyley brought her back: he said he wished to have her tail cut; he asked me whether I did not think it would improve the appearance of her quarters, and whether he had a man to cut her tail; I said yes, and her tail was cut at his request; he made no complaint of her being unsound, but said she had a slight cold, but that he should take her home, and have some blood taken from her, and give her some mashes, and he thought she would soon be well; I never admitted that the mare had had a cough before she was sold; I did not suggest the taking of blood, that was plaintiff's own suggestion; coughs come on very suddenly, from change of stable.

Mr. Allen: I am the proprietor of the bazaar; I made this bargain with the plaintiff; I, myself, do not know anything of this mare.

Cross-examined: This is my hand-writing; I believe that Lord Liverpool franked this note that I might send it; this note of his Lordship was put into the same frank.

This note was afterwards read.

Sir J. CAMPBELL replied upon these notes, and

Mr. PLATT replied upon the case. He remarked, as a specimen of the defence, that the plaintiff was accused of following the hounds in July (*a laugh*), and that the coughing of the mare was pretended to be snorting. It was clear, however, that it was something else, and the groom called it "blowing," which was much nearer the truth than snorting. No doubt when his Learned Friend heard this word, he thought of the lines—

"Oh, Nelly Gray, Nelly Gray! how could you tell me so?"

I've met with many a breeze before, but never such a blow?" (*Laughter*.)

Lord DENMAN summed up the whole case to the jury, who returned a verdict for the plaintiff.—Damages, 33*l*.

STATE OF HORTICULTURE, &c., IN  
JANUARY.

The first month of the year has passed over, and it may be asserted that a finer season has never been witnessed. The only circumstance to be regretted is the paucity of water; for a really dry summer, with the single local exception of a few days of copious rain in Berkshire, part of Oxfordshire, Hants, and perhaps of Warwickshire, about the middle of July, was succeeded by an autumn equally splendid and sunny; hence the wells in many districts have become dry, and farmers have been put to the inconvenience of procuring water for their cattle from a considerable distance. The month of December had none of its usual gloom; the temperature was genial throughout, and fears were rationally entertained that the old proverb might begin to be realized by the *growth of the grass* during the first month of the year. But January was ushered in with frost, and thirteen days have been more or less frosty. The greatest depressions of the thermometer that we have witnessed occurred on the 6th, 7th, 20th, and 21st; on the last of these days it stood at 18 degrees at 8 o'clock a.m., but rose to 31 degrees by noon. Some rain has

also fallen, and we now anticipate an ample supply. Thus, to the present period, the season has been very propitious to the gardener and farmer; the crops of the former are rich and healthy, but without precocious growth, and those of the latter are green and promising, but not luxuriant. In 1834, the deluges of rain in December, followed by a consistently warm January, rendered the wheat so rank, that many had recourse to the ambiguous remedy of "feeding off" with sheep. Now the wheats are green, but short and clean: the Swede turnips healthy and strong, and abundantly productive of good bulbs. The general standing crops of the garden may be noticed in very few words. The Brassica (cabbage) tribe is very fine; the early Yorks and Vanacks, which remain in nursery-beds for removal at the earliest approach of the growing season, are sound and without defect; while those which were transplanted into beds in November, are ready to start off at once into growth. Savoys are firm, and the brocolis promise to come in very early; celery remains sound at heart; celerica is extremely well bulbed. In respect to our deservedly esteemed early fruits, currants give promise of being very productive, the flower buds being closely knitted at the base of the spurs. The bushes, and those of the gooseberry and raspberry, ought to be pruned about this time, as they will soon begin to push. Filberts, in many gardens, show abundance of the beautiful male catkins, those harbingers of good promise for the future crop; this tree requires peculiar management to render it very fertile; but our limits will not now permit us to notice that mode of training and pruning which is so successfully attended to near Maidstone. Wall-fruit trees may safely be suffered to remain unregulated for two or three weeks, though the apricot will require the watchful eye of the attentive gardener.

In the flower garden few flowers have yet appeared, the late frosts having retarded that early development which formed one of the peculiar characteristics of January, 1834. The greenhouse, however, affords some beautiful proofs of the influence of the advancing sun, for several varieties of geraniums—the round leaved cyclamen, occasionally the Persian cyclamen, Chinese primula, pink and white, lichenaultias, &c., are in excellent blossom; a few camellias are to be met with, though by far the greater number remain unopened.

A recurrence of a few more days of frost, and then a copious supply of rain, preparatory to the drying winds of March, will render the commencement of 1835 a season of the finest promise. We ought to notice the extraordinary altitude of the barometer; it has been, on an average, far above 30 inches, and that for a period which has rarely been recorded, at least within our recollection.

NEW COLLEGIATE INSTITUTION IN AMERICA.—The Manual Labour Academy, of Manly County, Kentucky, which was opened four years ago with only seven pupils, has been formed into a college, under the title of Jackson College. The trustees own 310 acres of land, with substantial buildings for the accommodation of 72 students, and they are now erecting other buildings. 160 applications for admission were made during the last year. Two hours' labour a-day are required from each student, and 16¢, in addition to this will pay for his board and tuition. Donations are now solicited for the purchase of a library, philosophical apparatus, and the endowment of a professorship.

## BIRMINGHAM,

1st MONTH, 28th, 1835.

We have delayed issuing our annual circular in order (as on previous occasions) to complete some statistical tables. In the retrospect of the corn trade for the past year, the most striking feature is the remarkable depression in the price of wheat, which, with a few trifling fluctuations has now progressively receded from the commencement of 1831; the average in December, 1830 being 66s 6d.—1831, 61s 8d.—1832, 55s 2d.—1833, 48s 5d.—1834, 41s 1d. This depression has so far exceeded the calculations of the most experienced persons in and connected with the trade, that it renders any opinion as to the cause, or how long it may continue, of little value. It is now generally admitted that upon the whole, the two last years have yielded over an average crop, but the absence of all foreign and colonial grain for home use for several years, except a trifling liberation, the progressive increase of population, and the augmented consumption occasioned by the reduced price, not only for bread, &c., as human food, but for distillation, feeding cattle, pigs, &c., makes it fair to presume will prevent a still further decline. The long continued fall in prices having however not only destroyed the spirit, but in many instances the means of speculation, as respects millers, factors, and farmers, we cannot confidently look forward to any material advance till the stocks in the hands of all parties are light: and should the appearances in the spring be favourable, we may not have much improvement on our present rates: should any thing on the contrary arise to induce capitalists to make investments in wheat, the prices are so remarkably low, that there would be a large margin for profit before it rose to the average of the last seven years. Best bread has been selling for some months here by all the principal bakers at 5d a quarter loaf.—a lower price than it has been rendered to the public since the commencement of the present century. There is every reason to suppose that the complaints both of the quantity and quality of the wheat in Ireland are well founded; and owing to the comparatively high prices of oats and barley, the distillers are, and have been taking it freely instead of the two latter kinds of grain: the imports of wheat from that country are consequently less than usual. The appearance of the young wheats, as might be expected from the mildness of the season, is very luxuriant. The foreign prices, as will be seen by the annexed, are rather lower in the Baltic and North of Europe generally, than last year, while in the Mediterranean and South, its value is fully as high. Wheat in bond may be considered as nominal; the last sale in Gloucester was about equal to 22s per Imperial quarter for a fine lot of soft Russian, which would now be taken for a further quantity. At these prices we think it likely there may be some demand in the spring for export. The present quotations for fine English red, are 5s to 5s 6d; white, 5s 2d to 5s 10d. Irish red, 4s 10d to 5s 3d; white, 5s to 5s 4d per 62lbs at Birmingham.

Our barleys, with little exception, are by no means of fine quality; yet they are found to work tolerably well. The prices of all descriptions have rather given way, but not to the extent that is usual at this season of the year, which we attribute to the crop being light; consequently neither the local or distant supply by any means heavy. Our

maltsters have made much less than last year, and the brisk state of the iron trade having caused an increased demand, the stocks of malt are considered very trifling; an advance in the price of barley is therefore rather confidently expected by many; but in forming an opinion, the quantity of wheat used by the distillers as a substitute for this grain, should be taken into consideration. In the West of England, whence we usually obtain a considerable supply, it generally weighs so light, and the price is relatively so high, that very little has come to Gloucester since harvest. Some of the best samples of Irish, particularly from Wexford, have given satisfaction to our maltsters, and are at present worth 29s. to 31s. per im. qr. at Birmingham. The duty has been paid on one small lot of foreign at Gloucester, of a quality superior to any English that we have seen of this year's growth, and we think it likely carefully selected parcels may be worth the attention of importers before summer. English malting samples are a free sale at 29s to 34s; grinding, 25s to 26s per 392lbs at Birmingham.

Of oats, although we have had a tolerable import, yet very few remain in granary at present; and as not many are coming forward from Ireland, we think there is little prospect of their being any cheaper, though the increased consumption from the inferior crop of beans will in some measure be counterbalanced by the substitution (as with barley) of wheat for oats, by the distillers: they are now in fair demand at 21s 6d to 23s 6d per 312 lbs at Gloucester.

Beans are undoubtedly a deficient crop, but they have been by no means a brisk sale lately, and a considerable quantity of old from the farmers has recently been brought forward, which, with the liberation of foreign, and the usual slackness of the demand at this season of the year, has depressed the price 1s to 2s per qr; it is, however, probable, that as spring advances they may be higher, and that imports of good qualities which can be laid down in Gloucester at 26s to 27s in bond, are a safe investment. There are at present only 2,381 qrs under lock at Gloucester.

Peas, both grinding and boiling, have borne a good relative price during the season, though the import has probably fully made up for any deficiency in the crop. At present the sale is very dull for good foreign at 48s to 50s per qr for breakers, and 15s 6d to 15s 9d for grinding, per 196lb. For coarse flour, during the past month, the demand has much fallen off, and the price receded about 1s per sack.

JOSEPH AND CHARLES STURGE.

## AN ACCOUNT OF THE TOTAL QUANTITY OF WHEAT, AND WHEAT FLOUR, IMPORTED INTO GREAT BRITAIN FROM IRELAND, FROM 1800 TO 1825.

| Year. | Qrs.    | Year. | Qrs.    |

HEREFORDSHIRE AGRICULTURAL SOCIETY was numerous and respectfully attended on Monday, Feb. 2. Amongst many others were Sir G. Cornewall, Bart., Sir R. Price, and K. Hoskins, Esq., E. B. Clive, Esq., M. P., Mr. Knight, Mr. P. Jones, Mr. James Phillips, Mr. Hornyard, Mr. F. Price, Mr. Hayton, Mr. Unett, and about fifty principal yeomanry, farmers, and graziers of that and other counties. Much discussion (without the slightest allusion to political subjects) took place on various topics of agricultural interest, and Mr. Andrew Knight recommended that *less wheat* than usual be sown (where practicable) during the present depreciation of that article. The exhibition of cattle, &c. was generally considered equal to former occasions, and the successful candidates for the premiums were thus announced from the Chair:—

1. Mr. R. Tench, for the best yearling bull.
2. Mr. Walker, of Burton, for second-best yearling ditto (Mr. Yeld's being disqualified.)
3. Mr. Jones, of Breinton, for best two-year-old bull.
4. Mr. Turner, of Noke, for best three-year old ditto.
5. Mr. Thomas Yeld, for best aged ditto.
6. Miss Tomkyns, for second-best aged bull; and
7. Mr. Vevers, for best cart stallion.

The receipts for the year, 1834, in Goblets presented to the Society, and in Cup subscriptions, amounted to 94l 10s; the expenditure to 113l 8s 1d; reducing the former balance in favour of the Society to about 25l.

The stock exhibited was, as usual, from our most celebrated breeders, and the bulls and all the cattle excited general admiration.

EMIGRATION TO VIRGINIA.—The subject of emigration is one of great importance. We perceive that 50,000 acres of selected land in Virginia, adapted for this object, are to be submitted to sale by Mr. Robins. We have received what may be considered almost a work on this subject, but can only find room for the following statement of the individual to whom the conduct of the sale has been confided, and who is practically acquainted with the property itself:—"So much of deception (misapprehension perhaps would be a milder term) has been brought into the field, with a view to seduce the unlearned and the unpractised in these matters to seek an improvement in their fortunes in foreign climates, that it became an important duty with the individual who has the conduct of this sale, to scrutinize, with the eye of impartiality, every possible advantage, and compare it with the probability of a partial failure; the result is so satisfactory, that he begs most earnestly to invite each class of the community who have large and moderate means at their command, and have entertained the idea of amassing wealth in foreign climes, to give to this sale a candid, yet searching scrutiny; to weigh well every possible difficulty, and unless the mighty, moral certainty, which he has indulged in, be the result of this severe review, then, and in such case, he prays them to banish the adventure from their thoughts; if contrarywise, they feel with him, that the more it is inquired into, the brighter will be the prospect, with the certainty of realizing an independence, free from doubt and uncertainty, then he trusts they will prefer the present sale to the visionary schemes which have unluckily tempted so many thousands to their ruin. It should be remarked, by way of concluding these prefatory remarks, that in no instance are the favourable conclusions which follow, drawn from suppositious statements; sound rea-

soning is, in every instance, called to aid the moderately-estimated result of embarking successfully and largely in 'the land of promise.' The analysis and capabilities of this vast property are given in terms perfectly easy of comprehension, and apparently void of any attempt to colour the picture highly. It is, at all events, worth the consideration of every farmer, adventurer, and mechanic resolved on improving the situation of himself and family."

## COMPARATIVE PRICE OF CORN AND LABOUR IN EUROPE AND AMERICA.

TO THE EDITOR OF THE TIMES.

Sir,—Having remarked with some interest the accurate statements of the price current of corn abroad and in Great Britain occasionally exhibited in the columns of your paper, it has occurred to me that a well-substantiated account of the comparative price of labour in the same countries might give rise to correct and just views of the various points which bear upon the all-important subject of the corn laws, and tend to elucidate the advantages or disadvantages of a free trade in that great staple commodity.

I take, therefore, the present occasion to address you relative thereto, and would only premise that, having passed several years abroad in those countries which have hitherto furnished the greatest supply of corn, and having, early in life, taken much care to make myself acquainted with the influence of supplies from abroad on the interests and prosperity of Great Britain, my attention was devoted to obtain correct and general information of the value of labour in those sections of Europe and America where such immense supplies were raised.

The wheat which is sold at Riga comes principally from Russian Poland, and is placed in London in bond at the prices of 24s to 26s. The province of Lithuania, comprising that portion which lies on the river Dwina, to a great distance in the interior towards Smolensk, and the town of Viel, on the Dwina, as also that portion of Courland accessible from the same river, are the positions (independent of the coasting trade supplies) from whence the Riga wheat is drawn. The manner in which the commissariat department for obtaining those large quantities of grain is arranged is interesting, and during my residence at Riga I became acquainted with its details.

The principal dealers in grain are the merchants from the interior, chiefly Polish Jews, who, either resident in the interior themselves, or by their subordinate agents, make those arrangements with the proprietors of estates, or their factors, which insure a delivery after harvest of the amounts for which they, in Riga, contract to furnish the foreign exporting houses.

Immense amounts are thus negotiated for before the material has shown itself much above the surface of the ground.

In effecting such contracts considerable sums of money are advanced by the exporting houses in Riga to those merchants, upon their faith in the individuals who have contracted: furnished with supplies of money, the interior merchants repair to those points where the facilities of obtaining grain present the best aspect. They arrive at a time when the necessitous proprietors, and great landed nobles, are best disposed to enter into engagements, into mortgages, in fact, of their next year's revenue. It is needless here to observe the scenes of usury and rapacity which mark such an epoch. It is little known in

this country how deeply plunged in debt are the unfortunate proprietors of estates, and at what heavy sacrifices they anticipate their incomes. Whatever it may be, it results in immense profits to the interior merchants, and in many instances to the exporting houses, whose agents sometimes these men only are.

To whom, then, does the benefit of the price given accrue? Not to the landed proprietors nor to their serfs, but to the middlemen, if they can be so termed, who stand between the grower of the grain and the consumer.

The condition of the labouring classes in Lithuanian Poland is indeed deplorable. Attached as slaves of the soil, they change their masters as the estates change hands, and, ignorant of the happier condition of the rest of mankind, they drag on an existence which is only sufferable by early habit, strong power of endurance, and the degradation of their nature, in which they are thrown by the acts of their fellow-creatures.

The food of the Lithuanian peasant is coarse, but nutritious, consisting of black bread, potatoes, peas, a kind of soup or gruel, cabbage prepared with vinegar, and occasionally, though rarely, meat or butter. Their drink is water, and sometimes a kind of beer made from quassia and molasses. All the little earnings and savings of whole families could not suffice to obtain them a weekly allowance of the nefarious ardent spirits which are sold in every village, at little shops, kept by the factor of the nearest estates, through a sub-agent, or by Polish Jews, these shops answering at the same time as pawnbrokers' shops, where the filthy and coarse woollen clothing of the peasantry is occasionally pledged for 1d.; and this is the mode, and these are the means, and such is the remunerating price of labour to the peasantry and agricultural labourers of Poland! I have thus far dwelt upon the corn trade with Riga, more particularly to point out the condition of all Russia, and of all those provinces which supply her exporting cities with grain. The trade per Riga, did not otherwise merit that it should take such a conspicuous position in the present remarks. Liebau is supplied from the coast of Courland, and from the interior of that province, but the amount exported is inconsiderable, compared with other places. St. Petersburg is the great mart for Russian grain, and the exporting houses there frequently negotiate largely at Riga and Liebau. The northern provinces, and the middle provinces of European Russia supply that market. The price of St. Petersburg, Liebau, and Riga wheat, in bond, in London, is 24s. to 26s.

A better order of things fortunately exists in Prussia. Wages are higher there, or rather actual wages are obtained by the Prussian labourer. Agricultural labourers' wages amount to 3s. per week, varying still lower under that amount, as circumstances and the position of the agricultural districts may determine. They live, however, on the coarsest food—potatoes, cabbage, rye, or buck-wheat. They manufacture their own linen, and their wool is spun by their females. They are not able to indulge in two changes of clothes, but wear what they have until it is no longer useful to defend them from the weather. I was much pleased with what I saw in Prussia. There is a healthy tone of contentment and quiet in the mind of the Prussian labourer; from early habit his food is nutritious, and he takes as much satisfaction in his vegetable diet as the English labourers in bread and bacon. There, also, the remunerating price of labour is more directly received, and the labourer benefits in proportion; the profit on grain is not swallowed up by the few, but is dispersed through a more general channel. The

price of good Dantzic and Königsberg wheat, finest high mixed at London, in bond, is from 38s. to 40s. —lowest priced wheat, 28s. to 29s., the average price may be considered at 34s. At Dantzic and Königsberg, both flourishing cities, the price of labour is higher than in the interior; in summer, common labourers receive 5s. 6d. per week—in winter, 4s. 6d.

We may regard the situation of Zealand and Denmark, which also furnish considerable supplies of grain, as somewhat similar to that of Prussia. The Danish labourers in those parts of Denmark in which I have been are, perhaps, on the whole more favourably situated. Their living is somewhat better, as they possess the means of obtaining cheap fish. The country, too, is prolific, and the land yields excellent crops. The access to market is more easy, and the demand for labour greater than in Prussia, and the wages somewhat higher.

Matters assume a highly different aspect in France, both with regard to the price of wheat, the situation of individual labourers, and the remunerating price of labour. The superior condition of the French labourer is so well known that the data collected by me while there will be unnecessary to add here. At Chalons-sur-Marne, the price of wheat of the first quality is from 29s. to 30s. 6d. per quarter. At Dijon, wheat of the first quality varies from 15f. to 15f. 50c. the hectolitre; and of the second quality from 14f. 50c. to 15f., the mean price being equal to 34s. 4d. per quarter. At Nantes, the price of wheat is equal to 55s. to 57s. 6d. per quarter. At Bordeaux, wheat is from 33s. to 39s. per quarter. The wages of agricultural labourers at Bordeaux are 6s. per week; at Marseilles, day labourers get 7s. 6d. to 9s. 6d., the average price of corn in France being 33s. 6d. per quarter during 1834.

The price of Canada wheat placed in London, in bond, is 47s. to 48s. per quarter. The price of labour in Canada and the United States is high in comparison with Prussia, Denmark and France. In the interior, agricultural labourers receive little actual money; if single men, they eat with the family of the farmer; if married, they are allowed a certain amount of bacon, Indian corn, meal, and flour, which, with orders upon the adjacent stores or shops for any article of luxury which they may require, and from time to time a little money, constitute the payment they receive. The amount of labour price varies in such countries as these, according to the position in which the agricultural district may be as regards an immediate market. If a market is easily accessible, then higher wages are given, and a greater number of labourers are in demand, in consequence of the desire which the farmers or proprietors have to clear and get under cultivation their additional land. In the interior the price of labour, I perceive, by my notes, varied from 7s. to 9s. 6d. per week. This refers only to Canada and the non-slave-holding states of the United States. In the slave states, such as Virginia and North Carolina, the farmer generally estimates that his crop of Indian corn will support his family and negroes by the meal, and the hogs that are fed upon the corn and the crops of wheat are considered as nearly all clear gain. The cost of food per week for the negroes, including their clothing and usual allowance of tobacco, is about 5s. 6d. Their food consists of an unlimited supply of Indian corn, meal, and a sufficient supply of bacon or salt fish every day. I consider the condition of the negroes of Virginia and North Carolina as much preferable, in point of comfort, to that of the serfs of Russia. No instance ever came under my notice of cruel treatment towards the slave population of the United States; in fact, they are looked upon more in the

light of children, and much of that feeling seemed to exist between master and slave which can be traced in the history of the Jewish patriarchs of Scripture, and unfortunate as their situation is, divested of the rights of mankind, which ought to be inalienable, their lives pass on in apparent content and buoyancy of spirits.

The average price of wheat in England, up to October, 1834, was 43s. 2d. per quarter. The average price of agricultural labour is 10s. per week. The labourer in England is well clothed, has sufficient meat, bread, and beer, can indulge in the luxuries of tea, coffee, and sugar; and when he marries and has children, if unable to support them, they are maintained at the expense of the parish in which he is located. If he becomes maimed, indigent, or if old age overtakes him, he is provided at the public expense with a comfortable refuge from want and distress.

| Price of Grain, bond price.                                                           | Remuneration for Labour.                                        | State of the Population.                                                                                                                                                                  |

#### THE PILGRIM IN EUROPE.

STEAM NAVIGATION TO INDIA. — The following is a precise account of the time and distance occupied by the Enterprise steamer, as printed in the Minutes of Evidences taken before the Commons Committee:—The Enterprise left the land on the 16th of August, 1825, reached Calcutta on the 7th December, 1825; that was 113 days (of which she was 103 actually under weigh), from the land to Diamond Harbour; she used both sail and steam. The greatest run by sail in 24 hours was 211 miles; the least, 39; the greatest by steam, assisted by sail, 225 miles; the least, 80. The greatest heat in the engine-room during the voyage was 105 degrees; the air at the same time being 84½ degrees. The total distance was 13,700 miles, and the consumption 580 chaldrons of coals, being nine chaldrons per day for 64 days, the rest being under sail; the engines were 120 horse power, the speed of the engine in calm weather was eight knots an hour, the log giving nine from the wash of the paddles."

## ON THE ABUSE OF THE POWER OF DISTRESS FOR RENT.

MR. EDITOR—In addition to the useful and appropriate observations made by your Correspondent in your last number of "The Farmer's Magazine" on this important subject, I beg permission to be allowed to add my mite of information in many cases where it not only operates to the disadvantage of the landlord, but to the utter ruin of the tenant. I mean with respect to the very oppressive and expensive mode adopted on distrains for rent above 20*l*.

For the recovery of rents not exceeding 20*l*., the legislature has adopted a very salutary measure, making it penal on the landlord, his bailiff, broker, or any other person, if he exact from the tenant any other costs than are set forth in the schedule of an Act passed in the year 1817. The schedule of that Act is on a moderate and fair scale. I have inclosed you a copy of this Statute. You will no doubt think with me that it is worthy of more notoriety. Will you, therefore, do me the favour, for the public good, to insert it *verbatim* at the foot of this letter.

In distrains for rent above 20*l*. the tenant is still left to the mercy of the landlord, or rather to the merciless harpies employed by him; for if landlords in general were better informed of the cruelties and waste of property inflicted and incurred by brokers, sheriffs' officers, and bailiffs' followers, authorized by landlords to recover arrears of rent, they would be more circumspect who they employ for these purposes; and they would be more anxiously solicitous to constrain their underlings to dispose of property taken in distress to better advantage than is generally observed.

Within my experience in business I could give a catalogue of barbarities exercised against tenants which would startle those who have not contemplated the abuses of this necessary power. When I say *necessary power*, I mean when properly qualified and restricted.

A person occupying a tavern in the borough of Southwark was in arrear with his landlord, less than 50*l*. for a quarter's rent. His stock in trade and furniture had been twelve months before valued to him at nearly 400*l*. as incoming tenant. He was distrained upon for this small sum. The broker had ingenuity enough to procure two other men of the same trade, his public-house companions to value the property distrained (which, in fact, was the whole stock and furniture) at about 75*l*. The whole property was accordingly condemned at that sum, being the amount of the rent and expenses. Five vans were employed to convey this ill-fated property to its new and more wealthy, but less honest, owner, to the dismay and ruin of the tenant.

Another case occurred to a grocer in my neighbourhood, whose property, to nearly the same amount, was sacrificed for the payment of a still smaller amount of arrears of rent; but with this difference, instead of the brokers taking the goods at their own condemned price, the property was disposed of at an auction room, with the colour only of publicity to cover a sham sale.

Thus were the tenants ruined, the premises much dilapidated by the hasty removal of fixtures, &c., and the landlords lost their tenants.

If less severity had been shewn, they would no doubt have surmounted their difficulties, instead of being now in a state of pauperism.

To remedy these unjust proceedings, I would propose that the expenses of distrains for rent

above 20*l*. should also be limited by a schedule of moderate fees; and that in cases where goods are appraised and condemned by brokers the tenant should have a few days *breathing time* allowed to redeem his property, over and above the five days given for replevy.

The public would derive another advantage by an alteration in the law of landlord and tenant, if the period for distraining for arrears of rent was limited.

At present a landlord and tenant may collude to defeat *bona fide* creditors from recovering their just demands, under the pretext that there are several years rent in arrear.

Equal justice seems to require that the power of distraint for rent in arrear should be limited to six months, leaving the landlord to his remedy by action, in common with other creditors, for the recovery of his rent beyond that period.

Much fraud against creditors in general would thus be prevented.

Your most obedient servant,  
AMICUS.

## AN ACT TO REGULATE THE COSTS OF DISTRESSES LEVIED FOR PAYMENT OF SMALL RENTS.

[July, 10, 1817.]

WHEREAS divers persons acting as brokers, and distraining on the goods and chattels of others, or employed in the course of such distresses, have of late made excessive charges, to the great oppression of poor tenants and others, and it is expedient to check such practices; be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the Lord's Spiritual and Temporal, and Commons, in this present parliament assembled, and by the authority of the same, that from and after the passing

No person making any distress for rent, where the sum due shall not exceed 20*l*., to take other charges than mentioned in the Schedule annexed;

of this Act no person whatsoever making any distress for rent, where the sum demanded and due shall not exceed the sum of twenty pounds for and in respect of such rent, nor any person whatsoever employed in any manner in making such distress, or doing any act whatsoever in the course of such distress, or for carrying the same into effect, shall have, take or receive, out of the produce of the goods or chattels distrained upon and sold, or from the tenant distrained on, or from the landlord, or from any other person whatsoever, any other or more costs and charges for and in respect of such distress, or any matter or thing done therein, than such as are fixed and set forth in the schedule hereunto annexed, and appropriated to each act which shall have been done in the course of such distress; and no person

nor to charge for any act not done.

or persons whatsoever shall make any charge whatsoever for any act, matter, or thing mentioned in the said schedule, unless such act shall have really been done.

Party aggrieved by any such practice may apply to Justice of the peace.

II. And be it further enacted, that if any person or persons whatsoever shall in any manner levy, take, or receive from any person or persons whatsoever, or retain or take from the produce of any goods sold for the payment of such rent, any other or greater costs and charges than are mentioned and set down in the said schedule, or make any charge whatsoever for any act, matter, or thing mentioned in the said schedule,

and not really done, it shall be lawful for the party or parties aggrieved by such practices to apply to any one Justice of the peace for the county, city, town, and acting for the division where such distress shall have been made or in any manner proceeded in, for the redress of his, her, or their grievance so occasioned; whereupon such Justice shall summon the person or persons complained of to appear before him at a reasonable time to be fixed in such summons; and such Justice shall examine into the matter of such complaint by all legal ways and means,

Justice may adjudge treble the amount of the monies unlawfully taken to be paid, with costs, which may be levied by distress.

and also hear in like manner the defence of the person or persons complained of; and if it shall appear to such Justice that the person or persons complained of shall have levied, taken, received, or had other and greater costs and charges than are mentioned or fixed in the schedule hereunto annexed, or made any charge for any matter or thing mentioned in the said schedule, such matter, or thing not having been really done, such justice shall order and adjudge treble the amount of the monies so unlawfully taken to be paid by the person or persons so having acted to the party or parties who shall thus have preferred his, her, or their complaint thereof, together with full costs; and in case of nonpayment of any monies or costs so ordered and adjudged to be paid, such Justice shall forthwith issue his warrant to levy the same by distress and sale of the goods and chattels of the party or parties ordered to pay such monies or costs, rendering the overplus (if any) to the owner or owners, after the payment of the charges of such distress and sale; and in case no sufficient distress can be had, such Justice shall by warrant under his hand commit the party or parties to the common gaol or prison within the limits of the jurisdiction of such Justice, and there remain until such order or judgment be satisfied.

Justices may summon witnesses.

III. And be it enacted by the authority aforesaid, that it shall be lawful for such Justice, at the request of the party complaining or complained against, to summon all persons as witnesses, and to administer an oath to them, touching the matter of such complaint or defence against it; and if any person or persons so summoned shall not obey such summons, without any reasonable or lawful excuse, or refuse to be examined upon oath, or if a quaker upon solemn affirmation, then every such person so offending shall forfeit and pay a sum not exceeding forty shillings, to be ordered, levied, and paid in such manner, and by such means, and with such power of commitment as is herein-before directed as to such order and judgment to be given between the party or parties in the original complaint, excepting so far as regards the form of the order, and hereinafter provided for.

If complaint unfounded, Justice may give costs to the party complained against.

IV. And be it further enacted, that it shall be lawful for such Justice, if he shall find that the complaint of the party or parties aggrieved is not well founded, to order and adjudge costs, not exceeding twenty shillings, to be paid to the party or parties complained against, which order shall be carried into effect, and levied and paid in such manner, and with like power of commitment, as is herein-before directed as to the order and judgment founded on such original complaint; pro-

No judgment to be given against the landlord, unless he personally levies the distress.

shall have personally levied such distress; provided always, that no person or persons who shall be aggrieved by any distress for rent, or by any proceedings had in the course thereof, or by any costs and charges levied upon them in respect of the same, shall be barred from any legal or other suit or remedy which he, she, or they might have had before the passing of this Act, excepting so far as any complaint to be preferred by virtue of this Act shall have been determined by the order and judgment of the Justice before whom it shall have been heard and determined; and which order and judgment shall and may be given in evidence, under the plea of the general issue, in all cases where the matter of such complaint shall be made the subject of any action.

Parties not to be barred of other legal remedies.

Signature of the justice proof of judgment.

V. And be it further enacted, that such orders and judgments on such complaint shall be made in the form in the schedule hereunto annexed, and may be proved before any court by proof of the signature of the Justice to such order and judgment; and such orders as regard persons who may have been summoned as witnesses shall be made in such form as to such justices shall seem most fit and convenient.

Brokers to give copies of their charges to the persons distrained.

VI. And be it further enacted, that every broker or other person who shall make and levy any distress whatsoever, shall give a copy of his charges, and of all the costs and charges of any distress whatsoever, signed by him, to the person or persons on whose goods and chattels any distress shall be levied, although the amount of the rent demanded shall exceed the sum of twenty pounds.

Printed copy of Act to be hung up in Sessions House.

VII. And be it further enacted, that a fair printed copy of this Act shall be hung up in some convenient place in such halls or rooms where the Justices of each and every county in England and Wales shall hold either their quarter or other sessions.

#### SCHEDULE referred to in this Act.

FORM of the order and judgment of the Justice before whom the complaint is preferred, where the order and judgment is for the complainant.

In the matter of the complaint of *A. B.* against *C. D.* for a breach of the provisions of an Act of the fifty-seventh year of his Majesty King George the third, intituled *an Act [here insert the title of this Act,]* *I, E. F.,* a justice of the peace for the county of \_\_\_\_\_ and acting within the division of \_\_\_\_\_ do order and adjudge that the said *C. D.* shall pay to *A. B.* the sum of \_\_\_\_\_ as a compensation and satisfaction for unlawful charges and costs levied and taken from the said *A. B.* under a distress for rent; and the further sum of \_\_\_\_\_ for costs on this complaint.

(Signed) *E. F.*

FORM of the order and judgment of the Justice, where he dismisses the complaint as unfounded, and with or without costs, as the case may be.

IN the matter of the complaint of *A. B.* against *C. D.* for the breach of the provisions of an Act of the fifty-seventh year of his Majesty King George the third, intituled an Act [here insert the title of this Act,] *I, E. F.*, a Justice of the peace for the county of \_\_\_\_\_ and acting within the division of \_\_\_\_\_ do order and adjudge that the complaint of the said *A. B.* is unfounded; [if costs are given] and I do further order and adjudge that the said *A. B.* shall pay unto the said *C. D.* the sum of \_\_\_\_\_ for costs.

(Signed) *E. F.*

SCHEDULE of the limitation of costs and charges on distresses for small rents.

|                                                                                                                   | £ | s. | d. |

## TO THE EDITOR OF THE "MORNING HERALD."

Sir,—The culture of the vine has justly been considered one of the most important objects of gardening, and men of all grades in the art, and from the most remote period, have strenuously endeavoured to excel; but the palm of excellence ought, perhaps, to be awarded to Speechly, the justly famous gardener at Welbeck, who died at an advanced age, in the year 1820. But great as was his fame, and much as he has taught us, by his celebrated "Treatise on the Culture of the Vine," it is notorious that very great improvements have recently been effected, one of which is the *successful propagation of the vine in pots*. Many persons have endeavoured to throw a doubt upon the fact—they have argued that a plant which propels its roots to so great an extent in the open borders, cannot be expected to succeed when confined to the small limits of a pot. But as the argument is fallacious, so it is misplaced, inasmuch as the two methods of cultivation have different objects in view—that in the open border is calculated to produce successive crops, at certain definite periods; while pot-culture, on the contrary, is intended to procure a supply of the finest fruit, at any period of the year, from plants constantly renewable. My limits will not now permit me to enter into minute detail; but as I have witnessed and proved the facts which it is the object of this letter to advocate, I am particularly bound to advert to a new method of raising vines, which has recently been announced by one of the first grape-growers in the kingdom. It is no less remarkable than true, that Welbeck is the site of this great improvement, and to Mr. Mearns, the present gardener to his Grace the Duke of Portland, we are indebted for its publication.

I am perfectly aware that the inventor has com-

municated his mode of culture to the Horticultural Society, and also to the Editors of two or three of the periodicals, but numbers of persons may not have seen or heard of it; and as I have been favoured by direct information from Mr. Mearns himself, I have seen and possessed several specimens of vines produced by him, and have proved the facts by my own experiments, I am called upon to give them all the publicity I can, and I know not how to do this more effectually than through the medium of your most influential columns.

The practice in question has for its object, indeed, the perpetual production of *forced* grapes; it therefore requires artificial heat in the first instance, but it prospectively includes the production of perfect vines either for the vinery, the stove, the greenhouse, or the exposed wall. No mode of operating can be more effectual or more comprehensive. I cannot now enlarge, especially as at no distant period an opportunity may be afforded me to describe particularly the cultivation of vines in pots; but I shall at present content myself by referring to a few heads of the process communicated to me by Mr. Mearns himself, so long back as the summer of 1833. A bunch of grapes was finely swelled off from a cutting of the same sprig; this was a *Muscat*. Another was obtained from a black Tripoli; a third, from a black Damascus. The cuttings alluded to were branches, 5 to 10 or 20 feet long, coiled round the inside of a pot, which was then filled with a good compost, "leaving from three, four, six, to ten feet above the soil, mossing the stem, and keeping it moist to prevent evaporation." After the buds expanded and the grapes set, the moss was removed, and the roots that were matted therein were cut off; the pots were plunged into some material which furnished bottom heat.

The vegetable physiologist will, in these few hints, obtain abundant matter for mental reflections; he will recollect, however, that, in these incipient experiments, there were no roots to the branches when they were coiled; roots, buds, fruit, and branches, were produced within the short period of a few weeks from the commencement of the operation. The experiment has since been carried to a far greater extent: and it has been proved beyond a doubt, that vines bearing fruit may be formed by one process, and that, by another, vines may be prepared for the next season, which cannot fail to yield from eight or ten, to thirty or forty fine bunches of grapes each.

The tree, to the physiological botanist, is one of great interest; the internal structure of the stem is peculiar, and its anatomy presents objects of singular microscopic beauty. Its flower and fruit are produced in clusters; the former are of a pale greenish colour; calyx of five parts, or segments; corolla deciduous; stamens five; germen with a small obtuse stigma, succeeded by a round or oval berry, enclosing five seeds, some of which are often abortive. These characters are correct, but not sufficiently explicit. The corolla is lifted off upwards by the expanding stamens, and it appears as though it was divided upwards: in fact, while seated on the flower it seems to act as a veil or hood (calyptra). The blossoms, when the stamens are released, and the farina formed, emit a delicious odour, somewhat approaching to that of mignonette.

The Vine (*Vitis Vinifera*) is the type of the natural order Vineræ.

I am, Sir, your's, very respectfully,

THE AUTHOR OF THE "DOMESTIC GARDENER'S MANUAL."

# MONETARY SYSTEM—THE CAUSE OF OUR NATIONAL AND PRESENT DERANGEMENTS — DEFICIENCY OF NATIONAL CAPITAL, &c.

Mr. Editor,—In addressing myself to you on the general state of trade, manufactures, agriculture, and finances of this country, and the capital necessarily required to carry on so vast and important national concerns, you must be fully aware, cannot (nor, indeed, is it necessary) be explained to that nicety of amount and value, so desirable on questions or statements of so much consequence to every class of society, from the peer of the realm to the humblest mechanic and labourer of the country; but particularly to those classes of society who hold the destinies of the country in their hands as a sacred trust, confided to them by the people of England—our legislators—whose duty it is to devise and maintain a just equilibrium of the affairs of the country and of society, to the great end of securing to every man those privileges and blessings of equal laws and comforts, to which they are so justly entitled at the hands of a well-regulated and liberal government, professing to legislate for a free people, whose misery and degradation now begin to assume a more serious aspect than, what I fear, is contemplated by the legislature or the government. These certainly are not times for delusion to be practised upon the country. Assertions of national prosperity so often and so repeatedly re-echoed in both Houses of Parliament, are a delusion no more to be believed by the people—pompous displays of the increasing produce of taxation have been, and are still, held up to the country, as the evidence of its increasing wealth and happiness, whilst the converse of the assertion is the fact. England, with her well-paid standing armies—an highly eulogised and enlightened nobility—an upright and active magistracy—a zealous and conscientious clergy, &c., I maintain, are not signs of our increasing wealth, but of our increasing poverty and pauperism: and these are the instruments in the hands of the government, periodically reiterated to blind the people into a belief that they are happy and prosperous too.

I feign would ask these wealth-increasing classes, what are the products of their hands? Is it possible to calculate their value to the state, except that they are all living in affluence and ease at the fountain of industry, while the people, who raise all and pay all, present a widely different picture for contemplation in their wretchedness and sorrow?

With the gloomy and portentous prospect before them of the operations and mighty benefits of the Poor Law Amendment Bill, which at once gives the lie to these reiterated displays of our national prosperity, while it degrades the people who have been pauperised by the system into every species of wretchedness.

It is not my duty or province, voluntarily or officiously to advance any propositions, either for obtaining the desired equilibrium or preventing the sad and portentous consequences which must necessarily and inevitably follow the existing and acknowledged derangements of the country. They are now great and extensive. First, in the monetary system, brought upon the nation by repeated tamperings with the currency. In the train of which have followed all the derangements of our agricultural pursuits, low wages and pauperism, with a continued drain upon the farmers of high rental, taxation, poor levies, &c. The same evil effects are as keenly felt in every department of our manufactures, trade, labour, &c., all of which are merging to that state of poverty too serious

to pass unnoticed, and too portentous not to create alarm. But the wise men of the land (our legislators) must, ere long, both open their eyes and their ears to the existing derangements of the country, or themselves sink into its ruin. Nothing calls so loudly for their serious attention as the monetary system, which is too limited or contracted for all the purposes of a mercantile and agricultural nation like England. Hence arise all the derangements, the bankruptcies, and ruin, caused by the want of a well-regulated currency, which the Parliament have the means of creating, by its own powers, to meet all the existing demands and energies of the people, by the establishment of a national bank, the profits of which might be made available to the nation in the liquidation of the debt, and the payment of its other demands; so that the present system of taxation and other burdens might be greatly reduced, and the people relieved from that continued stress upon their property and industry to an extent both honourable to the government and satisfactory to the nation.

I am, and I believe every man is perfectly aware, that the present capital of the country, that is, the amount of the circulating medium, is far too limited or small for the mighty extent of British speculations and industry. And, to establish the fact, only on the supposition, that, in the first place—

|                                                                    |              |
|--------------------------------------------------------------------|--------------|
| 1. The agricultural annual produce of the country amounts to ..... | £200,000,000 |
| 2. The annual produce and value of our manufactures .....          | 300,000,000  |
| 3. The annual taxes of the government .....                        | 45,000,000   |
| 4. Clergy and poor .....                                           | 14,000,000   |
| 5. Rental of the land, 46 million acres, at 30s. per acre .....    | 69,000,000   |
| 6. Rental of the houses of the country .....                       | 69,000,000   |
| 7. The ship-owners .....                                           | 8,000,000    |
| 8. The mortgagers, &c. ....                                        | 10,000,000   |
|                                                                    | <hr/>        |
|                                                                    | £713,000,000 |

Besides other transactions requiring the aid of money, such as mining, internal navigation, steam vessels, railways, turnpikes, coach and waggon conveyances, &c., supposing the whole amount to be 800,000,000*l.*, as a total. I shall now appeal to the calculator, the merchant, tradesman, land proprietors, and the government itself, to know whether the present national capital, as a metallic circulating medium of 30,000,000*l.* in specie, and 20,000,000*l.* of paper, Bank of England and local, in amount 50,000,000*l.*, is sufficient to meet all the exigencies of the country?—but particularly to enable the merchants and tradesmen to meet their bills of exchange at two and three months' date, to the annual amount of many millions, not very readily to be calculated or guessed at. Suppose 200,000,000*l.*, available in cash, when due; that is, every such two and three months. It must appear obvious to every man that so small a capital is quite inadequate to carry on the concerns of the country—hence all our national derangements and present ruin. Trusting the remedy may not come too late from the hands of the government and legislature, &c., I remain your's, &c.

Nottingham, Nov. 3, 1834.

J. C.

## AGRICULTURAL MEETING AT GOOLE.

A very numerous and highly respectable meeting of land-owners, occupiers, and inhabitants within the extensive district of the Goole Agricultural Association, was, pursuant to advertisement, held at Goole, on Wednesday, February 4th, to take

into consideration the expediency of addressing petitions to the King and to the two Houses of Parliament, for improving the condition of the agricultural population: John Egremont, Esq., in the chair; when the following resolutions were unanimously adopted, viz.—

That this meeting sees with extreme regret the continuance of agricultural distress, especially as that distress has rather increased than decreased within the last year. That although a duty upon the admission of foreign grain is absolutely necessary for the protection of British agriculturists, such a duty is in itself insufficient to maintain their produce at such a price as will enable them to pay their taxes, rents, and parochial rates, out of the annual profits of farming. That for the payment of the present taxation and local burdens, prices materially higher than those at present obtained are indispensably necessary, and that no reasonable prospect of obtaining such prices can be entertained, so long as Sir Robert Peel's bill for regulating cash payments remains in full force. That for the present a petition, grounded on the above resolutions, be addressed only to the King: waiting for his Majesty's speech, on the opening of the ensuing session, upon which may be grounded other petitions to the two Houses of Parliament. That the petition to his Majesty now read be adopted, and forthwith signed and presented. And that (the business of the day being closed, and the chair vacated,) the thanks of this meeting be given to John Egremont, Esq., for his able and impartial conduct in the chair.

#### COPY OF THE PETITION.

*To the King's most excellent Majesty.*

Sire,—We, your Majesty's loyal and dutiful subjects, owners and cultivators of land in the vicinity of Goole, in the county of York, wish to express our sincere thanks to your Majesty for having, in your address to Parliament, at the opening of the last session, most graciously called its attention to the distress of the agricultural interest. We, however, at the same time, feel called upon to express our great disappointment that your Majesty's most gracious recommendation to Parliament did not meet with the attention from the legislature which we conceive it deserved, and that no efficient measures for abating our distresses have been adopted. Great as were our privations and sufferings at the opening of the last session of Parliament, we feel that we ought not to conceal from your Majesty the fact that they have been progressively increasing from that period down to the present, and that, in consequence of the change in the value of the currency, the decrease of taxation, as far as related to our interest, is merely nominal. We, therefore, humbly implore your Majesty once more graciously to direct the attention of Parliament to our steadily increasing distress. We are, &c.

#### DEVON AGRICULTURAL SOCIETY.

The Annual General Meeting of the Members of this Society was held at the Society's Rooms, Exeter, on Tuesday, February 3.

S. TREHAWKE KEKEWICH, Esq., took the Chair, and, previous to the commencement of the ordinary business, presented to the meeting a beautiful specimen of the Cashmere Goat's Wool, as imported from Alexandria; of which goat's Mehemet Ali has a large flock in Egypt, which he clips twice a year. The wool is exceedingly soft and fine, of a white colour, very long, and much resembling silk. The honourable gentleman also presented a

fine specimen of the common goat's wool, as imported from Alexandria, of which kind Mehemet Ali has an immense flock, which are also clipped twice a year. This wool is of a dark brown colour, very soft, but short, and not so fine as the Cashmere. These specimens, which attracted much interest, were kindly given to Mr. Kekewich to be laid before the Society, by W. Collyns, Esq., of Kenton.

#### ACCOUNTS.

The accounts for the last year were read, and there appeared a balance in the hands of the Treasurer of 17. 6d. on the year. It appeared that upon the three years from the commencement of the Society, there is a balance due on arrears of subscriptions not paid, of the large sum of 429. 19s. 6d., deducting the arrear of 10l. for a donation.

In conformity with the 5th rule of the Society, 12 members of the General Committee went out of office, and 12 new ones were appointed as follows: J. Sillifant, jun., Esq., H. B. Pennell, Esq., Captain T. L. Lewis, J. Yarde, Esq., Jos. Davey, Esq., Messrs. J. Gould, Upham, Elliott, Beare, Cockram, Pile, and Sharland.

#### PREMIUMS.

The CHAIRMAN said before this question was proceeded with, he was desirous of stating that he had heard that persons in other parts of the county had raised great objections to the restrictions as to the feeding of sheep; they objected to the restriction of green food, and wished it to be left open to every one to feed his sheep in whatever manner he pleased, for the purpose of increasing their fatness and making them look as well as he could for the exhibition. He was not himself of this opinion, as he considered the restriction to green food ought to be continued, which he believed to be the opinion of most of the practical agriculturists connected with the Society; he thought it right, however, to mention the circumstance for their consideration.

Mr. JOHN DREWE said there was a very great objection to removing the restriction, as feeding with corn was most injurious to rams.

The CHAIRMAN said, he understood from the gentlemen who had principally stated the circumstance to him, that the objection was raised for the purpose of removing any jealousy or suspicion as to the manner in which the sheep had really been fed: it was thought if it were thrown open, all that feeling would be obviated. It would be desirable if this could be obviated, but he was of opinion the restriction was essential.

Mr. T. HUSSEY considered if the restriction to green food was removed, it would defeat the principal object of the Society. The sheep were quite fat enough, and even too fat already, on green food; if this was altered, and other feeding allowed, the county would be deprived of some of their best sheep, which would be rendered useless by over-feeding.

Several others present expressed their dissent to the alteration being made, and the rule was ordered to stand as before.

It was then announced by the Secretary, that the first exhibition for the present year would be the third Tuesday in May, being the 19th of May, the day previous to the Exeter Fair; and the second exhibition on Thursday, 5th of November.

#### NEW PREMIUM.

Mr. HUSSEY having pointed out the advantages which would arise from encouragement being given for the Stock produced by the Society's Horse,

Mr. KEKEWICH expressed his concurrence, and said, in order to meet that object, he would give an annual premium of *Five Guineas*—(cheers) for the best colt from the stock of the horse *Elephant*; the prize to be a piece of plate of the above value, with a suitable inscription.

Mr. YARDE moved, and several members seconded the motion, that the best thanks of the meeting be given to Mr. Kekewich for his very handsome offer, and that it be accepted,—which was carried by acclamation. It was suggested that the colts should be from half-bred mares only, but this part was left to be arranged by Mr. Kekewich and Mr. Hussey.

On the motion of Sir THOMAS ACLAND, seconded by Mr. SILLIVANT, it was resolved that the Yearling Bull winning the Sillivant Prize should be disqualified from winning either of the other Prizes, but the mere entering for the Sillivant Prize not to disqualify from competing for the others also.—And while upon this subject, Sir THOMAS said, that he wished not to prevent others from preceding him in so good a race, but if none more worthy stepped forward, he should be most happy next year to stand in the shoes of his hon. friend Mr. Sillivant, and as his successor in his turn present the Society with TEN GUINEAS, to be appropriated as a Premium for the Yearling Bull, precisely in the same way as had been observed in the appropriation of that of his hon. friend.—This was received, as the intimation of Mr. Kekewich had been, with a burst of applause.

Mr. SILLIVANT in a very able address, pointed out the advantages of the allotment system, and urged its extension, in conformity with the professed objects of the institution.

Mr. KEKEWICH concurred in all that Mr. Sillivant had so well said on the subject; and Dr. MILLER suggested that the Society should offer two medals: one as at present, and the other confining the allotment to one parish; which was unanimously agreed to, with this reservation, that the same person should not be entitled to both.

On the motion of Mr. KEKEWICH, a letter of thanks was directed to be sent to William Collyns, Esq., Kenton, for the specimens of Egyptian Wool with which he had furnished the meeting.

The Committee Meetings are in future to commence at eleven o'clock in the forenoon, instead of two in the afternoon.

There were in the room specimens of both White and Red Potatoes, raised from seed by the Rev. John Huyshe, at Clysthydon.

## TO THE EDITOR OF THE MARK LANE EXPRESS.

Mr. Editor,—In your observations on the repeal of the Malt Duty, in your paper of the 9th inst., you say it will materially benefit the farmer, yet you allow it will not advance the price of Barley; how, therefore, can it benefit him? Only in the opportunity he will have to malt his grain, and that most likely in a very imperfect manner, if done at home, and dried in an oven, as no doubt many would do; to the poor man, also, it would amount to but little benefit as you, I am sure, are aware the sum reduced would be only 2s. 7d. per bushel; whereas you now say it would be bought for 3s. 9d. to 4s. per bushel, malt being now 8s. 6d. per bushel, retail. If so, you would injure the farmer, as the malt could not exceed 32s. per quarter, retail price; barley, therefore, would be 30s per quarter, and under for inferior qualities, when, now, with the duty, it averages

nearly 40s. per quarter for malting. Again, if the Malt Duty is repealed, it would only reduce the price of beer one halfpenny per quart, as the estimated quantity of beer, taking all the qualities together, amount to 3½ barrels per quarter; such is the quantity allowed in making the excise average for the charging brewers' licences; this quantity divided into the 20s. 8d, the malt duty, per quarter, leaves nearly 6s., per barrel reduction, or one halfpenny per quart. Should the price of barley advance, which I have little doubt it would, at least for a time, the reduction could not be carried out as permanent unless the brewers or publicans were losers; so that the principle persons, who would be actually benefited by the reduction of the malt duty to any amount worth notice, would be the gentleman or nobleman, who wet his 100 quarters per annum, and who, as landlord, would also reap the advantage of the higher price of the barley, in having his rents better paid, or his backward dues cleared off. The real consumer would be so little advantaged, and the licence so much reduced, that I apprehend it being held out to the farmer as a relief, would prove but little to him; if it is considered to press so heavily with the untoward circumstances of bad seasons, which, thanks to kind Providence! we have not lately experienced. Let the farmer be so reduced in his rent, and let the cottager have the advantage of a few rods of land to cultivate as a garden, these things done would give more solid advantage than the repeal of the malt duty. Previous to the repeal of the beer duty (which was indeed obnoxious, as falling only on those who could not brew at home), the amount of malt used, on an average of years, in private houses, would, if made into beer by the public brewer, and paid the duty of 10s. per barrel, have amounted to nearly 1,000,000l. per annum, which sum was actually left in the pockets of all those nobles, and gentlemen, and those who could brew at home; whereas all those who were obliged to buy of the public brewer were paying 3½ millions per annum as beer duty. Should you be disposed to put the matter in a fair light before your numerous readers, you will find room for these observations, and I shall be very happy to see the farmer and the poor man both benefited in a more substantial manner than by the reduction of 2s. 7d. per bushel from malt. Remaining yours,

February 11.

A CONSTANT READER.

**SUPERSTITION.**—A scene of the most ludicrous and gross superstition took place lately at Perth. A wealthy old farmer having lost several of his cattle by some disease very prevalent at present, and being able to account for it in no way so rationally as by witchcraft, had recourse to the following remedy, recommended to him by a weird sister in his neighbourhood as an effectual provocation from the attacks of the foul fiend. A few stones were piled together in the barn-yard, and wood and coals having been laid thereon, the fuel was ignited by fire obtained by friction. The neighbours having been called in to witness the solemnity, the cattle were made to pass through the flames in the order of their dignity and age, commencing with the horses and ending with the swine. The ceremony having been duly gone through, a neighbouring farmer observed to the enlightened owner of the herd, that he, along with his family, ought to have followed the example of the cattle, and "the sacrifice to Baal" would have been complete.

## CORN LAWS.

MR. EDITOR,

On the Corn Question, as on all other comprehensive subjects, much may be fairly urged on either side; and some advantage on the score of Foreign Trade, might be shown pretty clearly to attend a less restrictive policy in the importation of corn, but the question is, would it or would it not be overbalanced by disadvantages another way?

The value of an export trade should be estimated not by itself, but in conjunction with home consumption; a falling off in the latter might more than counterbalance an increase of the former; at any rate very little direct trade in manufactured goods would be likely to take place with the corn countries, the chief of which are Russia, Poland, and the North of Germany; our low prices could not have much influence when their own manufactures are protected by duties or prohibition, for as our prices were reduced their protection and vigilance would be increased; and, admitting that our goods might be received without restriction, in what state is the great bulk of the population there, as to the taste for or the capability of purchasing our manufactures? The former, no doubt, might be acquired, but the latter must be a work of very many years, as regards Russia and Poland: our purchases of corn would enrich the nobles and great landed proprietors, without much ameliorating the condition of the inhabitants generally; and if it were otherwise, we should have first to enrich those countries, and to take our chance of drawing back the money afterwards, and besides if it were wished to establish foreign manufactures in opposition to our own, could any way be devised so likely to promote such an object, as by throwing capital into foreign hands?

With respect to the protection for the home growth of corn, I do not pretend to fix the precise amount; but it should be such as would make us, or keep us, a great corn producing nation.

The great object never to be lost sight of, is, to give such protection as will, in average seasons, insure the produce of the bulk of what we consume; thereby to preserve within ourselves the most effective means of national independence. It may be asked, how does the more free admission of foreign corn interfere with this proposition? I answer by throwing land out of cultivation. To this it may be replied, let landlords reduce their rents, and cultivation will go on as before—but what is rent? It is clearly the proceeds of produce from land over and above paying wages, taxes, tithes, poor-rates, and all other charges that land is subject to; no other rent can be sustained: the capital of tenants on lease may for a time give something more, but this must be very limited both in amount and duration. I will endeavour to shew more clearly by an example, how low prices would throw land out of cultivation.

You occupy one hundred acres of land, which, with great care and good management affords you and all others employed upon it, a maintenance, with a surplus of 15s. an acre for the landlord, there is another farm near at hand, of the same quantity of better land, more productive and requiring less labour, for which you can afford to pay 40s. per acre and you hire it at that rent; now let the prices of farm produce be so reduced by the competition with foreign grain, that you can only afford to pay 25s. an acre for the better land, what becomes of the other farm? Is it not

obvious, that it cannot be kept in tillage? Consequently, the labourers that had been employed upon it must be thrown out of work, and cast as a burthen upon the better land; and the evil may go on increasing till our agricultural population may become one general mass of paupers. This of course is assuming that foreign grain would in the first instance cause a reduction in prices, for if it had not that effect, its introduction could not attain the commercial results that are contended for.

Having shown that home growth must decline under foreign competition, it becomes a serious question whether prices would long continue low, after the home supply had materially fallen off? It is more than probable prices would be frequently much higher than they have been under the present system, for we have seen an advance in cotton from 6d to 18d per pound, caused by speculation set on foot by reports industriously circulated, (with very little foundation) of an expected scarcity; and let us consider how much more powerfully men's minds would be acted upon if such reports were so applied to bread corn; and should we have to encounter a real scarcity instead of a fictitious one, the very thought of it is appalling.

MERCATOR.

## ENGLAND FIVE CENTURIES SINCE.

There is in Pinkerton's collection an account of Gonzali's voyage to England in 1330. He speaks highly of the air of Suffolk. Norwich he states thirty years back was computed to contain 50,000 inhabitants. It is curious to observe with what curious eyes different persons travel. Westmoreland he describes as a filthy marshy country, and pities the poor inhabitants; and Don Bank, on the banks of the Don, he characterizes as the best feeding ground in England. The description of London and the manners of its inhabitants is highly curious. He speaks of the sumptuous houses inhabited by persons of quality in Queen-street and Queen-square, Westminster. As much good white bread, he says, may be bought for 1½d. or 2d. as will serve an Englishman a day; good strong beer may be had of the brewer at 2d, and at the alehouses at 3d. per quart. Port wine he values at 2s the quart, or 18l to 20l the hogshead; and French wines, from the duty, double the price. A coach and pair of horses, 10s the day; a sculler 3d for two miles; a good horse lets for 4s a day, an ordinary one for 2s 6d; a hunter for the city hounds, with liberty of hunting an English chase once a week in the season, accompanied by many young gentlemen and tradesmen, at 5s per day. He speaks of meeting in the coffee houses after dinner at four; and again all the gay world get abroad after dinner; between four and five in their gayest equipages, bound to plays, operas, masquerades, concerts, &c. Houses of parliament meet at noon. The post comes in every other day. The two houses commonly sit from nine till one, but on urgent occasions do protract their sitting, and do business by candle-light.—*Gentleman's Magazine*.

A person in Augsburg has discovered a mode of making from potatoes sugar, wine, vinegar, beer, and a pure distilled spirit convertible into rum and brandy. The remains of the potatoe, after the extraction of its saccharine matter, are used for feeding cattle.

## ALLOTMENT SYSTEM.

A nation with an impoverished and discontented peasantry is

"Like an inverted cone,  
Which wants its proper base to stand upon."

If Englishmen were actually to see the nation in the form of the poet's simile, tottering on a pivot, without sufficient stability to bear firmly against the slightest breathing of anarchy, what would they do? If they knew how, they would, no doubt, begin to lay a foundation broad and deep, whereon to fix props to support the social fabric.

The only effectual way to do this, in our opinion, is by adopting extensively throughout the whole kingdom, the Allotment System, by which every industrious man will be enabled to maintain himself by his own exertions, and by so doing, improve both his physical and moral condition.

We once expressed our opinion that the Allotment System would be of no benefit to the inhabitants of a large city. Our objections were, the distance the occupiers of land would have to travel to cultivate it, and the unsuitableness of out-door work to those accustomed to an in-door, if not a sedentary life. If, however, any persons in a town can be found willing to occupy and to cultivate a piece of land, there cannot be any objection to their so doing; and if they succeed, they place the advantages of the system beyond all dispute.

Mr. Lowder has actually tried this in the neighbourhood of this city, and as it is now about 12 months that the land situated in the parish of Charlcombe, has been occupied by about 56 tenants, having a quarter of an acre each, we deem it our duty to state the results thus far, which we find to be every way favourable. Mr. Lowder has had every disadvantage possible to contend against; first of all his own habits of life, as a gentleman residing constantly in the city, are such as would not lead him to take any such a system. He has taken the land for the purpose of trying whether or not the Allotment System be of that benefit it has been represented to be; for this purpose Mr. Lowder was determined to give it a fair trial; and notwithstanding the tenants were neither gardeners nor country labourers, but consisting of masons, shreemakers, and mechanics, and notwithstanding the land was poor and highly-rented, being so near a town, the tenants have, with the aid of a subscription to purchase manure for them at the onset, received one crop, and greatly improved the condition of the land. The first year has been of course, one of great difficulty: the land was rough and heavy, and required much labour, and many of the tenants had been long out of employment. The result of the first year has been as good a crop of potatoes as could have been expected—about 80 sacks per acre. The land is now brought into fair tillage, and in the course of a year or two, will no doubt be brought into a high state of cultivation. Mr. Lowder has retained an acre of the land for experiment, to shew the tenants the capability of the land when well worked, so that an allotment of this nature is a school for industry and economy, in which the industrious labourers, by rivalling each other, will contribute to the comfort and happiness of themselves and families, have no time for idleness and crime, and be placed above the degradation of pauperism. Mr. Lowder, in his observations at the last annual meeting of the Labourer's Friend Society, which we then had not room to insert, recommended every land-owner to have a model garden amongst the allotments.—*Bath Journal*.

## BRIDLINGTON AGRICULTURAL ASSOCIATION.

A very numerous meeting of the members of the above association, was recently held at the Green Dragon Inn, in Bridlington, pursuant to notice given for that purpose, to take into consideration the propriety of sending an address to his Majesty, and petitions to both Houses of Parliament, on the subject of agricultural distress. Mr. Sidney Taylor (the secretary to the association) opened the meeting, and explained the cause of its being then called together, and read the address and petitions. Francis Coverley, Esq., the president, addressed the meeting at considerable length. He felt upon the fit period of time it was, to address his Majesty and petition Parliament. He congratulated the meeting on the awakened apathy of the agriculturists, who were at last aroused to speak out what they really and too deplorably felt, for without a patient making known his complaint, how is it possible for a remedy to be effected? He assured the meeting it was no trivial subject on which they were then met—no matter to be treated with levity—it was a most important duty they had to perform, and what they owed and had been long in debt, to themselves and to the country at large. Just now was a moment the most critical; the first reformed parliament was at an end, after two short years' duration, without having made the least effort to relieve the farmer. The King, our most gracious Sovereign, had exercised his prerogative; had dismissed his ministers and dissolved his parliament; and it was now our duty to exercise our privilege; to address his Majesty and petition parliament; and such coming from so powerful and respectable a class of the community, could not but be heard and obeyed. Public opinion was now no longer to be disregarded, but must be treated with the merit it deserves. He deeply censured the conduct of the landlords in general, (admitting some few exceptions,) for not coming forward to assist their tenantry, and concluded by proposing the address to his Majesty, and the petitions to both Houses of Parliament, which were unanimously agreed to.

The address and petitions were highly approved of, and they are couched in moderate but firm language, stating the past and present deplorable state of the farmer, and praying for relief. They pointed out no specific mode of redress, but earnestly urged an immediate attention to their claims for relief, as parliament in its wisdom might judge proper.

## HINTS TO AMATEUR GARDENERS.

Those who grow early cucumbers, or are forcing asparagus, mushrooms, grapes, &c., or have pet collections of store or green-house plants, must not depend on the promising state of the weather, so unusually mild thus early in the season, but take the same precautions in covering up and uncovering their houses and frames until February is gone. In pruning wall trees, leave all the wood of the last summer's growth, except the thick and unsightly shoots, which never bear, but draw the sap away from the small blooming wood; in shortening back some of the shoots to produce a succession of young wood, always leave one bud or more of last year's growth. This rule holds good as regards peaches, nectarines, and Morella cherries. Other fruits generally produce fruit on spurs, formed on the two (or more than two) years old wood; but to keep a succession of healthy bearing wood, it is requisite to shorten back, from time to time, to the heart of the tree. The shoots proceeding from such pruning, to be

carefully laid in, to replace the old or cankered branches. The test of judicious pruning is, to have your trees covered with fruit on every branch, and not in some moderate sized gardens merely at the extremities. If you have an old grape vine, even to the top of the house, that produces small fruit, cut it down to within a foot or two of the ground. It will produce fine shoots the following season, (I have seen such forty feet in length the first year;) these should be trained up the house, or wall, four to five feet apart, parallel to each other. Shorten them back to the strongest bud that breaks the following spring, and every other eye will produce, right and left, lateral shoots, those latter produce the fruit. In the first or mid summer pruning those lateral shoots are each to be shortened back, so as nearly to meet mid-way; the lateral from the corresponding main shoot of last year. Every winter pruning the whole of those laterals must be cut back to one strong bud, or eye, of the same year's growth, from which bud proceeds the fruiting wood of the following summer, the main shoots always continuing in the position they were first placed in; by this simple method you may always (except when destroyed by severe spring frost) make certain of having a luxuriant crop; the wall of your house, garden, or graperies, clustered over. Regarding the pruning of fruit trees in open quarters, or espaliers, excessive pruning should be avoided, all cross branches, or those cankered, ought to be cut clean to the parent branch. If the tree has become useless from neglect, and your soil good, the best method is to head it back to the original stem, and in a few seasons it will produce a good tree. The only way to have fine mulberries, is to keep the knife at work on the head of the tree.

### TRIFOLIUM INCARNATUM.

TO THE EDITOR OF "THE FARMER'S MAGAZINE."

Sir,—The agriculturists of Italy, France, Spain, and Switzerland, are acquainted with the extraordinary productiveness of the clover lately introduced into this country, called *Trifolium incarnatum*.

Its value is greatly enhanced by not interfering with the main crop of a farm, yet supplying abundance of green food at a time of the year when most wanted, viz., before other grasses have become fit to cut or feed off.

The best time to sow this clover has been considered in Autumn, to produce an early crop of green food in the Spring; but it may, with great profit, be sown in the Spring, so as to produce a crop in the Summer; and, when sown at this time, the plant is not exposed to the various contingencies of winter, which may be so severe as partially to destroy the crop, consequently, the Summer crop will be found most certain and most abundant.

I am not an agriculturist, and therefore cannot fully detail the many valuable qualities of the *Trifolium incarnatum*, but, should you be pleased to insert these few remarks in your valuable Journal, it may draw the attention of practical persons to write more fully on the subject. In conclusion, I may just remark, that it is not a fanciful idea of mine to recommend sowing this seed in the Spring, for it is generally sown at that season on the Continent. I am, Sir, your most obedient servant,

P. X. Z.

### TO THE EDITOR OF THE TIMES.

Sir,—As you have introduced my name in your observations this morning on the case as reported from the Bath papers, on the ill-treatment of the Freshford paupers, perhaps you will allow me to say a few words in explanation.

On Wednesday, the 28th ult., I received whilst at Calne, Wiltshire, the following instructions from the Board of Poor Law Commissioners:—

"The Board request that as soon as you have concluded your proceedings at Calne, or during any convenient interval, you will forthwith proceed to the parish of Freshford, and examine and report as to the truth of the allegation contained in the enclosed communication from Colonel Napier, and others, inhabitants of that parish.

"You will examine upon oath such witnesses as may be offered, or as you may be able to procure, touching the allegations as to the past mismanagement of the parish. You will give the parties accused a full opportunity of being heard; and having heard all relevant witnesses, you will report whether you deem any and what of the allegations proved; and if so,

"1. Whether, with relation to the assistant-overseer, you deem the evidence of past misconduct renders it necessary for the future correct and safe management of the paupers of that parish that he should be dismissed from his office by the Board.

"2. Whether, further, the case is one which requires a public prosecution of the assistant-overseer, or of the officers who may be inculpated with him.

"3. What steps appear from the circumstances of the parish to be requisite for the improvement of the existing administration of relief, and for preventing a recurrence of the past mal-administration; and especially for insuring to the aged, the infirm, and the impotent, the present inmates of the workhouse, and the proper objects of relief, that distinct provision and humane care which it is the wish of the commissioners to insure for them."

I immediately summoned the officers of Freshford to meet me at the New Inn there, on Friday morning, the 30th ult., at 11 o'clock, and after examining upon oath Colonel Napier, Captain Burt, the Rev. Thomas Spencer, and several other witnesses, who clearly proved the most cruel oppression and brutal neglect of the poor of Freshford by Thomas Dike, the assistant-overseer, and George Watts, the churchwarden, I certainly did feel it my duty to recommend to the Board the instant dismissal of Dike, and the severe censure of the Board on the churchwarden, Watts; and it is true also that I did recommend that Freshford, with some of the surrounding parishes, should be united to either Bath or Bradford, for the purpose of procuring for the deserving poor those comforts and that improved parochial management which it is the object of the Poor Law Commissioners to obtain for them.

I cannot, however, conceive how the cruelties and neglect exercised by these unfeeling officers towards the poor of Freshford can be said to be the "effects of the new Poor Law Act."

The transactions spoken of by the witnesses as evidence of cruelty extended over a period of more than a year and a half past; it is so stated, Sir, in the account which you cite as evidence of the effect of the new Poor Law Bill.

The local magistrates have the same power as

they had previous to the passing of the act to check such misconduct on the part of the parochial officers; indeed, the 46th clause of the new act not only confirms the previous power of the justices, but actually extends it in these matters, but the magistrates on being applied to to interfere, did not do so.

The new act does not supersede the local authorities in such parishes; if neglect takes place, the overseers are answerable, as before the act, for their misconduct. The magistrates in such parishes now, as before the passing of the act, are bound to interfere.

The new act superadds a new controlling authority in this case; the new authority was applied to to put an end to an abuse of the old system, generated by the old system, and this new authority supplied a remedy, for which the old authorities doubted their competency.

Now as to the charge impugning the conduct of the Commissioners. The first charge against the assistant-overseer was received on the 15th of January; Freshford is 100 miles from London, and notwithstanding it will readily be conceded that out of 16,000 parishes this is not the only case that presses on the attention of the Board, the inquiries were gone into fairly and impartially between the accuser and the accused, and the sentence of dismissal issued against the offender on the 4th of February.

It would not become me to add another word as to the "effects of the New Poor Law Act," they will speak loudly for themselves some twelve months hence. I will therefore only beg further to state, that the gentlemen at Freshford who signed the application to the Commissioners (one of whom is a magistrate) expressed themselves much pleased with the promptitude by which the case had been met by the Board.—I am respectfully, Sir, your most obedient servant,

Feb. 9.

CHARLES MOTT.

## TO THE EDITOR OF THE 'FARMER'S MAGAZINE.'

Sir,—You will greatly oblige a constant reader of your valuable Magazine by contradicting a paragraph inserted in your last publication, entitled "The New Poor Law Bill in the Country," and by inserting the following, which has not been circulated so widely as that which you have copied from the *Chellenham Free Press*, but which I hope, through the medium of your Magazine, will find its way into the hands of all who have seen the other; as the one which you have copied has scarcely a word of truth in it.

TO THE EDITOR OF THE "DEVIZES GAZETTE."

Sir,—In looking over your Gazette of Thursday last, I see an account, which you have copied from the *Buth Journal*, of a large body of labourers going to Bowood to state to Lord Lansdowne the hardships they were receiving from the farmers or the vestry, most of whom are his lordship's tenants, by being refused either work or money. I assure you, Sir, the greatest part of that paragraph is a gross falsehood. It is true, about fifty men went to Bowood, but I believe not a quarter part of that number had been before the vestry to make any complaint. The fact is, the greatest part of them left constant places of work to join the mob. I do not believe there was any communication between Lord Lansdowne and the men, through his steward. The principal ground of complaint of these men was the low price given

for labour, more than the want of it. The farmers of Bremhill are giving 7s. a-week, when the labourer is working by the week; but many of the men have been getting more than 10s. a-week, by piece-work. Seven shillings a-week is the regular price of labour round this neighbourhood, and that, little as it may seem, is more than the farmers can afford to pay, as the produce of the land is now selling. As an inhabitant of Bremhill, I can take upon me to say that the poor of the parish are as comfortable and as well off as the poor in any parish in this part of the country, in every sense of the word.

A LOVER OF TRUTH.

## THE SHEEPSTEALING DOG.

In the pastoral and sequestered district of Tweeddale, where the manners of the people retain a simplicity scarcely known elsewhere, crimes of capital magnitude occur very rarely. There is no want of small offences, perhaps, such as assaults, thefts, and so forth, most of which are punished with a short imprisonment in the tolbooth of Peebles. But it is not above once in an age that a native of this primitive district is doomed to expiate his guilt at Edinburgh or Jedburgh. It might be supposed, that, in the border counties, where at no remote period habits of predatory warfare prevailed, a little cattle-lifting or so would neither be unfrequent nor regarded severely; but this is not the case. Offences against property, if considerable either in kind or in extent, are looked upon with as much horror and reprobation in this province as in any other; the guilty parties are spoken of as lost and unhappy creatures: and their relations generally find it very difficult to stand up against the painful feeling which their name excites, but, leaving the locality, seek to hide their shame in distant countries. Indeed, the few instances of heinous crime which have occurred in Peeblesshire during the last eighty years, are traditionally remembered in almost every particular: and the descendants and collateral relations of the parties, even to the fourth generation, could still be pointed out. Such events become, like the chivalrous adventures of an earlier period, the materials of grandam tales for the amusement of children, to whom they are never related without many a solemn admonition respecting the danger of allowing the heart to be tempted to violence, or the eye to go a-hungering after the goods of another.

Among the narratives of this kind which still entertain the fireside circle in Tweeddale, one of the most remarkable refers to an extraordinary case of sheepstealing, which took place in the year 1772. A young farmer in the neighbourhood of Innerleithen, whose circumstances were supposed to be good, and who was connected with many of the best store farming families in the county, had been tempted to commit some extensive depredations upon the flocks of his neighbours, in which he was assisted by his shepherd. The pastoral farms of Tweeddale, which generally consist each of a certain range of hilly ground, had in those days no enclosures: their boundaries were indicated only by the natural features of the country. The sheep were, accordingly, liable to wander, and to become intermixed with each other; and at every reckoning of a flock, a certain allowance had to be made for this, as for other contingencies. For some time, Mr. William Gibson, tenant in Newby, an extensive farm stretching from the neighbourhood of Peebles to the borders of Selkirkshire, had remarked a surprising increase in the amount of his annual losses. He questioned his shepherds severely, taxed them with carelessness in picking up and bringing home the dead, and plainly intimated that he conceived some unfair dealing to be in progress. The men, finding themselves thus exposed to suspicions of a very painful kind, were as much chagrined as the worthy farmer himself, and kept their minds alive to every circumstance which might tend to afford any elucidation of the mystery. One day, while they were summering their lambs, the eye of a very acute old shepherd named Hyslop was caught by a black-faced ewe which they had formerly missed (for the shepherds generally know every particular

member of their flocks), and which was now suckling its own lamb as if it had never been absent. On inspecting it carefully, it was found to bear an additional *birn* upon its face. Every farmer, it must be mentioned, impresses with a hot iron a particular letter upon the faces of his sheep, as a means of distinguishing his own from those of his neighbours. Mr. Gibson's *birn* was the letter T, and this was found distinctly enough impressed on the face of the ewe. But above this mark there was an O, which was known to be the mark of the tenant of Wormiston, the individual already mentioned. It was immediately suspected that this and the other missing sheep had been abstracted by that person; a suspicion which derived strength from the reports of the neighbouring shepherds, by whom, it appeared, the black-faced ewe had been tracked for a considerable way in a direction leading from Wormiston to Newby. It was indeed ascertained that instinctive affection for her lamb had led this animal across the Tweed, and over the lofty heights between Cailzie and Newby; a route of very considerable difficulty, and probably quite different from that by which she had been led away, but the *most direct* that could have been taken. Mr. Gibson only stopped to obtain the concurrence of a neighbouring farmer, whose losses had been equally great, before proceeding with some of the legal authorities to Wormiston. Millar, the shepherd, observing the approach of the formidable group, ran off and attempted to hide himself in a field of grain, where he was taken into custody. On arriving at the farm-house, Mr. Gibson knocked, and was answered by the unfortunate farmer himself, who, supposing it to be a friendly visit, expressed much pleasure at seeing his neighbour, and desired him to walk in. Mr. Gibson, whose feelings were now affected in a way he had not calculated upon, declined the proffered hospitality, and with a choking voice, said that Mr.—(here he mentioned the name of a well-known *messenger*, resident in Peebles) wished to speak to him in the close. "Mr.—!" cried the farmer; "what can Mr.—want with me?" He retired for a moment into the house, and, after whispering a word or two to his wife, reappeared. Mr. Gibson, who was in the passage, saw the unfortunate woman throw her head distractedly upon the table at which she was sitting, and exclaim, "Oh, death, come and break my heart!" The farmer was then conducted with his shepherd to Peebles, where bail to a large amount was in vain offered for them by their friends. On a search of the farm, no fewer than thirty-three score of sheep belonging to various individuals were found, all bearing the condemnatory O above the original *birns*; and it was remarked that there was not a single ewe returned to Grieston, the farm on the opposite bank of the Tweed, which did not *minny* her lambs—that is, assume the character of mother towards the offspring from which she had been separated.

The magnitude of this crime, the rareness of such offences in the district, and the station in life of at least one of the offenders, produced a great sensation in Tweeddale, and caused the elicitation of every minute circumstance that could possibly be discovered respecting the means which had been employed for carrying on such an extensive system of depredation. The most surprising part of the tale is the extent to which it appears that the instinct of dumb animals had been instrumental both in the crime and in its detection. While the farmer seemed to have deputed the business chiefly to his shepherd, the shepherd seemed to have deputed it

again, in many instances, to a dog of extraordinary sagacity, which served him in his customary and lawful business. This animal, which bore the name of *Yarrow*, would not only act under his immediate direction in cutting off a portion of a flock, and bringing it home to Wormiston, but is said to have been able to proceed solitarily and by night to a sheep-walk, and there detach certain individuals previously pointed out by its master, which it would drive home by secret ways, without allowing one to straggle. Some very curious particulars of the practices of the two thieves and their quadruped associate are given in an early volume of *Blackwood's Magazine*, apparently by one who had a minute traditional knowledge of the transaction. These we shall take the liberty of quoting:—

"While returning home," says this authority, "with their stolen droves, they avoided, even in the night, the roads along the banks of the river, or those that descend to the valley through the adjoining glens. They chose rather to come along the ridge of mountains that separate the small river of Leithen from the Tweed. But even here there was sometimes danger, for the shepherds occasionally visit their flocks even before day; and often when Millar had driven his prey from a distance, and while he was yet miles from home, and the weather-gleam of the eastern hills began to be tinged with the brightening dawn, he has left them to the charge of his dog, and descended himself to the banks of the Leithen, off his way, that he might not be seen connected with their company. *Yarrow*, although between three and four miles from his master, would continue, with care and silence, to bring the sheep onward to Wormiston, where his master's appearance could be neither a matter of question nor surprise.

Adjoining to the thatched farmhouse was one of those old square towers, or peel-houses, whose picturesque ruins were then seen ornamenting the course of the river, as they had been placed alternately along the north and south bank, generally from three to six hundred yards from it—sometimes on the shin, and sometimes in the hollow of a hill. In the vault of this tower, it was the practice of these men to conceal the sheep they had recently stolen; and while the rest of their people were absent on Sunday at the church, they used to employ themselves in cancelling with their knives the ear-marks, and impressing with a hot iron a large O upon the face, that covered both sides of the animal's nose, for the purpose of obliterating the *brand* of the true owner. While his accomplices were so busied, *Yarrow* kept watch in the open air, and gave notice, without fail, by his barking, of the approach of those who were not of *the fancy*.

That he might vary the scene of his depredations, Millar had one night crossed the Tweed, and betaken himself to a wild farm among the mountains of Selkirkshire; and as the shepherds have wonderfully minute knowledge of localities, he found no difficulty in collecting part of a flock, and bringing away what number he judged convenient. Sheep are very loth to descend a hill in the night-time, and more so to cross a river. Millar, to keep as clear as possible of the haunts of men, on his return brought his drove over the shoulder of Wallace's hill, opposite, and intended to swim them across a pool in the river Tweed. But his prey being taken from the most remote part of the farm, happened to be mostly old ewes (of all kinds of sheep the most stubborn in their propensities,) and all the exertions of a very active man, intimately acquainted with the habits of the animals,

and assisted by the most sagacious dog probably ever known, were found inadequate to overcome the reluctance of the sheep to take the river. Millar continued to exert himself until the dawn of the morning warned him that any further effort was inconsistent with his habitual caution. Still he was unwilling to relinquish his booty, since, could he only get the sheep across the river, he was within little more than a quarter of a mile from the old tower. He therefore left the future conduct of the enterprise, as he had often done before, to *Yarrow*—crossed the river himself, and went home, encouraging the dog by his voice, while he was yet not too distant, so as to risk being heard by some early riser. The trustworthy dog paused not, nor slackened his exertions—the work was now all his own; such had been his efforts, as he furiously and desperately drove in first one flank of the drove and then another, that two of the ewes were forced from the bank into the river, and were drowned, as they could not regain their situations for the pressure of their companions. But he was finally unsuccessful; for he too knew the danger of being seen in the broad light of the morning driving sheep "where sheep should na be." The ewes were observed, in the course of the ensuing day, wending their weary way homeward, and half covered with a new keel with which Millar had himself marked them in a small sheepfold in a lonely place on his way. Millar himself was astonished at the stubbornness of the sheep, and the persevering energy of his dog; and he told the story to a respectable sheepfarmer in prison, while under sentence of death."

The farmer and his servant were tried at Edinburgh in January, 1773, and the proceedings excited an extraordinary interest, not only in the audience, but among the legal officials. Hyslop, the principal witness, gave so many curious particulars respecting the instincts of sheep and the modes of distinguishing them both by natural and artificial marks, that he was highly complimented by the bench. The evidence closed on the second day at five o'clock, and the speech of the Lord Advocate, with the replies of Messrs. Crosbie and Rae, the prisoners' counsel, occupied till eleven. The jury, which was then enclosed, sat till five o'clock next morning (Sunday), when they gave in a verdict, finding the master guilty by a plurality of voices, and the servant unanimously. The counsel for the unfortunate men pleaded for a few days, to prepare some objections to the verdict; and this being granted, the court met once more in February, and took these into consideration. They rested, firstly on the illegality of a verdict given on a Sunday, and secondly on various circumstances which were alleged to be out of rule in the references of the verdict to the indictment and the evidence. All of them were overruled by the court, and sentence was pronounced. The unprecedented step was then taken of an appeal to the House of Peers; but this was decided to be incompetent, and the judgment of the law was accordingly executed.

The general tradition is, that *Yarrow* was also put to death, though in a less ceremonious manner; but this has probably no other foundation than a *jeu d'esprit*, which was cried through the streets of Edinburgh as his dying speech. We are informed by the same writer in *Blackwood*, that the dog was in reality purchased, after the death of Millar, by a sheepfarmer in the neighbourhood, but did not take kindly to honest courses, and his new master having no work of a different kind in which to engage him, he was remarked to show rather less sagacity than the ordinary shepherd's dog.

## LOTHIAN DINNER TO HIS GRACE THE DUKE OF BUCCLEUCH.

We have given rather a lengthened report of this interesting Meeting, in order that every publicity may be given to the merits of an individual so highly deserving as the Duke of Buccleuch, and to prove that there is no class of men who appreciate more gratefully a kind consideration for their interests than the British tenantry. There are many, very many, extensive landowners in the United Kingdom, who have it in their power to confer as much happiness upon a numerous tenantry. We trust they will imitate the example. The reward will assuredly follow.

EDINBURGH, Feb. 13.—To-day the tenantry of the Three Lothians, viz., Edinburghshire, Haddingtonshire, and Linlithgowshire, gave a grand dinner to his Grace the Duke of Buccleuch, in testimony of his great merit as a landlord, and his excellent character as a private individual. The meeting took place in the large assembly room, in which were present upwards of 600 persons, and we do not recollect ever having witnessed a more numerous meeting, or a more respectable display of kindly and enthusiastic feeling, than was exhibited on this occasion. The most substantial of the tenantry in the three Lothians—the richest, and perhaps the most independent districts of the country—asssembled on this occasion; and they seemed to be actuated by feelings of the deepest attachment and respect to the noble Duke, though he is, comparatively speaking, less intimately connected with the Lothians than with other counties in Scotland. The *élite* of the three Lothians assembled on the occasion, *without regard to political sentiments*; and it was quite evident that the feeling throughout was equally spontaneous and enthusiastic.

Professor Low was in the Chair, supported on the right by the Duke of Buccleuch, the Very Reverend Principal Baird (who officiated as Chaplin), Sir J. S. Forbes, Major Wyndham, of the Scots Greys, and others; and on the left by the Marquis of Lothian, Lord Ramsay, Sir George Warrender, and others. The Croupier, Mr. Hawden, was supported on the right by the Earl of Selkirk, Sir John Hope, Bart.; and on the left by Lord John Scott, Sir Francis Walker Drummond, &c.

After the usual prefatory toasts, the CHAIRMAN said that he was honoured in being made the organ of the sentiments of the tenantry of the three Lothians, and to beg them to unite in a cordial welcome to their honoured guest the Duke of Buccleuch—(*cheering*). He was here to offer no flattery to wealth—no homage to power—but to render honour to whom honour was due, to private worth and public virtue—(*applause*). They were the tillers of the ground, and were not ashamed of their calling; and amongst them was one who rendered fitting honour to the plough, one ever ready to share their pursuits and devote to their happiness those hours which PROVIDENCE had blessed to him with affluence and leisure, one ever ready to counsel and befriend—the Duke of Buccleuch—(*great applause*). After eulogising his Grace on his encouragement of agriculture and the useful arts, which he supported by a munificent patronage, and the path he had chosen, not of pleasure and luxurious ease, but of duty and manly action, Professor Low gave “his Grace

the Duke of Buccleuch,” which was drunk with all the honours.

The Duke of BUCCLEUCH rose amidst the most enthusiastic cheering. “If ever (he said) it becomes a difficult task for any one to return thanks for an honour which has been done him, in the case, more particularly of the honour which it has pleased you to bestow upon me this night, you will, I am sure, agree with me in saying, that my task at present is no easy one. I wish I had words to express, or power to utter the genuine feelings which I now experience for this unprecedented—I believe it is quite unprecedented—mark of your kindly feelings towards me, which you have been pleased to bestow upon me this evening—(*cheers*). Dinners, no doubt, have been frequently given to public men, or to private individuals, as a mark of esteem for particular circumstances, but the compliment which you have now paid me is of a far higher nature. I am not aware that the line of life which I have adopted, or that actions which I have at any time performed, can in any way equal the high compliment which you have now paid me. I am sure that I am now addressing far too sensible a body of men for them to imagine that I am anxious, by word or deed, to seek to attain any unworthy popularity, or that for its sake, fleeting as it is, I should flatter any man or body of men—(*cheers*). I can assure you that I have ever been actuated by the principles of honour and integrity—(*loud cheers*), turning neither to the right hand nor to the left, neither setting before me, as a motive of action, the fear of unpopularity on the one hand, nor the hope of approbation on the other—I have endeavoured, in every situation in which I have been placed, to act a strictly independent part—(*cheers*). My friend who addressed you last has painted my character in far too glowing colours, and I cannot hope to merit the high praises which he has bestowed upon me; but as he stated that in these sentiments he was the organ of the numerous and respectable audience now assembled, I may be allowed to say that if I have done any thing to deserve popularity among the individuals with whom I am personally connected, I trust they know that I have done it, not only from the feeling which I think ought to actuate every man, whatever be his station, but also from that kindness of feeling towards them which was imbued into my mind from my earliest infancy. When in early life, I was taught to look upon the tenantry, not merely as the tillers of the soil, but as those who were connected with myself and family, and myself and family connected with them—(*loud cheers*). From my earliest infancy I was taught this, that the connection between us is so intimate, that it was impossible to discover where it commenced or ended, except by severing the links altogether—(*renewed cheers*). With regard to what I have done for agricultural affairs, or to support the agricultural interest, I felt that it was no more a duty than I experienced it to be a pleasure, to follow this line of conduct. To be connected with a body of men so celebrated every where as connected with this country—I mean the tenantry of Great Britain, who are not equalled in any other nation—must always be a source of pride to any person. I have had considerable experience with a large body of these men, I know the difficulties they have to encounter—the vicissitudes they have to contend against; and I know, too, how manfully they have contended against those difficulties, and who that understands their circumstances would not be proud to come forward and assist them on every occasion?—

(*great cheers*). Unfortunate is the lot of those—and I trust the instances are rare—where the landlord and his tenantry have not this kindly feeling towards each other—who look upon each other with distrust—and who seem ever to be calculating upon what one can gain from the other. I have always acted upon the principle of reposing confidence in my tenantry, and of expecting confidence from them in return. I have acted on every occasion, as far as was in my own power, with strict and impartial justice on all sides, neither showing too much leniency on one occasion, nor acting with rigour, much less with injustice, on another, and without giving way to every statement, without first making a strict investigation—a course by which, I am certain, in most cases, more injury is done than good is received. I fear I am occupying your time too long—(*cheers and cries of "No;"*) but I trust you will excuse me if I cannot adequately express my feeling on this occasion—(*loud cheers*). Though I am always nervous in matters of this kind, yet in such a large assembly as the present, and set to return thanks for the honour which has done me, this is a situation in which I feel far different from any in which I was ever placed before—it is a situation highly honourable and excessively flattering. Allusion was made by the Chairman to the circumstances under which I succeeded to the estates. Certainly, no greater misfortune can befall a man than to enter upon life without the guardianship of a parent's care. No one can feel this more than I do—(*cheers*), but I am happy to say, that in early life the highest principles were instilled into my mind; and in commencing my career of public life, I was determined to abide by those principles, without which I do not see how any individual or set of men can order their conduct aright—(*cheers*). Allusion has also been made to the difficulties under which the tenantry at one time laboured, and to the plans of amelioration which were devised for their relief; but the credit of those plans are not due to me, for they were put in practice before I came into possession of the estates, but you all know to whom their credit is due, and I have endeavoured to follow the mode of management which they set before me; I endeavoured by my practice and example to improve that which was committed to my care, and which I hold in trust—(*loud cheers*). And if by any thing that I have done, or by following the example they have set me, I have been able to do any good, or to excite a desire of imitation in other quarters, though I can scarcely imagine that any thing I may have done is worthy of imitation, I can assure you that the manner in which my conduct has been approved by this intelligent meeting is the best reward I can receive—(*cheers*). I believe you know, at least I have expressed the sentiment before, that my feeling with respect to landlord and tenant is, live and let live—(*loud cheers*)—and I am certain, from the intelligence that characterises the tenantry, and the good sense which they have always shown, that wherever they are satisfied that their landlord acts on the dictates of conscience and principle, though at the moment the decision he comes to may not satisfy them, yet the angry feelings arising from their not having gained their object must soon pass away. I can assure you that if there are some disappointments on the part of the tenantry, the landlord also is not without his occasional disappointments; and if they feel as I do, though not pleased at the moment, yet on a cooler examination of the merits of the case, those unpleasant feelings soon pass

away—(*cheers*). I assure you, that so long as health and strength are spared me, so long as I am spared in this life, I shall endeavour to act fearlessly and independently, whether in the relations of public or private life. I shall endeavour more especially from my intimate connection with the agricultural interest to support that body; yet I will not support it at the expense of the other interests of the empire, for in my opinion they are all so intimately connected, that it is impossible for one to prosper without the other—(*cheers*). As far as my power extends I shall endeavour to encourage the timid, to restrain those who are over hasty, to hold up the active and enterprising as examples, and to spur on those who may be inclined to go too slow—(*laughter and cheers*). While at the same time I shall be always ready to introduce every real and rational improvement which may be devised for the advancement of the agricultural interest, and wherever I may be called in after life, be assured that this high compliment which has now been paid me by a respectable body of men, for whom I entertain the highest regard and respect, will ever be deeply engraven on my memory—(*loud cheers*). I beg again to tender you my best thanks for the honour you have done me, and I trust I shall be excused that I have not been able so fully as I could wish to express the feelings with which I am so deeply impressed at the present moment—(*loud and continued cheering*).

The CHAIRMAN.—I have to propose that venerable establishment the Church, under which we have lived the citizens of a Christian State—the defenders of that faith, the free possession of which our ancestors secured to us by their valour—the guardian of those sacred truths, which from youth to age we have been taught to reverence—(*cheers*). On my soul, gentleman, I do believe, that an institution more venerable by the piety of its teachers, more suited to the religious instruction of the people, exists not than the Church of Scotland—(*loud cheers*).

Principal BAIRD.—It has fallen to my lot, in the name of the Church, to express her acknowledgments for the flattering compliment in which the Chairman has proposed the toast. These acknowledgments, under present circumstances, I think it right to give, not with prolixity, but in a single sentence. In the name of the Church and of Churchmen, I have to express our entire and decided satisfaction with which this toast has been given and received, and when it reaches the remotest manors in Scotland, it will be found to operate as a sweet reward for the labours that are past, and a strong incentive to fidelity and zeal in the discharge of future duty—(*cheers*). I have only farther to say, that I trust the clergy of the Church of Scotland, and the Clergy of every other denomination in the land, may live together in a becoming Christian spirit—(*cheers*)—with no rivalry betwixt them but how to increase their mutual comfort and mutual usefulness—(*cheers*). I have only farther to express my wishes and my prayers, that under the guidance and the blessing of Heaven, the Clergy may be as zealous, as skilful, and as successful in cultivating and improving the soil of the Christian mind, as the enlightened and active individuals I see before me are in cultivating and improving the soil of our mother earth.

Mr. NIMMO gave "the Peerage, the safeguards of our institutions"—which was briefly acknowledged by the Marquis of LOTHIAN, who proposed the "Agricultural interests of the country."

Lord RAMSAY rose, and was received with loud cheers.—In asking you to join with me in doing honour to the toast which has been confided to my care, “the Tenantry of Scotland,” I wish to linger for a moment in expressing my sense of the honour which has been conferred on me in being permitted to lead the way to do honour to a class of men who are peculiarly our country’s strength and boast—(cheers). If the task had been imposed upon some one whose years would have enabled him to add the weight of experience in telling what the tenantry had done in times that are past, it would, perhaps, have been more fortunate. Yet still I feel that their value is so peculiarly marked in every passing circumstance of every passing day, that he that runs may read. It is, perhaps, that we are so very familiar with the fact that we are apt to overlook the great advantages which Great Britain enjoys through her tenantry over all the countries in the world. Look at the other nations, “search Europe wide from sea to sea,” and you will find a gap between the higher and the lower classes, which in our country is filled up, and happily filled up, by the class of the tenantry—(great cheering). In all other countries there exists a line strongly marked, which again becomes a gulf, and it in its turn becomes an impassable obstacle, placed between the landowners and the peasantry, while in this country the tenantry act as a connecting link, in which the wants, the wishes, and the feelings of all are fused and blended together, till they become amalgamated into one mass—(cheers). The tenantry of Great Britain stand distinguished for their enterprise and skill over those of all other lands, and the tenantry of Scotland are distinguished even in Britain, as may be shown from the surprisingly rapid strides which agriculture has made within the last fifty years “from Tweed to Spey.” After enlarging on the kindly feelings which existed between landlord and tenant in Scotland, his Lordship gave the “Tenantry of Scotland,” which was drunk with great enthusiasm.

Mr. FINNIE.—The infinite pleasure with which I rise to propose the toast which has been allotted to me, is alloyed with one consideration only, and that is a perfect sense of my inadequacy to introduce to your notice, in a suitable manner, a subject in which the dearest feelings of our noble guest is involved—(cheers). Assured, however, of a unanimous and cordial response to my call, I will neither waste your time in apologising for my incompetency in proposing, nor in the needless task of propitiating your concurrence with the toast with which I am to conclude. Much has been said here and elsewhere respecting the hereditary virtues of the family of Buccleuch; and although I profess myself rather sceptical regarding the doctrine which assigns nobility of soul as an invariable concomitant to nobility of birth, still it must be acknowledged by all that it is both cheering and animating when we are about to dedicate a bumper to the expectant representative of so great and influential a family, that we can dwell with pleasure on the past and present character of that family it would almost appear that the Bard had that family in his eye, when speaking of those

“Who left their sons a name, a fame,  
They, too, would rather die than share.”

(Applause).

Let me, therefore, request you to dedicate this bumper to the Earl of Dalkeith, the roof-tree of the house of Buccleuch, and may the son even surpass the estimable qualities of the father,

The Duke of Buccleuch returned thanks.

A variety of other toasts, particularly relating to agriculture and its promoters, were given, and the meeting broke up at half-past twelve o’clock.

## A DUMFRIESSHIRE FARMER IN THE UNITED STATES.

The rain ceasing about noon, we walked after dinner round the north end of the lake, to visit a farmer from Dumfriesshire, Scotland.

Mr. J——— possesses strong natural parts, and is an instance of what energetic and persevering industry is capable of accomplishing in this country. On his first arrival he was very poor, and often employed himself in carrying wheat for hire. One year he raised by his own labour 900 bushels of wheat, with only the assistance of a small boy in harrowing, while he himself was engaged in sowing. His farm is now his own property; and this season he has sixty acres in wheat, equal to any crop of similar extent I ever examined. His system is to sow clover amongst wheat, which affords good pasture in autumn, and is fed off in the following spring; the land is ploughed in the end of June, and after an imperfect fallowing, sown with wheat in autumn. The Dutch farmers in the neighbourhood also sow clover with the wheat crop, which in spring is ploughed down for manure, without being fed off. This shows how much nature does for the farmer,—one year providing manure, and in the next a wheat crop. Skill might improve the system followed, but the period of introducing advanced agriculture into the United States has not yet arrived. Mr. J——— applies fifty heaped Winchester bushels of lime to an acre, which costs nine cents, or  $4\frac{1}{2}$ d sterling, per bushel. Gypsum costs fifteen cents per bushel, and is only used for clover and Indian corn. This being the season of applying it to the latter, people were carrying it in baskets, and putting a pinch on each hill or cluster of plants. Half a bushel is sufficient for an acre, and imparts an improved appearance to the crop in four days, except on black soft land, where it has little effect.

Mr. J——— feeds labourers on the best of fare, and finds no want of them at any time. His wheat crop is cut with the cradle scythe at \$1 a-day and found, that is boarded—and two binders follow the cradler at  $62\frac{1}{2}$  cents. Wheat is cradled at \$1 $\frac{1}{4}$  per acre, and grass at \$ $\frac{1}{2}$ , labourers finding themselves—and the work well done in both cases. Americans, Dutch, English, Irish, and Scotch, he finds work equally well. All his crop, including hay, is housed, and he considers a dollar per bushel a good price for wheat.

A good many sheep were shown us, a mixture of Saxon and Merino blood, which are not anointed with any kind of liquor or salve, and never stricken with fly. They are kept in courts during winter, fed on hay, and lamb betwixt 20th April and 20th May. Mr. J———’s flock was in better condition than any yet seen, though poor, and the lambs were starvelings, compared with those reared in the cultivated parts of my native district. He says his sheep seldom die, having only lost two out of five hundred in the course of two years, and the mortality amongst lambs was not much greater. The price of his ewes, when the lambs are weaned, is \$3, and that of two-year-old wedders, \$2 and \$2 $\frac{1}{2}$ . Fleeces weigh 3 $\frac{1}{2}$  lb., and his wool at present is worth 60 cents per lb.

We examined a large collection of wool belonging to Mr. R———, which was of fine quality. He

told us one of his yearling widders, weighing 29lb., yielded 2lb. 9oz. of wool; and the small size of this sheep induced him to think an acre of ground would yield as much fine wool as coarse. But the data furnished by this animal are not satisfactory, as its wool and carcass, in all probability, bore a different proportion in the preceding autumn; since which, the latter may have decreased, and the former increased. The carcass of a live widder, weighing 29lb., must have consisted only of bone and sinew, and the weight of wool, compared with that of the sheep, may be held as evidence of wretched condition, and not of superiority of wool-growing.

Mr. J——'s cows were beautiful animals, and very fat. For some days past a great improvement in the condition of cattle had been observed, arising, perhaps, from better pastures, and the advance of the season.—*Shirreff's Tour in North America.*

### THE GENESEE FLATS.

Having heard much of the Genesee flats, I proceeded to call on their owner, on arriving at Genesee. Mr. Wadesworth had gone to a distant part of the country, one of his sons being the only member of the family at home, and who had rode out after breakfast. On calling a second time, the young gentleman pointed out the way to the flats, where he said he would join us in an hour afterwards.

The Genesee flats belonging to Mr. Wadesworth, are rich alluvial soil, ornamented with aged trees, deposited in groups and at intervals; and perhaps no gentleman's park in Britain equals them in fertility and beauty. They differ from the rest of the surface in this part of the country, by having been cleared by nature, and are chiefly in grass, affording the richest pasturage I ever saw, with the exception of some fields in the neighbourhood of Boston, Lincolnshire, England. On examining some parts which had never been subjected to the plough, red and white clovers were particularly abundant, also Timothy grass (*Phleum pratense*), and several kinds of poea. Cocksfoot was less common, and a few spikes of tall oat-like grass (*Holcus avenaceus*). Rye-grass or yellow-flowering clovers were not visible. A field was pointed out which had been mown for hay thirty-five successive years, without top-dressing, and the grasses were still in vigour of growth, interspersed with red clover nearly thirty inches high.

The young gentleman joined us on the flats, and pointed out every thing deserving of notice. The sheep were a mixture of Merino and Saxon breeds, and not fat looking. There was a fine short-horn bull, intended to improve the dairy stock, which I did not see. This contemplated improvement originated from perusing the writings of the Rev. Henry Berry of England; and I took the liberty of advising the cross to be tried on a small scale, believing the short-horns the worst milking breed in Britain. This opinion was new to the gentleman, who said he would keep it in view, and proceed cautiously in intermixing the breeds. The grazing cattle were extremely numerous — four-year-olds, which had been bought in spring, and kept on hay till the arrival of grass, on which they are to be fattened. Mr. Wadesworth intends to cultivate wheat extensively; and one enclosure, as a beginning, was bearing an indifferent crop. I have often observed wheat not succeed well on very rich ground, and that, in Britain, the United States, and Canada, soils which have been long under cultivation, yield the best crops of this grain when properly managed.

There was a variety of implements which brought to recollection those at Holkham, Norfolk, England. Amongst others, a mowing machine was exhibited and descanted on. We were shown a fine oak tree growing on the banks of the river, and said to be twenty-four feet in circumference.—*Shirreff's Tour in North America.*

### SOILING.

With respect to the advantages of soiling horses on green food, in the yard or stable, it seems to be now generally understood that, with proper management, they can be supported with great health and vigour: its economy, however, must depend on the proportion which it bears to the price of dry food, and its convenience to the quantity in which it can be spared for other cattle.

It is a very old, though by no means a universal practice, and the experience of hundreds of farmers proves, that horses maintained in that manner for years have neither lost flesh nor strength sufficient for all farming purposes, although there was no palpable saving of their work, and that, though afterwards placed on dry food during the winter, they continued in perfect health. It is an excellent plan to give some green food along with the corn and chaff, before the usual period of feeding entirely on dry fodder; the change from dry to green, and again from green to dry food, should be gradual. In its commencement, the clover or tares should be cut, and mixed in small portions with straw, and a proportionate quantity of corn should be reduced. The green food is then insensibly increased, until the corn is entirely omitted, and the quantity of green meat is supplied without limitation: it should, however, be cut over-night, and given only in small quantities gradually increased, to guard as much as possible from accidents, which may arise from its succulence by hoving. When horses are soiled, they never should get much at a time, a practice far too prevalent among servants.

The summer feeding of horses was formerly confined to pasturage: but of late years the practice of soiling has become very general. The benefit of grazing consists in its requiring little attendance; and being the most natural, and therefore the most healthful, it is preferable for all young cattle which can be spared from constant labour, and on farms which contain a considerable portion of rough pasture. But for horses at regular work, these advantages are counterbalanced by the time lost in getting them up from the field; the indisposition to labour which they acquire by being at large; and the annoyance which they suffer from heat and flies when turned out in the day-time. The value of their dung and urine is also in a great measure destroyed by being scattered upon the surface of the ground, and exposed to exhalation of the sun and wind; and there is much waste of grass, and injury done to the mellowness of the soil, if it be valuable land, by the treading of all heavy stock, but especially of horses. The utility of soiling consists in a more economical consumption of grass, whether natural or artificial, than by grazing; in the accumulation of manure, and in the quiet and coolness which the cattle enjoy under sheds, or in the stable, during mid-day, as well as in their being always ready when wanted; the only disadvantage is the expense of cutting and carrying home the grass, against which may be fairly set the increase of manure, if expense be really incurred; but as, during summer, there is usually a long interval of rest between the morning and afternoon-work, the carters can then cut the necessary quantity, which

may be drawn to the homestead by one of the team-horses, if there should not be a supernumerary one left for odd jobs.

When, however, the economy of the practice is not the chief consideration, horses on summer work may be *both grazed out and soiled*. They may be put on cut clover in the middle of the day, between yokings, and turned out during the night into a well-sheltered meadow or enclosure. In being kept under cover during the heat of the day, they will be sheltered from flies, and will feed more at ease; and in being pastured out during the night, they will also have an opportunity of selecting those grasses which act as condiments and are most agreeable to their palate. All animals like variety of grasses, selecting always what is most palatable, which they cannot do when soiled, particularly if fed on cut clover and tares. Exposure to the night air is also found to be highly favourable both to their health and appearance.

The economy of soiling, wherever it can be conveniently adopted, is, indeed, too generally admitted to need the support of argument; and particularly on soils on which turnips are entirely consumed on the ground, or on which they cannot be grown, and where consequently there is difficulty in converting the straw into manure during the winter, it cannot be too strongly recommended. But it requires a succession of green crops; and as only the artificial grasses are resorted to in England—though in many parts of the continent the meadows are also mown for that purpose—it is necessary that winter and summer tares should be sown at different periods, so as to afford a constant supply, both before clover comes in, and after the first crop is off. This is a great impediment to the practice in Scotland, and in some of our northern counties, where tares are an uncertain crop; though cattle are certainly soiled with great advantage, both there and in other places, on clover alone. In other situations too, farms, on strong clay, frequently contain a large portion of meadow, and grazing being combined with tillage, the whole of the straw is consumed in the winter; in which case one of the advantages of summer soiling would be lost, as yard dung, without the addition of straw, is of very little value. But even in this instance, or in others where the distance of the fields from the homestead may be opposed to the cartage of the grass, it is better to cut it daily, and give it on the ground in pens, or small enclosures hurdled off, so as to prevent the cattle from injuring the growing crop, than to allow them to range over and trample it. By confining them in this manner to a small space, and moving the hurdles forward as the grass is eaten, the fertilising properties of the dung and urine, which would otherwise be lost, are in a considerable degree preserved; and if the land be immediately ploughed, it will be nearly as much benefited as if it were more regularly manured.

The artificial grasses used for soiling are the same as those already enumerated as hay, but here *tares* take the lead, both because the winter species is earlier ready than any other, except rye-grass, and affords a weightier crop. In most seasons, tares are ready for the scythe towards the middle of May, for if left till they are quite ripe they will become unfit for soiling before the crop can be used; and although there may be some loss in using them so soon, it will be compensated by the saving at the latter end, as well as by commencing the soiling sooner than would be otherwise practicable. Before they are off, clover will be ready; the tares still standing may then be made into hay, and by the time the clover is becom-

ing strawy, and losing its succulence, spring-tares will come in, which, if they have been sown at intervals of about a fortnight each, will last until the second cut of clover; or, if spring-tares be not sown, the growth of part of the clover may be checked by light early feeding. There is also an excellent fashion regarding soiling in Dorsetshire, which consists in saving a portion of rye, alone, to be cut green; then another portion of rye with tares; and afterwards the remainder entirely with tares: the rye comes first into use and assists in raising the earlier tares, while those of later growth do not require any such nursing. Thus horses may be kept upon a succession of green herbage, without touching the meadows, throughout four months of the summer and autumn, and, while thus fed, require very little corn; when stirring the fallows, and during the hurry of harvest, a couple of feeds a-day may be serviceable, but more is unnecessary, and at other times should be wholly omitted.

The mention of *lucerne* has been omitted, although extremely valuable for soiling, because it requires a peculiar quality of land, and is not commonly cultivated. In the Essex Report, it is said, that two horses have been supported during four months upon a quarter of an acre, with scarcely anything given to them besides; and that six horses, at hard work, have been kept on *lucerne*, instead of hay, but with an allowance of oats and chaff for twelve weeks—six from the first cut; four from the second; and two from the third: which, valuing the hay saved at 3s. per horse per week, would amount to 10l. 16s. A paper in the communications to the board of Agriculture also states that, in one year, twenty-three horses have been kept twenty weeks, and in the next, twenty-eight horses during eighteen weeks, upon eleven acres alone; which gives an average of three roods per horse in nineteen weeks. It is also extensively used on the coast of Normandy, and in the neighbouring islands Guernsey and Jersey but it is there said that horses, particularly those used for the saddle, require more precaution from overworking, when first going out of the stable, than when fed on other hay; and, what is singular, that, when soiled on green *lucerne*, there is not the same danger.

In Holland and Flanders, where the feeding of cattle is supposed to be better understood than in most places, the summer soiling of farm-horses is limited to half an acre of meadow grass, cut and carried to the stables, from the middle of May to the middle of June; from which time to the end of August one-sixth of an acre of clover is added, with 2lbs daily of beans; and from thence to November, when the winter feeding commences, the clover is replaced by an equal quantity of carrots. From the number of horses stated, in this instance, to be kept in proportion to the tillage—11 to 150 acres, of alluvial soil—their labour can, however, be only light; though a pair is said to draw a ton and half of manure in the field, and three tons upon pavement.

Accounts have been also published, showing that horses may be regularly worked throughout the summer, in this country, without any corn: thus green crops, consumed by soiling, are said to go four times as far as when grazed; and that, in this manner, one acre of clover is equal to six of meadow pasture. But many of these statements rest only upon opinion, or upon insufficient data, and in all, so much depends upon the state of the crop, the size and health of the animal, and the work performed, of which the account is generally imperfect, that no safe conclusion can be drawn from them: it is therefore unnecessary to refer

to them; nor is the cause which they are meant to promote assisted by being advocated upon any other than its real merits. A medium-sized farm-house, at customary labour, consumes from 84lbs. to one cwt. of green food daily, with an occasional allowance of corn. Now a good acre of tares, or of broad clover, will weigh twelve tons, (that is, presuming the tares to be cut only once, and the clover twice; for although winter tares may be cut again, it is more usual to get them off the land as soon as possible, either in order to sow turnips or to form a bastard fallow;) and, taking that weight as the average of both, and the consumption at the highest rate, half an acre of either would support a horse during four months. This nearly accords with some instances in the county surveys; in others, more have been consumed, and, for the reasons already stated, it is next to impossible that any two accounts should agree; but, upon a rough estimate, it may be affirmed, that about a perch per day will be required for each horse in most seasons, and on most kinds of lands, if soiled, and that double that quantity will be necessary if pastured.

It must, however, be borne in mind that the difference in the degree of succulence contained in various grasses must necessarily have a material influence on the state of the cattle by which they are consumed. Of this farmers are generally pretty well informed, either through their own observation, or by the experience of others; but an accurate acquaintance with the subject was not attained until the experiments made at Woburn, by which Mr. Sinclair has been enabled to ascertain the quantity of soluble nutritive matter afforded by all those grasses which constitute the produce of the richest ancient pastures, as well as those of artificial growth.

The custom of giving corn along with green meat is unprofitable; for the grain thus mixed, passes rapidly off the stomach, and is never perfectly digested. When however, increased exertion demands an addition of more substantial food, and that corn is also allowed, it should be given only in the morning and at night, accompanied with a sufficient quantity of chaff to afford it consistence, and green meat should only be given at mid-day. Farmers very generally omit that precaution, and it is a common custom among them, to allow half the usual quantity of corn, without regard to the effect of the watery juices of grass upon the digestion; but they may be assured that a great portion of the nutriment contained in the grain is thus wasted.

WONDERFUL, IF TRUE!—There is at present in Mr. Archibald Kemp's, spirit-dealer, Charlotte-street, a sheep, whose exploits will make even the Editor of *The Dumfries Courier* turn up his eyes and exclaim with Domine Sampson—"Prodigious!" He goes by the cognomen of "Willy," and if any of the customers in the house cry "Willy, here's a glass for you," he will come forth obedient to the summons, and swill his bumper with the most inveterate toper present. Nor is this all; for Willy sometimes turns his owner's spirit crans and helps himself, when he thinks he is not observed; or purloins a few sweetmeats, or peppermints, from the window. Whisky, ale, porter, &c., come all alike to him; he will open a snuff-box of himself, and speedily empty the contents, and chew a quid of tobacco, and drink a glass of grog, with as much satisfaction as any jolly tar in his Majesty's navy. Willy's feats are innumerable: he is a friend of all, a consumer of all sorts, and one of Mr. Kemp's best customers.—*Scotsman*.

## WILD DUCKS.

The wild duck or mallard is nearly two feet in length, two feet ten inches in extent of wing, and weighs from two and a half to three pounds. The bill is of a greenish yellow colour; the head and upper part of the neck are of a glossy changeable green, terminated in the middle of the neck by a white collar with which it is nearly encircled. The scapulars are white, barred, or rather undulated with minute lines of brown; the back is brown, and the rump black, glossed with green. On the wing coverts two transverse white streaks edged with black enclose a broad stripe of a lucid violet-green colour. The lower part of the neck and breast is of a chestnut colour; the belly is pale grey, crossed with numerous transverse dusky lines. The tail consists of twenty feathers and is pointed in shape; the four middle are of a greenish black colour and curve upward in a remarkable manner; the others as usual of a grey brown, margined with white. Legs orange.

The female is very plain. The bill is shorter and smaller than that of the male; and the ground colour of the plumage is pale reddish brown, speckled with black. The violet-green stripe on the wings is as in those of the male; but none of the tail feathers are curved. The young male birds, previously to their first moult, resemble rather the female than the male parent. In a domestic state some individuals appear in nearly the same plumage as the wild ones; others vary greatly from them, as well as from each other, and are marked with nearly every colour; but all the males or drakes, still retain the curled feathers of the tail. The tame duck is, however, of a more dull and less elegant form and appearance than the wild, domestication having deprived it of its lofty gait, long tapering neck, and sprightly eyes.

Wild ducks inhabit Europe, Asia, and America, in summer frequenting the lakes and marshes of the north, and in autumn migrating southward in large bodies, and spreading themselves over the lakes and marshes of more temperate latitudes. Considerable numbers of them return northward in spring; but many straggling pairs, as well as former colonists, stay in this country to rear their young, which become natives, and remain throughout the year in the marshy tracts of the British isles. Large flocks visit Egypt in November after the inundation of the Nile. In an opposite direction of the globe, the lakes in the Orkneys form one of their great resorts in winter; and when the lakes happen to be frozen, they betake themselves to the shores of the islands. In these districts they may be seen in great multitudes, and on the report of a gun they rise like clouds. They are also known to abound on the lake of Zirknitz in Carniola, where they are often swallowed entire by the huge pikes which frequent that remarkable piece of water. On the approach of a storm they issue from the caverns in the rocks, and fly about the country, where they are soon captured by the peasants; many of them are killed with clubs at the very openings of the cavities, being dazzled by the light of day. In England they abound most in the fens of Lincolnshire, where prodigious numbers are annually taken in the decoys. Particular spots in the fens are let to the fowlers at a rent of from 5*l.* to 30*l.* a-year; and Pennant mentions a season in which 31200 birds were captured in a single season in ten stations near Wainfleet, adding, that "the numbers taken in the decoys make them so cheap on the spot, that the decoy-man would be glad to contract to deliver the ducks at Boston for years, at tenpence the couple."

Wild ducks are naturally very shy birds, and fly at a considerable height in the air, in the form of a wedge or triangle. Before they alight on any spot, they describe several turns round it, as if to reconnoitre it, and then descend with great precaution. They generally keep at a distance from the shore when they swim; and when the greater part of them sleep upon the water, with their heads under their wings, some of the party are always awake to watch over the common safety, and to apprise the sleepers of the approach of danger. The extreme wariness of these birds renders much patience and ingenuity necessary on the part of the fowler. They rise vertically from the water with loud cries; and in the night-time their flight over head may be known by the hissing noise which they make. They are more active by night than by day; indeed those that are seen by day have in general either been roused by a sportsman or by some bird of prey.

Wild ducks breed only once in the year, the pairing-time commencing about the end of February or beginning of March and lasting three weeks, during which period each couple lives apart, concealed among the reeds and bushes during the greater part of the day. The female generally selects a thick tuft of bushes, insulated in a pool or lake, for her breeding station, and binds, cuts, and arranges the bushes in the form of a nest; sometimes she makes her nest on heaths at some distance from the water, scraping together a heap of the nearest vegetables for the purpose; a rick of straw in the fields occasionally serves her purpose. Latham says, that she has even been known to lay her eggs in a high tree, in the deserted nest of a magpie or crow; and he records an instance of one that was found at Etchingham, in Sussex, sitting upon nine eggs, in an oak, at the height of twenty-five feet from the ground, the eggs being supported by some small twigs placed crosswise. The female, during the incubation, usually plucks the down from her breast to line her nest, in which she frequently deposits sixteen eggs, which she generally covers when she leaves the nest for the purpose of feeding. Whenever she returns to it, she alights at some distance, and approaches it by winding paths; but when she has resumed her seat she is not easily induced to quit it. The male keeps watch near the nest, or accompanies and protects his mate in her temporary excursions in quest of food. All the young are hatched in one day, and on the following the mother leads them to the water; or if the nest be high, or at a distance from water, both parents convey them, one by one, in their bills or between their legs, and they are no sooner consigned to the water, than they begin to swim about with the greatest ease, and to feed on insects. The mother-bird is a most attentive and watchful parent until her young progeny are able to fly; this is in about three months after their birth, and in three months more they attain to their full size and plumage.

The flesh of the wild duck is more delicate and juicy, and of a finer flavour, than that of the domestic. It is almost every where in high estimation as an article of food, and hence the ingenuity of man, in all the countries which it frequents, has been employed in devising stratagems for the capture of this most cautious and wily bird. We shall now proceed to furnish our readers with an account of some of the more remarkable of these stratagems. Some of the methods of capturing the wild ducks in America, as described by Wilson in his 'American Ornithology,'

are among the most singular resorted to in any country, and claim to be noticed in this place.

In some ponds frequented by these birds, five or six wooden figures, cut and painted so as to represent ducks, and sunk, by pieces of lead nailed to their bottoms so as to float at the usual depth on the surface, are anchored in a favourable position for being raked from a concealment of brushwood, &c. on shore. The appearance of these decoys usually attracts passing flocks, which alight and are shot down. Sometimes eight or ten of these painted ducks are fixed in a frame in various swimming postures, and secured to the bow of the gunner's skiff, projecting before it in such a manner that the weight of the frame sinks the figures to their proper depth; the skiff is then dressed with sedge or coarse grass, in an artful manner, as low as the water's edge; and, under cover of this, which appears like a covey of ducks swimming by a small island, the gannet floats down sometimes to the very skirts of a whole congregated multitude, and pours in a destructive and repeated fire of shot amongst them. In the winter, when detached pieces of ice are occasionally floating in the river, some of the fowlers on the Delaware paint their whole skiff or canoe white, and laying themselves flat at the bottom, with their hand over the side silently managing a small paddle, direct it imperceptibly into or near a flock, before the ducks have distinguished it from a floating mass of ice, and generally do great execution amongst them. A whole flock has sometimes been thus surprised asleep with their heads under their wings. On land, another stratagem is sometimes practised with great success, a large tight hogshhead is sunk in the flat marsh or mud, near the place where ducks are accustomed to feed at low water, and where, otherwise, there is no shelter. The edges and top are artfully concealed with tufts of long coarse grass and reeds, or sedge. From within this the fowler, unseen and unsuspected, watches the collecting party, and, when a sufficient number offers, sweeps the n down with great effect.

Among the methods resorted to in different countries for the capture of wild ducks, one is so remarkable as to require particular notice. On the river Ganges, in India, at Ceylon, and in China, a man wades into the water up to his chin, and, having his head covered with an empty calabash, approaches the place where the ducks are, and they, not regarding an object so commonly seen upon the water, suffer the man to mingle freely with the flock, when he has nothing to do but pull them under water, by the legs, one by one, until he is satisfied, and then returns to the shore as unsuspected by the remainder as when he first came among them. For this purpose the earthen vessels used by the Gentoos, called kutcharee pots, which are thrown away as defiled after having been once used for cooking rice, are often employed instead of calabashes; and some authors state that hollow wooden vessels, with holes to see through, are sometimes used for the same purpose.

In an account of the various methods employed in capturing wild ducks, we must not overlook the system of "hut-shooting" pursued in France, which is described by Colonel Hawker, from whose book\* the following account of it is derived, as the only method "by which a very bad shot, with a very bad gun may kill ducks while as warm and dry as if by his fire-side."

There are few places where the lover of comfort can

\* Instructions to young Sportsmen in all that relates to Guns and Shooting. Fifth Edition, 1826.

shoot more at his ease than at the lakes of Peronne in Picardy. The water, being part of the Somme, is not quite stagnant, and is, in every part about four or five feet deep, surrounded and intersected by numerous islands and walls of rushes. The waters are here rented by "hutriers" (hut-shooters), who get their livelihood principally by supplying the markets of Paris and other towns with wild fowl, which they shoot, instead of taking them with decoys, as in this country. Though the French in some places are very expert at catching birds, particularly on that vast tract of sand between Crotoi and St. Valery, where the whole mouth of the Somme may be seen spread with nets, and surrounded by lines of horse-hair (nooses), yet shooting from the hut is the favourite and most general method of capturing wild fowl in France. The common way of making a hut is, to cut down a large square in the reeds, about eight feet by four; and after a foundation of wood, stone or brick, has been laid, six piles are driven in on each side, on which are placed hoops precisely like those of a tilted waggon. The sides are then built up with turf, or whatever else is most convenient, and the roof is thatched over. In front there must be three or four port-holes to fire through, and, at the back, a small door at which the fowler enters. This hut being built amidst high reeds, and afterwards strewed over with them, is completely undistinguishable, although as commodious inside as a large covered waggon. Hither the "hutrier" of Peronne repairs regularly every night, wet or dry, and takes a great coat (if he has one), with a piece of brown bread and a sour apple for his supper. In front of his hut are fastened, to piles at each end, three separate ropes about twenty yards long. On the centre rope he ties four drakes, and four ducks to the one on each flank, making in all twelve decoy birds. The birds thus separated will, in general, be calling to each other, and, if so, a wild one will seldom pass without coming down to them. As the decoy birds are (to use a military term) dressed in line, whatever bird the fowler sees out of the ranks he knows must be a wild one; and as the lake in moderate weather is like a mirror, the night is seldom so dark but that he can see to shoot at the very short distance which his miserable gun and powder will allow. The hutriers never permit shooting from a boat, or at birds on the wing, through the fear of disturbing the pond. One of the principal of them informed Colonel Hawker that his plan was to take his night's rest, and leave the birds till a little before daylight, when they would be all collected together, and when a shot would do much less mischief to the decoy than if fired before the birds had fed and slept.

But all the methods we have described, which more or less involve much watching and fatigue, are vastly inferior to the decoys used in England, particularly in the fens of Lincolnshire,—a circumstantial account of which is given by Bewick.

In the lakes to which the wild ducks resort, their most favourite haunts are observed. Then, in the most sequestered part of this haunt, a ditch is cut, which is about four yards across at the entrance, and decreases gradually in width from the entrance to the farther end, which is not more than two feet wide. The ditch is of a circular form, but does not bend much for the first ten yards. The banks of the lake on each side of this ditch (or "pipe," as it is called) are kept clear from reeds, coarse herbage, &c., in order that the fowl may get on them to sit and dress themselves. Along the ditch poles are driven into the ground, close to its edge, on each side, and the tops

are bent over across the ditch and tied together. These poles, thus bent, form at the entrance of the ditch or pipe an arch, the top of which is ten feet distant from the surface of the water. This arch is made to decrease in height as the pipe decreases in width, so that the remote end is not more than eighteen inches in height. The poles are placed about six feet from each other, and connected by poles laid lengthwise across the arch and tied together. Over the whole is thrown a net, which is made fast to a reed fence at the entrance and nine or ten yards up the ditch, and afterwards strongly pegged to the ground. At the end of the pipe farthest from the entrance is fixed a "tunnel-net," as it is called, about four yards in length, of a round form, and kept open by a number of hoops, about eighteen inches in diameter, placed at a small distance from each other to keep it distended. Supposing the circular bend of the pipe to be to the right when one stands with his back to the lake, then on the left-hand side a number of reed fences are constructed, called "shootings," for the purpose of screening the "decoy-man" from observation, and in such a manner that the fowl in the decoy may not be alarmed while he is driving those that are in the pipe. These shootings, which are ten in number, are about four yards in length, and about six feet high. From the end of the last shooting a person cannot see the lake, owing to the bend of the pipes, and there is then no further occasion for shelter. Were it not for these shootings, the fowl that remain about the mouth of the pipe would be alarmed if the person driving the fowl already under the net should be exposed, and would become so shy as entirely to forsake the place. The first thing the decoy-man does when he approaches the pipe is to take a piece of lighted turf, or peat, and hold it near his mouth, to prevent the birds from smelling him. He is attended by a dog, trained for the purpose of rendering him assistance. He walks very silently about half-way up the shootings, where a small piece of wood is thrust through the reed-fence, which makes an aperture just large enough to enable him to see if any fowl are in, if not, he walks forward to see if any are about the entrance of the pipe. If there are, he stops and makes a motion to his dog, and gives him a piece of cheese, or something else, to eat; and, having received this, the animal goes directly to a hole through the reed-fence, and the birds immediately fly off the bank into the water. The dog returns along the bank between the reed-fences, and comes out to his master at another hole. The man then gives him something to reward and encourage him, and the animal repeats his round until the birds are attracted by his motions, and follow him into the mouth of the pipe. This operation is called "working" them. The man now retreats farther back, working the dog at different holes until the ducks are sufficiently under the net. He then commands his dog to lie down behind the fence, and going himself forward to the end of the pipe next the lake, he takes off his hat and gives it a wave between the shooting. All the birds that are under the net can then see him; but none that are in the lake can. The former fly forward, and the man then runs to the next shooting and waves his hat, and so on, driving them along until they come to the tunnel-net, into which they creep. When they are all in, the man gives the net a twist, so as to prevent them from getting back. He then takes the net off from the end of the pipe, and taking out, one by one, the ducks that are in it, dislocates their necks. The net is afterwards hung on again for the repetition of the pro-

cess; and in this manner five or six dozen have sometimes been taken at one drift. When the wind blows directly in or out of the pipes the fowl seldom work well, especially when it blows into the pipe. The reason of this is, that the ducks always prefer swimming against the wind, otherwise the wind blowing from behind catches and ruffles their feathers. If many pipes are made in the same lake, they are so constructed as to suit different winds, and are worked accordingly. The better to entice the fowl into the pipe, hemp-seed is occasionally strewn on the water. The season allowed by Act of Parliament for taking ducks in this way is from the latter end of October until February.

Willughby states that formerly before the young ducks took flight, or while the old ones were in moult and unable to fly, they were driven by men in boats furnished with long poles, with which they splashed the water, between long nets stretched vertically across the pools in the shape of two sides of a triangle, into lesser nets placed at the point, and in this way he says that 4000 were taken at one drive in Deeping Fen; and Latham has recorded an instance in which 2646 were taken in two days near Spalding, in Lincolnshire; but these practices being considered injurious, were prohibited by statute in the reign of George II.

Tame ducks are also used for the purpose of leading the way into the pipe. Hence the term "decoy-ducks." These birds are fed on the pond, and made quite tame, and come to the keeper's whistle, to eat the hempseed which he strews on the pond. They generally lead the way into the pipe when whistled to. As they are used to the sight of the keeper, they do not rush forward with the wild ones into the net, but return back again safe into the pond: or if any of them should be driven forward, they are easily, by their colour, distinguished from the wild ones.

Although our account more particularly relates to the bird in its wild state, it will not be improper to mention that the rearing of ducks is made an object of great importance in China. The greater part of them are hatched by artificial warmth; the eggs being laid in boxes of sand, are placed on a brick hearth, to which a proper degree of heat is given during the time required for hatching. The ducklings are fed with crawfish and crabs, boiled and cut small, and afterwards mixed with boiled rice; and in about a fortnight they are able to shift for themselves. The Chinese then provide them with an old step-mother, who leads them where they are to find provender, being first put on board a "sampan" or boat, which is destined for their habitation, and from which the whole flock, 300 or 400 in number, go out to feed, and return at command. This method is used nine months out of the twelve, for in the colder months it does not succeed; and is so far from a novelty that it may be seen everywhere, more especially about the time of cutting the rice, when the masters of the duck-boats row up and down the rivers, according to the opportunity of procuring food, which during that season is found in plenty, at the ebb of the tide, on the rice plantations, which are overflowed at high water. Is it curious to see how the ducks obey their master; for some thousands belonging to different boats will feed at large on the same spot, and on a signal given, follow the leader to their respective boats, without a stranger being found among them.

Died, at Quarry Hall, Enville, near Bridgnorth, on the 21st of January last, Joseph Smith, aged 71

years; he was 40 years waggoner in a nobleman's family, and in the habit of drinking a gallon of ale per day, independent of small beer; he therefore drank the quantity of 228 hogsheds 63 gallons, in forty years. He also was huntsman to the "Squirrel Hunt" kept up in that part of the country on every Good Friday afternoon for 45 successive years.

#### HINTS TO AGRICULTURAL READERS.

A correspondent of a contemporary journal says—"I have often been much surprised at the tardiness exhibited by the agricultural population in adopting any improvements in their modes of conducting their business, especially when I have compared it with the eagerness and celerity with which the manufacturing districts communicate to each other the most trifling improvements of machinery or mode of carrying on their manufacture, whereas many very useful practices prevail in rural districts which are entirely neglected even in a parish a few miles off; such, for instance, as the scalding of milk, in general practice in Devonshire for more than a century, and attended with the greatest advantages where the dairy is small, or the milk is produced in very small quantities, as is generally the case at this season of the year; for it enables the dairyman to keep his cream sweet for a long time, so that, instead of having butter rancid from being made with stale and often sour cream, the butter is as sweet and fresh as if it were made from one day's cream, as in the summer. The trouble of doing it is trifling; the milk is put into a shallow brass pan, and simmered over a stove, or hot dresser, or over a wood-fire (but the latter is apt to give it a smoky taste,) until a bubble rises, then take it off, and let it stand until cold, and then take off the cream from the top of it, and it will more readily churn into butter than raw cream. This simple process, so advantageous to dairymen at this season of the year, is almost entirely confined to Devonshire. Again, that very useful and advantageous use of unthrashed straw, for covering houses and ricks, commonly called reed, is known only to the three western counties; although every traveller must have observed the superior neatness of thatched buildings in those counties; yet they seem not to have inquired into its merits, or discovered that it is not dearer, and infinitely more durable, than thrashed straw, or surely we should have seen the practice become more general."

MURRAIN AMONG CATTLE. — MORAVIA, January 18th.—The epizootia makes frightful ravages in our country. According to authentic accounts, it has spread southward as far as the Danube, towards the west into Bohemia, and to the north as far as Austria. Some landed proprietors have lost all their cattle. In the space of ten years all the cattle belonging to the Lichtenstein family have perished. The alarming progress of this plague is attributed to the excessive heat last summer, and the consequent want of pasture. The same complaints exist in Galicia. This epizootia has also broken out in the northern mountains of Hungary. —*German Paper.*

Two or three days previous to the late general election, two candidates for a northern county met in a ball-room: "Why do you sit still," inquired a friend of one of them, whilst your opponent is tripping it so assiduously with the electors' wives and daughters?" The aspirant for parliamentary fame replied, "I have no objection to his dancing for the county, if I am allowed to sit for it."

## TO THE EDITOR OF THE "FARMERS' MAGAZINE."

Meltham, near Huddersfield.  
Feb. 3, 1835.

SIR,—By publishing this letter in your very valuable Miscellany, you will doubtless oblige thousands of your correspondents. I here give to the public four infallible processes for preventing the rot in Potatoes, they have all been tried, some two, others four years, without any failures at all arising from the rot.

The first and most simple is:—Plant whole potatoes in the usual way and manner. Second,—Cut the sets, and suffer them to dry in the shade two or three days, mix with these cut sets two measures of sand, or moist earth, to one of the seed, in a bin or corner of the barn; throw a slight covering of sand or earth over the heap, and let them remain until they are wanted to plant. N. B. In opening out the pie examine them carefully, and if any have not budded, or have symptoms of decay on the wounded parts, they must be rejected. Third,—Having cut your sets and suffered them to dry as before, stick a fork into each set, and rub the cut parts on a *red hot iron* until they be slightly charred; or, whilst the set is on the fork, dip the cut parts, first in coal-gas tar, and then in powdered charcoal. Both these last are tedious, but as it may be done by children or women, the cost will not be much.

NOTE.—If whole potatoes are planted in the usual way in March or the beginning of April, when they have all come up, if each root be reared up a little with a three-grained fork, and the potatoe taken away, the crop will be much increased thereby, (Tried in 1833.) Again, if these same sets be planted a second time the same day, or the day after, they will prove as good a crop as at first. If robbed a second time in June or July, the recovered potatoes will feed hogs;—but are capable of being applied to a much more profitable purpose, which I forbear at present to mention.

Thus much I give gratis to the public; what followeth is of much more importance, and demands a very small remuneration.

I have for thirty years back known a sure and certain method of producing, at the least, fifty per cent. more weight of potatoes on a given area, and at no more cost, either in manure or labour, than it is possible to be produced by any other process whatever. The method is simple and easy, and is built on the very nature of things; so very much so, that the natural philosopher will be astonished at his own ignorance, and that he himself was not the discoverer long ago. The process is very little known, and some few to whom I have communicated it, have made fortunes thereby.

I had not meant to give this almost invaluable discovery to the public; but, from circumstances not needful to mention, I am in less affluent circumstances than I have been. I propose the following most liberal terms:—Letters (post paid) directed to JOHN JOHNSON, Land Agent, Meltham near Huddersfield, inclosing half-a-sovereign; such letters, and such alone, will be answered, and the whole process in detail will be given.

## THE OTTER.

In the British Islands we have but one species of otter—the *Lutra vulgaris*. But the members of the genus are very numerous, and spread respectively over every quarter of the globe—nor are all confined to fresh waters; on the contrary, some are fishers on

the sea, and take up their abode, like seals, in the crevices of rocks on the shore. Of these we may instance the *Lutra stelleri*, a native of the polar regions.

The otter is found on the wild shores of the western isles of Scotland. Among the Highlanders it is a favourite sport to hunt this animal with dogs of the terrier breed. Parties will sally out with torches at night-time, when the otter leaves his hole to seek food. During the day he conceals himself under the large bare stones or fragments of rock close to the margin of the sea, forming what is called a "cainn." It is a difficult matter to force him from this retreat. The writer being in one of the Hebrides in the autumn of last year, accompanied a party of gentlemen attended by game-keepers for the purpose of witnessing this sport. It was a fine morning in September. Landing on one of the islands from a boat, the terriers were loosened from the couples and left to their own instinct to find the otters' den. After scrambling a considerable distance over masses of rock and loose pebbles on a remarkably wild and beautiful shore, the dogs, by their eagerness of manner and incessant barking, convinced the party that the game was within scent. The gentlemen, with guns cocked, then arranged themselves in convenient situations for intercepting the passage of the otter, should he attempt to take refuge in the sea; some mounted on the tops of rocks, others stood near the water or in the boat which had accompanied the party from the landing place. The keepers in the mean time assisted the dogs in their efforts to discover the lurking-hole of the prey. One of them, a thick-set Highlander, displayed a very characteristic enthusiasm. Addressing the dogs in Gaelic, he set to work with all the fervour of the animals themselves, tearing away large stones from the mouth of the hole, and half burying himself to enable the dogs to come at their object; they in the meantime ran about, yelping in the greatest excitement, and scratching at every aperture between the stones. While this action was going on at one hole, a large otter poked his head out of another, and looked about with as much astonishment as his countenance was capable of expressing, until catching a glimpse of one of his enemies, he suddenly retreated from the light. This incident having been observed, the attention of the party was transferred to the retreat thus betrayed. A large stone was first uplifted and hurled upon the top of the pile, with the intention of either forcing the inmate out by the shock, or of breaking some of the stones. Then a pole was thrust into the crevice, which was enlarged so as to admit a dog. One of the canine besiegers immediately rushed in, and, after a few seconds spent in grappling with his antagonist, an otter was dragged forth, at whom the whole body of dogs ran a-tilt. His defence was most heroic; many of his assailants exhibiting evidences of the power of his bite. The battle was continued for several minutes; and to those who delight in the display of animal ferocity, the noise of enraged combatants, and the sight of wounds and death, must have afforded high enjoyment. Dogs and otter, involved in one compact group, rolled down a precipitous ledge of crags, at the bottom of which, the power of numbers prevailing, the poor otter yielded up his life, "dying very hard," as it is called. Two more otters were taken directly after at the same cairn; one was shot as he made towards the water, the other was dragged by the tail, by one of the men, from his hole, and bagged alive. This was called a good day's sport. Although the otter, when attacked, is exceed-

ingly courageous, he is considered a harmless animal, living as described above, near the sea, and feeding upon fish. It is said, by the Highlanders, that this animal is somewhat of an epicure, selecting the back of the neck of a conger-eel, and generally preferring the upper parts of fish, leaving the rest to be devoured by the eagle or cormorant. This characteristic trait is confirmed by the written accounts of the river-otter.

Several English sportsmen have expressed surprise at the small dimensions of the dogs used in this kind of hunt in the Highlands. It is nevertheless true, that though some of the dogs are scarcely larger than the otter, their courage is quite equal to any encounter; and from their peculiarity of form they are perfectly adapted to enter the holes between the rocks, which to a larger animal would be impracticable. The writer of this account has seen little terriers of this breed exhibit marks of the severest bites from otters;—one dog had its lower jaw quite bitten away.

**PIGEON SHOOTING.**—The crack shots in the neighbourhood of Taunton had an excellent day's sport at Bishop's Lydeard, on Thursday, Feb. 12th, in a field in the occupation of Mr. Hawkins. The match was for a handsome silver goblet, of large size; and it was contested for by nine shots of well-known celebrity, at five birds each, twenty-one yards from the trap. The wind blew a "stiffer," which made the birds difficult to be got at, but the shooting was altogether of the first-rate description, and the prize was won by Gurnett, the gamekeeper of E. J. Esdaile, Esq., who killed all his birds in admirable style. The contest for the second prize lay between Mr. Bacon, Mr. Hawkins, and Mr. Woodrow, who were ties, the two former of whom killed their birds well, which made another trial between these well-known shots necessary, and again killing both their birds, they at length agreed to divide the prize between them. Mr. Hollier shot very unfortunately, two of his birds having fallen out of bounds by only two or three yards, after he had brought down his first bird very gallantly. Mr. Joseph Davey was the umpire, and gave his decision on the objections submitted to him in a fair and impartial manner. Some private matches at rabbit shooting were subsequently made, which produced some excellent sport, and caused much merriment to a large assemblage of spectators.

**EXTRAORDINARY CHARACTER.**—Mr. John Biss, who rents an estate of, and acts as gamekeeper for, L. St. Albyn, Esq., of Alfoxton, near Stowey, in the county of Somersetshire, although now in the *eightieth* year of his age, has the reputation of being the "best shot" within many miles of his neighbourhood. On the 1st September last, accompanied by Mr. St. Albyn, jun., he brought down eight birds out of nine, and on Friday last, several experienced sportsmen having assembled on a trial of skill, they proceeded with their dogs into the park and adjacent woods, where this ardent old sportsman kept up a brisk and successful fire among the rabbits, to the astonishment of all present. Biss occupies a snug cottage in a sweetly sylvan and sequestered spot, and has no ambition to relinquish it, being much attached to his habitation from the circumstance that his grandfather came to dwell therein when he was eighteen years of age, and married and brought up on the spot a large family, and died at the age of *eighty*. Biss's father also lived in the same dwelling all his life, and died at the age of *ninety*, and Biss himself as above stated, now *eighty*, has never lived in any other place. Biss

is cheerful and hearty, and speaks of his landlord in terms of devoted gratitude, averring that as he could never meet with a more generous master, no consideration whatever should ever tempt him to relinquish his present station. Biss has a son, who has always lived with his father, and who, the old man hopes, when he dies, will succeed him in the employment and protection of his benevolent landlord. The owner of property whose estate exhibits such an attestation to his honour, as that we have above described, enjoys a more estimable heir loom, than any which mere extent of acres can transmit. T. C.

**DOGS.**—The Australian dog never barks; indeed, it is remarked by Mr. Gardiner, in a work entitled "The Music of Nature," that "dogs in a state of nature never bark; they simply whine, howl, and growl: this explosive noise is only found among those which are domesticated." Sonnini speaks of the shepherds' dogs in the wilds of Egypt as not having this faculty, and Columbus found the dogs which he had previously carried to America to have lost their propensity to barking. The barking of a dog is an acquired faculty—an effort to speak, which he derives from his associating with man.—Bennett.

**A SPLENDID RUN WITH MR. G. L. COHAM'S PACK.**—On Tuesday, the 27th January, Hengscott, Devon, was the place of meeting, and ten the hour. Punctual to his time was G. L. Coham, with his "out-and-outers," and whilst drawing Hengscott Marsh Brake, old Rifle was heard by his shrill sounding note in the brake above the great wood, giving notice to the rest of his companions that he had found the varmint. Hark! hark! hark! away my boys! "one and all" soon joined, and for more than ten minutes the whole brake was in a movement; it was now who would give the joyful sound of *Tally-ho!* Gone away at last, woefully discovering what rum customers she (for a vixen she was, and a game one too,) had to deal with, she broke cover, and was tally'd up over the fields with a burning scent, and her pursuers, with heads up and sterns down, close to her brush, to Hengscott great plantation; from thence across the inclosures to Higher Gidcott, into Nott's Wood, on to the extensive woods and brakes of Walland, to Woodford Bridge; where, crossing the great road that leads from Torrington Hols-worthy, she hastened at double quick step for the Woodford Woods, and crossed the bottom to Abbots Bickington. Finding her pipes getting out of order, and her pursuers gaining ground, she changed her course from north-west to north-east, and skirting on her left the parish of West Putford, dashed through the river Torridge to Bulkworthy. (Yes, reader, if you are fond of fox-hunting, it would have made every hair on your head stand an end to have seen the little warblers striving for precedence whilst ploughing the water.) From Bulkworthy, running through the parish of East Putford, she pushed on to Membury; and here, my jolly fox-hunters, I am rather brought up in my narrative, not knowing the names of the numerous moors, brakes, woods, and inclosures through which and over which we galloped, nor had I time to inquire, at such a slapping pace, where we hurried along;—suffice it to say, after leaving Membury, Thornhill Head was on our right, and the towers of Parkham and Buckland Brewer on our left, till we reached the vale and covers which separate the latter parish from Frizlestock; and here from the small circuitous line the gallant varmint made, it was evident she was about to yield. Die she must,

(blood is always sweet, both to the huntsman and bounds,) and die she did, after as fine a run as ever was witnessed. The distance must have been nearly thirty miles, run in two hours and thirty-six minutes, and during the time nothing occurred which deserved the name of a check. The country was both hilly and deep, the fences difficult, the pace throughout very fast. Messrs. G. L. Coham, L. R. Heysett, and J. Sloley, all Nimrods, whose names in the west require no comment, as hunters, being "regular trumps;" the young 'Squire Morris, who gives promise of making an out-and-outer; M. R. Leach, whose heart is always in the cause; and Bob, the whipper-in, were up at the electric sound of "Whoop Whoop!"

**EXTRAORDINARY SCENTED FOX.**—On Tuesday, Feb. 17, the Cottesmore Hounds ran a fine dog fox up to the village of Empingham, and here, being hard pressed, reynard took refuge in a *small house*, into the lower region of which he descended, and became immersed in something more pungent than the otto of roses; he was, however, by some means unhoused, and again made his way across the country, the pack following on a *blazing scent*, and was killed near Tinckencote.

## AGRICULTURAL INTELLIGENCE, FAIRS, &c.

**EXETER FAIR.**—The old English proverb, "*Down corn, down horn*," seems now to be fully verified, since matters in cattle are come to the full as bad a pass as in Wheat. Our fair has been most abundantly supplied, but business has been dull indeed. There have been driven into it fat bullocks, stall fed, and as prime as can be looked upon, which, as regards a marketable price, were worth more in October last than they are now, and have stood throughout this morning without a shilling being offered for them!! Indeed, fat bullocks have fared worse than any thing else; the business done has been at the decidedly unremunerating price of from 7s 6d to 8s per score, but the far greater proportion remained unsold. For plough oxen and steers fit to go to work (of which the show has been remarkably fine), an effort was made for a start upwards, and to some small extent it has succeeded: the number of dealers from the East has been large rather than otherwise, with a disposition to pick these description of articles up. In this way, then, a pair of fine oxen, five years old, from the farm of Mr. John Comer, of Newton St. Cyres, were purchased to be taken into the neighbourhood of the metropolis for 30*l*. And for these generally, with a better share of the business of the day, we must quote from 23*l* to 30*l* the pair. In poor steers the efforts for an advance have not succeeded, the up-country dealers appearing determined to have them only at their own price. Condition, of course, was here the regulator, and with many driven back to their farms, we have to quote from 14*l* to 20*l* per pair. In poor heifers, if possible, things have been worse, since here on the part of the dealer it has been entire dictation; nor, for the business done, can we venture to quote more than 5s per score. There have been a fair show of cows and calves, but with nothing occurring to vary our market quotation.

**COCKERMOUTH FAIR.**—The annual Fair at Cocker-mouth had but a very inferior shew of horses, and the prices offered was so extremely low that many came away unsold,

**FROME MONTHLY MARKET** was well supplied with beasts, sheep, pigs, cheese, &c.: and we have the pleasure of stating that the general opinion was, that a finer exhibition of beasts was never witnessed in any market in the West of England, and the supply far exceeded that of many of the late Frome fairs. The sheep penned were above 500, and about 300 pigs, and amongst which was one belonging to Mr. Charles Hoddinott, butcher, of Frome, only six months old, which was extremely fat, and the admiration of all the fanciers in that department, for its shapeliness and beauty. In consequence of there being such a large supply (of beasts particularly) many were driven off unsold, but considerable sales were effected, and we have every reason to believe there will be many more dealers on the next Monthly Market day, it being now established. The premiums were awarded as follows:—

|                                                                                                                     | £ | s. | d. |
|---------------------------------------------------------------------------------------------------------------------|---|----|----|
| For the second best fat cows or heifers, Mr. Joseph Harding, of Broadmead                                           | 2 | 0  | 0  |
| For the third best in-calf heifers, under two years old, Mr. Charles Weaver, Buckland                               | 2 | 0  | 0  |
| For the best bull, of any breed, under three years old, Mr. Taylor, Beckington                                      | 2 | 0  | 0  |
| For the greatest number of neat cattle offered for sale, the property of one person, Mr. James Crees, Witham Friary | 1 | 0  | 0  |
| For a pen of not less than ten fat long wool wethers, Mr. John Edgell, of Foxcote                                   | 1 | 10 | 0  |
| Ditto fat South-Down wethers, Mr. Edmund Moody, of Maiden Bradley                                                   | 1 | 10 | 0  |
| For the four best fat pigs, Mr. John Hoddinott, of Bollow Farm, East Woodlands                                      | 1 | 0  | 0  |
| For ten cwt. of the best cheese, of last year's make, Mr. G. Butler, of Kilmersdon                                  | 2 | 0  | 0  |
| For ten cwt. of the second best cheese, Mr. John Craddock, of Hemington                                             | 1 | 0  | 0  |
| EXTRA.—For the second best fat cows, Mr. Edward Jefferies, of Maiden Bradley                                        | 1 | 0  | 0  |
| For the second best bull, Mr. R. Brittain, Philip's Norton                                                          | 1 | 0  | 0  |

The prices may be quoted as follows: beef, from 8s to 9s per score; cheese, 40s to 48s per cwt, a few lots of superior quality sold considerably higher. Mutton, from 5d to 6d per lb; pigs, from 6s to 6s 6d per score. Of horses there was but a short supply.

At **BATH FAIR** there was a larger supply of cattle than has ever been exhibited on any former similar occasion. Fat beef averaged 9s per score; fat mutton, 5½d per lb; small South Down, 6½d. A large supply of cows and calves, as well as of stock beasts: but all met a very dull sale.

At **LEOMINSTER FAIR**, there was rather a thin show of cattle, but many fine animals amongst them. Fat cattle sold from 5d to 5½d per lb, and there was a tolerable good demand; stores were nearly 10 per cent better in price than at the last fair. There were few sheep, and mostly large ones, which went from 5d to 5½d per lb. Pigs were low in price. There was a good show of agricultural horses, which commanded fair prices.

**DARLINGTON FAIR.**—At our fortnight fair, we had a tolerably good supply of cattle and sheep which were nearly all sold at very little alteration in prices from our last quotation. Beef, 5s 3d to 6s; Mutton, 5s to 7s per stone.—In the corn market the supply of grain was good, sales a little brisk.

**DUMFRIES CANDLEMAS HORSE FAIR.**

The number of horses was considerably less than ordinary, but more generally of every kind of a superior description, and were eagerly bought. Colts ran from 30*l* to 40*l*, and in some few instances to 45*l*; but fillies were from ten to fifteen per cent lower. Good roadsters were from 26*l* to 35*l*, and work horses from 20*l* to 30*l*, but old and inferior, of every description, could scarcely be got off on any terms. Ponies were in much demand, and sold readily at from 12*l* to 18*l*, and even as high as 20*l*. A few hunters were sold at from 50*l* to 60*l*.—There were hardly any black cattle, and the very few exposed were driven away unsold.

**CARLISLE HORSE FAIR.**—There was a superior show of draught horses, but the prices offered were very low. Very little business was done, as intending purchasers would not come near the prices asked. Saddle and harness horses were few and inferior, though much in request.

The **GREAT CATTLE MARKET** at **KELSO** turned out extremely discouraging to the farmer. Many heavy cattle, fed through the winter, fetched from 20*s* to 40*s* only above the price at which they were bought in; whilst parcels of sheep fell short by 4*s* or 5*s* a head of what might have been got for them before being laid on turnips.

**LINCOLN ANNUAL FAT STOCK MARKET.**—The annual fat stock market was much better attended by buyers than by sellers. There was a good show of sheep, which fetched on the average 2*s* a-head advance, but only a short supply of beasts, which caused a considerable rise in the prices. The average sales were from 5*s* 6*d* per stone to 6*s* 6*d*, sinking offal.

**BEVERLY CANDLEMAS FAIR.**—At this fair there was only a small supply of good horses, most of which were sold at fair prices. There were a great number of middling and inferior horses which met with a very tardy sale, and at bad prices. The beast market was well supplied with both fat and lean stock; the former sold at rather lower prices than at most of the late markets, owing, it is supposed, to abundant supply. Some lots were driven out unsold.

**GISBURN CATTLE FAIR.**—There was an extra show of fat and a numerous attendance of buyers. Beef, 3½*d* to 5*d*; Mutton, 4*d* to 6*d*. Lean Cows and Calvers, of which there were abundance, fetched good prices, and were nearly all sold.

At **PAUL'S FAIR** of **TURRIFF** there was a moderate show of stock. Cows at calving, and fat cattle, were in demand, but at reduced prices. Cows sold at from 5*l* to 9*l* 10*s*; fat stock from 38*s* to 40*s* per cwt; stirks and cows of inferior quality 30*s* per cwt. Little doing in lean stock. Few horses, and the quality still worse; of course few of them sold.

**WOOL MARKET IN LINCOLN.**—At the annual dinner held at the Monson's Arms, Lincoln, to commemorate the Fat Stock Market, which was most numerously attended, it was proposed to establish a Wool Market in Lincoln, and the proposition was hailed by the farmers and merchants present with great applause.

At **DORCHESTER CANDLEMAS FAIR** there was a numerous show of cows and calves, which met with a dull sale at from 7*l* to 10*l*. Barreners were in demand at prices from 6*l* to 10*l*. There was a few lots of fat sheep, which found buyers at 6*d* per lb. The Horse Fair exhibited, among the usual worn-out animals, many good useful horses, and several good colts, which met a ready sale at fair prices.

**NORTHAMPTON FAIR** exhibited an indifferent show of good store beasts, but as the jobbers did not offer them at reduced prices, they were quite sufficient to meet the demand. There was very little good beef, and a large number of inferior barren and milking cows, all dull of sale. Mutton was in small supply, the best, with the wool on, did not exceed 3*s* 6*d* per stone. The show of inferior cart horses was large, but the sale was very dull. Good riding and harness horses were much sought after. All the useful ones were readily sold.

**HOPS.**—A prime bargain was made a few days ago in north clay hops, at Retford. Mr. Wheelwright, of Welham, near Retford, sold to Mr. Atkin Ogle, of Ollerton, the produce of his hop ground (eight acres more or less), at 20*l*. per acre for the coming season. The speculation is good on the part of the purchaser.

**ACCIDENTAL DESTRUCTION OF SHEEP.** A farmer residing at Dunmow, having a flock of 130 sheep infected with the tick, he obtained a large quantity of tobacco juice and oil of tar, the latter being, when diluted with tobacco water, the most efficacious remedy; but the servant, owing to an accident, applied only the oil of tar, which being used by itself, caused the death of about fourscore of the suffering animals. The remainder of the flock, by the early application of an antidote, it is expected will recover.

---

## REVIEW OF THE CORN TRADE IN MARK LANE DURING THE MONTH OF FEBRUARY.

We last month availed ourselves of the opportunity of giving an impartial review of the wheat trade, and the little prospect which existed of the holder of bonded corn quitting his stock without sacrificing his property at ruinous prices; and, however unpalatable the facts may have been, which we communicated, yet we have just grounds for affirming, that the statement was by no means exaggerated. The prospects, however, for the speculation in foreign barley, as well as oats, are of a brighter character; and though the extent of the anticipated profits may by some be overrated, yet where the articles have been bought with judgment, and at prices not too exorbitant, there is every probability of the transactions repaying the outlay, and in many cases of yielding a fair return. No doubt seems to exist that the crop of both articles in this country are materially deficient, and which the sister kingdom have not means adequately of supplying; consequently, recourse will doubtless be had to the foreign produce, which, as regards barley, has in Holstein and Denmark, the past season, turned out of unusually fine quality, and the cargoes which have already come to hand, have worked so well, as in a great measure to remove the prejudices entertained by maltsters, against any quality of the grain that is not of English growth. The barley from the district of the Saale, and Bohemia, which commanded hitherto a preference in the trade, has this last year, from the unprecedented drought, proved steely and thin, not averaging in weight more than 47 to 48 lbs per bushel,

and only calculated for the local consumption. In Mecklenburg, the growth both as to quantity and quality, is inferior to that of the neighbouring Duchy of Holstein, and though samples may be selected weighing 51 to 52 lbs, yet the later deliveries from the farmers have not averaged more than 48 to 50 lbs, and the quality generally more adapted for distilling than malting. In Pomerania and Silesia, barley is also light and short in produce, and at Stettin, parcels weighing nearly 50 lbs, have realized 16s 6d to 17s. As we proceed up the shores of the Baltic, all the countries contiguous are found to have yielded a deficient crop both of oats and barley. At Königsberg, Liebau, and other principal places, there will be no barley for export, and in some instances hardly enough of either article for seed. In Russia, the deficiency of the crops of summer grain have forced the government to re-open the Baltic ports for the free admission of corn. In Finland, barley has failed to a considerable extent, and the ports of Abo, Nyland, and Wiburg opened for its free import, until the 1st of July. In Sweden also a deficiency is much complained of, and purchases effected at the Danish ports for Swedish account. Under these circumstances the early investment of capital in the Holstein and Danish samples, offers every appearance of rendering a fair return for the speculative risk. The prices however, are keeping more than on a par, with our currencies, and must check for the present further investment. As we fully appreciate the fact, that as regards the grain trade, no conclusions can be drawn, except from existing circumstances, as beyond these, they became purely speculative conjecture; it will be worthy of remark, by way of conclusion, that it is advisable, before entering too deeply into the speculation in foreign barley, to bring into the calculation, that the principal portion of the growth of the English and Scotch article, is of inferior quality; and the Irish imports have with few exceptions, proved only adapted for grinding purposes; and that thus, the low relative prices these descriptions are realizing, compared with the chevalier and malting samples, may act so disadvantageously on the averages as to prevent their advance sufficiently high, to have that effect on the duties, which would make it worth the chance of staking any large amount in the speculation.

During the past month the arrivals of British grain generally have been liberal, but have not differed much in the total amount from the receipts of January.

Dulness has generally pervaded the French markets, and the general average price of wheat throughout the kingdom has not exceeded 34s 1d, which is a trifle less than the previous month. The average of wheat however, taken for the last sixteen years has been 39s 8d. In many parts of the country, the want of water has become a serious inconvenience, as well as the source of much apprehension as to the fate of the forthcoming grain. In Paris the trade has been dull for wheat and barley, as well as rye, but oats coming in limited supply are maintaining a

higher relative value than other grain, and realizing 1s per qr more than barley, the top quotation being 18s 9d. At Rouen, Havre, Nantes, Caen, Bordeaux, and other leading markets, the trade in wheat has ruled heavy, and little demand existing, except for the local necessities; at Rouen, perhaps an exception may be formed, as the millers of the neighbourhood fearing a scarcity of wheat in spring, have been purchasing in Brittany. The cloverseed trade has been also languid, at Paris the article is obtaining 33s to 35s.

In the French markets in the Mediterranean, as well as the Italian ports, little alteration in price has been sustained. At Marseilles some few purchases of secondary qualities of wheat have been making for shipment to Corsica, and the Var, but as the anticipations of an import into Catalonia, had for the present disappeared, the business passing in bonded qualities was very partial; it was reported, purchases were making, in order to be smuggled into Spain, but there seems little foundation for the statement. The stock of free wheat amounted to 143,437 qrs, and 8000 bales of flour, but only 18,000 qrs of foreign bonded qualities. At Genoa, prices were unaltered. At Leghorn, the best samples of red Baltic wheat brought 25s 9d to 26s 9d; and the stocks had increased to 62,500 qrs. At Naples, Barletta wheat of best quality was quoted at 30s 2d to 31s, secondary 28s 2d, and some purchases had been effected. The weather continued very favourable for the growing crops.

The supplies of flour as well as grain in the markets of the United States, had been impeded by the cold weather, and prices remained without alteration, though holders were steady in their demands. At New York barley realized 25s 8d, Oats 16s 10d. The crop of flaxseed is favourably spoken of, and will exceed in produce the growth of the previous season. The cloverseed trade was languid, and the business transpiring almost entirely confined to the local necessities; at New York, prime eastern samples were held at 5½d per lb; southern 4¾d per lb.

### THE CHURCH COMMISSIONERS.

(From the Courier.)

Among the objects enumerated for the new Church Commissioners to inquire into is, "The state of the several Dioceses of England and Wales, with reference to the amount of their revenues, the more equal distribution of episcopal duties, &c.," and we beg our readers' attention to these objects. It has been contended, by Sir Robert Peel, Lord Stanley, and others that the property of the Church rests upon precisely the same foundations as the property of the landowners. But Sir Robert Peel would never think of issuing a commission to inquire into the amount of the revenues of the owners of land. The Scotch nobles, when the King questioned their titles to their estates, replied by laying their hands on their swords; and if the Government of this day were to institute inquiries into the revenues of the landowners, with any view to alter or to equalize them, it would be replied to in a similar fashion. The Government knows, in fact, the bounds of its duties too well to institute any inquiries into the relative wealth of merchants, bankers, farmers, or the owners of estates. The Tory Government, however, does institute inquiries into the relative revenues of the Bishops and the rest of the Clergy; we praise it for doing so, but we contend that by doing it Sir Robert Peel gives up the principle as to Church property for which he has contended, and clearly establishes that it is not, in his estimation, equally as sacred as private property. We do not now extend our remarks as to the boundaries of this difference, though we may do that when Sir Robert Peel—if he remain long enough in office—shall propose to alter the present appropriation of this property. We only request our readers to remember, that by instituting the inquiry he admits that Church property is functionary property, like the salaries of Generals and Admirals, which the State may deal with. It is not like private property, which the State is bound to defend.

The next point to which we beg attention is, "the more equal distribution of episcopal duties." Chester is one of the sees which is generally stated to be overloaded with duty; the plain cause of which is, the vast increase of population in that district of the kingdom since the Bishopric was formed. By what other criterion can we in fact test a Bishop's duties but by the number of his Clergy, which must be in proportion to the number of congregations? Nobody dreams of building a church where there are no people. The present Minister for the Home Department, indeed, once contended that the number of geographical square miles in a Bishop's diocese was the criterion of his duties, on which absurd principle the See of Calcutta ought to have somewhere about two hundred Bishops, and there should at once be established in Canada more Bishops than ever there were in Ireland. The equal distribution of episcopal duties must, therefore, be made according to the number of congregations, which alone can,

and ought to determine the number of the Clergy. Here, then, we have the Tories embracing as their principle of Church Reform, that very principle of population, against which they protested so vehemently when Mr. Ward proposed to issue a Commission to inquire into the Church of Ireland. If the irregular increase of the population in England—the deficiency of Protestants in Winchester or Durham, and the redundancy in Chester, in relation to the Bishop's labours—make it necessary now to equalize the duties of the Bishops in England, can it be contended that the deficiency of Protestants in the sees of Ireland is not a sufficient ground for making an improved appropriation of the duties and the revenues of the Protestant Clergy of Ireland? Against the principle of taking the number of the congregations into consideration, Lord Stanley spoke with great vehemence. Sir Robert Peel, too, condemned in the strongest terms the introduction of any principles which were equally applicable to England and to Ireland. He said, on the 2d of June—

"If you appoint a commission in Ireland to inquire whether there be not an *excess of church revenue*, to inquire into the relative proportion of *protestants and dissenters*, and the facilities afforded to each respectively of attending divine worship, you recognize a principle which is applicable to England as well as to Ireland."

Upon that ground he resisted Mr. Ward's motion, and he enforced his view by a reference to the Dissenters of England claiming relief from Church Rates in consequence of the measure for relieving the Catholics of Ireland from Vestry Cess. But he now recommends a Church Commission to be issued, which inquires into the amount of the revenues of the dioceses of England, obviously with a view to the numbers of the people and the facilities afforded them of attending divine worship. There may be a difference in phraseology, but, in substance and principle, there is not a shadow of difference between the Commission now issued for the Church of England, and that which the late Ministers issued for the Church of Ireland, and which Sir Robert Peel vehemently condemned. Though he then objected to applying the principle of population to the Church to Ireland, because it told so powerfully against his party, other men, following his present example, will have no such scruple. The Commission to inquire into the revenues of the English Church, with a view to equalizing the Bishops' duties, and to conduce to the efficiency of that Church, consecrate the great principle, that the number of the Clergy and the revenues of the Church ought to be regulated by the number of the people.

### THE CHURCH.

(From the John Bull.)

The Morning Chronicle chuckles very much because we have expressed a determination to exert our

utmost efforts in support of the Church and its rights. We are unquestionably determined so to do; but whatever may be the rumours and reports touching the changes intended to be effected in the ecclesiastical department of the State, we are most certainly not in a position at present to form an opinion of the 'Reform' proposed. We are not singular in our ignorance, for we know that one of the eminent individuals who, according to the 'fashionable intelligence' of the daily press, has been frequently closeted with the Premier on the matter, declares that, although, of course, perfectly aware of what his own suggestions have been, *he has not the slightest notion of the plan eventually to be adopted by Government.*

When the scheme comes before the country, we shall exercise our privilege of discussing it—fearlessly and sincerely; we are conscious of the good opinion and support of the most pious and exemplary clergy in the world—we mean the clergy of the Church of England. *Satisfy us that the new-modelling of the Establishment is considered just and safe by the most eminent ministers of that Church, and we shall cheerfully abide by the decision—but most assuredly not by that of the Ministers of the State.*

We have no reason—knowing no more than our contemporaries—to apprehend innovations of an indefensible character, but we must say in sincerity of heart, that *if the Conservative Ministry is to adapt its measures to the rule of the Destructives, the King has vainly exercised his prerogative.* The country—we mean the sound, enlightened, and intelligent portion of the people of England, were disgusted with the proceedings of the last Ministry—or, we might more justly say, with the proceedings of the last portion of the last Ministry; and we have seen Lord Stanley, Sir James Graham, the Duke of Richmond, and Lord Ripon, at one period quitting it, and finally Lord Grey himself. *If then it be considered important to the existence of the new Administration to adopt measures similar to those from which these individuals, eminent—some in rank and others in talent, thought it essential to their honour and character to withdraw, we repeat most distinctly our opinion that the change of men means nothing; and that so far from congratulating ourselves upon the accession to office of Ministers, from whose firmness and constitutional steadiness we had every thing to hope, we shall deeply regret that the mischief which must accrue from anything like an adherence to the principles of the Abercromby, Ellice, Duncannon, and Russell school of politics, had not been achieved by the real plotters against the happiness of the country, and that the condign punishment which the consummation of their atrocities must have insured them, had not fallen upon their own heads.*

### THE CURRENCY,

(From the Herald.)

We do not attempt to delude the agriculturists by stating that the abolition of the malt tax will afford them the relief they anticipate—the relief will only extend to the labouring population; but to them it will be most important, second only to the bread they consume; but to the tenant or landlord nothing short of an amelioration of Mr. PEEL's iniquitous Bill can either afford them, or the manufacturer any relief. This we repeat for the hundredth time, and this assertion alone will prove that the article alluded to by our Evening Contemporaries, was neither written at the suggestion of, nor by the authority of the present Government. Our great pride is to be enabled to act independently of any Administration for the time being; and although it is quite out of our practice to

boast of the purity and independence of our motives, we nevertheless fearlessly challenge our worst enemies to prove the contrary of this assertion; and we unhesitatingly state that there is no advantage that any Administration could offer us that would compensate for the loss of the public confidence we at present enjoy.

It is this *real, not boasted*, independence that enables us to repeat our strong recommendation of taking off the tax in question, not, as we have before stated, for the relief it will it will afford the agriculturists, but as a boon to the labouring classes throughout the kingdom, who, in fact, ought never to have been taxed with it. Beer is an article peculiarly British; it is as much an article of necessity as meat, and the perpetual toil of the British husbandman and mechanic renders it of more consequence to them than to any other portion of the like population in Europe. A heavy tax upon spirits would more than compensate for any apprehended fear of deficiency in the revenue; but we repeat we have none, the deficiency would not last three years, and therefore would not, as one of our Contemporaries states, be permanent. As to its leading to a breach of faith with the public creditor, it is to ridiculous to answer. But we should like to know what important tax has ever been wrung from any Administration that has not been resisted on the very same ground? The cry of "Wolf, wolf," has ceased to have its effect on the sober-minded people of this country, and it ill becomes any one to urge the plea against this Journal which has ever been first and foremost in defence of the just claims of the public creditor; but we will be no parties to any delusion—to any fraud on the people of England; and whilst we uphold, as we have ever done, the necessity of keeping the national faith inviolate, we seriously ask whether the same inviolate faith is not to be kept with the people? Are they ever to continue the victims of the most gross and iniquitous fraud ever heard of or practised in any age or country? Is not the history of that fraud to be inquired into? Is it possible to imagine that there is no limit to their patience and to their sufferings? Will they continue to pay cent. per cent. for the money they have borrowed, and patiently submit to be insulted, and accused of a wish to violate the national faith into the bargain? Even the greatest advocate of the measure that caused their misery, the late DAVID RICARDO, was so sensible of the mistake he had committed, as to admit, only three years afterwards, that the difference in the change of the currency made 25 per cent. instead of 4 per cent., as he had anticipated; and, if he had the candour to admit this, is it too much to admit that Mr. M. ATTWOOD, Mr. BARING, Mr. WESTERN, the Marquis of TITCHFIELD, Mr. E. ELLICE, Mr. BENNETT, Lord RADNOR, Mr. DENISON, and others, to the number of 27, were not perfectly correct in their assertion and votes that it had made more than 50 per cent. difference? Yet this *mistake*, by which the happiness of 19 millions of people was sacrificed to the interests of less than one million, is not even to be inquired into!

If there is one subject more than another of which this Journal may be justly proud, it is the part, the disinterested part (for we have no party but the country,) we have ever taken on this subject, and we conclude these observations by telling the people of England that in vain do they seek any permanent relief from their difficulties from any other source than an amelioration of the currency. The enemies to this measure, and consequently the people's enemies, have

endeavoured to delude them for the last 15 years, by ascribing their distress to every other cause but the true one; such, for example, as over population, over production, use of machinery, bad harvests, good harvests, and a variety of such trash; all successively thrown out, as "tubs to a whale," to divert the people from an investigation of the real cause of their calamities; but this wickedness cannot last much longer, it has already produced one good measure—the Reform Bill, but if longer neglected it will produce other changes, not so welcome,—perhaps revolution.

SIR R. PEEL.

(*From the Courier.*)

The speech of Sir Robert Peel to his constituents at Tamworth, is, like all the other speeches of the Right Hon. Baronet, dexterous and able. Perhaps he arrogates more credit to himself in respect of Law Reform than he had a good claim to, seeing that most of the reforms he adopted had been chalked out, and their expediency established, by Romilly, Mackintosh, and others. We are ready, however, to admit, that Sir Robert Peel is entitled to credit, for having, in this instance, adopted the principles and carried into effect the plans of his political opponents; and we hope he will be ready on other occasions to avail himself of their suggestions. There is nothing in the speech in question to which any one can object; but then it presents no definite views, no tangible points; and may, in fact, be interpreted to mean anything or nothing. The Right Hon. Baronet, like every one else, professes his readiness to introduce all necessary, safe, and convenient reforms, calculated to remove defects, and to repair and strengthen our institutions; and to oppose all speculative and dangerous innovations. This is all very well; but it is so very loose that, for aught we know, it may be assented to even by Lord Stormont. There have, in fact, been a great deal too many of these unmeaning generalities lately palmed upon the public; and not a few have got credit for being Reformers, by dealing liberally in them, who, we believe, have rather an indifferent claim to that title. We do not, however, mean to insinuate any doubt as to Sir Robert Peel's sincerity. On the contrary, we incline to think that he intends to do a good deal—much more, indeed, than will be agreeable to his ultra-Tory associates, though still decidedly less than the necessities of the times require. Even though Sir Robert Peel should succeed in getting Sir C. M. Sutton again placed in the Chair, and carry the Address, the question of the Irish Church will assuredly upset his government; and it will upset every other that may be framed that has not courage to deal with it on the plain principles of justice and of common sense. Sir Robert Peel says he will reform the Irish Church, by making a better distribution of its revenues, &c.; but that he will not allow one farthing to be taken from it and applied to merely secular purposes, or for the use of any other religious sect. His notions as to the inviolability of Church property are narrow and bigotted in the extreme. The Irish Establishment may be re-modelled and rendered less intolerable than it is; but, in truth and reality, it is at bottom a nuisance. No reform can make it suitable to the wants, or subservient to the religious instruction or moral improvement of the vast majority of the Irish nation. It is, and ever will remain, the Church of the richer classes only; and being alien to, and detested by, nine-tenths of the people, it is

not possible to invest it with the distinguishing and peculiar characteristic of a national establishment. Suppose that by some accident the Roman Catholic were to be made the established religion of England, and that its Priests were to be put in possession of all the estates and revenues now enjoyed by the Protestant Clergy, does any one suppose that any distribution, however unexceptionable, of this wealth, among the Catholic Priests, would make the people of England tolerate such a state of things? Would they permit that wealth, sufficient to provide for the religious instruction of the whole country, should be engrossed by the Clergy of a tenth part of the population? Most certainly not? They would instantly overturn the whole thing; and would either confiscate the revenues of the Church, or apply them to the support of an Establishment suited to the religion and wants of the bulk of the nation. But if such, under the circumstances supposed, would be our conduct, how can any impartial or reasonable man imagine that the people of Ireland are to be reconciled to the existing Church Establishment by any reform of its abuses? What is it to the poor Catholic, who has his own Priest to provide for, whether the 20,000*l.* or 30,000*l.* a year that now goes into the pockets of the Primate and his family, continue to find its way into them, or be distributed among the Hannibals, or any other set of Protestant clergymen? The fact is, that there must be a jetson—that, to preserve the rest, a large portion of the wealth of the Establishment must be thrown overboard. The clergy of the Catholics must be provided for as well as those of the Protestants; and it is the merest possible delusion to expect, unless this be done, that the country will ever be satisfied, or that the Catholic Priests will ever cease to be the enemies of England. We do hope that Mr. Ward, or some other Member, will not be long in bringing the subject of Church Property before the House. General professions will not do. In a matter of such vital importance it is necessary that the country should have a distinct knowledge of what Government mean to do. The Irish Church is, at this moment, the greatest abuse in Europe; and if Sir Robert Peel attempt to bolster it up, he will, as he ought to be, buried in its ruins.

#### THE EXPECTED PRINCE.

(*From the Chronicle.*)

From all that we hear upon a certain subject which has been the town-talk for the last three weeks, we are inclined to think that the Tories are counting their chickens rather too fast. The current story of the bow at the shoulder, we believe to be a merely fanciful explanation, though we by no means pretend to say that a bow at the shoulder may not be connected with such events, according to Court custom. At present, however, we believe the fact to be that the Tories have built their frail baby-house of hopes on very equivocal circumstances. The thing may be, but there is no reason to suppose that it is, and there has been little delicacy, and as little discretion, in bruising about the story so prematurely. The disposition of the public to doubt the possibility of the alleged event, brings to mind the same sort of incredulity in the time of James the Second (the Tories have a knack of reminding us of passages in the reign of the Stuarts). In reading the passage, we have only to substitute Tories and Reformers for Catholics and Protestants; and there being some similarity in the party hopes as to the lineal and the remoter but more popular succession, we may imagine, in the sub-

joined passage, a historical page in anticipation for the summer of 1835, should the event realize the hopes of the Tories; but instead of commencing, "A few days before the acquittal of the Bishops an event happened which, in the King's sentiments, much over-balanced all the mortifications," the historian may have to write it, "A few days after the expulsion of the Bishops," &c.—

"A few days before the acquittal of the bishops, an event happened, which, in the king's sentiments, much overbalanced all the mortifications received on that occasion. The queen was delivered of a son, who was baptized by the name of James. This blessing was impatiently longed for, not only by the king and queen, but by all the zealous Catholics both abroad and at home. They saw, that the king was past middle age; and that on his death the succession must devolve to the Prince and Princess of Orange, two zealous Protestants, who would soon replace every thing on ancient foundations. Vows therefore were offered at every shrine for a male successor: pilgrimages were undertaken, particularly one to Loretto, by the Duchess of Modena; and success was chiefly attributed to that pious journey. But in proportion as this event was agreeable to the Catholics, it increased the disgust of the Protestants, by depriving them of that pleasing, though somewhat distant prospect, in which at present they flattered themselves. Calumny even went so far as to ascribe to the king the design of imposing on the world a supposititious child, who might be educated in his principles, and after his death support the Catholic religion in his dominions. The nation almost universally believed him capable, from bigotry, of committing any crime; as they had seen, that, from like motives, he was guilty of every imprudence; and the affections of nature, they thought, would be easily sacrificed to the superior motive of propagating a Catholic and orthodox faith. The present occasion was not the first, when that calumny had been invented. In the year 1682, the queen, then Duchess of York, had been pregnant; and rumours were spread, that an impostor would, at that time, be obtruded upon the nation: but happily, the infant proved a female, and thereby spared the party all the trouble of supporting their improbable fiction.

#### THE SPEAKER.

(From the Morning Post.)

Our Whig-Radical contemporaries assure their readers that there is no doubt whatever of the election of Mr. Abercromby to the office of Speaker. We are persuaded, however, that they do this in pursuance merely of the established system at all contested elections, where the invariable rule is for each party to be quite certain of success until the final state of the poll determines which of the two had made the more accurate calculation of their strength. We should feel bound to disbelieve the confident statements of the supporters of Mr. Abercromby from respect to the character of the new House of Commons, of which that statement is a direct impeachment, had we no other reason to advance for our incredulity. But we have in addition to this the best direct authority in contradiction to the bold assertions of our contemporaries. From the express declarations of members of parliament as to the course they mean to pursue upon this occasion, it is quite certain that Sir Charles Manners Sutton will be elected Speaker by a decided majority.

The subject of the comparative qualifications for the chair of Sir Charles Manners Sutton and Mr. Abercromby was never a very difficult or complicated one, and it has long been exhausted. To that

subject, therefore, we do not at present mean to revert. But we cannot refrain from directing attention to the letter addressed by Mr. W. Hughes Hughes to an evening contemporary, which we have inserted in another part of our paper. This communication sheds much new and valuable light upon the history and character of the opposition so factiously and absurdly got up to the re-election of the Speaker who presided over the deliberations of the last and several former parliaments with equal honour to himself and advantage to the House of Commons and the country.

This letter informs us by what means the leaders of the opposition contrive to keep up the spirits of their party. Mr. Hughes Hughes had been described by some of the Whig-Radical organs as one of "the most determined foes to Sir Charles Manners Sutton." But no sooner does that gentleman hear of the calumny than he hastens to repel it. How many members of the House of Commons upon whose anticipated support the Abercromby faction found their pretended expectation of success will wait for the division rather than take any intermediate step to repel the slander or dissipate the delusion? A number which will occasion, if we are not greatly mistaken, a very serious and fatal defalcation in the estimated ranks of the faction. But Lord John Russell and the other leaders knew that Mr. Hughes had never given them any reason to expect his support to their factious manœuvre; as a proof of which the gentleman in question very properly adverts to a canvassing circular which was sent to him so recently as Monday last by Lord John. Why were the organs of the faction permitted to remain ignorant of what the leaders knew so well? Why, but to inspire false hopes in the former, and to make them better instruments than they could otherwise be of the temporary deception it is intended to practice upon the public? The circular letter of Lord John Russell, canvassing for votes, will remind the public of a declaration put forth by the party but the other day, to the effect that solicitation had not been employed to promote the election of Mr. Abercromby; and in reminding them of this it will also remind them that the professions and the conduct of the Radicals and low Whigs are never by any accident in accordance with each other.

The fact to which Mr. Hughes adverts, of the clause in the House of Commons' Officers Bill, introduced within a fortnight of the termination of the last session expressly as a testimony to the able and excellent manner in which Sir Charles Manners Sutton had discharged the arduous duties of the Chair, is pregnant with instruction. In this complimentary enactment the House of Commons unanimously concurred. It has the tacit assent of the whole Whig cabinet, and the declared assent of one of their number, Mr. Spring Rice. "What," we ask, in the significant language of Mr. Hughes, "has since occurred to justify a change of sentiment on the part of any gentleman?"

Mr. Hughes refers with great felicity and propriety to the meritorious exertions and sacrifices made by Sir Charles Manners Sutton on the occasion of the late conflagration, speaking upon these subjects with the authority of an eye-witness. But we suppose the Whig-Radical faction regard exertions and sacrifices in the public service as a personal disqualification, unless these exertions and sacrifices have been eminently conducive to their own convenience or advantage. This is the plain inference from their vote at the conclusion of the last session of parliament when contrasted with their present conduct.

## THE POOR LAW BILL.

*(From the Times.)*

We refer our readers to an article which we have copied from a Sunday paper, and which appears in another column under the head "Effects of the New Poor Law Act." It will be seen that persons whose character and reputation place them above suspicion—they are Colonel NAPIER, Admiral TROLLOPE, Captain BURT, and others—appealed to the magistrates of a certain provincial district to relieve some unhappy paupers from the cruel treatment to which they were subjected by an assistant overseer. The magistrates, it seems, found that under the heartless Poor Law Act, they had no power to remedy the shocking evil to which these humane gentlemen had called their attention. That unchristian law—really and in fact more horrible than the romantic obligation of *Shylock's* bond—required that a resident gentry and magistracy should stand by and see their fellow-creatures suffer or perish—the law restraining these natural guardians of the poor from alleviating their pains or saving them from death. All they could do was to apply to the Central Board in London. We need hardly say that they had recourse to this forlorn hope without delay. But what was the reply from the London tribunal, that holds in its hands the life or death of every stricken pauper in the provinces? Why, that "the engagements of their assistant Commissioners were at that time so urgent, to meet the demands of their services in other parts of the country, that *no one* of them could be detached to investigate the case." Thus, we are to have the poor perish from ill-treatment, because our late Ministers and late Parliament would commit to a few persons in London the regulation of every parish in England and Wales! The Commissioners did indeed send papers to the parish-officers—ay, copies of the of the charge that they were killing or suffering their fellow-creatures to die when human aid could save them! Papers on such a subject! And the Commissioners received answers to the papers they sent. What answers? The narrative states that they were "unsatisfactory;" and so at last an Assistant-Commissioner, a Mr. MOTT, was dispatched from the Central Board; but mark, Christian reader, "two of the paupers died shortly before the arrival of the Assistant Commissioner." Coroner's inquests were held upon the bodies of these wretched beings, and here are their verdicts:—Verdict on Harriet Minns—"That she came by her death by natural causes; but we find that there was culpable negligence on the part of the parish-officers in the first part of her illness, during her residence in the workhouse of the parish." Verdict on Thomas Hill the idiot—"By the visitation of God he came to his death; but the jurors are of opinion that if proper nutriment had been supplied to the said Thomas Hill, he might have existed longer; and they therefore pass a censure on the parish-officers."

We will not trust ourselves to comment upon this horrible occurrence. It is true that the Poor Law Act is a part of the law of the land, but there is nothing in morality, nothing in the custom of this country, which requires men to cease from exposing and calling for the repeal of a bad law. And so we deal with this execrable statute. That any but an heathen people should endure it long is utterly impossible, when cases like these occur, and the crime of infanticide, as the journals of each day demonstrate, is so fearfully on the increase. That this act must, in effect,

be repealed, we have no doubt; but at the same time, the fact that such a law did once exist in this Christian and civilized land will for centuries to come be a deep and damning stain both upon the Ministers that proposed and the Parliament that passed it.

## THE DISSENTERS AND THE MINISTERS.

*(From the Herald.)*

The *Edinburgh Review* of the present quarter contains an article on the subject of "*the Universities and the Dissenters*," a question, the discussion of which has given rise to the expression of much angry and acrimonious feeling. In the article alluded to, the reviewer, though he has exhibited considerable ingenuity and power in the mode of conducting his argument, has, to a certain extent, been throwing away his strength in refuting arguments, the grounds of which have long since been abandoned as untenable by all reasonable persons; his main object being to show that as great breaches of trust have been committed by the Universities they are not entitled to avail themselves of the defence set up for them by the Bishop of Exeter, Sir Robert Inglis and others—viz., that, "*as public trustees, they ought not to be superseded without proof of negligence or abuse of their duties.*" The failing to establish such proof we consider to be immaterial; the real point to be considered in such a case should be, whether the Universities, the creatures of civil society, and which exist, like all other institutions, under and subject to the law, are productive to the community of the greatest degree of benefit of which they are capable. The principle cannot, we assume, be doubted that such institutions not only may be, but should be reorganized, or otherwise reformed, whenever their own inefficiency, or the interests of the country at large, renders such a measure expedient.

Assuming, then, that the Legislature has the right (*potestas*), but also is able, in accordance with *quod jus et fas est*, to make regulations for the compulsory admittance of Dissenters into the Universities of Oxford and Cambridge, the question is, can such a regulation be carried into effect without injuring the efficiency of the Universities as places of education, but more especially as places for the instruction of those intended to be Ministers of the Established Church?

To any claim (*as a claim of right*) we, in unison with the sentiment expressed by Sir Robert Peel in his Tamworth declaration, are opposed. It is true that the House of Commons carried the question of admission by two large majorities during the last Session; but it is observable while 321 voted for the second, 184 only voted for the third reading of the Bill alluded to, showing somewhat strongly that its supporters did not increase in consequence of the discussion the subject underwent. It is true also that little information or sound argument was introduced into the debate itself, and perhaps a subject less suited for popular debate and the consideration of such a tribunal as the House of Commons cannot well be conceived. After attending to the debates, however, and giving the question a calm and unbiased consideration, we were compelled to come to the conclusion that the admission of the Dissenters into the Universities in the manner proposed would have been detrimental to the Universities; and it appears clear to us that the retaining religious instructions as part of the course of education there pursued is utterly incompatible with a state of things allowing Dissenters the right of being members of the same College or Hall with students of the Church

of England. The inevitable result would be the infliction of a very severe blow upon the power of maintaining the requisite discipline of the Universities, and that acrimonious religious strife, and theological controversies, especially amongst the students, would too often intervene, to the interruption of the peace, as well as the literary pursuits and studies of the University.

Two further plans in order to afford relief to the Dissenters have been proposed—viz., to allow the Dissenters to establish a University, or, more strictly speaking, a chartered college in London for themselves, or that they should be permitted to found new and separate Colleges or Halls in Oxford and Cambridge. To the latter plan there exist difficulties, with which, we confess, it is by no means easy to grapple; but to the former we see not only no objection, but we consider it one which it is most desirable in every point of view should be adopted; and we would here observe, that without meaning to justify to the full extent such expressions as “sectarian bigotry,” “blind intolerance,” and “grasping monopoly,” we think that scarcely any reproach can be too severe upon the conduct of the two Universities in resisting in the manner they did the fair and just claims of the Dissenters to obtain a Chartered University. It is true that the steps which are now taking with respect to the professions both of the Law and Medicine will obviate some of the hardships under which so many conscientious persons now labour; but still we think that, considering the number, wealth, and intelligence of this large body, their having a University for the purpose of conferring degrees and other honours should be no longer denied to them.

COMPLETE LIST OF THE MEMBERS  
OF THE HOUSE OF COMMONS,

STATING HOW EACH VOTED ON THE ELECTION  
OF SPEAKER.

[Those marked *a* were absent.]

## TO THE EDITOR OF THE "FARMERS' MAGAZINE."

Cottesmore, near Stamford.

Sir,—I was much pleased in looking over your Magazine for February, to see an engraving of Ransome's ploughs, with the description you have given on the first page. I also observed that you noticed one plough in particular of theirs, in a recent number of "The Mark Lane Express," which was made expressly for the county of Rutland; if you should be inclined to notice it in "The Farmer's Magazine" also, I have no objection to your inserting this letter, should you deem the remarks therein contained of any value to your readers.

As the most important implement used in husbandry, the plough must always be a subject of interest to the agriculturist. It has been my object to excite a lively interest in its use, from the owner of the land, to the tenant, the ploughman, and ploughboy. To effect this object I have, for many years past, given, throughout Rutland, encouragement in competition in ploughs and ploughing, by annual ploughing matches, which have produced an interest from the nobleman to the peasant, and spread its stimulating influence over the minds of those engaged in agricultural pursuits throughout the year.

For the last few years there have been from forty to fifty competitors in ploughing, for prizes at the Cottesmore Annual Ploughing Matches. The participation in the pleasure in these trials of skill has been very considerable. The neighbouring villages have been emptied of the peasantry to witness the scene; whilst ladies and gentry, in their carriages or on horseback, with many hundreds of spectators on foot, have given to these animating scenes a character of lively interest, that those who have not witnessed them can scarcely credit, and I am of opinion that meetings of this kind do an infinite degree of good to a county, when the gentry and farmers will do their part in supporting them with the small pecuniary contributions which are requisite for prizes, and more especially by their personal countenance and encouragement. My anxious wish for some years has been to advance by all means in my power the proper application of this valuable implement in agriculture in this immediate neighbourhood, which, generally speaking, was very much in the rear of good ploughing.

Upon first turning my attention to the subject, I thought it necessary to excite a spirit of emulation, both in master and men, and by degrees destroy the strong rooted prejudice in favour of antiquated ploughs, slowness of movement, horse-power badly applied, &c. &c. Under these impressions an annual meeting was established under the patronage of a few persons of consequence, both in property and discernment, convinced of

what it was possible to do. A pair of horses abreast, without a driver, was introduced, depth of ploughing, the time stated as necessary to perform the work fixed, &c. This to a certain extent did much good, but a difficulty occurred that puzzled me much how to find two ploughs that would do their work alike upon the same land, and it never was in my power to discover a remedy with our country plough-makers. The plough made by Ransome, No XVIII., in the Magazine, called the Bedford wheel-plough, partly served my purpose, and succeeded in ploughing land in dry weather, when all other ploughs refused their work. I became well convinced that I had found out the right sort of ploughmaker, though not the sort of plough that I thought would be of general and essential service in the neighbourhood. I wanted a simple implement, easy to regulate and understand, yet strong, and above all, *light* of draught. My attention has been from time to time, as a matter of necessary consequence, much directed to the construction of ploughs suited to our local purposes, and I think we have now arrived at the conclusion, that in the "Rutland plough, made by Ransome," we have an implement best adapted for our use; this plough has become a general favourite. It is light in draught, simple in its construction, and consequently easy to keep in order, and is economical to the user. I have seen boys not more than fourteen or sixteen years of age, handling it with a dexterity apparently beyond their years, and making such sound work as would not discredit ploughmen of long experience. Thus, by the united assistance, pecuniary and personal support of some good landlords, spirited and enlightened occupiers, industrious and well-behaved labourers and lads, and the combined efforts of a skilful and unequalled implement maker, has the ill-turned furrow and prejudice vanished from the neighbourhood, and with them hundreds of antiquated ploughs and other implements, which are replaced by the now more valuable and approved *Rutland plough*.

I am, Sir,

Your most obedient Servant,  
RICHARD WESTBROOK BAKER.

## THE OX.—IMPROVEMENT OF BREEDS.

The breed must be adapted to the means, natural or acquired, possessed of supplying food. Art and an improved system of tillage do much in supplying the food of herbivorous animals. By cultivation we can change the nature, and increase the abundance, of the food supplied. But in many cases, tillage is only practicable or expedient to a limited degree, and then the natural pastures of the country must furnish the main supplies of food. In a mountainous country, where the principal food is natural herbage, and where the means do not exist of obtaining artificial food, it

would be vain to attempt the rearing of a large and fine breed of oxen. We must, in such a case, be satisfied to rear a race, of hardy properties, of small size, and capable of subsisting on coarse herbage.

Where, again, art or the natural fertility of a country admits of supplying sufficient food, the study of the breeder should be to select a race of animals, the best that circumstances will allow him to rear.

Having fixed on the kind of breed which is the best suited to the circumstances of the district or farm, the practical question to be determined, is the manner in which a proper breed should be obtained, or the old one improved. There are three methods which may be adopted for this purpose:—

1. The entire change of the existing stock, and the substitution of a different breed, females as well as males.

2. The retaining of the old breed, male and female, and improving them by breeding from the best animals of the same breed.

3. The improving of the breed by crossing with males of a different breed.

When the nature of a farm allows, the most speedy and the best method certainly of attaining the object is to change the stock, and to substitute females of the improved one from which it is proposed to breed. In this manner the object will be attained at once, without the labour or loss of time of improving a defective stock.

The second method is the retaining of the existing stock, and improving it by a selection of the best individuals of the same breed. This is the method which ought to be adopted if the breed already existing is sufficiently suited to the natural circumstances of the farm, and to the method of cultivation which can be pursued upon it.

The third method is that of crossing, that is, the retaining of the females, and the employing of males of a different breed. This method has often led to disappointment, from the nature of the crosses attempted, especially where the crosses have been violent, as between animals of very different characters. The first cross in general will be good, but in breeding from the progeny of this cross, expectation will often be disappointed. Not only do the good qualities of the first cross not always remain in the progeny, but often there are found in it defects which cannot be traced to the parents.

This, however, generally arises from injudicious crossing, and from unacquaintance with the principle on which the crosses of different animals should be conducted. When a cross is made, it should be with a male of a superior breed; and in this case the first cross will be almost always a good animal. To secure the benefits of the cross, however, we should not again resort to the males of the inferior stock, because it might be found, that, while we had injured the original breed, we had not substituted a better in its stead. The rule, therefore, should be, to cover again the first cross with a superior male of the same breed, and so on, until the good character of that breed became permanent in the progeny. This is said to be breeding up to the superior stock.

In crossing, the essential characters of form are imprinted on the offspring by the male; and it is surprising in how great a degree this imprinting of better characters takes place when a male of superior breeding is employed. A first cross between a short-horned bull, for example, fully bred, and a very ordinary cow, produces, not only often, but generally, a fine animal, with an extraordinary aptitude to fatten. Many of

the very fat animals that receive premiums at the cattle-shows in this country, are extreme crosses of this kind. But the benefit may end with the progeny, if we do not again cover with a male of the same superior breed, and so on until the good characters become permanent.

When a breeder, then, is to improve his stock by crossing, he ought to select a male of undoubtedly superior blood. And he should not generally, after the first cross, resort to the males of the defective breed, but to those of the superior one, until he has formed, as it were, a breed for himself. There are, indeed, numerous cases in which a single mixture of better blood will do good, as with those inferior breeds which have no fixed characters. These will be improved by even the slightest intermixture with the blood of a better race; and a farmer who is in a district where this class of animals prevails, may safely avail himself of a good male, in the same manner as a breeder of horses would do, although the stallion were of a different character from the native stock. The cases where crossing of any kind is to be attempted with caution, are when a breed of established good characters, or of characters which fit it for the nature of the country and the state of its agriculture, already exists.

In crossing, then, the rule is, to breed from a male of superior stock; and, fortunately, in this country we have now a breed of such established character, that no mistake can arise in the selection of males. These have been formed to our hands, with all the care that art can bestow in improving the form of feeding animals. There is no need, therefore, for those mistaken attempts at crosses which were sometimes made with males of questionable characters, as between an Ayrshire cow and a Galloway bull, and *vice versa*. We can predicate nothing securely of the progeny of such crosses as these, the effect of which will probably be to destroy the good properties of either breed, as the aptitude to yield milk of the Ayrshire, and the hardy and feeding qualities of the Galloway. But in crossing with a breed so highly cultivated as the short-horned, the breeder has the assurance that he will produce animals of large size and good feeding properties. He is to consider, indeed, whether he has the means at his command of rearing the larger animals; and if this be so, it will be better that he at once form his stock upon the best model, than run the hazard of wasting time and capital on questionable crosses.

And it must be regarded as highly important as a mean of improving the live-stock of Great Britain, that a breed has been actually formed, by long-continued selection and care, which may always be resorted to, to effect the purposes required, in the same manner as recourse is had to horses of known pedigree, to communicate their characters to the progeny. In this manner the labours of those who have improved the short-horned breed, have extended far beyond what the original breeders contemplated. They have not only improved a peculiar breed, but have furnished the most efficient means that can be used of improving the live-stock of the entire country; and it is to be trusted that the breeders of this class of animals will have encouragement to maintain the characters of the breed with as much care as is used in the case of the race-horse, seeing that it is for a far more important object.

But having selected the breed, or having fixed on the means to be employed for forming it, a point to be determined is the manner of maintaining or improving

it, by the selection of good individuals, male and female; for it is to be observed, that it is equally determined, in the case of the ox as of the horse, that the properties of the parents are conveyed to the offspring. The male undoubtedly acts the principal part in impressing his characters on the young. But the form of the female is of the utmost importance; and if we hope to arrive at success in breeding, the form and characters of the female must be no more neglected than those of the male.

Now we might breed either from animals nearly allied to each other in blood, as brothers and sisters, parents and their offspring, technically termed breeding in-and-in, or from animals of different families. By the latter method are produced animals more hardy and less subject to disease; by the former, we are frequently enabled to produce animals of more delicate form, and greater fattening properties, and above all to give a greater permanence to the characters of the parents in the offspring. It is known, that Bakewell and other breeders were enabled, by this system, to give and perpetuate the peculiar characters of their stock. These first improvers, indeed, found the practice to be, to a certain extent, necessary, because they could not resort to the males of other families, without employing inferior animals, and so impairing the properties of their own breed.

It is to be observed, that the breeding and continuing to breed from animals very near of blood, produces animals which have a greater tendency to arrive at maturity, and to become fat. This seems to result from a tendency to premature age in the animal, which thus more quickly arrives at its maturity of bone and muscle, and so begins sooner to secrete fat.

The system, however, of breeding from animals near of blood, has its limits. Nature will not be forced too far for our purposes. It is known that, although this joining of animals closely allied diminishes the size of the bones, and gives a tendency to fatten to the progeny, it renders them also more delicate and subject to diseases. Although, then, this near breeding may be carried to a limited extent between very fine animals, for the purpose of rendering their qualities permanent in the offspring, we do a violence to nature when we carry it too far. The progeny, along with their early maturity and aptitude to fatten, become feeble; the cows cease to secrete milk in sufficient quantity to nourish their young; and the males lose their masculine characters, and become incapable of propagating their race.

When, therefore, the stock of any farmer has become too nearly allied, he ought not to fail to change his males, and procure the best of the same breed. This is essential to preserve the health of the stock for any time. Great losses have been sustained by breeders who have carried the system of close breeding too far, with the design of pushing the improvement of their breed to its limits.

A character of a breed not to be neglected, is size of the individuals. Although large animals consume more food than small animals of the same species, yet they do not consume food in proportion to their greater size; and hence the benefit of rearing the larger animals, if the natural or acquired productiveness of the farm will allow it. But although size be an important element in the character of a breed, there is another property to which that of size is subordinate, namely, that of a disposition to quick fattening and early maturity. This property depends not on size, but on a different class of characters.—*Low's Agriculture.*

## ON THE WAGES OF AGRICULTURAL LABOUR IN FRANCE AND THE UNITED KINGDOM, AND THE INFLUENCE OF THE CORN LAWS ON PROFITS AND WAGES.

(From the Times.)

In *The Times* journal of the 7th instant there is an article under the head of "Comparative price of Corn and Labour in Europe and America," and having the signature of "The Pilgrim in Europe,"\* on which we crave leave to make a few observations.

The writer begins by glancing at the quotations of the prices of corn in different parts of Europe, which appear weekly in *The Times*, and then remarks "that it has occurred to him that a well-authenticated account of the comparative price of labour in the same countries might give rise to correct and just views of the various points which bear upon the all-important subject of the corn-laws, and will tend to elucidate the advantages or disadvantages of a free trade in that great staple commodity."

Now, in our judgment, this matter requires no elucidation whatever, and to a common thinker every proposition which really and truly has a bearing on the corn trade must always appear self-evident; or, at any rate, of so easy demonstration that we may arrive at sound conclusions without any very great labour of thought, or long circuit of deduction; for, first, it is certain that the average price of corn in this country is double the average price of the rest of Europe; next, it is equally certain that the price of manufactures in this country are much lower than in the rest of Europe; and, lastly, it is notorious that there is a very large exportation of British manufactures to all parts of the world. And from these premises it follows—

That if we were allowed to import cheap corn in exchange of cheap manufactures, this would greatly increase the demand for our manufactures, by furnishing the foreigner with new and considerable means of barter in a commodity which has hitherto been interdicted.

By increasing the demand for our manufactures there would be a rise in the rate of manufacturing profit, consequent on a greater demand for capital, and there would also be a rise in the wages of the manufacturing labourer, consequent on a greater demand for his labour; and as there would be at the same time a fall in the price of corn, the real virtual profit of the one, and the real virtual wages of the other, would be increased in a still greater proportion; both master and man would gain more money, and every penny of this money would command an increased quantity of the necessaries of life. And therefore, if we suppose the rise in the money wages of manufacturing labour consequent on a free trade in corn to be 10 per cent., and the fall in the price of corn to be 50 per cent.,† and that the labourer expends three-fourths

\* The article alluded to appeared in the last number of the Farmer's Magazine.

† It should certainly seem to be a great mistake to suppose, as some do, that there would be no fall in the price of corn consequent on a repeal of the corn laws, because not only is it clear in reason that the fall would be considerable, but the question is already determined by the fact.

Holland is a mere bog, and grows but a small proportion of the corn which is consumed by its inhabitants.

of his wages in the purchase of food, this would altogether be equal to a rise of  $92\frac{1}{2}$  per cent. on the whole of his present wages of labour; and as a reduction of 50 per cent. in the price of a commodity is tantamount to an increase of 100 per cent. in its quantity, so does it follow that with that portion of his wages (be it more or less) which the labourer devotes to the acquisition of food he will be able to purchase double the former quantity.

Now, not one word of all this may be brought into doubt or controversy, for there could be no decline in the price of the raw material of a manufacture consequent on an increased demand for the wrought article, but the reverse; there could be no decline in the price of the wrought article consequent on an increased demand for this article, but the reverse; there could be no decline in the profits of the manufacturer consequent on an increased demand for his commodities, but the reverse; and there could be no decline in the wages of the labourer consequent on an increased demand for his labour, but the reverse; and therefore it is every way manifest that a free trade in corn, by reducing the price of food, would not only virtually increase the income of every member of the community, but that it would also somewhat raise the prices of manufactured products, and increase the profits of the manufacturer and raise the wages of manufacturing labour.

It would in the same manner increase the profits of the farmer, and raise the wages of the agricultural labourer, and for this reason—that with that fall in the price of corn which would be consequent on a free trade in the commodity, the reduction in the rent of land would be not merely proportionate, but to the whole extent of the fall; and then it is as evident as mathematical principles, that this state of things must induce a new relation between the landlord and the tenant, which is greatly to the advantage of the latter; and therefore it is past all doubt that low prices and low rents being greater and surer gains to the farmer than high prices and high rents.\*

bitants; and yet the average price of wheat in Holland for a series of years does not exceed 35s. the quarter, and the present average price does not exceed 26s. the quarter. If Holland then, without mines and minerals, and with but few manufactures, by allowing a free trade in corn, can obtain this commodity at so low a price, what question is there but that England, with her immense resources and advantages in manufactures and various kinds of raw produce, would be able to obtain corn on still lower terms than Holland; and, therefore, it is fair to presume that with a free trade in corn, the average price of wheat in this country would rule from 30s. to 35s. the quarter.

\* This is established by the fact. The average price of corn is low in Belgium, but the land being generally good, and the rent comparatively low, the farmers are all well to pass; every one of them has a purse of gold and silver in his house, and nobody comes to them twice to demand payment of his account. In the two Pomeranias, in Mecklenburgh, and generally on the south-western coast of the Baltic, the average price of wheat for a series of years does not exceed 26s. the quarter, and yet the farmers are wealthy men, and the labourers are in a happy and prosperous condition; a glass of pure corn spirits may be had for a farthing, and a can of beer for an old song, and there is not a single beggar in the whole country.

The same advantages would accrue to the agricultural labourer, and there would be a rise in his real wages commensurate with the fall in the price of corn, and there would probably also be a rise in his money wages, all which rests upon this foundation—that the only regular permanent fund for the payment of wages being profit, it is a clear consequence that the greater the profit on capital, the higher will be the wages of labour; and then in the case under our present consideration, the farmer obtaining the same quantity of corn from a diminished outlay of capital, and of the quantity so obtained a much larger proportion remaining over in consequence of the reduction in the rent of the landlord, it is visible that there is more to be divided between the farmer and his labourers, and therefore the one makes more profit, and the others, as a consequence, get more wages.

There would be another cause of increase in the wages of agricultural labour, and that is, the great fall in the rent of land which would be consequent on the fall in the price of corn; for how would it be possible to get a man to work at low wages, when he might gain a plentiful subsistence by working a plot of cheap ground on his own account? It is the cheapness and abundance of land which occasions the high wages of agricultural labour in America.\*

And now, by what has been said, it is sufficiently manifest that there would be no decline in the price of any other commodity consequent on a decline in the price of corn, and that the profits of both the manufacturer and the farmer would be increased; that the wages of labour, both manufacturing and agricultural, would advance; and that in consequence of the reduction in the price of food, the income of all classes of the community would be virtually increased. In fine, none would lose but the landlords, and what they would lose is very far from equivalent to the loss sustained by the community under the present monopoly. The tax which this monopoly imposes on the community cannot amount to less than 60,000,000*l.* per annum; and of this sum, it is probable that from 20,000,000*l.* to 25,000,000*l.* enters into the pockets of the landlords, and the rest is wasted by unprofitable labour, and in the perversion of a great part of the land of the country from its proper uses, and in growing corn at an immense expenditure of labour and capital on poor hungry soils which nature designed for other purposes.

Now, this sum of 60,000,000*l.* per annum, be it repeated, is a sheer tax, arising solely from that dearness of food which is the consequence of the corn laws: but there is beyond this a great and signal injury, from the circumstance, that by in-

\* There is little doubt that consequent on a repeal of the corn laws land would be very cheap in this country, and this for the following reasons:—To import corn is virtually to import land, and to have the power to import cheap corn is virtually to have the power to rent and cultivate cheap land; and, therefore, if we just reflect on the immense means for the importation of foreign corn which our present exports of manufactures place at our disposal, and if we again consider that these means would regularly increase in consequence of the increased demand for our manufactures, who can doubt that there would be a large and regularly increasing importation of foreign corn? And then land would become cheap and abundant, and the poor Irish peasant, who now pays a rent of 5*l.* and 6*l.* and 8*l.* an acre, would obtain the same land for as many shillings.

terdicting the importation of the most considerable and useful and necessary of all commodities in return for our manufactures, we set limits to our industry, we diminish the demand and consumption in the foreign market of our manufactures, and diminish profits and wages. And therefore, first, our energies are cramped, and our income is reduced, by the interdict on the importation of corn; and next, this income is rendered less efficient by that dearness in the price of food which is the consequence of this interdict. And so we lose and suffer every way by the cause, and by the consequence, which in turn also becomes a cause.

The tax being 60,000,000*l.* per annum, and the number of persons engaged in agriculture being one-third of the population, it is clear that their proportion of the tax is 20,000,000*l.* per annum, and here they suffer and pay in their capacity of consumers in common with and in proportion to the other classes of the community; but with them the matter does not rest here, they suffer also as producers by the diminution of the profits of the farmer and the reduction in the wages of the labourer, and therefore, when considered in their twofold capacity of producers and consumers, the injury inflicted on them by the corn laws cannot fall short of 25,000,000*l.* per annum; and yet the poor creatures are assured, and verily believe, that they have no concern whatever in the matter, and that the question lies solely between the landlords and the other classes of the community; whereas it is plain at first sight, that, as consumers of food, they have precisely the same interest as every other class, and that as producers they have a special, distinct, peculiar interest in the question, which does not attach to any other class of the community, and, therefore, of all men in the world the question is to them of the greatest concernment.

From what has been said it must be evident to every man who will hear reason, that a repeal of the corn laws and a free trade in corn would be highly beneficial to every class of the community, and this without the least reference to the wages of labour on the continent: at the same time, however, it is manifest that the same cause which in the present instance raised the wages of labour in England would also raise the wages of labour on the continent, seeing that if one country produces cheap corn and another cheap manufactures, and that the corn of the one be freely exchanged for the manufactures of the other, it is precisely the same as if each country produced both cheap corn and cheap manufactures; and, therefore, as the real wages of the British labourer would be increased by the reduction in the price of food, so would the real wages of the foreign labourer be increased by the reduction in the price of clothing, and in the same way that an increased demand for British manufactures would occasion an increased demand for British labour, so would an increased demand for foreign corn occasion an increased demand for foreign labour. In a word, the interchange of commodities between two separate independent nations relies on the same principle, and is productive of precisely the same effects, as the interchanges between two individuals of the same nation; for let one man have great skill as a hatter, and let another have the same skill as a shoemaker, and then let the hats of the one be exchanged for the shoes of the other, and there is immediately a mutual transference and communication of skill, and the skill of the one vests and inheres in and becomes the property of the other,

and so that virtually, adequately, and to all real purposes, it is precisely the same thing as if each was both hatter and shoemaker.

We will now examine what the writer says on the subject of wages on the continent of Europe and in America, and which he compares with the wages which obtain in England; and here it should seem that the following preliminary observations are necessary:—

1. That in all questions concerning the wages of labour the efficiency of the labourer, his skill, energy, and perseverance, must be taken into the account—that is, the quality of his work, how much work he can do in a given time, and how long he can work without pause or intermission. Now, in all these respects, and in all the ordinary occupations and employments which require a combination of skill and strength, the labourers of the United Kingdom are, we believe, superior to those of any other nation; they turn out better work, they do more work in any given space of time, and they work longer without rest or intermission: on all these accounts, therefore, they are entitled to more wages than a foreigner for the same number of hours of labour. The precise value of the difference it is perhaps hard to appreciate, but it cannot, we conceive, be less than 15 per cent.

2. That every true comparison being between things of the same kind and in the like circumstances, it is always a mistake to compare the wages of labour in a free and industrious community with those which obtain in a land of slaves and serfs and under a despotic Government, and therefore the wages which obtain in one free and industrious community must be compared with those which obtain in another free and industrious community; and then the comparison lies between the United Kingdom on one side, and France, Holland, Belgium, and America on the other.

3. That as at least three-fourths of the wages of the agricultural labourer are expended in the purchase of food, so is it clear that his real wages must for the most part depend on the price of food, and therefore, in comparing the money wages of labour in different countries, the price of corn in each country respectively must be taken into the reckoning, and then, as corn is more than any other commodity subject to great and continual fluctuations, and that, with a bad harvest, the price of corn, it may be, will be higher in an ordinarily cheap country than it is in an ordinarily dear country, with a good harvest, so must we not take the prices of any one particular year as a standard of comparison, but it must be the average price of a series of years in each country respectively; thus the average price of wheat in England, for instance, during the last year has been between 40*s* and 50*s* the quarter, and the average price in 1822 was 43*s* 3*d* the quarter, but the average price during the 14 years from 1820 to 1833 inclusive was 59*s* 11*d* the quarter, and the average price in France during the same period was 17*l.* 80*c.* the hectolitre, which equals 40*s* 4*d* the quarter, and therefore if, which is the only true method, we take a series of years, the average price of wheat in England is in round numbers 50 per cent. higher than in France.

4. Not only must the price be considered, but the quality of the corn of each country respectively must also be taken into the account. Now, the best bread at Paris and in the large towns in France is better than the best bread in London and the large towns in England; and the best flour at Paris and the large towns in France is better than the

best flour in London and the large towns in England; and therefore the best French wheat is better than the best English wheat, and therefore the average quality of the wheat in France is better than the average quality of the wheat in England; and if we then consider that the Scotch, and particularly the Irish wheat, is greatly inferior to the English, we shall find no difficulty in coming to the conclusion that the average quality of the wheat in France surpasses that of the United Kingdom, at least 10, and probably 15, per cent.

5. Independent of the price and the quality of the corn, the mode of taking the average in each country respectively must also be had in remembrance and consideration. The ancient practice in England and Wales was to make up the averages of corn from the sales made in the maritime districts only, and all Irish and Scotch corn was excluded from the account; but in the new corn law of 1828, the crafty landlords, with a view to reduce and keep down the average, and thereby shut out the importation of foreign corn, contrived to have it enacted, that not only the sales of corn in the inland markets of England and Wales, but that the Irish and Scotch corn should also enter into the averages, and these alterations have the effect of depressing the average prices of wheat, as compared with the period anterior to 1828, at least 5s the quarter, and in proportion for other grain; and therefore when the average price of wheat is now stated to be 41s the quarter, this under the former mode of taking the averages would be at least 46s the quarter, all which must be borne in mind when we compare the average prices of corn subsequent to 1828 with those before that period.

The French averages, on the contrary, for the whole of that large and populous country, are drawn up from the sales made at the very small number of only twenty-six places, and these for the chief part capital towns and cities; and this has important results; for, first, it is certain that the corn consumed in large cities will be much superior to the average quality of the corn of the whole country, and next, it is equally certain that the price, whatever the quality, will be higher than in the places of growth in the interior, because the corn comes loaded from thence with charges of transport.

Wherefore, the mode of taking the averages in England tending to show a low price of corn, and the mode of taking the averages in France tending on the contrary to show a high price, this establishes a great difference in the respective results, and in a sober and impartial view of things it is plainly impossible to estimate the value of the difference at less than 10 per cent.

There being then 10 per cent. difference between the quality of the wheat of the united kingdom and that of France; another 10 per cent. difference as resulting from the different modes of taking the averages; and, finally, the result of the averages of both countries as it now stands, and according to the present mode, establishing the fact, that the average price in England for a series of years is 50 per cent. higher than in France, this makes altogether 70 per cent. that the average price of wheat in England is higher than in France, and indeed, were things to be nicely weighed and computed, the difference would be 80 per cent.

All this being laid down, proceed we now to compare the wages of agricultural labour in England with those of France.

The "Pilgrim in Europe" states the wages of agricultural labour in England to be 10s a-week,

in which, however, he is most assuredly mistaken. The average wages of agricultural labour in England and Wales throughout the year are probably not more than 8s a-week; and this, if we suppose the labourers to be in full constant work; whereas, if we take into the reckoning those who, failing regular work, are employed by the overseers of the poor in road-making and other matters at very low wages, this will of course reduce the average. The average, then, if we even abstract from the beforementioned consideration, we take, as already said, to be 8s; but it certainly does not exceed 9s a-week. The average wages of agricultural labour in Scotland are probably less than 7s, and certainly not more than 8s a-week; and with respect to that miserable landlord-ridden country Ireland, the average wages of agricultural labour are probably under 5s, and most certainly do not exceed 6s a-week. This being laid down, if we now take the population of England and Wales at 7-12ths, that of Scotland at 1-12th, and that of Ireland at 4-12ths of the entire population, this will give 7s 11d a-week for the average wages of agricultural labour throughout the united kingdom.

As to the wages of labour in France, the "Pilgrim in Europe" is equally mistaken. The average wages of field labour in France may very safely be set down at from 10 to 12 francs a-week, and from the circumstance that since 1832, there has been a considerable rise in the money wages of every description of labour in France, and this in face of a great fall during the same period in the price of corn, we are justified perhaps in saying, that according to a prudent and careful estimation of things, this is a low average, but as we wish to keep within bounds, we shall put down 9 francs, which at the par of exchange makes 7s 2d a-week for the average wages of agricultural labour in France.

It therefore appears that the money wages of agricultural labour in the united kingdom are 11 per cent higher than in France, but the price of corn being at the same time 70 per cent. higher, this leaves a balance of 59 per cent., that the real wages of agricultural labour, that is, wages computed in food, are higher in France than in the united kingdom; and then we lay entirely out of view the superior skill and energy and perseverance of the British labourer, and which, for the same kind and the same number of hours of labour, entitle him to higher wages than the Frenchman.

The same comparative disadvantage attends the British labourer in other respects. The taxes in France are heavy as well as in England, but in England so great a proportion of the public revenue derives from taxes on commodities that the rest in comparison is hardly worth the considering; whereas, in France the taxes on commodities are comparatively light, and a great part of the public revenue derives from direct taxation; and, therefore, apart from the greater cheapness of the necessaries of life, the Frenchman is able to command many little comforts and enjoyments which are utterly beyond the reach of the British labourer, and indeed such in this respect is the happy state and condition of things in France, that a man and his wife and four small children may, if they be so minded, get blind drunk for sixpence, and this upon neat genuine liquor. The French, however, are sober to a proverb, and, therefore, the cheapness of strong drink, and the facility with which it may be obtained, are not *per se* the occasion of in-

ebriety, and this vice must have other causes and adjuncts. For the rest, the general appearance of the agricultural labourers in France, as compared with that of the same class in the united kingdom, sufficiently indicates the great superiority of their state and condition.

Thus much concerning the average wages of labour in France as compared with the united kingdom, and if we can find opportunity, we will hereafter make a few observations on the wages of labour in America, and on other matters connected with the subject of wages.

## TO THE EDITOR OF THE 'FARMER'S MAGAZINE.'

Sir,—Your correspondent, alluding to an article from a Constant Reader (in your last edition), says, "lest the fallacious arguments, in your last, should bias any one, I will state the case at issue."

I trust I shall be able to shew the fallacy of your correspondent's figures, when he states the amount of malt at 32,000,000 bushels, which he calls 8,000,000 quarters, and having made all his very erroneous calculations therefrom, the whole proofs he brings forward is perfectly untrue. The following statement of the actual charge on malt for the year ending October, 1833, will prove his errors—

| Quarters.      |                                       | £          | s. | d. |
|----------------|---------------------------------------|------------|----|----|
| England..      | 4,242,279 qrs. at 20s.<br>8d per qr.  | 4,383,688  | 6  | 0  |
| Scotland..     | 530,365½ Barley, 20s<br>8d, Beer, 16s | 523,539    | 8  | 6  |
| Ireland ..     | 247,954½ qrs at 20s 8d....            | 246,347    | 4  | 9  |
| 5,020,599½ qrs |                                       | £5,153,574 | 12 | 3  |

It is well known the above sum is what was received into the Exchequer, and the amount of quarters, is the total of malt made which pays duty, this is, therefore, a fact that nothing can controvert, malt made with or without duty would have the same expences in regard to manufacture, delivery, interest, &c., therefore the fallacy of calculating on any saving on that head, as the farmer could no more be his own maltster, than he could his own butcher, baker, and brewer, without creating an expense; again, the monstrous charge alluded to in collecting the malt duties of 8s. per pound sterling, is so truly ludicrous in the mind of any man who have a knowledge of business, it being long known that the malt duty from its amount being actually collected at far less expense than any other tax, since the repeal of the beer duty, yet we are not to suppose that it is now collected so cheaply as when in existence with the beer duty, as the number of officers could not be reduced within the same ratio: how your ingenious correspondent can possibly make out a saving to the country of 9,600,000*l.* from a tax of 5,153,574*l.* 12s 3d collected, I am at a loss to discover, unless he, like the soldier, can spend half a crown out of sixpence a day. Strongly suspecting your correspondent to be a native of the eastern part of the kingdom, he should be careful for the future not to mistake coombs for quarters. Should you be disposed to allow this a place in your valuable columns, you will oblige, Sir, yours, &c.

A CONSTANT READER.

dressing hedges twice and even sometimes thrice in one year; such a practice is very pernicious to hedges, as it weakens the growth and ultimately kills the plants, and consequently renders the hedge a useless and unsightly object, instead of being an ornamental and substantial fence, which a proper mode of management would seldom fail to procure. The proper season for dressing hedges of any kind is from the beginning of September to the first of April. When hedges are young, there should not be more of the young wood cut than what is supposed the frost would destroy during the winter. The same method should be pursued the second year also, excepting some of the tallest shoots which may only be reduced to an average level. By the time a hedge is three years old, it should be dressed on the sides, so as to make it straight or eye-sweet, but nothing more should be taken off the top shoots until such time as the hedge has arrived at its permanent height, which should seldom exceed four or five feet. The proper tool for dressing hedges is the bill or switching hook. Indeed hedge shears are now very properly almost out of use, except in some solitary instances, where old hands still retain their old prejudices.—*Third Report of Drummond's (Stirling) Agricultural Museum.*

## ON PUTRESCENT MANURES.—FARM-YARD DUNG.

Putrescent manure consists of all animal and vegetable substances which can be reduced through decomposition, fermentation, and putrefaction, into such a state as will render them fit to assist the melioration of the land, and to forward the purposes of vegetation. When combined, they form a saponaceous, solid mass of great nutritive power, well known to farmers under the common term of "muck," which, although a seemingly uncouth expression, conveys an idea distinct from that which is meant by dung. Of these, the most generally useful are composed of the excrements of animals; for that which passes through them is not composed alone of the residue of their food, but also of certain secretions of other matter in the intestinal canal, so that the dung even of those which are supported entirely on vegetables, partakes more of an animal than of a vegetable nature. The food on which they are supported, and their state of flesh, also make an essential difference in the quality of the manure. If the stomach of an animal be filled with provision which contains but little nutriment, and which is composed of fibrous matter which it is difficult to decompose—namely, straw alone, without grain—this will pass through the intestines in almost the same state as it was eaten. The dung will contain less of that secretion which belongs to animals whose flesh has not been deprived of its nourishing juices; though even this small quantity serves to give the straw a stimulus to putrefaction. But the excrement of animals which have been supported upon nutritive food—as corn and pulse, or the oleaginous seeds of rape and linseed, though given in the shape of cake—and which are thus maintained in high condition, imbibes muck of that property to which we have alluded, which thereby yields a more fertilizing manure than that furnished by lean stock. This, indeed, is strikingly exemplified by the difference observable in that produced by stall-fed cattle, and those kept in the straw-yard; and there can be no doubt that the fatter the animal the richer will be its dung.

DRESSING THORN HEDGES.—The season for dressing or switching thorn hedges is when the wood is fully ripe. I would on this part of the subject venture to deprecate the practice (which is too frequently followed in gentlemen's policies) of

It has been thought that the dung of ruminant animals—oxen and sheep—when pastured, is preferable to that of horses, also kept at grass, which is supposed to be owing to the greater quantity of animal juices secreted with their food in the act of chewing; but the fact requires to be established by a more minute and critical analysis of its properties. All animal manure, however, partakes in its fertilizing properties of the richness of the food by which it has been created; yet experience proves that its immediate powers are in several instances widely different, thus the ordure of a man and that of a dog, though fed upon the same food, is so wholly distinct in its effects, that the excrement of the latter is used instead of bark in the process of tanning goat-skins for the production of morocco leather. Pigeon's dung, too, is hotter than that of other fowls, though both are fed alike; and it is said that a celebrated foreign chemist—M. Vauquelin—has not only lately discovered a very remarkable difference between the dung of cocks and hens, but that there also exists a sensible distinction between those of hens which lay, and of those which do not produce eggs. However deserving those researches may be of inquiry, and however important they may hereafter prove, if followed up with regard to the larger animals, it would yet be difficult, and perhaps, under all circumstances, unnecessary, to state the differences of the comparative character and value of these and various other putrescible bodies—such as fish, spoiled flesh, and many other substances, which, though all, no doubt, useful to vegetation, when they can be procured on such terms as that the farmer finds they can be profitably applied to his purpose, are yet seldom found in such abundance as to require a separate account of the properties of each.

### AGRICULTURAL MEETING.

On Friday Feb. 27, at one o'clock, a public meeting of the Members of the Agricultural Association of West Kent, comprising most of the largest landowners in Kent, was held at the Rose and Crown Hotel, at Seven Oaks, for the purpose of deciding on the propriety of presenting petitions to Parliament for some speedy and efficient relief being granted to the agriculturists. Col. Austin was unanimously called to the chair.

The Chairman stated that they had been called together for the purpose of taking into consideration the best means of relieving the heavy pressure on the agricultural interests. He then read the following letters from the Members of the Western Division of the County, who had been invited to attend the meeting:—

"Dear Sir,—I have just received a printed letter informing me of the meeting of the Committee of the Central Agricultural Association, held on the 13th of this month, and the resolutions there adopted.

"If not detained by business, I shall have great pleasure in attending on the 27th, and, at all events, shall be glad to take charge of any petition for some speedy and efficient relief to be granted to the agriculturists. —I am, &c. (Signed) "W. R. P. GEARY.

"Feb. 10, 1835."

"House of Commons, Feb. 25, 1835.

"Sir,—If possible I will attend the meeting of the West Kent Agricultural Association next Friday, but should any circumstances prevent me, I beg to say that no man is prepared to act in or out of Par-

liament more zealously than I am, in furtherance of the important but cruelly depressed farming interests. Please to place my letter in Mr. Streatfield's hands, who, I understand, will take the Chair on Friday, as I beg to impress upon the meeting the particular propriety of forwarding petitions for relief generally, and for repealing the malt tax in particular, as early as possible. It is a matter of deep regret and disappointment that the new Ministry offer no relief to that suffering interest—they are altogether as silent on that subject as their predecessors.—I am, &c.

"To Mr. Selby."

"T. L. HODGES.

Mr. WELLS, the late member for Maidstone, moved the adoption of the following petition to be presented to both Houses of Parliament.

The Humble Petition of the Owners and Occupiers of Land of the West Kent Agricultural Association in the county of Kent.

"Showeth,—That your petitioners having long felt, and still continue to experience the great depression of the agricultural interest, and are fully sensible that unless some considerable and extensive relief be forthwith granted by your Hon. House to the occupiers of land, the labours of the plough on ordinary soils must wholly cease.

"That your petitioners hail with satisfaction the acknowledgement of the great depression of the great agricultural interest contained in his Majesty's gracious Speech, together with a recommendation to your Honourable House to devise a method for mitigating the pressure of those local charges which bear heavily on the owners and occupiers of land, and for distributing the burden of them more equally over other description of property.

"Your petitioners humbly trust that the recommendation contained in his Majesty's gracious Speech will not be deemed by your Honourable House inconsistent with a further measure of relief to be simultaneously considered—viz., the total repeal of the malt tax, a tax which your petitioners conceive injurious to the interests of agriculture.

"And your petitioners will ever pray, &c."

Captain RANDOLPH recommended that no time should be lost in presenting the petitions.—(hear.)

Mr. COLGATE seconded the proposition made by Mr. Wells.

After some observations from Mr. BERENS.

The petition was read, and adopted by the meeting amidst much cheering.

Mr. WELLS moved that the petition to the House of Lords should be presented by Lord Amherst, the Chairman of the West Kent Agricultural Association; and that to the House of Commons by their Representatives Sir Wm. Geary and Mr. Hodges.

Captain FOSTER seconded the Resolution, which was carried unanimously.

A vote of thanks to the Chairman was passed unanimously.

Colonel AUSTIN returned thanks in a neat and eloquent speech, and the meeting separated.

FIR TREES.—The finest trees we know of this species (says a critic in the *Gentleman's Magazine*), are in Greenwich-park, at the bottom of the hill. They should be seen on a summer evening, when the sun setting over London, slants his beams through their dark and glowing umbrage, and lights up, as with fire, their rich auburn trunks. They are as grand as cedars, and their ramification is always much superior to that of the pinaster.

## SOME ACCOUNT OF THE FAIRS IN SCOTLAND.

ROXBURGHSHIRE—(CONCLUDED).

V. THE RINK FAIRS.—They are held on the estate of Edgerstoun, seven miles from Jedburgh, and fifteen from Kelso, Yetholm, and Hawick. The first fair is held on the 12th of July, for Cheviot lambs and wool, of which from 7,000 to 8,000 used to be presented; and the second sheep fair, by a recent advertisement of the proprietor of Edgerstoun, is to be held on the day before Pennymoor October Tryst, for Cheviot ewes and wethers, of which from 3,000 to 4,000 used to be shown, all of the purest Cheviot breed; but since the establishment of the Pennymoor markets, the numbers at the Rink have dwindled away very considerably. The same remarks which we have made on the stock at Pennymoor applying to that at Rink, we shall not repeat them. The first fair, if not well attended on the 12th July, will be afterwards altered to suit the wishes of the public.

VI. MELROSE FAIRS.—Melrose is a small town near the Tweed,  $1\frac{1}{2}$  miles north-west of Jedburgh, 4 miles from St. Boswell's Green, and 14 west of Kelso. It is beautifully situated in a romantic country, and gives name to one of the most beautiful and interesting ruins of an abbey that exists in Scotland.

1. MELROSE FIRST FAIR is held on the Thursday before Easter Day. Very few cattle being shown here, this is a fair of very little importance, and of none to people at a distance.

2. MELROSE JUNE FAIR is held on the first Wednesday of June, when generally from 500 to 600 cattle are shown. The half of these consists of half-fat and lean one and two year old short-horn steers and heifers, which are principally purchased by the English dealers. The other half consists of milch cows, and cows to calve, and farrow cows of the short-horn breed, and Highland cattle. The calving and newly calved aged cows are bought by the Edinburgh cow-dealers; and the young cows and heifers newly calved, and to calve, are purchased for the use of the country. The farrow cows are bought to feed off by those who are in want of such stock. Such of the Highland cattle as are fat, are bought by butchers and dealers to slaughter. Those which are half-fat and lean are chiefly bought by graziers in the neighbourhood. A very poor show of horses at this market.

3. MELROSE LAMMAS FAIR.—This fair is held on the 12th of August, and is entirely a lamb fair, and one of the largest of the south of Scotland, 30,000 being generally shown; and this year the numbers have increased to 50,000. Till within the last ten years the lambs were all of the Cheviot breed; but the spread of the Leicester, and the system of crossing, have now changed the appearance of this market. Nearly one-half of the lambs are now half-bred betwixt the Cheviotewe and the Leicester tup; and a few are pure Leicester. Buyers from a great distance attend this market. Numbers of the top lots of Cheviot lambs are bought by the stock-farmers in the north of Scotland and the Highland districts, who keep them till they are three years old; but the greatest number of the half-breds is cleared off by the farmers and graziers in Berwickshire, East Lothian, Northumberland, and Durham, who give them full feeding for twelve or eighteen months, and then sell them fat to the butcher and grazier as they come forward to maturity, which they do sooner than the

pure Cheviots; and, even in the state of lambs, they are worth 3s or 4s a-head more than them. This market has increased much in numbers within the last ten or twelve years, in consequence of breeders withholding their stock from St. Boswell's lamb fair on the 18th of July, to this on the 12th of August, during which period lambs make great improvement on the hill pastures. Prices vary much at this market, in accordance with the price of fat mutton and wool. The top lots of Cheviot lambs may sometimes fetch 14s a-head, at others only 7s, but 9s or 10s is a remunerating price for Cheviots, and 12s to 13s for half-breds; and these will be pretty near the general average prices. The top Leicester lambs are disposed of at St. Boswell's lamb fair, and the shots are only reserved for this fair. The price of these shots will hardly reach that of the best half-breds.

Most of the half-bred lambs in this district are got by Leicester tups, but some lots may be seen from the Teeswater tups, which, having large coarse bone, and heavy coarse fleeces, give a great size to the lamb. Some farmers in this quarter pursue this system of crossing. There is no doubt that the lambs of this cross stand high in the leg and look well comparatively, in a large market; and in lambs, buyers often look more to height than breadth. This point the flock farmers in Selkirk and Peebleshire think a matter of importance, as they principally depend on the sale of their lambs and wool. There is no doubt, however, that the cross with the pure Leicester tup will come sooner to maturity, and will make up in breadth and quality what the other may have in height and weight. The wool is mostly sold before the period of this market, and very few wool-staplers consequently attend it.

There is a middling show of cattle, fewer than at the lamb fair at St. Boswell's, and the remarks given there will apply here. The show of horses is mostly of the inferior descriptions.

4. MELROSE MARTINMAS FAIR is held on the 22d November, when from 400 to 500 cattle are presented. Fully one-half consists of one and two year old half-fat and lean short-horn steers and heifers, the most of which are bought by farmers and graziers in the neighbourhood and adjoining counties for turnip feeding, and wintering on half straw and turnips. The remainder consists of calving and farrow milch cows, and fat and half-fat Highland cattle. The calving and newly calved cows are bought by the Edinburgh cow-dealers, the farrow cows are bought by persons to feed, or to supply them with milk during the winter. A few of the fat Highland cattle are bought by dealers for the Edinburgh market, but the most of them are purchased by country butchers, and formerly by private people to kill as marts for salting down for use in winter. But now that the butcher markets are well supplied with good beef at all times, this practice is wearing out of the country, and beef is now bought as it is wanted. When small Highland cattle cannot find a market at All-Hallow fair, several lots of them are shown at this market. There is a very indifferent horse-market held here at this time.

VII. JEDBURGH MARKETS AND FAIRS.—Jedburgh is a considerable town, pleasantly situated in a glen by the river Jed. It is a royal burgh, capital of the county, and contains 5647 inhabitants. It is distant ten miles from Kelso, eleven and a half from Melrose, and twenty and a quarter from Lauder. Its gardens and orchards have long been famous for the production of good pears.

1. JEDBURGH MONTHLY MARKETS.—In addition

to the old-established markets at Jedburgh, a few years ago monthly markets were established similar to those at Kelso and Coldstream. They are held on the Saturday week after the second Friday of the month, which are the Kelso market days, and is generally the last Saturday of the month. They commence in November and end in May. They are intended for cattle, though a few lots of sheep may be seen in them. The number of cattle, short-horns, shown is small in November and December, between 200 and 300 mostly fat, with a few half-fat; but in January, February, March, April, and May, the numbers increase to 400 or 500, and sometimes as many as at Kelso in the same months. The cattle are nearly all fat, but their quality is not equal to those shown at Kelso or Coldstream. They are generally bought by the Morpeth and Edinburgh dealers, and in spring the half-fat are taken as far as Yorkshire, &c. The milch cows, calved and to calve, are bought by the Edinburgh cow-dealers.

2. JEDBURGH JUNE FAIR is held on the Tuesday after Whitsun Tuesday. This was at one time a very large fair, but since the establishment of the monthly markets it has fallen very much off in point of number, only 300 or 400 being now shown. The greatest proportion of cattle are one and two year old half-fat and lean short-horn steers and heifers, with a few fat short-horn cattle, and fat Highland cattle, and short-horn milch cows. The young beasts are taken off by the Yorkshire and other English dealers, the fat cattle to the Morpeth and Edinburgh markets, and the milch cows by the Edinburgh cow-dealers. There is a very different show of horses.

3. JEDBURGH SECOND FAIR is held on the second Tuesday of August O. S. The same description of cattle are found at this fair as the one we have just described. Fewer English dealers, however, attend this fair than the preceding one.

4. JEDBURGH ROOD FAIR.—This is held on the 25th September, or on the Tuesday if the 25th falls on Saturday, Sunday, or Monday, and is the largest fair held in Jedburgh. From 700 to 800 cattle are shown, two-thirds of which are one, two, and three years old half-fat and lean short-horn steers and heifers, mostly steers, fit for feeding off or wintering on half straw and turnips. Very few English dealers attend this fair, the cattle being principally bought by the farmers and graziers in Roxburgh and Berwickshire, and East Lothian.

The breed of cattle has much improved in this district. Most of them are good growers and feeders, thrive well on good keep, and attain to heavy weights. The original breed in this district with large open-boned cattle, and having been crossed with pure short-horn bulls, their fattening properties have much improved.

The other third of the number consists of short-horn cows, calved, and to calve, farrow cows, and Highland cattle. The calved cows and to calve are bought by the Edinburgh cow-dealers, the farrow-cows by the farmers to feed, or supply their families with milk in winter. The fat Highlanders are bought by the country butchers, and a few for the Edinburgh market. The half-fat and lean Highland cattle are picked up by the graziers in the surrounding counties. The horse-market is indifferent.

5. JEDBURGH WINTER FAIR.—This is held on the first Tuesday of November O. S., when about 300 or 400 of the same description of cattle are presented as at the former fair, and they are disposed of much in a similar manner.

VIII. HAWICK FAIRS.—Hawick contains 4970 inhabitants, and is employed in the manufacture of woollens, such as carpets, stockings, and narrow cloths. It is said that the first winnowing machine was invented in 1737 by Andrew Roger, a farmer in the parish of Hawick.

1. HAWICK FIRST FAIR is held on the 17th May. As a cattle market, this has almost completely dwindled away; it being now chiefly confined to the hiring of single men and women servants.

2. HAWICK SECOND FAIR is held on the 20th and 21st of September, or the Tuesday after, if the 20th falls on a Saturday, Sunday, or Monday. This is principally a sheep market for shot lambs, yield ewes, fat tups, and wethers, mostly Cheviot. From 2000 to 3000 of all these different sorts of stock are shown, and are bought by butchers or dealers, to drive to the English and Morpeth markets. Formerly this market used to constitute the show of tups, which has been transferred to the October Tryst, that month being more suitable for the purchase or hiring of tups.

3. HAWICK TRYST is held on the third Tuesday of October. This is a tup show, and premiums are awarded for the best Cheviot tups. Some years ago a great show of Cheviot tups took place here from all parts of the Border, and upland districts, and very high prices were frequently obtained for some of the best of them. Upwards of 100 have been given for Cheviot tups; but the common price for good young ones is now from 2*l* to 5*l* each. Numbers of them are annually bought here for the northern sheep counties of Sutherland, Ross, and Inverness, particularly to the two latter counties, where the black-faced ewes are put to them, and this cross makes excellent sheep. A few black-faced tups are also shown: and now a considerable number of Leicester tups find merchants at this fair to cross with Cheviot ewes in high districts. This system is now much pursued on the Border, and all the high lands in Roxburgh, Selkirk, and Peebles-shires. Last year from 400 to 500 tups were sold at prices varying from 2*l* to 5*l* each, very few being above the latter price. There are also a few lots of other kinds of sheep shown here; but the tryst being instituted principally for the sale of tups, the other sheep do not deserve particular notice. A number of young horses are shown at this tryst, and a few lots of Highland cattle from the Falkirk October tryst.

4. HAWICK WINTER MARKET is held on the 8th of November, or Tuesday after, if the 8th falls on Saturday, Sunday, or Monday. From 600 to 700 short-horn cattle are shown here, the greatest proportion of which are what are called *stirks*, or young cattle, about eighteen months old; some fat and half-fat small Highland cattle, and short-horn milch-cows, calved and to calve, and a few barren cows. This is a famed market for young cattle; a great many of the farmers in this neighbourhood selling their cattle at that age; and farmers in want of such come from a great distance to supply themselves. This being a good grazing country, many small Highland cattle are fed in it, weighing from 25 stones to 30 stones imperial, and shown at this market, and bought by country butchers, and a few for the Edinburgh market. As this fair happens the week after All-Hallow Fair at Edinburgh, sometimes a few lots of lean Highland cattle are shown at it. Calving and new-calved cows are bought by the Edinburgh cow-dealers, and the barren cows by farmers to feed, and for winter milk. The horses shown at this fair are very middling.

There are no small useless fairs in Roxburghshire.

## ON SHEEP DIPPING.

SIR.—To a paragraph extracted from the Berkshire Agricultural Report, you express a wish that some of your correspondents should forward you the process of sheep-dipping, which has been of such incalculable advantage to the Berkshire farmers. Previous to 1831 and 1832 this was but little known to the farmers of Berkshire, and but little practised; and perhaps many years might have elapsed before it would have been, had it not occurred that an Agricultural Work was introduced into the county from Sussex, published under the superintendence of the most eminent men of the kingdom, and intitled *Baxter's Library of Agricultural and Horticultural Knowledge*. In this work there is an article on sheep, written by the late celebrated John Ellman Esq., which contains the following description of the process:—

“Young sheep are more troubled with insects than older ones: to prevent their attack, the lambs, about the months of August and September, should be dipped in the following mixture:—Put six gallons of water into an iron kettle, and place it over a fire; when it is warm add two pounds of soft soap and one pound of arsenic; the soft soap should remain in the water till dissolved before the arsenic is added, and the whole should be well stirred; when the arsenic is sufficiently incorporated with the water and soap, let twenty-four gallons of cold water be put into a tub, then take the ingredients from the kettle and pour them into the tub, the whole being again well stirred. In using the above there should be two tubs—one for dipping the lambs into, and another to catch the drainings from the wool after being dipped. The process of dipping requires one man to take hold of the hind legs, and another the fore legs, immersing the lamb with its back downwards, taking care that its head is kept from going under the mixture. The lamb need not remain in the tub longer than is sufficient to well wet the wool. It is then lifted out and put on its back on a cradle over the draining tub. The cradle is made with two sticks or cord bats, rather longer than the tub is wide, tied together in five or six places, for the lamb to lie on to drain; and while in this situation the mixture is to be pressed from the wool as much as possible. To prevent the loss of the mixture the tub should be kept pretty close together. Four men are constantly employed in this operation—two to dip, while the other two are at the draining tub.

“Our Correspondent, Mr. Robson, informs us that he dips the whole of his flock at one time, and calculates he gains half a pound of wool upon each fleece, from a flock of two thousand sheep. He also recommends dipping of sheep after shearing, as it may be done with little trouble and comparatively small expense. This method recommended by Mr. Robson, has been much approved by the Wiltshire flock masters, and has been found very advantageous.

“The mixture of the dipping tub should be frequently stirred to keep the arsenic suspended. It will likewise be necessary to keep the dipping tubs nearly full, to prevent the back of the lamb touching the bottom. It will be necessary to point out the poisonous quality of this liquid, and how important it is to keep the vessel locked up, and after the operations are performed to clean it well, or rather never to use it for any other purpose, and to throw the liquid which remains where not the

smallest quantity of it can be drunk by any creature whose life we value. Infusion of tobacco is said to be equally effective but more expensive.”

Knowing as I did that this came from the pen of a practical man, I followed the practice the same year I received the Work: and although this has been of the highest advantage to me, still there are several other subjects of equal importance from which I have derived quite as much advantage, and for which I have been indebted to the Work in question; and in gratitude to the publisher and writers of this practical Work I offer my testimony of its great utility to practical farmers, and others, who, without such a Work, are depriving themselves of a great fund of useful agricultural knowledge.

I remain Sir,

A BERKSHIRE FARMER.

Newbury, Feb., 24, 1835.

PERTHSHIRE FARMING ASSOCIATION.—The Spring Meeting of this Association was held at Perth on Friday, Feb. 27, when the following premiums were awarded:—

| Best Qr. of                                 | lbs. |
|---------------------------------------------|------|
| WHEAT, Mr. Jack, of Westmilm, wt. 65½       |      |
| English BARLEY, — Turnbull, Bellwood, — 54½ |      |
| Chevalier do. — Græme, of Garwood, — 57½    |      |
| Hopeton OATS, — Turnbull, Bellwood, — 43    |      |
| Potatoes do. — do. — 44½                    |      |
| Common do. — Jack of Westmilm, — 42         |      |
| BEANS — do. — 65½                           |      |

A Sweepstake for the best Quarter of Chevalier Barley, gained by Mr. Richardson, of Pitfour, sample weighing 59 ¾ lb. per bushel.

INCREASE OF NATIONAL WEALTH.—A highly valuable and interesting paper was read before the London Statistical Society lately, by its Vice-President, Lieut. Col. Sykes, “on the increase of wealth and expenditure in the various classes of society, as indicated by the returns made to the tax-office, by exports, imports, and savings-banks.” By this paper it appears that the estimate of capital employed in 1832, 1833, and 1834, in articles of luxury—which comprise only saddle and carriage horses, four-wheeled private carriages, male domestic servants, armorial bearings, game certificates, dogs, and race-horses, including keep as well as duty)—is 406,953,000*l.*, being an increased capital of 61,667,000*l.* since 1820. The increased capital in trade Colonel Sykes estimates at 87,837,997*l.*, the total capital thus employed in the three last years being estimated at 330,390,430*l.* He takes the rental of 443,990 houses in Great Britain to be 12,629,980*l.*, and the capital thus invested at 300,000,000*l.*, being an increased rental of 2,368,646*l.*, and capital of 59,200,000*l.* The total capital employed in the articles of luxury above enumerated, in buildings, in trade, viz., in the cotton, wool, silk, linen, iron, trade, 105,128 shopmen, clerks, warehousemen, &c., horses, &c. &c., he estimates at 1,037,343,430*l.*, being an increase of 208,704,977*l.* between the years 1820 and 1832. With such indications of wealth in the condition of the higher classes, observes Colonel Sykes, it becomes an important and interesting inquiry, how far it is shared by that portion of the community of a lower grade in the social scale. In the prosecution of this inquiry, the colonel finds that from November 1831 to November, 1833, the number of depositors in savings' banks in the United Kingdom, had in-

creased 45,755, and that the additional amount of money deposited was 1,403,464. The increase in England, in the above period, amounted to 8 per cent., and in Ireland to 25 per cent. The absolute increased individual pressure of the poor-rates from 1821 to 1831 amounts to 7 per cent. The increase in crime, it is to be regretted, appears to be beyond that either of population or of pauperism. From 1821 to 1825, and from 1825 to 1832, the increase of commitments has been 44.3 per cent. In 1821 the commitments were, in regard to the population, as 1 in 866; in 1831, as 1 in 686 persons.

## TO THE EDITOR OF THE "MARK LANE EXPRESS."

Sir.—Lest the fallacious arguments of "A Constant Reader," in your last, should bias any one, I will state the case at issue.

The consumption of malt, it appears, is 32 millions of bushels; the duty 2s. 7d. per bushel; but, for facility, I will take whole numbers, and assume convenient average prices to simplify the question.

|                                                                            |             |
|----------------------------------------------------------------------------|-------------|
| Eight millions of qrs. of malt, at 64s per qr., is....                     | £25,600,000 |
| Eight do. do. barley, at 32s.                                              |             |
| per qr., is .....                                                          | £12,800,000 |
| Manufacturing, at 4s. per qr.....                                          | 1,600,000   |
| Interest on capital, labour, &c., retailing, 4s. per qr.....               | 1,600,000   |
| Duty, at 20s. per qr.....                                                  | 8,000,000   |
| Extra cost, from restrictions on the trade, licences, &c., 4s. per qr..... | 1,600,000   |
|                                                                            | £25,600,000 |

|                                            |            |
|--------------------------------------------|------------|
| Total amount of duty, at 20s. per qr. .... | £8,000,000 |
| Net revenue obtained, at 12s. per qr.....  | 4,800,000  |

|                                                                 |           |
|-----------------------------------------------------------------|-----------|
| Total amount of expence in collecting, at 8s. per qr. ....      | 3,200,000 |
| Extra cost, from restrictions on the trade, at 4s. per qr. .... | 1,600,000 |

|                                                               |            |
|---------------------------------------------------------------|------------|
| Cost above the duty, 12s. per qr., and maltster's charge..... | £4,800,000 |
|---------------------------------------------------------------|------------|

|                                                                                                |           |
|------------------------------------------------------------------------------------------------|-----------|
| 125,000 qrs. more malt than as above are consumed, which increase the amount of duty paid..... | £129,629  |
| And 8d. per qr extra gives .....                                                               | 37,500    |
| And duty, as before stated, .....                                                              | 8,000,000 |

|                                    |            |
|------------------------------------|------------|
| The total amount collected is..... | £8,167,129 |
|------------------------------------|------------|

As the above estimate of produce of the malt tax was taken at 20s. per qr. for convenience, and the 8d. per qr. produce, 37,000*l.*, by so much the less the increased cost from the restrictions on the trade, the difference is not material; and the fact, that the cost of collection, and effects of restrictions on the trade should be so near equal to the revenue obtained is singular.

|                                                                  |            |
|------------------------------------------------------------------|------------|
| If half the duty is taken off the revenue obtained would be..... | £2,400,000 |
| The cost of collection the same as before .....                  | 3,200,000  |
| Increase of price from the restrictions on the trade .....       | 1,600,000  |
|                                                                  | £7,200,000 |

|                              |            |
|------------------------------|------------|
| Net revenue, at one half ... | £2,400,000 |
|------------------------------|------------|

|                                                 |           |
|-------------------------------------------------|-----------|
| Cost to the consumers three times as much ..... | 7,200,000 |
|-------------------------------------------------|-----------|

If the whole duty is taken off, the consumers will save 9,600,000 in the price of malt and beer, and it remains to be duly considered whether the revenue would not be replenished by the expenditure to the amount at least of the revenue, to be obtained by half the present duty. If any estimate is made, founded on the supposition that any

material increase of consumption of malt from the reduction of the duty will take place, it will be found not to be borne out by the result.

### SUMMARY.

|                                                                 | Per     | Per             |                    |
|-----------------------------------------------------------------|---------|-----------------|--------------------|
|                                                                 | Bus.    | Qr.             | s. d. s.           |
| Average price of Malt,                                          | 8 0 64  | 8 millions qrs. | Total, £25,600,000 |
| Do. Barley,                                                     | 4 0 32  | do.             | £12,800,000        |
| Do. Malting,                                                    | 0 6. 4  | do.             | 1,600,000          |
| Interest on capital and retailing....                           | 0 6. 4  | do.             | 1,600,000          |
| Duty paid into Exchequer .....                                  | 1 6. 12 | do.             | 4,800,000          |
| Do. paid for collection .....                                   | 1 0. 8  | do.             | 3,200,000          |
| Extra cost, from restriction on the trade, licence, &c. &c..... | 0 6. 4  | do.             | 1,600,000          |
|                                                                 | 8 0 64  |                 | £25,600,000        |

Thus, the cost of malt to farmers having their own barley malted, would be 4s. 6d. per bushel, retail price, 5s. per bushel; but the average price of barley would not be so high by 2s per qr., and inferior barley might be malted to feed farm horses &c. to great advantage.

P.S. I do not expose the grievous effects of the malt tax from any factious motives, but in hopes of shewing that if any possibility exist of repealing it without injury to the revenue that it would give great relief.

RELATIVE PRICES OF WHEAT AND CONSOLS.—In 1804, when the Wheat was 60s. 6d. a quarter, 100*l.* of 3 per cent. consols would purchase 18 quarters; in 1812, the same quantity of Consol stock would only purchase 9 quarters; since then, from the reduction in the price of grain, and the increase in the price of funds, the same 100*l.* would yearly purchase a larger quantity of Wheat; till now, when Wheat is 45s. per quarter and consols are at 92, it will buy 45 quarters !!! A correspondent, therefore, asks how it is possible that a farmer can pay his old rents when he is obliged to give four and a half times as much produce, as he did 24 years ago for the same sum of money?

THE GARDEN SPIDER.—This spider has several amusing facts which she exhibits to those who study her economy. If in issuing from her cave in a morning she finds her web loaded with dew drops, she goes to the centre, and laying hold of the web with all her feet, gives her body three or four convulsive jerks, which instantly shakes off the dew. If a spider of the same or of another species ventures upon her web, she endeavours to entrap or drive off the intruder; and if the stranger runs to the lower edge of the web to escape by suspending itself by a line as usual, the owner follows, and instantly cuts the line by which the stranger swings, who falls to the ground. Sometimes, instead of cutting the fugitive's line, she will endeavour to pull up the culprit, "hand over hand," with great adroitness, but seldom succeeds in this. If the web has been torn by the capture of a fly, the owner tries to repair it; but this is never neatly done, showing that she is a much better maker than mender. If, however, a principal stay of the web be broken, she will quickly replace another.—*The Analyst.*

## TAXATION.

The same "ignorant impatience of taxation" of which the late Lord Castlereagh upbraided the people twenty years ago, sticks by them still, and is as rife as ever, notwithstanding the nominal diminution of the public burthens which has since taken place. We are compelled to call the reductions which have been thus rather nominal than real, because, from the disastrous effect of Peel's Bill, fifty pounds now paid is equal to twice that sum raised upon the community before that fatal measure came into operation. If any one doubts this, let him take the price of wheat alone as a test, and he will readily satisfy himself that it takes the farmer more than double the number of bushels to raise the former sum now, than it did to raise the latter when nominal taxation was twice what it now is. This is the real root of the evil, extending itself far and wide into every artery of the State, except that alone which is fed from the stream of taxation. The people, therefore, from this cause, still impatient of taxation, look as ardently for relief as if none had ever been afforded them; and while the national creditor still looks to the literal fulfilment of his bond, a Finance Minister, naturally enough, finds himself embarrassed how to meet the wishes of the one and the demands of the other. At present, the town and country both, as heretofore, put forward their claims for relief; the one in a repeal of the window tax, the other in that on malt. At the same time it is perfectly clear that there is no practicable saving in the public expenditure, short of a reduction of interest upon one or more portions of the public funds, which could enable any Chancellor of the Exchequer to part, without an equivalent, with so large an amount of annual income as these two heads of taxation amount to. It remains, then, to be seen whether any such equivalent can be found. We think it could, and that by an equalisation of land tax throughout the kingdom. By land tax, we mean probably what some would call a property tax, under a less objectionable name. Though Dr. Johnson on the authority of Locke, defines land tax to be "a tax laid upon land and houses," it is quite notorious even in the present time it has a much more extensive definition and effect, many public salaries, for instance, contributing to it; and there is, we believe, no change in our system of taxation which would give more general satisfaction than transferring the two burdens we have alluded to, as well as some others, to the shoulders of those best able to bear them—the owners of fixed property of all descriptions. We know that it is alleged that there is an insurmountable obstacle to any re-modelling of the land tax, by a pledge in Mr. Pitt's Redemption Act that those who redeem shall be subject to no further assessment. But this objection would be fairly met and obviated by full credit being given in any new impost in the shape of land tax, to that property on which the old tax shall be found to have been redeemed. This is all that in common justice the purchasers of land tax can lay claim to. Beyond this they might as well demand exemption from every other public impost—a claim which they will hardly have the modesty to put forward.—*Herald*.

## "DRUMMOND'S AGRICULTURAL MUSEUM,"

Third Report, from March, 1833, to November, 1834." Longman.

The excellent example set by Messrs. Drummond, in originating an Agricultural Museum, has already been followed in two or three instances, and we are fully persuaded that a perusal of their report will convince those whose attention has not hitherto been directed to the subject, of the vast benefit which would be derived by the Agricultural community, in extending such establishments as widely as possible. Agricultural Societies, when conducted on a sound and liberal principle, and undisturbed by party feeling, have produced much improvement in the breeding of stock, but the subject to which the Messrs. Drummond have directed their attention, has assuredly not received the encouragement it deserves. In an essay upon this subject, which precedes the report, the writer, Mr. A. Gorrie, Annat Gardens, Perthshire, justly observes—

"In the breeding of live stock, much useful progress has been made; and to feeding, attention, amounting to waste, has been paid, while the important capabilities and productions of the soil have been comparatively neglected. While the gardener has a choice of about thirty varieties of pease, the farmer rests contented with three old varieties of gray, partridge, and Hastings. While the gardener can choose from a list of sixteen hundred varieties of apples, nearly a thousand varieties of pears, and other fruits in proportion, the farmer has scarcely half-a-dozen varieties of wheats, oats, and barley, from which to make a selection. While nature has been profuse in presenting to the attention of the farmer and the grazier an ample variety of plants, to improve the meadow and the pasture field, they have hitherto brought but few of them under cultivation. Out of more than two hundred grasses suitable to our climate, and the greater part of which spontaneously clothe our pasture fields and wastes, it may be said that only one genus, the rye-grass, has, as yet received general culture—from amongst sixty species of clover, only three or four species receive general attention. Of the genus, lotus, sixteen species are hardy, and in waste lands two species contribute to enhance the value of the pasture; but in agriculture they are seldom noticed. The species of melilot are as numerous, many of which might vie with our common clover, and form excellent substitutes when land is "clover sick," yet that genus is almost quite neglected. The same may be said of many species of vicia, lathyrus, orobus, medicago, and other diadelphous plants, which point out the apathy and remissness of the farmer; hence it is obvious that agricultural societies, as hitherto conducted, however efficient in other departments, have aided in exciting sufficient attention to the nature of vegetables."

IMPRISONMENT FOR DEBT.—By the last Returns laid before Parliament on the above subject, it appears, that the number of persons confined for debt in the several prisons of England and Wales, at the close of the year 1833, was not less than 16,661! Add to these, the probable amount of prisoners for debt in Scotland and Ireland, and the total, in the United Kingdom, will not fall short of 24,000.

## COMMON SALT.

We propose to give a brief account of this great necessary of life, salt, without entering into any purely chemical disquisitions upon its nature and properties.

Common salt is found in a solid state as "rock-salt," or is obtained by evaporating sea or salt-spring water. The evaporating process is conducted either by exposing the liquid to the atmosphere, or by boiling it over a fire. In countries where the rays of the sun possess sufficient heat to occasion rapid evaporation, salt of the finest quality is obtained without the assistance of artificial heat. The sea-water is enclosed in salt-pans, or shallow pits lined with clay: as the evaporation advances, and the salt is deposited, the brine is pumped off till a crust of salt about three inches thick remains. When this crust becomes hard it is broken up, and deposited in heaps in a place protected from rain. A fluid called the *bittern*, containing a number of the earthy bitter salts, continues for a long time to drain from the heaps: the salt, indeed, is not considered perfectly good till after three years' draining. The result of this process is the "bay salt," so much in request for preserving animal food. The "bittern" is sometimes preserved for the purpose of obtaining from it the sulphate of magnesia, and other substances containing magnesia. Glauber's salts are made from it.

In countries where the sun's heat is too weak to effect the evaporation with sufficient rapidity, and where, at the same time, fuel is cheap, the other process of boiling the liquor is adopted. The boiling is repeated four or even seven times, the boiler being each time replenished with fresh brine. When the liquor is sufficiently evaporated, the salt is left in crystals at the bottom of the pan. From a pan of 1300 gallons from 15 to 20 bushels of salt are obtained every day. In this process the draining which the salt requires after being removed from the boiler seldom takes more than four days. Not only brine must be subjected to the process of evaporation, but even rock-salt, if impure, must be dissolved in water, and again consolidated by heat.

It is supposed that brine-springs are formed by a stream of water flowing through a stratum of rock-salt. It is stated that charcoal is very generally found in strata above brine-springs. Such springs are very numerous in America, and are extensively used in the manufacture of salt. They appear also to be generally of greater strength than the springs of Europe. Yet some of those in England are remarkably strong. Though the strongest brines can yield little more than one-fourth of their weight in salt, the springs of Cheshire afford 22 per cent., in one remarkable case 25 per cent., and in another even 26 per cent. In Switzerland, from 13 to 14 per cent. is the usual strength of the salt-brine springs, and the average is only 11 per cent. in France.

Dr. Reusselaer conjectures that rock-salt is composed of deposits from salt-lakes, or seas, which have now ceased to exist. Some of the salt strata are considerably above the present level of the ocean. In the Tyrol they are 5000 feet, and in Peru 10,000 feet, above the level of the sea. In England, on the contrary, strata are found 420 feet *below* that level. The Zout pans in Africa are deposits of salt in crystals, which Dr. Reusselaer concludes to have been wafted from the coast, where a great evaporation of the sea-water is produced by the action of the sun;

and this opinion is authorized by that saltiness of the air between the coast and the interior which travellers have remarked.

Salt-rocks and strata are found in all parts of the globe. Dr. Reusselaer states that they extend across America from the Alleghany Mountains to the Pacific, and are found in California. In Mexico the Pennon Blanco are salt-rocks which are worked, and annually produce 1,786,000 bushels of salt. In England the great depositories of rock-salt are in Cheshire, where are also the brine-springs mentioned before. In 1819 six distinct strata of very fine rock-salt were discovered at Vic, in the department of Meurthe, in France; but no use appears to have been made of the discovery. Spain has a singular mountain of salt near Cardona in Catalonia. It is a mass of solid salt, between 400 and 500 feet high, and nearly three miles in circumference. The salt is of various colours, but generally white, transparent as crystal, and remains a considerable time insoluble in water. The inhabitants make it into vases, urns, candlesticks, and other toys and utensils. At La Mancha there is a smaller but similar mass of salt; and near the Ebro is a chain of hills, consisting of salt, sulphate of lime, and limestone. In Germany there are masses of rock-salt in Upper Austria, Styria, Bavaria, Wurtemberg, and the Tyrol. In Hungary and Poland there is an immense deposit of rock-salt on both sides the Carpathian Mountains. It is also found near Ockna in Moldavia, in Transylvania, and in Calabria. In Caramania, in Asiatic Turkey, it is said to be used for building. The Isle of Ormuz, in the Persian Gulf, is a solid mass of fossil salt. In Caubul a road is cut through a mass of rock-salt that rises in a cliff more than 100 feet above the river. In Africa rock-salt is very abundant; on both sides the Atlas Mountains it occurs in great quantities, and is found in Tunis and Algiers. In Abyssinia there is an immense plain of salt, four days' journey in extent.

The uses of salt are very various in manufactures. It enters into the composition of sal-ammoniac,—of glass,—of oxymuriate of lime,—of corrosive sublimate,—of Glauber's and Epsom salts, and of the painter's patent yellow; and it is used in bleaching,—in glazing earthenware,—in assaying metals,—in case-hardening steel, and in rendering iron malleable. But the qualities of salt which render it indispensable to man are its uses as mixed with its food. With every bushel of flour about one pound of salt is used in making bread; thus, it may be presumed that, in bread alone, every adult consumes about two ounces of salt weekly. Salt is *antiseptic* (counteracts putrefaction); and hence meats and fish are preserved by salting. In using salt for this purpose, it should be free from the muriate of magnesia, which attracts moisture. The importance of salt for the support of life is evident, when we consider how much fish and flesh are thus preserved, to be removed from places where they could not be used fresh, to be distributed and consumed gradually through a whole country. In countries where salt is scarce, the want is severely felt. In the states of La Plata, in South America, the sheep and cattle, where they discover a pit of salt-clay, rush together to feed upon it; and, in the struggle, many are trodden to death. In Upper Canada the cattle have plenty of wild pasture to browse on in the woods; but once in a fortnight they return to the farm of their own accord in order to obtain a little salt; and when they have eaten it, mixed with their fodder, they return again to the woods. Salt is now extensively used in England, and in all

Europe, for fattening cattle. In Spain they attribute the fineness of their wool to the quantities of salt given to the sheep. In England, 1,000 sheep consume at the rate of a ton of salt annually. About 1,000,000 tons annually are given to animals in this country. It is also much in use as a manure for the soil. The proportion of half-a-peck of salt to an area of soil equal to forty yards long by one broad has been found to succeed. About twenty years since, Lord R. Manners applied salt in solution to the irrigation of herbage: one ounce of salt to a gallon of water was used with success: a stronger solution,—of two ounces to a gallon of water,—was found to destroy the blades of grass; but in the next season an abundant crop of herbage came up. Dr. Holland recommends from eight to sixteen bushels of salt per acre. A mixture of salt and soot is a good manure; it is, indeed, the best compound, as manure, into which salt enters as an ingredient. Corn is steeped in salt to prevent smut: in orchards irrigation with a salt solution is recommended; and, spread on the surface of the soil, it destroys slugs and snails in gardens; but it will also destroy vegetation if dropped on the leaves of young growing plants. The use of salt as a manure is not confined to Europe; all the land on the coast is regularly treated with sea-water in China and Hindostan. It is to ferruginous sandy soils that salt is understood to be particularly adapted as a manure.

#### REPORT OF THE PARLIAMENTARY MARKET.

March 2, 1835.

In consequence of recent bounties,  
A large supply from all the countries;  
Quality various; some *in bond*;  
Dealers inclining to despond.  
The market noisy, this its vice is  
No wonder there's so many *Prices*.  
Much smut and tares among the wheat;  
With here and there a sample neat;  
Some only such as we should send hence;  
But great demand for *Independence*;  
Some lots are dull, not worth a risk;  
Others are looking up, and brisk;  
In short, although so much is sent,  
At present there's but little vent,  
And we our readers should advise,  
To wait until the *new supplies*  
Are asked for, when we think the nation,  
Will see a wondrous alteration.  
*Tories* were last week quoted low;  
*They're infinitely lower now*;  
And people's taste has grown so nice,  
They'll have them not at any price.  
*Reformers* are a famous sample,  
And no doubt would meet prices ample,  
But, and it is a pleasant thought,  
We find *they are not to be bought*.

J. M. L.

DEVIL'S TREE. — There is a tree which they call the Devil's Tree growing in America; its fruit, in a state of maturity, is elastic, and when dried by the heat of the sun, noisily splits and bursts forth its grains. To this sport of nature the tree owes its name, for at the moment of bursting the effect of a piece of artillery is produced, the noise of which succeeds rapidly, and is heard tolerably far off. If its fruit be transplanted before it is ripe, to a dry place, or exposed on a chimney-piece to a gentle heat, it will have the same effect, and produce the same phenomenon.

#### COURSE OF THE SAP IN PLANTS.

In this phenomenon we find an object of intense interest. Physiologists have been much perplexed to discover the sap-vessels, and the cause of the impulse of the fluid; and in the various works upon vegetable structure, we meet with recitals of a multitude of experiments, which have been instituted to unravel the mysteries in which they are involved. A perusal of the "System of Physiological Botany," by the Rev. P. Keith, will afford much instruction to the inquiring reader, while it gives abundant proof of the contradictory opinions that have been derived from the investigations of men of the greatest ability; from all that has been written and undertaken, from the closest examination of recorded facts, and from actual experiments, we are led to the inevitable conclusion that there are difficulties which embarrass the inquiry, of a nature so formidable as to leave little hope that the offices of the vegetable structure will ever be distinctly revealed. It is not our object then to elucidate that which is far beyond our ken, but to point out a source of error, and by a recital of a few well-ascertained facts, to caution those who attempt investigation against the conclusions which we are but too apt to draw from partially-observed phenomena.

Every plant living and growing is provided with organs of ascent and general supply. These organs are usually either cells or tubes, and it has been the object of physiologists to ascertain in what way the fluids which abound in these organs, particularly in the cells, have been taken up from the soil about the radical processes, and conveyed to the utmost summit of the vegetable. Cuttings of the stems of the lateral shoots, of the foot-stalks of the leaves, &c., have been immersed in coloured infusions, and after a certain time, have been dissected in every possible direction. Colouring matter has been detected in some parts of the structure, but not a trace of it has been found in others. Those wherein it has been found to pursue a regular course, for a considerable extent, have naturally been viewed as the vessels of ascent and supply; and on these or similar grounds, a hypothesis has been formed, which other facts have tended to subvert. We cannot enter into minute particulars, but such are the general facts. One point has, however, been overlooked: the growing plant is endowed with the *vital principle*; and whether it be in the open ground or in a pot, it is, if in health, in a perfectly natural situation, wherein all its functions are under the stimulus of the great natural agents, light, air, water, and excited heat. But the cutting, be it what it will, and however skillfully managed, if immersed in chemical or coloured fluids, is a mutilation—a member cut off from a living being—a portion severed from its source of life, and subjected to *un-natural* action. Can any unerring conclusions be drawn from observations of facts so entirely delusive? Let the reader answer the question, by performing an experiment of the following description:—

The garden balsam (*balsamina hortensis*) possesses a transparency of stem which peculiarly adapts it to experiment. Let three or four plants be raised from seeds, or by cuttings of the small lateral shoots of a large plant, stuck in water and transferred to very small pots containing a simple soil, such as plain unmanured loam, or heath mould. Prepare two liquids, one an infusion of rasped Brazil wood in boiling rain water; the other, a solution of one drachm of the green sulphate of iron, oxygenated with a few drops of nitrous acid

in eight ounces of the same fluid. Strain these separately through white blotting paper, and then add to the red infusion two or three drops of the solution of potassa, which will change the tint to a full and beautiful claret. When the young plants (by being placed in a gentle heat, and watered with pure rain water) have recovered their full vigour, select three, and mark them distinctively. Moisten one plant with water only, a second with the crimson infusion, and the third with the solution of iron. If the two latter become dry and flag through heat a little water will recover them without impeding the processes. Persist for a week or more till it be certain that the roots must have been in contact with the impregnated soil for some days. Then dissect the three stems, cutting them longitudinally and transversely; in fact, in every way that the fancy can suggest. Examine each portion with the microscope; compare the two medicated plants with that fed by pure water only, and finally test the slices with re-agents; that from the infusion of Brazil wood with solution of sulphate of iron, which, if any of the vessels have attracted the infusion, will produce a black tinge thereon; and the other grown in a like solution, with liquid prussiat of potassa, which will afford a blue tint. Apply the same tests to the water-grown balsam. If the test indicate the results described, some idea will be formed of the position of the conducting vessels, or, at least, it will be proved that growing plants can absorb chemical fluids. Critical investigations, rigidly and extensively pursued, may lead to very gratifying results. But, not to stop here, let one or two healthy balsams be raised in water only, by cuttings, and transfer one to an infusion, and a solution of exactly the same quality and strength as those which were made use of in the first experiment. A negative evidence, at least, against the theory of absorption will hereby be afforded; for, if our most careful experiments have not deceived us, the balsam placed in the red infusion will languish from its first immersion, while that placed in the solution of iron will be killed almost instantaneously. We are constrained to quit the subject for the present, having passed our limits, but may resume it in another form before long.

Antiquarians seem to strangely disagree on the origin of the custom of "wearing the leek" on St. David's-day. A rare little volume, preserved in the British Museum, entitled "Royal Apophthegms," says "The Welshmen, in commemoration of the great fight by the Black Prince of Wales, do weare leekes as their chosen ensign." The "Festa-Anglo Romane" states that it was "in memorie of a notable famous victory obtained over the Saxons, they, during the battle, having leeks in their hats for their military colours and distinction of themselves." Blount, in his "Antiquarie Brit.," says, "That an ancient record in the Tower of London relates that they were fighting under King Cadwallo, near a field that was replenished with leekes." See edit. 1671. In "Henry V." Pistol is upbraided for mocking "at ancient tradition, begun upon an honourable respect, and worn as a memorable trophy of pre-deceased valour." On St. David's-day, last year, the Right Hon. C. W. Wynn wore a remarkably large real vegetable leek in his hat, without any addition; and in the evening he entered the House of Commons with that emblem of the "ancient Britons" erect on his hat.

## MAJOR BOWER'S SALE, AT WELHAM, NEAR MALTON.

On Wednesday, the 25th day of February, and the two following days.—FIRST DAY'S SALE.

(For further particulars of pedigrees, &c. see Coates's Herd Book.)

## THE PEA.

Of the cultivated Pea there seems to be one species, comprehending our various cultivated kinds, whether grown in the garden or the field, namely—

## Pisum sativum—Cultivated Pea.

But botanists of high authority make two species, *Pisum arvense*, the Grey pea, and *Pisum sativum*, the cultivated pea of the gardens.

The changes produced on this plant by the effects of climate, soil, and culture, are very great. Whether regarded as one or two species, peas, with respect to their uses, may be divided into two classes; the first, the field peas of different colours, and the second, the white or garden peas. The coloured kinds are those which generally form the objects of cultivation in the fields; the white kinds are those which are grown in the garden, though several of the white kinds are also cultivated in the fields, and though some of the garden kinds are coloured.

The garden peas are distinguished by their periods of ripening and other properties. New kinds of them are raised every year, and generally receive names from the persons who have first cultivated them, or the places where they have been grown. Their characters, however, are not permanent, and they degenerate unless cultivated and selected with care.

The field kinds are distinguished by their habits of ripening. The early-ripening kinds admit of being sown late; the late-ripening kinds must be sown early. The common early-sown peas of this country are small and dark in their colour. The most hardy of these is generally termed the early grey pea. It is chiefly cultivated for the food of horses.

The later sown kinds of field peas are larger in their size and approach more in their characters to the garden peas. The seeds are of various colours, blue, speckled, grey, and dun; and they have purple flowers, whereas the true garden kinds have generally white flowers.

The white kinds usually cultivated in the fields in this country are the Pearl, the Early Charlton or Golden Hotspur, and the common White or Suffolk. Of these the early Charlton has been long esteemed as an early-ripening kind.

The peas of this class are largely cultivated in the north of Germany, in Poland, and all over the central and southern parts of Europe. In England they are raised to a considerable extent in Middlesex, Kent, Suffolk, and some other counties. But the principal cultivation of peas in this country is of the grey or field kinds.

Sometimes peas are cultivated to be used in their green state. There is no species of cultivation more profitable than this, where it can be adopted; for the peas being ready for use in the month of June, time is allowed for taking another crop, generally of turnips, in the same season. The practice, however, of gathering peas in their green state must necessarily be limited to the vicinity of great markets; and in most parts of the country it is the province of the gardener rather than of the agriculturist.

The general purpose in cultivating the pea is for its ripened seeds. When these are intended for boiling the white kinds are used; when for the food of horses and other animals, the grey kinds are preferred. The method of cultivating either kind is the same. The circumstance to be chiefly attended to is the habit of ripening, which should determine the period of sowing.

The later-ripening kinds are sown in February or March; the earlier-ripening kinds in April, and sometimes so late as the beginning of May. But the more early all kinds of peas are sown the better.

The pea will grow on stiff soils as well as the bean; but it is more peculiarly adapted to the lighter class of soils, and in an especial degree to the calcareous.

The pea, like the bean, may succeed to any of the corn-crops; and, if properly tilled, it may, like the bean, be regarded as a cleaning crop, and be succeeded by another corn-crop.

In many parts of England the pea is made to succeed to a crop of grass and clover, and it will grow well under such circumstances; but it has been before observed that a corn-crop may then be taken with benefit. It is generally better, then, that a crop of oats be taken, to which may succeed a crop of peas. This at least is the rule of practice, while the deviation from it which particular circumstances require may be regarded as the exception.

In the case of sowing peas on land broken up from grass, it is common in some parts of England to plant them by means of the dibble; and the most approved method of doing so is to put a row of holes upon each sod, so that the rows shall be at the distance from each other of about nine inches. To allow of this the furrow-slices are laid very flat.

When the pea, however, is to follow a corn-crop, which is its proper place in the rotation, the land is ploughed before winter as for beans, though there is not the same necessity for giving a very deep ploughing as in the case of the bean, the root of the pea being more fibrous and not striking down in the same degree into the soil.

When the land is ready to be worked in spring, it is to be cross-ploughed and well-harrowed; and the peas are to be sown in rows, at the distance from each other of about 27 inches. Several methods of sowing may be adopted:—

1. The land, after being pulverized by the cross-ploughing and harrowing, may be sown with the same kind of drill sowing-machine as is employed for the common grains.

2. The land may be formed into drills, as in the case of the bean; and the hand-sowing-machine, pushed along the bottom of each drill. The land is next to be harrowed across, and thus the seeds are covered. It is not necessary to split the drills by the plough, as in the case of the bean. The harrow does the work equally well, covering the seeds of the pea to the depth of two inches, which is sufficient.

3. The seeds are sometimes covered by the plough, in which case they are sown in every third furrow. But the more frequent practice is to sow in every furrow, in which case the rows are only nine or ten inches asunder. This is a species of drilling certainly, but the great advantages of the drilling-system are lost when the intervals are thus narrow.

Of these methods of sowing the peas, the best, it is conceived, is that of sowing them on a flat surface by the common corn drill-machine, the orifices being adapted to the larger of the seeds.

When either system of culture is practised, the quantity of seeds may be three bushels to the acre, or less.

When the plants are a few inches above ground, the horse-hoe with lateral coulters, is to pass along the intervals, the coulters being set to go as near the rows of plants as possible without injuring them.

Soon after, the hand-hoes, with the hoe follow, and hoe up any weeds that are amongst the rows of plants, or that may have escaped the action of the horse-hoe in the intervals.

Then, before the plants come into flower, the hand-hoes are again to pass along the rows and hoe up all weeds as before. This completes the culture of the pea, which will now grow with great rapidity, and soon cover the intervals. Sometimes this growth is so considerable, that only one hoeing can be given; but in every case one horse-hoeing in the early stage of the plant, and one hand-hoeing, must be given.

When the intervals, however, are very narrow, as eight or nine inches, the common horse-hoe cannot be applied, and the hand-hoe alone is used. In some cases, indeed, particular kinds of horse-hoes with flat triangular shares are employed.

Early hoeing in the case of this plant should never be neglected. The effect is not only to repress the growth of weeds until the plant shall have acquired sufficient strength, but, as in all cases of tilling the ground about the stems, increased vigour is given to the growth of the plants. From the manner of growth of the pea, and from its stems quickly stretching over the intervals of the rows, the process of hoeing should be begun early, and assiduously prosecuted. After the first crop of weeds are destroyed, the plants themselves will grow up and stifle all that may spring up during the subsequent period of their growth.

This is the system under which the pea may be beneficially cultivated. The land will thus be cleaned in an efficient manner, and prepared for any crops of grain that are to follow.

With the early-sown varieties of peas, it is common to sow a proportion of beans. This is a good practice, the tall and erect stems of the bean affording a support to the other, in the same manner as branches do in a garden. The proportion of beans may be equal to one-fourth part.

When manure is applied to the pea-crop, it should be laid on the ground and covered by the plough before winter rather than in spring, fresh manure tending to cause this plant to run too much to straw. Lime is extremely beneficial in the case of this crop.

The ordinary method of harvest-management for the pea differs from that of the other kinds of grain mentioned. In some parts there is employed a tool called a peas-make, which is merely the half of an old scythe fixed in a handle. With this the peas are cut and rolled up into what are called wads or wisps, in which they are left to dry. In other cases, old blunt hooks are employed, by pulling which towards the reaper the plant is torn and broken at the surface rather than cut. The binders move in advance of the reapers, twisting the ropes for binding, and laying them down. The reapers, as they advance, throw the ropes behind them, and lay upon them the reaped peas in moderate bunches, their heads all in one direction. In this state they lie for a few days to wither, and are then tied in sheaves, but they are not set up in shocks. They are left upon the ground to dry until they are ready to be carried home and stacked, and in the mean time they are to be turned once a

day, which is easily done by boys and girls passing along the rows with hooks in their hands, and hooking over the bunches.

The produce of the pea is very uncertain. Perhaps none of our cultivated crops present such frequent failures. This arises partly from the diseases to which the plant is subject, and partly from the effects of late ripening and unfavourable weather. Thirty bushels per acre are held to be a good crop in most districts of this country. Perhaps the average of the kingdom should not be stated as exceeding 20 bushels per acre.

Peas are much employed in this country as the food of horses, and for this purpose they are generally mixed with oats. They form a very nutritious food, and should be given when dry, and in all cases bruised. They are also employed for the feeding of hogs in the same manner as beans are, and they form a nutritive and fattening food. In this respect they are held to be superior to beans, which feeders imagine give a hardness to the pork. The meal, too, as well as that of beans, is made into a thick gruel, which, given with milk, forms an exceeding good food for calves, after they have been fed for some time on milk.

But the pea is also used extensively for human food. In some cases it is ground into meal, and made into bread; which, however, though nutritious, is coarse and unpalatable. But the meal of the pea may be mixed to a considerable extent with the flour of wheat, without sensibly impairing the qualities of the latter. It is made also into bread with the flour and meal of barley.

But the most common application of the produce of the pea is for soups, puddings, and other articles of domestic economy. In this way there is a great consumption of the pea in England, partly the produce of the country and partly derived from the Continent. And a distinction is made between the different kinds of peas, derived from the difficulty or facility of boiling them. Those that moulder down are technically termed boilers, and this property seems to arise less from the particular variety, than from the nature of the soil in which they are produced. Calcareous matter, so favourable to the growth of the plant, tends, it is said, to give the quality of hardness to the seed. To fit the pea for its culinary preparations, the seeds are subjected to a species of grinding, by which the external covering is rubbed off.

The straw of this plant is greatly esteemed for fodder. It is not regarded as much inferior to hay, and it is given in place of hay to the working cattle of the farm. Sheep too are fond of it, and it may be given to them in the cases where hay would otherwise be given.

The pea, like the bean, is subject to various diseases. It suffers like the bean from rust, and is rather more subject to injury from insects at the root. It is liable too, like the bean, to the ravages of aphides. At a late period of its growth, great injury is sometimes sustained by a small beetle, *Bruchus granarius*, which deposits its eggs in the pods, and the grubs of which destroy the seeds. Other species of beetles, in different countries, prove fatal to the pea; and in some countries to so great an extent has this taken place, as to put a stop to the cultivation of the plant. Assiduous tillage, and the avoiding of two frequent repetition of the crop, are the best preservatives against these evils.

MR. EDITOR,—A few days since a letter was pointed out to me, in a paper of the 27th of December last, signed A. B. purporting to be an answer to

a letter from Mr. Wm. Chapple, of Gornhay, near Tiverton, published in the same paper a few weeks previous, on the advantages of the Exeter Agricultural Association, and advising the formation of District Societies, in which I fully agree; and with your permission, Mr. Editor, will state my reasons:—A. B. presumes Mr. Chapple to farm his own estate, but on the contrary he is a renter; I am also a renter, —consequently A. B. and myself meet on equal ground, and have the same common interest.

It is to be lamented that the progress of convincing the Agricultural Classes of any errors in their management is so slow, that they are prone to travel on in the beaten path of ancient custom, and from the retirement of their situations are inaccessible to information by ordinary means; to them discoveries (of whatever importance), would be imparted in vain through the press; it would be regarded as one of the many inventions of the Printer, or a mere Theorist, and the reader would congratulate himself on not being gulled by such devices. On such impressions as the foregoing, Societies have been formed, for the purpose of drawing together the best breeds of cattle; of assembling large bodies of practical farmers, to discuss agricultural matters; to elicit from other districts and from each other, the best rural information; to draw the tie of friendship closer between landlord and tenant, and between the tenant and his labourers; to encourage the labourer by offering bounties to the industrious and the deserving; and to convince each class how much they depend on each other's prosperity. I am confident that the intercourse of farmers at annual meetings would not only be the means of improving stock generally, and promoting more correct views of rural economy; but that it would subdue those prejudices, which are entertained by many against everything new, or what they are unacquainted with; while perhaps at the same time they are loud reformers, thinking everything wants reform but their own practices. It is a frequent and well-founded observation, that while those engaged in arts and manufactures are prompt to avail themselves of every invention that will facilitate their labours; the cultivators of the soil are too apt to be jealous of innovations upon old practices, and are remarkable for the slowness with which they adopt improvements. Many consider every improvement suggested to them as an inroad on their happiness;—this is unquestionably owing to their retired habits, and to a want of that intercourse with each other, which Agricultural Meetings are so well calculated to promote. At home, a breeder forms erroneous ideas of the perfection of his stock: he goes abroad, and is set right; he sees the perfection of all animals is to produce the greatest quantity of food for man, having consumed the least quantity of food themselves. At such meetings, men of science would have an opportunity of imparting their ideas; for I cannot but believe that the pursuits of agriculture would be much advanced by the acquisition of general knowledge and scientific attainments. The investigation of the chemist and naturalist are denounced by some as speculations, idle theory, and book-farming: it is curious to observe what a bugbear theory is with many, who plume themselves on being sagacious practical farmers. I admit that theory without practice is but learned ignorance; and, on the other hand, practice without theory is but groping in the dark. Science brings to the assistance of agriculture a knowledge of mineralogy, chemistry, botany, and zoology,—a knowledge very essential in order to carry the soil to the highest pitch of improvement which it is capable of bearing; and judging the improvements which have been effected within the last

few years, to proceed in a great measure from the attention that men of liberal education have paid to rural affairs, and from the better education of the rising generation, a new era seems now to be dawning: the narrow-minded and prejudicial objection to such societies, as opening the eyes of their landlords to the produce of their farms, and thus entailing upon themselves a rise in rent. But it is the competition among a *numerous and increasing tenantry*, that causes high rents, and not any knowledge that the landlord possesses, or any information which *agricultural societies can give him*. Supposing he has a farm to dispose of, he publishes it to be let by tender, or by auction; and he will find a numerous list of competitors, and frequently lets it for less than is offered; and he has a right to let it to the person who will introduce the finest breeds of cattle, and follow the most approved system of tillage,—knowing that the best manager can afford to pay the highest rent, and that the prejudiced and the sloven are frequently full of complaints. I will go farther, and say it is the landlord's duty to improve the property committed to his care; for he is not only a steward for his own family, but also for the public, whose annual vast increasing numbers have a right to expect the utmost improvement the land is capable of bearing, particularly the manufacturers, who labour hard to produce cheap wares, and therefore have a right to expect in return the utmost improvement of the soil; and the heart of the true patriot must glow with delight at the prospect of his country attaining its utmost perfection, which agricultural societies will much promote; and I am glad to find they are warmly supported by such men as a Bedford, Lansdowne, Coke, Stanley, Althorp, and Fortescue.

That rents are high is generally admitted, and must always be the case, (whatever price the produce may bear,) from the competition among tenants. A. B. says he finds the price of Wheat 14s 6d per bag from 1789 to 1798 inclusive; and being under that price at the present time, means to infer, I suppose, that it ought to regulate the amount of tithes and rent now: but it seems to me that, from the alteration in the produce of farms, wheat is not a fair criterion to settle their amount by. He admits that rents are doubled since that period, but would tie down tithes to their amount in 1798; that I am anxious for their settlement, the best proof I can give is by pointing to a letter bearing my signature in your Gazette of 31st Jan. last. Passing over A. B.'s eulogy on Earl Grey, and his allusion to Dissenting Chapels, it having nothing to do with my present purpose, I come to the burdens on the land, which I own to be heavy, but have not room to particularize them, and should be among the foremost to promote their diminution. Now I have my pen in hand, I will address a class of people who, on hearing a farmer complain of the low prices of corn, say that the landlord ought to reduce the rent, thinking, no doubt, that the landlord, whatever be the price of grain, can sufficiently reduce his rent so as meet all other outgoings; but they seem ignorant of the fact, that when the four-pound loaf of bread sells at 9½d, were the entire rent of tillage land given up, it would only reduce it to 8d, plainly showing how small a portion the *charge* of rent has to do with the price of bread, and how many interests share its amount.

I now come to the last part of A. B.'s letter, wherein he says an association has been formed at Kingsbridge, and hopes its days may be numbered. Now had he not dragged the Kingsbridge Society into view, I should have remained silent; but being one of its original promoters, I feel called on to vindicate the intentions of myself and those who have

acted with me, and I hope to do it in the best spirit. With regard to its days being numbered, I can tell A. B. for his consolation, that its prospects are brightening every hour, and that we are enabled this year to offer a long list of premiums, particularly for the encouragement of Agricultural Labourers. That we have landed proprietors, and perhaps a solitary tithe-owner among its members, is true. With the motives of other people I have nothing to do;—that landowners expect to acquire *unfair* information from this society I do not believe; and perhaps the best answer I can give to that assertion is, that they have been unaccountably lukewarm in promoting its establishment, it having been chiefly accomplished by a few *renting farmers*, who cannot be suspected of doing any thing to injure their own interest. For myself, I know my intentions to be honest, and envy not the man his feelings who doubts it; my line of conduct is fixed, and I hope to promote the prosperity of the society by every means in my power, through evil report and through good report, knowing that I am promoting the best interests of my country, and resting assured that the day will soon arrive when a discerning public will fully appreciate my honest endeavours, which is the only reward I covet. Having an idea that anonymous writers sometimes cherish ill feelings, or, in espousing a bad cause, shun the public eye, I subscribe myself

Your obedient humble servant,

JOHN ELLIOTT.

Charleton, near Kingsbridge.

## CHURCH PROPERTY.

(From the Sun.)

Various estimates of the value of Church property have been made, but it is evident that the best can be only an approximation to the truth. We copy the following from a very able pamphlet on Tithes, by "Biblicus," published by Dennis, Paternoster-row, which we strongly recommend to all who wish to understand the extent and evils of the English Tithe System:—

|                                                    |            |
|----------------------------------------------------|------------|
| Value of tithes from land in tillage . . .         | £8,973,325 |
| Do. of parishes become part of towns, &c. . .      | 200,000    |
| Do. of coal, iron, tin, and copper mines. . .      | 500,000    |
| 1040 perpetual curacies, at 100 <i>l.</i> each . . | 104,000    |
| 100 benefices not parochial, 75 <i>l.</i> each . . | 75,000     |
| 9,000 glebes, at 40 <i>l.</i> each . . . . .       | 360,000    |
| Fees of 10,870 livings, at 20 <i>l.</i> each . . . | 217,440    |
| Incomes of Bishops . . . . .                       | 220,000    |
| Ditto of Deans and Chapters. . . . .               | 325,600    |

£10,974,765

Deduct annual value of lay impropriations . . . . . 3,117,434

£7,857,331

|                                            |         |
|--------------------------------------------|---------|
| To which must be added—Church-rates . . .  | 800,000 |
| Additions to Queen Anne's Bounty . . .     | 100,000 |
| College and school foundations. . . . .    | 682,150 |
| Parliamentary grants for building churches | 100,000 |

£9,539,481

If the above statement be anything near the truth (and it falls short of some estimates by a million), there can be but one opinion as to the amplitude of the provision made for the support of our spiritual guides. Indeed, if the spiritual benefit received were in proportion to the temporal, or, as we may say, carnal benefit returned, the English would be the most religious people on

the face of the earth. The following table, which we copy from the pamphlet before mentioned, sets this matter in a strong light:—

| Name of Nation.                | Number of Hearers. | Expense of Clergy per Million of Hearers. | Total Expenditure. |
|--------------------------------|--------------------|-------------------------------------------|--------------------|
|                                |                    | £                                         | £                  |
| France .....                   | 30,000,000         | 35,000                                    | 1,050,000          |
| United States of America ..... | 9,600,000          | 60,000                                    | 576,000            |
| Spain .....                    | 11,000,000         | 100,000                                   | 1,100,000          |
| Hungary—Catholics .....        | 4,000,000          | 80,000                                    | 320,000            |
| Calvanists .....               | 1,000,000          | 60,000                                    | 63,000             |
| Lutherans .....                | 650,000            | 40,000                                    | 26,000             |
| Italy .....                    | 19,391,000         | 40,000                                    | 776,000            |
| Austria .....                  | 18,918,000         | 50,000                                    | 950,000            |
| Switzerland .....              | 1,720,000          | 50,000                                    | 87,000             |
| Prussia .....                  | 10,536,000         | 50,000                                    | 527,000            |
| German States .....            | 12,763,000         | 60,000                                    | 765,000            |
| Holland .....                  | 2,000,000          | 80,000                                    | 160,000            |
| Netherlands .....              | 3,000,000          | 35,000                                    | 105,000            |
| Denmark .....                  | 1,700,000          | 70,000                                    | 119,000            |
| Sweden .....                   | 3,400,000          | 70,000                                    | 238,000            |
| Russia—Greek Ch. .....         | 34,000,000         | 15,000                                    | 510,000            |
| Cath and Luth .....            | 8,000,000          | 50,000                                    | 409,000            |
| South America ....             | 15,000,000         | 30,000                                    | 450,000            |
| Dispersed christians .....     | 3,000,000          | 50,000                                    | 180,000            |
| Christians in Turkey .....     | 6,000,000          | 30,000                                    | 180,000            |
| England, Church of .....       | 6,000,000          | 1,266,000                                 | 7,596,000          |
| Ireland, Church of .....       | 400,000            | 3,250,000                                 | 1,300,000          |

Thus the Clergy of 195,678,000 hearers abroad, receive 8,591,000*l*. While the Clergy of 6,400,000 hearers at home receive 8,896,000*l*., if not a much great sum.

According to this calculation, we ought to be about thirty-five times as religious as the French, and seventy times as religious as the Russians!

### ON ACUTE DYSENTERY IN SHEEP, AND ON INFLAMMATION OF THE ABOMASUM OR TRUE STOMACH IN CATTLE.

BY MR. WILLIAM DICK, VETERINARY SURGEON,  
EDINBURGH.

(From the Quarterly Journal of Agriculture.)

Lately, one of my old pupils Mr. Chalmers, now in practice in the village of Tarves, Aberdeenshire, wrote me, requesting my opinion regarding a disease which had made its appearance in a flock of sheep belonging to a farmer in his neighbourhood; and as I am persuaded the case is not a solitary one, it occurs to me that his letter, from the correct manner in which the disease is described, and the account given of the *post mortem* appearances, may prove interesting and useful to the readers of this Journal. At the same time, I shall take the liberty to offer a few remarks on the disease described, and its treatment. Mr. Chalmers writes thus:—

"You will confer upon me a very great favour, if you will furnish me with your opinion upon a complaint among sheep, which has fallen under my observation within the last week or fortnight (11th August, 1834). I am not aware that there is any good account of it in the works which treat of the diseases of cattle and sheep. The disease, of which I am about to attempt a description, broke out upon a large farm within the range of my practice; the number of sheep at pasture on the farm I suppose to be between 700 and 800, consisting partly of En-

glish, but the greater part Highland or black-faced sheep. Within the last week fifteen of them have died, the whole of which were of the black-faced kind. I have not yet observed a single instance of the complaint among the English sheep. It may be necessary to mention that a few of the sheep have died annually of *water in the head*, and a good many more are affected with the *rot*. A small proportion of the pasture grows upon a mossy or marshy bottom, the greater part of it, however, is quite dry. The sheep brought down from the Highlands do not become affected with the *rot*, until they have been pastured about a year and half. The symptoms which present themselves in the present complaint are nearly as follows:—

"When a sheep becomes affected, it is observed to be dull and heavy, to separate itself from the flock, and to fall behind the rest, when they are moving in search of pasture. There is a raising up of the back by which an individual can be detected, though surrounded by a mass. Soon after these precursory symptoms the sheep is observed purging; the first discharges are black and thin; afterwards they are more of a greenish hue; in the last stage, the stools are mixed with blood. The sheep is remarked often to make ineffectual efforts to empty the intestines, as if it were suffering from tenesmus. The animal dies within sixteen or twenty hours after it is first seen to be ill; some linger out a few days, and if they survive this period they generally get well. I have made several *post-mortem* examinations. The following are the most prominent appearances:—The paunch and the rest of the apparatus for receiving the food (with the exception of the proper stomach), are in a natural condition; the stomach is extensively diseased; the inner or mucous coat is thickened, soft and pulpy; the farther, or pyloric extremity of the stomach is more diseased and thickened than usual; over the whole inner surface, but principally in the end next the small intestines, there are reddish or reddish purple spots, and fine arborifications of small bloodvessels. The arborifications are in the upper and the purple spots in the lower end of the stomach, where the disorganization is more complete. The small intestines are loose in texture, easily torn, and might almost be said to be rotten; the vessels running in the folds of the mesentery are larger and more numerous than usual, and filled with purple-coloured blood; the contents in the small intestines resemble in every way the matter discharged by the rectum; the substance of the liver is soft; the edges of the lobes are of a dark purple hue; the gall-bladder is enlarged; in one instance it was more than twice the natural size; it is always full of bile, the colour and consistence of which I can compare to nothing which so well expresses it, as black beer; the spleen is also soft and enlarged, and, when broken with the fingers, resembles very much a mass of grumous blood, surrounded with a firm membranous capsule. I have not carried my examinations much further. In the last case inspected, the bladder was contracted to about the size of a hen's egg, and the brain presented nothing unusual. By whatever name we distinguish the disease, whether we call it looseness, dysentery, or any other name, the mucous membrane of the stomach and small intestines seem to be its principal seat, and its character seems to be inflammatory, or a compound of the congestive and inflammatory. I think the two may exist together, and I cannot conceive how any thing but inflammation can produce such extensive derangement of the structure. Does the disease arise from a common cause? Is it epizootic? Is it contagious? Or may it not be a production of all three?

—I have lately heard of other sheep being affected in the same manner."

In the observations I am about to offer, I would first remark, that several authors seem to be well aware of this disease, though they have met with it apparently in a less virulent form.
